An aerial survey of the Waterford Generating Station near Taft, Louisiana was conducted during the period March 24 through April 7, 1982. The area encompassed a 256-square-kilometer (100-square-mile) area centered on the reactor facilities. Inferred exposure rates were due primarily to naturally occurring gamma-emitting radionuclides and cosmic ray activity (estimated at 3.7 μR/h). The exposure rates varied from 7 to 60 μR/h. Throughout most of the residential/industrial areas, the inferred exposure rate range was 7 to 12 μR/h. Marsh and water-covered areas were less than 7 μR/h. Two areas were encountered which had activity elevated above the typical background: (1) an industrial waste pond located 2 kilometers southeast of the site, and (2) a small area located 5 kilometers southeast of the site on the south bank of the Mississippi River. (A river barge was docked at this location during the survey.) Maximum inferred exposure rates over these areas were 60 and 16 μR/h, respectively. Spectral analysis revealed gamma-emitting radionuclides of the uranium decay chain as the primary contributors to this elevated activity. Ground-based measurements made in several areas were consistent with the aerial data. This was the first aerial radiological survey conducted over this area. 3 references, 9 figures, 3 tables.

34307 **(EGG—10282-1038) Aerial radiological survey of the Palo Verde Nuclear Generating Station and surrounding area, Wintersburg, Arizona. Date of survey: November 1982.** Semmler, R.A. (EG and G, Inc., Las Vegas, NV (USA). Remote Sensing Lab.). Jan 1984. Contract AC08-83NV10282. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013489.

An aerial survey of terrestrial gamma radiation was performed during the period 4 November through 15 November 1982 over a 16-kilometer by 16-kilometer (10-mile by 10-mile) area approximately centered on the Palo Verde Nuclear Generating Station near Wintersburg, Arizona. Gamma radiation spectral data were collected while flying a helicopter over a regular pattern of parallel lines spaced 150 meters (500 feet) apart at an altitude of 90 meters (300 feet). All radiation measurements taken at the nominal flight altitude were corrected for altitude variations, cosmic radiation, and helicopter background to generate exposure rates from terrestrial sources extrapolated to 1 meter above ground level. The data are presented as isoradiation contour maps. The average terrestrial radiation levels fall between 8 and 14 microrentgens per hour (μR/h). All gamma radiation detected within the survey area was associated with naturally occurring radionuclides. Direct ground-based measurements at 1 meter height were also taken at four scattered sites within the survey area. These values agree with the contour intervals determined from the aerial measurements and differ from the mean value of adjacent contours by no more than 10%. 6 references, 5 figures, 2 tables.

34308 **(GSF-S—956) Radionuclide concentrations in ground level air and precipitation in South Germany from 1976 to 1982.** Hoetzl, H.; Rosner, G.; Winkler, R. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.)). Aug 1983. 107p. NTIS (US Sales Only), PC A06/MF A01. Order Number DE84751477.

The activity concentrations of fallout radionuclides from atmospheric nuclear test explosions and of Be-7 in ground level air and precipitation have been determined by the Institut fuer Strahlenschutz at Munich-Neuherberg since 1970. While methods and results from 1970 to 1975 have been published in a previous report, the present report describes the revised program which includes now the naturally occurring nuclides Pb-210 and Po-210, as well as H-3. Sampling methods, analytical techniques and measuring procedures are given. The results up to the end of 1982 are reported and seasonal and long-term variations of radionuclide concentrations as well as frequency distributions of the data are discussed. The data are compared with those of other stations. As a consequence of some recent atmospheric nuclear test explosions by the People's Republic of China also short-lived radionuclides have been detected in ground level air and precipitation. The radiation exposure due to the radioactivity in ground level air and precipitation is estimated.

34309 **(INIS-mf—8335) Investigations on natural radioactivity of indoor air pollution. Fundamental findings serving to estimate X-irradiation by inhalation of radon- and thoron daughter products.** Wicke, A. (Giessen Univ. (Germany, F.R.). Fachbereich Physik). 13 Dec 1979. 175p. (In German). NTIS (US Sales Only), PC A08/MF A01. Order Number DE84780302.

The behaviour of radon 222 and its daughter products in indoor air and the corresponding processes are explained and quantitatively recorded (as far as possible). Main subject of all considerations are those processes, which induce the development of radon-222 activity in indoor air, the formation of free and aerosol-bound daughter products and their partial loss due to air-exchange and deposition processes. Finally the contribution of natural indoor radioactivity to the natural exposure to radioactivity of man (rate of ventilation) is estimated on the basis of the presently available measuring data. This estimation bases on an investigation of those mechanisms, which are responsible for a continuous supply of radon and thoron by the building wall-material. (orig./HP).

34310 **(KFK—3566) Comparison of the atmospheric dispersion models UFOMOD and MESOS.** Vogt, S.; Neumann-Hauf, G. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Hauptabteilung Sicherheit; Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Abt. fuer Angewandte Systemanalyse; Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Nukleare Sicherheit). Nov 1983. 46p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751438.

UFOMOD and MESOS are compared concerning the calculated airborne concentrations of noble gases, quantities of radionuclides deposited, or the fractions of radionuclides remaining in the atmosphere, respectively, as well as calculated ground-level contamination due to Cs-137 and I-131 at well-defined locations at different distances and directions from the point of release (MESOS) and at well-defined locations at different distances averaged over all directions of transportation (UFOMOD) (height of release 10 m). On the average, the mean airborne concentration and ground-level contamination differ by a factor less than five. If one compares - integrated overall deposited by dry deposition only without considering wet deposition during transport and vice versa integrated over all dispersion directions (MESOS and UFOMOD) considerable differences emerge between the models, especially concerning the calculation of wet deposition. Here, differences amount to a factor of two. However, if, in addition the probability of a location being exposed is also taken into account, the model differs by factors up to 10 at selected locations. It is shown how UFOMOD calculations can be improved and adapted to reality by additional information from MESOS calculations.

34311 **(KY—742) Environmental monitoring report: United States Department of Energy, Paducah Gaseous Diffusion Plant, calendar year 1983.** (Paducah Gaseous Diffusion Plant, KY (USA)). May 1984. Contract AC05-84OU21400. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84012711.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Air, water, soil, sediments, grass, and groundwater in the vicinity of the Paducah Gaseous Diffusion Plant were continuously or periodically sampled during 1983. Analyses for materials known to be in plant effluents were made to provide effluent control information and to determine compliance with applicable environmental standards. Low sulfur coal is burned in the steam plant to meet Kentucky emission limits for sulfur dioxide. Air analyses for radioactivity indicated concentrations at each offsite sampling station averaged less than 1% of the applicable Radioactivity Concentration Guide. Offsite analyses for fluorides in grass met the Kentucky Air Quality Requirements. All onsite and offsite airborne fluoride samples met the Kentucky one-week and one-month standards for gaseous HF. Soil samples were analyzed for uranium and showed no significant deviation from normal background concentrations. There was no detectable change in chemical, physical, or radioactive characteristics of either the Ohio River or ground water attributable to Paducah Gaseous Diffusion Plant operations. The results of water sample analyses of the Ohio River show the chromium and fluoride concentrations to be in compliance with the requirements of the applicable Kentucky regulations. Algal activity resulted in an increase in pH violations during 1983. 7 references, 7 figures, 26 tables.

34312 **(LA—10100-ENV) Environmental surveillance at Los Alamos during 1983.** (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 189p. NTIS, PC A09/MF A01; 1; GPO Dep. Order Number DE84013933.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report documents the environmental surveillance program conducted by the Los Alamos National Laboratory during 1983. Routine monitoring for radiation and radioactive or chemical substances is conducted on the Laboratory site and in the surrounding region to determine compliance with appropriate standards and permit early identification of possible undesirable trends. Results and interpretation of data for 1983 are included on external penetrating radiation; on the chemical and radiochemical quality of ambient air, surface and ground waters, municipal water supply, soils and sediments, and foodstuffs; and on the quantities of airborne emissions and liquid effluents. Comparisons with appropriate standards, regulations, and background levels from natural or other non-Laboratory sources provide a basis for concluding that environmental effects attributable to Laboratory operations are insignificant and are not considered hazardous to the population of the area of Laboratory employees. 61 references, 34 figures, 22 tables.

34313 **(LBL—17622) Annual environmental monitoring report of the Lawrence Berkeley Laboratory, 1983.** Schleimer, G.E. (ed.). (Lawrence Berkeley Lab., CA (USA)). Apr 1984. Contract AC03-76SF00098. 33p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013881.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The Environmental Monitoring Program of the Lawrence Berkeley Laboratory is described. Data for 1983 are presented and general trends are discussed. 7 references, 7 figures, 11 tables.

34314 **(PB—84-156421) Airborne emission control technology for the elemental phosphorus industry. Final report.** Stula, R.T.; Belanger, R.E.; Clary, C.L.; May, R.F.; Spaeth, M.E. (Science Applications, Inc., La Jolla, CA (USA)). Jan 1984. 412p. NTIS, PC A18/MF A01.

Preliminary estimates by the U.S. Environmental Protection Agency (EPA) have indicated the potential for significant radiation doses to individuals near elemental phosphorus plants. During plant operations radionuclides associated with particulates and volatile metallic element radionuclides are released to the atmosphere. Of special interest are polonium-210 and lead-210. The purpose of this work assignment is to apprise EPA of the status of emission of radionuclides to the atmosphere. This work assignment involves collection of information on emission control technology related to the development of standards under the Clean Air Act. Each work task is designed as a chapter to be incorporated into a Background Information Document for the elemental phosphorus industry. Topics covered include general description of the industry and identification of plant-specific processes and emissions; plant-specific emission control techniques and costs; anticipated industry changes due to modernization, expansion, or process alterations; and definition of a model elemental phosphorus plant representative of those currently in operation. Three levels of control, ranging from minimum to maximum application of emission control techniques, are defined for the model plant along with estimated emissions and equipment costs.

34315 **(PB—84-166818) Analytical capability of the environmental radiation ambient monitoring system.** Broadway, J.A.; Mardis, M. (Environmental Protection Agency, Montgomery, AL (USA). Eastern Environmental Radiation Facility). Sep 1983. 74p. (EPA—520/5-83-024). NTIS, PC A04/MF A01.

The ERAMS program is composed of a network of sampling stations throughout the United States plus an associated radioanalytical and assessment support group. These components provide a capability to evaluate environmental consequences from both normal ambient concentrations of radiation and time dependent changes as measured by the samples. The program is structured to measure concentrations of radionuclides in air, milk, surface water, and drinking water and to estimate dose and health impact. Several examples of short-term and long-term assessments of dose and health effect calculations from the ERAMS data base have been presented in this report.

34316 **(PB—84-175108) Environmental Radiation Data, report 35 (July-September 1983).** (Environmental Protection Agency, Montgomery, AL (USA). Eastern Environmental Radiation Facility). Dec 1983. 47p. (EPA—520/1-84-004). NTIS, PC A03/MF A01.

See also PB84-149145.

Environmental Radiation Data (ERD) is compiled and distributed quarterly by the Office of Radiation Programs Eastern Environmental Radiation Facility (EERF), Montgomery, Alabama. Data from the Environmental Radiation Ambient Monitoring

System (ERAMS), and similar networks operated by contributing States, Canada, Mexico, and the Pan American Health Organization are reported in (ERD) when available. The ERAMS is comprised of nationwide sampling stations that provide air, surface, and drinking water and milk samples from which environmental radiation levels are derived. The major emphasis for ERAMS is toward identifying trends in the accumulation of long-lived radionuclides in the environment.

34317 **(PNL—3777-Rev.1) Hanford Dose Overview Program: standardized methods and data for Hanford environmental dose calculations. Rev. 1.** McCormack, W.D.; Ramsdell, J.V.; Napier, B.A. (Pacific Northwest Lab., Richland, WA (USA)). May 1984. Contract AC06-76RL01830. 54p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84013510.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This document serves as a guide to Hanford contractors for obtaining or performing Hanford-related environmental dose calculations. Because environmental dose estimation techniques are state-of-the-art and are continually evolving, the data and standard methods presented herein will require periodic revision. This document is scheduled to be updated annually, but actual changes to the program will be made more frequently if required. For this reason, PNL's Occupational and Environmental Protection Department should be contacted before any Hanford-related environmental dose calculation is performed. This revision of the Hanford Dose Overview Program Report primarily reflects changes made to the data and models used in calculating atmospheric dispersion of airborne effluents at Hanford. The modified data and models are described in detail. In addition, discussions of dose calculation methods and the review of calculation results have been expanded to provide more explicit guidance to the Hanford contractors. 19 references, 30 tables.

34318 **(Y/UB—19) Environmental monitoring report, United States Department of Energy, Oak Ridge Facilities, calendar year 1983.** (Oak Ridge Y-12 Plant, TN (USA)). 15 Jun 1984. Contract AC05-84OS21400. 126p. NTIS, PC A07/MF A01; 1; GPO Dep. Order Number DE84013888.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The Environmental Monitoring Program for the Oak Ridge area includes sampling and analysis of air, water from surface streams, creek sediments, biota, and soil for both radioactive and nonradioactive materials. This report presents a summary of the results of the program for calendar year 1983. Surveillance of radioactivity in the Oak Ridge environs indicates that atmospheric concentrations of radioactivity were not significantly different from other areas in East Tennessee. The levels of radioactivity were between 0.02 and 0.03 percent of the DOE concentration guides (CG) which has been the case since 1980. Levels of radioactivity in rainwater samples collected in the Oak Ridge area were not significantly different from those collected at remote locations. Concentrations of radioactivity in the Clinch River and in fish collected from the river were less than two percent of the permissible concentration and intake guides for individuals in the offsite environment. While some radioactivity was released to the environment from plant operations, the concentrations in all of the media sampled were well below established DOE standards, as has been the case since the inception of these reports. Surveillance of nonradioactive materials in the Oak Ridge environs shows that established limits were not exceeded for those materials present in the air as a result of plant operations except for suspended particulates in the Y-12 Plant area. The chemical water quality data in surface streams obtained from the water sampling program indicated that average concentrations resulting from plant effluents were in compliance with State Water Quality Criteria for fish and aquatic life with the exception of cadmium, copper, fluoride, lead, mercury, and zinc. 35 references, 22 figures, 55 tables.

34319 **Comments on natural tritiated moisture levels in air vary with atmospheric pressure.** Oestlund, H.G. (Miami Univ., FL (USA). Rosenstiel School of Marine and Atmospheric Sciences); Mason, A.S. (Los Alamos National Lab., NM (USA)). *International Journal of Applied Radiation and Isotopes;* **35**: No. 2, 143(Feb 1984).

34320 **Electrical aspects of rainout.** Rosenkilde, C.E.; Serduke, F.J.D. (Lawrence Livermore National Lab., CA). pp 573-582 of Precipitation scavenging, dry deposition, and resuspension. Volume 1. Precipitation scavenging. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. (eds.). New York, NY; Elsevier Science Publishing Company, Inc. (1983). (CONF-821136—Vol.1). TI84002447

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

Under extreme conditions, the radioactivity of fresh nuclear debris particles greatly alters the electrical phenomena within a natural cloud. There is sufficient beta and gamma activity to generate ions in the atmosphere at rates many orders of magnitude higher than those associated with natural terrestrial sources and cosmic rays. This ion production, when counterbalanced by recombination and attachment, yields steady-state ion concentrations that are several orders of magnitude greater than those present in fair weather. Such concentrations of ions greatly reduce the chance of accumulating large droplet charges or of generating high electric fields. Consequently, electrical interactions which lead to scavenging are estimated to be considerably less potent in the presence of fresh nuclear debris than might have been expected on the basis of parameters associated with natural thunderstorms. Rosenkilde has given a more detailed description of the work being summarized here. 8 references, 5 figures.

34321 **Dry deposition model sensitivity.** Lewellen, W.S.; Varma, A.K.; Sheng, Y.P. (Aeronautical Research Associates of Princeton, Inc., NJ). pp 859-870 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

The present understanding of the basic dependence of deposition velocity on a number of independent variables is reviewed. The dependence on atmospheric stability, through its effect on turbulent transport within the surface layer, is the most amenable to direct analysis. The aggregate effect of turbulent transport within individual canopy structures and the viscous sublayer on the basic elements of the surface canopy is considerably more difficult to analyze. The actual surface chemical reactivity can generally only be determined by experiment. If the effluent of interest is in the form of small particles, the viscous sublayer on the canopy surface is likely to be the dominant factor in determining the deposition. Deposition velocity for some of the effluents which may be expected from a nuclear reactor accident are estimated. This requires first estimating the uncertainties in the local meteorological variables, the surface canopy variables, and the physical/chemical properties of the main effluents of interest. These uncertainties in the independent variables are translated into uncertainties in deposition velocity. 6 references, 3 figures, 1 table.

34322 **Some recent studies of the resuspension of deposited material from soil and grass.** Garland, J.A. (AERE, Harwell, England). pp 1087-1097 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

Wind tunnel experiments showed that resuspension increases rapidly with wind speed, but does not show a threshold corre-

sponding to that for saltation. The resuspension rate declined as the inverse of time of exposure to the wind, and not exponentially. All tracers tested showed these features, and submicron powder showed similar resuspension behavior on soil and on grass. Large particles suspended more rapidly than small. Resuspension factors of 20 year old deposits were estimated using atmosperic concentrations of fallout and trace elements. Upper limits of order 10^{-11} or 10^{-10} m^{-1} were obtained. Extrapolation from small scale experiments to large scale contamination incidents requires only a modest increase in resuspension factor, K. Deposition of suspended material over a scale of metres can be significant, leading to an effect of experimental scale on estimates of the resuspension rate, Λ. 12 references, 3 figures.

34323 **Quantitative comparison of five suspension models.** Smith, W.J. II; Whicker, F.W. (Colorado State Univ., Fort Collins). pp 1099-1109 of Precipitation scavenging, dry deposition, and resuspension. Volume 3. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

A specific example is used to demonstrate an approach to the selection and comparison of models of particle entrainment. The problem is to estimate airborne mass flux from a hard-rock thorium ore stockpile. As a source of airborne particles an ore stockpile differs greatly from the sources used to develop an understanding of particle entrainment. The hypothetical ore pile would be a mounded, angular pile consisting primarily of relatively large rocks, but including in its wide range of particle sizes the very small fines from blasting and mining. Models must be selected that are capable of reflecting the unique features of a stockpile. The major thorium ore deposit is found along the continental divide near Lemhi Pass in the Beaverhead Mountains of southwestern Montana. The hypothetical ore pile of this example would be located at the base of the mountains, at fairly high elevation (2200 m). This location is characterized by harsh winters with heavy mountain snowfall, and summers with frequent thunderstorms and high evaporative potential. 15 references, 6 figures, 5 tables.

34324 **Scavenging ratios and dry deposition velocities of radioactive particles in the tropical regions of India.** Rangarajan, C.; Eapen, C.D. (Bhabha Atomic Research Centre, Bombay, India). pp 1271-1279 of Precipitation scavenging, dry deposition, and resuspension. Volume 3. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

Dry deposition velocities and scavenging ratios are presented for a number of stations in India. The variation in scavenging ratios at a place was more than the differences in the average values at various locations studied. It was concluded that, a crude global-average value may be adequate for first-order calculations, but more accurate estimates may require the inclusion of precipitation type, height, amount, and vertical activity distributions into scavenging models. 8 references, 4 figures, 1 table.

34325 **Atmosphere to snow transfers in Antarctica.** Lambert, G.; Ardouin, B.; Mesbah-Bendezu. (Centre des Faibles Radioactivites, Gif-sur-Yvette, France; Universite de Picardie, Saint-Quentin, France). pp 1289-1300 of Precipitation scavenging, dry deposition, and resuspension. Volume 3. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

The objective of this study is to determine the washout factor of radioactive aerosols by Antarctic snow, on a basis of one or several years. Owing to the necessity to compare the activities of air and snow at the same date, gross β or γ measurements cannot be used as there is no possible correction of radioactive decay. Therefore two nuclides, artificial ^{90}Sr and natural ^{210}Pb, are used. As far as possible wet and dry fallout are distinguished. 18 references, 6 tables.

34326 **^{210}Pb as a tracer of the deposition of sub-micrometer aerosols.** Graustein, W.C.; Turekian, K.K. (Yale Univ., New Haven, CT). pp 1315-1324 of Precipitation scavenging, dry deposition, and resuspension. Volume 3. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

^{210}Pb deposition rates can be obtained in soils in which the organic matter is concentrated in a surface layer. If the organic matter is uniformly distributed through the soil, the correction for ^{210}Pb produced becomes larger and the precision of the deposition rate estimate decreases. Forest soils are generally well suited for ^{210}Pb deposition rate measurements. The rate of ^{210}Pb deposition to New England lowlands averages 1.0 dpm cm^{-2} yr^{-1}. There is no evidence for systematic spatial variability in the deposition rate. Deposition rates are uniform. The amount of dry deposition of ^{210}Pb is too small to be measured by the methods used. Even in an area where impaction on foliage is a major removal mechanism for giant aerosols, vegetation has no apparent effect on the ^{210}Pb deposition rate. The ^{210}Pb deposition rate in a mountainous region is determined by the rate of water deposition by precipitation and in-cloud droplet impaction. The deposition rate of other species originating from the continental surface and residing in sub-micrometer aerosols, such as sulfate, should be estimatable at any given site using the species/^{210}Pb deposition ratio in aerosol particles and the ^{210}Pb deposition rate at that site. 24 references, 1 figure, 1 table.

34327 **Size distribution of atmospheric Pb and ^{210}Pb in rural New Jersey: implications for wet and dry deposition.** Knuth, R.H.; Knutson, E.O.; Feely, H.W.; Volchok, H.L. (Dept. of Energy, New York, NY). pp 1325-1335 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

High volume cascade impactor samples taken during spring, 1980, at the Chester sampling station in northern New Jersey showed a small but persistent difference in the size distributions of Pb and ^{210}Pb. On the average, 69% of Pb was below 0.58 μm and 12% was above 3.45 μm. For ^{210}Pb, the corresponding figures were 71% and 2.8%. These ^{210}Pb data indicate larger particles than found in Colorado, but smaller than those found over the Mediterranean Sea. The average air concentrations for the two species were 111 ng/m^3 (Pb) and 10.9 fCi/m^3 (^{210}Pb), in good agreement with other reported results for rural northeast areas. Experimental results imply a factor of three difference in dry deposition velocity between the two species, providing a qualitative explanation of a previously observed difference in wet/dry deposition of the two species. 19 references, 1 figure, 6 tables.

34328 **Mean residence time of the submicrometer aerosols in the global troposphere.** Lambert,; Sanak, J.; Polian, G. (Centre des Faibles Radioactivities, Gif-sur-Yvette, France; Universite de Picardie, Saint-Quentin, France). pp 1353-1359 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

A 2 box model for ^{222}Rn and its decay products is presented. It is assumed that the reservoir considered is the atmosphere and that the integration time is very long relative to the residence

time. This results in a single reservoir in steady state and the mean can be defined with respect to the total amount of atmospheric aerosols. Because of the difference between aerosol residence times in the tropospheric and the stratosphere, these reservoirs were considered separately. 27 references, 1 figure, 1 table.

34329 **Environmental radiation monitoring system development for atmospheric plumes from light water reactor nuclear power plants.** Ohba, T.; Ishida, K.; Kitada, Y.; Kobayashi, A.; Takimoto, S.; Tsunoda, T. (The Tokyo Electric Power Company Operation and Maintenance Department Fukushima Daiichi Nuclear Power Station Ohkuma-cho, Futabagun, Fukushima). *Nuclear Technology;* **56**: No. 3, 580-593(Mar 1982).

The environmental monitoring system for radiation exposure due to light water reactor (LWR) nuclear power plant plume is described. This system, employing a NaI(Tl) scintillation detector with an exposure rate conversion circuit, has the capability of highly accurate evaluation of radiation exposure due to an LWR plume with 0.15 million R/yr (39 nC/kg.yr) overevaluation and 0.05 million R/yr (13 nC/kg.yr) underevaluation. Plume exposure is identified by combining the time variation property of the exposure rate with meteorological parameters. Outlines of the present system are described, including monitoring results obtained over a 98-day period by tentative system at an LWR site boundary.

5004 Thermal Effluents Monitoring And Transport

34330 **(EIR—500) Possibilities of anthropogenic modifications of thunderstorm activity.** Gassmann, F.; Haschke, D.; Rudin, F. (Eidgenoessisches Inst. fuer Reaktorforschung, Wuerenlingen (Switzerland)). Nov 1983. 53p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84751281.

Portions are illegible in microfiche products.

Different approaches were used to estimate the number of thunderstorms that could be modified by anthropogenic heat rejection. As a result it was found that about 50% of the thunderstorms occurring annually over the Swiss plateau or the area around the city Basel offer the potential of an anthropogenic modification. On the basis of simplified physical models, the energy-flux to start a medium thunderstorm is estimated to about 0.01-0.1 GW, if the energy is available as kinetic energy, and about 100 GW for thermal energy. Computer simulations with a parcel model confirm these orders of magnitude. The model calculations indicate also, that the power required to start a small thunderstorm under especially critical (unstable) weather situations can be an order of magnitude smaller than the above values. Comparing the required 100 GW thermal starting energy-flux with a single dry or wet 2 GW cooling tower suggests, that for climatic conditions typical for Switzerland, the formation of a thunderstorm due to cooling tower heat rejection is a very unlikely event. Power parks consisting of 30-50 dry cooling towers rejecting 2 GW each would be required to severely modify thunderstorm activity in their surroundings. About 5 to 10 coolind towers concentrated at one site would probably be a critical limit. When exceeded, modification of thunderstorm activity seem to become climatologically significant.

Mar 1984. Contract AC06-76RL01830. 23p. (CONF-8406144—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013404.

From Research in arid and semiarid lands meeting; Washington, DC, USA (4 Jun 1984).

Portions are illegible in microfiche products.

The purpose was to determine annual shoot production in two 30-year old cheatgrass communities that had not been grazed by domestic livestock and to compare their concentrations of tissue assimilated mineral nutrients. The data indicate that the community at the low elevation produced more shoot biomass with less precipitation than the high elevation community. Nitrogen appeared to be less available to shoots at the high elevation. 20 references, 4 figures, 5 tables.

34335 **(CONF-8305200—2) Lead in vegetation, forest floor material, and soils of the spruce-fir zone, Great Smoky Mountains National Park.** Bogle, M.A.; Turner, R.R. (Oak Ridge National Lab., TN (USA)). 1983. Contract AC05-84OR21400. 14p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012353.

From Symposium on the Southern Appalachian spruce-fir ecosystem: status, threats, and management; Gatlinburg, TN, USA (1 May 1983).

Based on a survey during 1982, lead concentrations in vegetation, litter and soils of the spruce-fir zone of the Great Smoky Mountains National Park are generally less than values reported for similar sites in the northeastern United States and western Europe. As expected, lead concentrations increased with increasing age of spruce and fir foliage, and with increasing degree of decomposition of litter. Fir bole wood was higher in lead than spruce bole wood, but both species were far below acutely phytotoxic levels. Although the results of this study indicated no immediate cause for

concern, periodic monitoring of lead and other metals in the spruce-fir zone should be continued to provide early detection of significant changes. 32 references, 1 figure, 4 tables.

34336 **(DOE/EV/10750—T1) Effects of acid precipitation on forest soils and watershed biogeochemistry in New England. A technical progress report.** Cronan, C.S. (Maine Univ., Orono (USA). Dept. of Botany and Plant Pathology). May 1984. Contract AC02-81EV10750. 75p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84012966.

The research described was initiated to address the need for improved understanding of the mechanistic linkages between forest growth and acidic depositing. A long-term whole-system investigation of forest responses to acidic deposition has been initiated. Nutrient depletion and availability in forest soils, plant nutrient status, trace metal cycling and toxicity, plant disease resistance, and overall plant productivity is emphasized. 48 references, 4 figures, 7 tables.

Portions are illegible in microfiche products.

The Minister of Science and Technology supports research in the field of "methods to evaluate ecotoxicological effects of chemicals". In the ecosystem the soil is the major sink for environmental chemicals. In a coordinated programme several laboratories have conducted research to evaluate and standardize different methods to study degradation, accumulation and effects of chemicals in the soil. Results from a four year study are presented in five reports on adsorption/desorption, translocation and degradation of chemicals of 15 soils of the Federal Republic of Germany. Partially laboratory results are compared with data achieved in field studies. The following test chemicals have been included in the programme: Cd-, Hg-, Cr-, and Se-compounds, the herbicides 2,4,5-T, and pichloram, the tenside LAS, PCB as well as halogenorganic compounds. On the basis of the results standardized test methods are proposed.

34338 **(PB—84-148840) Development of chemical countermeasures for hazardous waste contaminated soil.** Ellis, W.D.; Payne, J.R.; Tafuri, A.N.; Freestone, F.J. (JRB Associates, Inc., McLean, VA (USA)). Jan 1984. 31p. NTIS, PC A03/MF A01.

The objective of this project is to evaluate the efficacy of in-situ treatment of large volumes of subsurface soils, and large, relatively quiescent waterbodies. To date, efforts have concentrated on soils-related activities to determine whether significant enhancements to the in-situ cleanup of chemically contaminated soils with standard water washing techniques could be obtained by using aqueous surfactants. The addition of the surfactant mixtures was designed to improve the solvent properties of the water and enhance the removal of adsorbed chemical contaminants.

34339 **Dry deposition of nitrogen dioxide to Scots pine needles.** Grennfelt, P.; Bengtson, C.; Skaerby, L. (Swedish Water and Air Pollution Research Inst., Goeteborg, Sweden; AB Haessle, Moelndal, Sweden). pp 753-762 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

Vegetation is important as a sink for atmospheric pollutants, e.g., sulphur dioxide and particles. Although data are sparse, there are indications that the same is true also for nitrogen dioxide. In addition, the possible effects of deposited compounds must be considered. The input of nitrogen compounds might together with sulphur oxides, be of importance for the acidification of soils and groundwater of forest ecosystems. The dry deposition of NO_2 probably gives an essential contribution to the total nitrogen input. In order to obtain basic data for deposition estimates of NO_2 to forest ecosystems the uptake of NO_2 in Scots pine needles was studied in the field. A gas exchange system was used, originally designed for measurements of photosynthesis and transpiration. The objective was to study the uptake of NO_2 during natural climatic conditions and to see how the uptake varied with changes in these conditions. In addition possible physiological effects (on photosynthesis and transpiration) due to the NO_2 exposure were studied. 8 references, 4 figures, 2 tables.

34340 **Dry deposition of SO_2 onto a Scots pine forest.** Fowler, D.; Cape, J.N. (Inst. of Terrestrial Ecology, Midlothian, Scotland). pp 763-773 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

The results reported are field measurements of rates of dry deposition of SO_2 onto Scots pine (Pinus sylvestris L) in a range of atmospheric and surface conditions. Rates range from 0.5 to 10 mm s^{-1}. During the day stomata are the major sink, absorbing ~ 80% of the total flux for a deposition rate of 5 mm s^{-1}. As stomata close the uptake by other surfaces (cuticles, bark and forest floor) begin to dominate but collectively the rates of deposition onto these surfaces, on dry nights are no more than 1 mm s^{-1}. A mesophyll resistance to SO_2 uptake within stomata has been observed, which may contribute 50% of the total resistance to transfer, but further field measurements are required to determine the properties of this resistance. For a rain wetted canopy rates of deposition are 2 to 3 mm s^{-1} and show the presence of a significant canopy resistance (300 s m^{-1}). Uptake by wetted surfaces appears to be controlled by the chemistry of the liquid film on vegetation. 18 references, 3 figures, 3 tables.

34341 **Dry deposition on coniferous forest of SO_2 at ppb levels.** Johansson, C.; Richter, A.; Granat, L. (Univ. of Stockholm, Sweden). pp 775-784 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

Results obtained with mobile equipment designed to measure surface resistance during deposition of trace gases to a forest canopy are presented. Measurements were made with concentrations down to low ppB levels of SO_2, NO/sub x/ and NO and a few tens of ppB of O_3. Results are as follows: deposition of SO_2 is higher than can be predicted by stomatal conductance - during daytime twice as high, sometimes even higher; the hypothesis of a linear relation between deposition and trace gas concentration (other factors being constant); Previous findings of a very pronounced diurnal variation are confirmed. The variation does not, however, follow a simple cycle and the deposition velocity can vary with a factor of 2 from one day to the following depending on climatic fluctuations; part of a seasonal variation has been revealed in that almost no deposition to the canopy was found in winter. Some variation also occurs during the growing season; and SO_2 concentration ranges found in rural Sweden a deposition velocity of 0.5 cm s^{-1} during summer and 0.1 cm s^{-1} in winter were estimated. 10 references, 3 figures.

34342 **Measurements of the dry-deposition flux of nitric acid vapor to grasslands and forest.** Huebert, B.J. (Colorado Coll., Colorado Springs). pp 785-794 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

The dry flux of HNO_3 vapor to a variety of terrains was measured using a modified Bowen-ratio method. Nitric acid concentration and temperature were measured at each of two or three heights above the ground, and sensible-heat fluxes were measured by an eddy-correlation technique. 15 references, 3 tables.

34343 **Experimental constraints in micrometeorological gaseous pollutant fluxes.** Droppo, J.G.; Doran, J.C. (Battelle Pacific Northwest Labs., Richland, Washington). pp 807-815 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

This paper presents the results of simultaneous ozone eddy flux and profile measurements performed during the summer 1982 Environmental Protection Agency (EPA) Dry Deposition Intercomparison Experiment at a site near Champaign, Illinois. These data provide an opportunity to investigate sources of variability in pollutant flux rates. Ozone eddy flux and profile values are combined to compute both ozone eddy diffusivities and deposition velocities. A comparison is made with momentum and heat turbulence analogies in relation to the independently measured and computed eddy flux values. The profile method is shown to give results which correspond well to those obtained from eddy correlation measurements. 4 references, 3 figures, 2 tables.

34344 **Threshold velocities for wind erosion on natural terrestrial arid surfaces (a summary).** Gillette, D.A. (Air Resources Labs./NOAA, Boulder, CO). pp 1047-1057 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

This review summarizes measurements of threshold friction velocity soils and relates those measurements, when possible, to laboratory and theoretical studies. Soils having loose particles on the surface and crusted soils are discussed. Finally, a few special mechanisms creating low threshold velocities are noted. 22 references, 5 figures.

34345 **Concept of resuspension rates applied to problems of fugitive dust emissions and wind erosion.** Gillette, D.A.; Cowherd, C. (Air Resources Labs./NOAA, Boulder, CO; Midwest Research Inst., Kansas City, MO). pp 1059-1072 of Precipitation scavenging, dry deposition, and resuspension. Volume 2. Proceedings. Pruppacher, H.R.; Semonin, R.G.; Slinn, W.G.N. New York, NY; Elsevier Science Publishing Co., Inc. (1983). (CONF-821136—Vol.2). TI84002448

From 4. international conference on precipitation scavenging, dry deposition and resuspension; Santa Monica, CA, USA (29 Nov 1982).

Specialized terminology has been developed to express the results of the investigations on particle resuspension. This paper reconciles some of the terminology by use of the resuspension concept. This is accomplished by developing a simple model of particle emission and then applying that model to the problem areas of fugitive dust emission and soil erosion. 8 references, 3 figures, 3 tables.

34346 **(DNA—8114-Rev.1) Radiological survey of Johnston Atoll. Dates of survey: April-August 1980. Revision 1.** Jaffe, R.J.; Tipton, W.J. (EG and G, Inc., Las Vegas, NV (USA). Remote Sensing Lab.). Apr 1982. Contract AC08-83NV10282. 122p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84012467.

Portions are illegible in microfiche products.

A radiological survey was conducted over all land areas of Johnston Atoll between April and August 1980. The survey was performed to locate and quantify residual surface transuranic (i.e., plutonium and americium) contamination resulting from three THOR missile aborts which occurred during that portion of the 1962 atmospheric nuclear testing series conducted by the United States from Johnston Island. A high purity germanium planar detector was utilized to enhance the detection sensitivity for the 59.5 keV gamma ray from ^{241}Am. Results are reported as equivalent surface concentration in units of nCi/m^2. Conversion factors are also included for several other assumed source distributions. Soil samples were obtained to determine plutonium-to-americium ratios. 7 references, 14 figures, 1 table.

34347 **The migration of ^{137}Cs and ^{90}Sr in multilayered soils: Results from batch, column, and fallout investigations.** Bachhuber, H.; Bunzl, K.; Gans, I.; Schimmack, W. (Gesellschaft fur Strahlen- und Umweltforschung mbH Munchen Institut fur Strahlenschutz, 8042 Neuherberg). *Nuclear Technology;* **59**: No. 2, 291-301(Nov 1982).

Rates of migration, retardation factors, and distribution coefficients of ^{137}Cs and ^{90}Sr were determined in the various horizons of three typical soils (podsol, ranker, and brown soil) by employing batch procedures, column experiments, and evaluating the measured distribution of these radionuclides in the field as a result of their deposition from worldwide fallout. To obtain the distribution coefficients of the radionuclides for each soil horizon from the column experiments, the radionuclide distribution in the undisturbed soil monoliths (1 m long, 30-cm diam) was determined from the outside by a scanner technique after various times. The columns were irrigated with rainwater using the same quantities as observed at the site of sampling. Tritium labeled rainwater was used to obtain the hydrodynamic properties of the soil columns (pore water velocity, dispersion coefficient, and volumetric moisture content). Assuming that the fallout investigations yielded the most realistic results, the observations suggest that column experiments performed in the laboratory under approximately natural conditions can be used to obtain fairly realistic information about the migration of ^{137}Cs and ^{90}Sr in these soils. The use of distribution coefficients from batch methods for the prediction of radionuclide movement, on the other hand, can be misleading, especially in soil horizons rich in organic matter.

34348 **(AD-A—137196/2) Installation restoration program. Phase I. Records search. Niagara Falls Air Force Reserve facility, New York.** (Engineering-Science, Inc., Atlanta, GA (USA)). Dec 1983. 184p. NTIS, PC A09/MF A01.

The Department of Defense (DOD) has developed a program to identify and evaluate past hazardous material disposal sites on DOD property, to control the migration of hazardous contaminants, and to control hazards to health or welfare that may result from these past disposal operations. This program is called the Installation Restoration Program (IRP). The IRP has four phases consisting of Phase I, Initial Assessment/Records Search; Phase II, Confirmation and Quantification; Phase III, Technology Base Development; and Phase IV, Operations/Remedial Measures. Niagara Falls AFRF is located in Niagara County, New York, approximately six miles northeast of the City of Niagara Falls and approximately fifteen miles north of Buffalo. The installation is currently comprised of 985 acres with a base population of approximately 2,560. The following areas were determined to have a sufficient potential to create environmental contamination and follow-on investigation is warranted: Bldg. 600 JP-4 Pipeline Leak; POL JP-4 Tank C; Landfill; BX MOGAS Tank Leak; NYANG Hazardous Waste Drum Storage; POL JP-4 Tank A; JP-4 Tank Truck Spill; Bldg. 202 Drum Storage Yard; Fire Training Facility No. 1, 2 and 3; Bldg. 850 Drum Storage Yard; and AFRES Hazardous Waste Drum Storage.

34349 **(AD-A—137373/7) Installation Restoration Program Phase I - Records Search, O'Hare Air Reserve Forces Facility, Illinois.** (Engineering-Science, Inc., Atlanta, GA (USA)). Dec 1983. 301p. NTIS, PC A14/MF A01.

The Department of Defense (DOD) has developed a program to identify and evaluate past hazardous material disposal sites on DOD property, to control the migration of hazardous contaminants, and to control hazards to health or welfare that may result from these past disposal operations. This program is called the Installation Restoration Program (IRP). The IRP has four phases of consisting of Phase I, Initial Assessment/Records Search; Phase II, Confirmation and Quantification; Phase III, Technology Base Development; and Phase IV, Operations/Remedial Actions. The O'Hare Air Reserve Forces Facility complex at O'Hare International Airport is located in the Chicago metropolitan area in northeastern Illinois. The airport is located northwest of downtown Chicago at the boundary of Cook County and DuPage County. All of the property around the airport and Air Force installation is urbanized and used for residential, commercial and/or industrial purposes. Nine areas were determined to have a sufficient potential for environmental contamination to warrant further investigation. They are as follows: Landfill No.1; JP-4 Tank, West POL Area; Fuel-Contaminated Soil; Defueling Pit Leak Site; Fire Protection Training Facility; Hazardous Waste Storage Area; Landfill No.2; Storm Drainage System; South Edge of Concrete Apron; Vehicle Maintenance Facility, Rear; and Low Level Radioactive Disposal Site.

34351 **(DOE/BP—201) White sturgeon research needs: workshop results.** Fickeisen, D.H.; Neitzel, D.A.; Dauble, D.D. (Battelle Pacific Northwest Labs., Richland, WA (USA)). Feb 1984. Contract AC06-76RL01830. 51p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84013593.

This report describes the results of a workshop to develop a research program for Columbia River Basin white surgeon. Invited participants developed a list of white sturgeon research needs and rationale for ranking the relative ir portance of the research needs. The highest ranked research needs were: define physical habitat requirements (substrate, flow, water quality) for early life history stages; identify genetic stocks; assess population status (e.g., distribution, densities, age-structure, year-class strength, age-specific mortality, disease, parasitism); assess reproductive status (e.g., spawning success, recruitment, age/size-dependent fecundity); develop new sampling techniques and gear for collecting early life history stages; assess gametogenesis (timing of maturation, frequency of spawning), including effects of environmental factors on gonadal development; and define physical habitat requirements (substrate, flow, water quality) for spawning. 2 references, 2 figures, 5 tables.

Portions are illegible in microfiche products.

For a number of environmental studies it is necessary to know the water flow rates and variations in the SRP streams. The objective of this memorandum is to pull together and present a number of statistical analyses for Upper Three Runs Creek, Four Mile Creek and Lower Three Runs Creek. The data basis covers 8 USGS stream gage stations for the years 1972 - 1981. The average flow rates over a ten-year period along Upper Three Runs Creek were determined to be 114 cfs at US Route 278, 193 cfs at Road C, and 265 cfs at Road A. Along Four Mile Creek the average flow rates over a ten-year period doubled from 9 cfs prior to F-Area discharges to 18 cfs prior to cooling water discharges from C-Area Reactor. Finally, average flow rates along Lower Three Runs Creek over a ten-year period tripled from 32 cfs at Par Pond to 96 cfs near Snelling, South Carolina. 1 figure, 9 tables.

From Symposium on condenser macrofouling control technologies; Hyannis, MA, USA (1 Jun 1983).

This report is divided into five parts corresponding to the five symposium sessions in which formal presentations and discussions were held. Session 1 discussed the nature of macrofouling problems in general and their impact on power plant operation. Session 2 discussed chemical control technologies, basically chlorine minimization, continuous low-level chlorination, cost of chlorination for the utility industry, and the effects of organotins on marine organisms. Session 3 discussed international experiences (from the United States, France, Germany and the Netherlands) with mechanical controls such as intake screening, in-line filters, and thermal backwash. Alternate control technologies, including antifouling coatings and sheetings, nontoxic sheetings, acoustical, velocity, and Cathelco, were discussed in Session 4. Session 5 consisted of information exchange workshops on utility experience with mechanical and chemical controls. The workshop's notes are presented in this report. Papers presented at the symposium are included. Each paper has been indexed separately for inclusion in the Energy Data Base.

34355 **(KFK—3611) Investigations on the dissociation of high molecular organic compounds in natural water.** Ackermann, R. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Portions are illegible in microfiche products.

Macromolecular humic acid from water of the Hohlohsee in the Northern Black Forest and of the river Rhine were isolated. The chemical structure and the ionization of these humic acids and of lignosulfonic acid were investigated. Chemical procedures used for the blocking of the function groups and IR-spectra showed that hydroxy- and carboxy-groups are present in humic acid and sulfonic- and phenolic-groups in lignosulfonic acid. SEM micrographs identified fibre-structures (diameter: 0.1 μm, lengths: 100 μm) in humic acid. The determination of dissociation from potentiometric titration curves was done using a nonlinear regression program. Humic and lignosulfonic acid can be described as a multibasic acid (Hsub(n)X). On the other side the ionization can also be described as a model of isolated monobasic acid groups. A mixture of organic acids with well known dissociation constants was used to simulate a

titration surve of humic acide. The dependence of the dissociation constants of humic acid on temperature and ionic strength is similar to organic acids as citric acid.

34356 **(LBL—15701) Study of contaminant plume control in fractured-porous media.** Tsang, Chin Fu; Mangold, D.C.; Doughty, C.; Javandel, I. (Lawrence Berkeley Lab., CA (USA)). May 1983. Contract AC03-76SF00098. 25p. (CONF-830561—4). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013392.

From 3. national symposium on aquifer restoration and ground water monitoring; Columbus, OH, USA (25 May 1983).

Portions are illegible in microfiche products.

Mathematical modeling studies have been made on the control, containment, and removal of contaminant plumes in water-saturated, fractured, porous media. Two approaches have been investigated from a hydrological point of view. The first considers one or more low-permeability barriers to contain the plume and to prevent it from being carried away by natural, regional groundwater flow. The second studies various plume extraction schemes using a pumping well. Heterogeneous and fractured aquifers are considered as well as a contaminant plume that is heavier than the groundwater. General discussions on the effectiveness and limits of the various plume control procedures are discussed. 4 references, 13 figures, 3 tables.

34357 **(NUREG/CR—3476) Chemicals in effluent waters from nuclear power stations: the distribution, fate, and effects of copper.** Harrison, F.L. (Lawrence Livermore National Lab., CA (USA)). Apr 1984. Contract W-7405-ENG-48. 61p. (UCRL—53486). NTIS, PC A04/MF A01; 1 - GPO; GPO Dep. Order Number DE84013533.

Portions are illegible in microfiche products.

This report provides a summary of research performed to determine the physicochemical forms and fate of copper in effluents from power stations adjacent to aquatic ecosystems with water that differs in salinity, pH, and concentrations of organic and inorganic constituents. In addition, research performed to evaluate responses of selected ecologically and economically important marine and freshwater organisms to increased concentrations of soluble copper is reviewed. The same parameters were measured and the same analytical techniques were used throughout the study. Copper concentration and speciation, in influent and effluent waters collected from eight power stations using copper alloys in their cooling systems, showed that the quantities of copper associated with particles, colloids, and organic and inorganic ligands differed with the site, season, and mode of operation of the station. Under normal operating conditions, the differences between influent and effluent waters were generally small, and most of the copper was in bound (complexed) species except when low pH water was circulated. However, copper was high in concentration and present in labile species during start-up of water circulation through some cooling systems and during changeover from open-cycle to closed-cycle operation. The toxic response to copper differed with the species and life stage of the organism and with the chemical form of copper in the water. Our primary emphasis was on acute effects and most of the testing was performed under controlled laboratory conditions. However, sublethal effects of copper on a population of bluegills living in a power station cooling lake containing water of low pH and on a population exposed to increased soluble copper in the laboratory were also assessed. 105 references, 15 figures, 11 tables.

34358 **(PB—84-172204) Contamination of ground and surface waters by uranium mining and milling. Volume 3. Experimental studies and analytical procedures. Open file report 25 Jul 79-14 Sep 81.** Runnells, D.D.; Gerlitz, C.N.; Davis, A.; Lindberg, R.D.; Meglen, R. (Colorado Univ., Boulder (USA)). 15 Sep 1983. 230p. NTIS, PC A11/MF A01.

Supplement to PB82-251992, and PB83-170688.

The objective of this study was to measure the degree of retardation of the important chemical species in fluid from a uranium tailings pile as the fluid passed through cores taken from rock underlying the tailings pile. The measurements indicated that pH was the dominant control on the behavior of these species, and that the pH was affected primarily by the calcite cement in the rocks. The most appropriate species for monitoring were sulfate, chloride, and selenium. An appendix provides a description of the advantages and disadvantages of the various analytical procedures used on these high-ionic strength solutions.

Portions are illegible in microfiche products.

This report covers 302 articles published between 1949 and 1980 on the contamination of freshwater and marine aquatic plants by radioactive strontium. For the marine and continental environments, the results of laboratory experiments on the dynamics of radiostrontium buildup and localization, concentration factors, elimination processes, the effects of biological factors and of the environment, the activity levels and concentration factors measured in areas directly and indirectly affected by waste discharges, discrimination factors and the role of plants as radiation indicators, are examined. The radioactive strontium uptake potentials are higher for freshwater plants -especially mosses and characeae- than for marine plants. In zones not directly affected by waste discharges, the maximum activity measured is 82 pCi/kg wet weight, compared with 750 pCi/kg for freshwater plants. The peak values were observed in 1964-1965. In zones directly affected by waste discharges, the activity levels range from 15 to 1700 pCi of ^{90}Sr per kilogram of wet weight in the marine environment, and from 20 to 207000 pCi/kg in fresh water. This work underlines the need for greater accuracy in allowing for the ecological characteristics of each site when assessing the impact of nuclear facilities, and for thoroughly correlating field observations with laboratory experiments in order to obtain a prospective view of the potentials for radioactive strontium uptake by plants according to the activity levels present in the liquid effluents.

34360 **(DPST—70-435) Radioactivity in the environs of Steel Creek.** Marter, W.L. (Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.). 20 Aug 1970. Contract AC09-76SR00001. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013150.

Portions are illegible in microfiche products.

All reactor cooling water discharges to Steel Creek ceased when L Area reactor was shut down in February, 1968. Since that time, only L and P Area disassembly basin purges, undiluted by cooling water, have been discharged to the creek. This has resulted in higher concentrations of radioactive materials (primarily ^{134}Cs ^{137}Cs from a few failed experimental fuel elements) in the stream water, even though the quantity of radioactive materials released to the creek has been decreasing since 1968. With reduced water flow, portions of the old creek bed are now exposed and support contaminated vegetative growth that is available for forage by deer. The creek water, now thermally cool, is an attractive habitat for fish and ducks. The maximum concentrations of ^{137}Cs detected in the flesh of deer, duck, and fish living in or near the creek are 204 pCi/g, 924 pCi/g, and 3500 pCi/g, respectively. 8 tables.

34361 **(NUREG/CR—2424-Vol.1) Mathematical simulation of sediment and radionuclide transport in coastal waters. Volume 1. Testing of the sediment/radionuclide transport model, FETRA.** Onishi, Y.; Thompson, F.L. (Pacific Northwest Lab., Richland, WA (USA)). May 1984. Contract AC06-76RL01830. 112p. (PNL—5088-1-Vol.1). NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84013535.

Portions are illegible in microfiche products.

The finite element model, FETRA, is an unsteady, two-dimensional (longitudinal and lateral) model for simulating the transport of sediment and contaminants (e.g., radionuclides, heavy metals, pesticides) in coastal waters. FETRA includes major transport and fate mechanisms explicitly, including sediment/contaminant interactions. The purpose of the study was to test FETRA

model with available field data and was not intended to assess the potential impact of the Windscale Nuclear Fuel Reprocessing Plant on the Irish Sea. The model was tested by applying it to the Irish Sea to simulate wind-generated waves and the migration of sediment and ^{137}Cs. The model predicted distributions of suspended sand; suspended silt; suspended clay; ^{137}Cs sorbed by each of the three sizes of suspended sediments; dissolved ^{137}Cs; bed sediment size fractions; and ^{137}Cs sorbed by bed sand, bed silt, and bed clay over a two-month period in 1974. FETRA generally predicted reasonable migration patterns for the sediments and ^{137}Cs. The prediction of ^{137}Cs distributions can be further improved by using a finer grid near the radionuclide release point. The study results indicate that FETRA can simulate the complex phenomena involved in sediment and contaminant transport in coastal waters. However, we recommend that FETRA be tested further at other field sites where the necessary field data are available to validate the model. 47 references, 64 figures, 4 tables.

34362 **(NUREG/CR—2424-Vol.2) Mathematical simulation of sediment and radionuclide transport in coastal waters. Volume 2. User's manual and computer program listing for FETRA.** Onishi, Y; Thompson, F.L. (Pacific Northwest Lab., Richland, WA (USA)). May 1984. Contract AC06-76RL01830. 90p. (PNL—5088-1-Vol.2). NTIS, PC A05/MF A01; 1 - GPO $4.50; GPO Dep. Order Number DE84013759.

Portions are illegible in microfiche products.

FETRA is a finite element model for simulating the sediment and contaminant transport to surface water. The model was applied to a test site in the Irish Sea and modified to account for wave mechanisms that effect sediment suspension. The model consists of three submodels that are coupled to simulate sediment/contaminant interactions. The submodels simulate 1) sediment transport, 2) dissolved contaminant transport, and 3) particulate contaminant (those contaminants absorbed by sediment) transport. Volume 1 of this report discusses the application of FETRA to the Irish Sea study area to simulate the effect of wind-generated surface waves on the transport of sediment, dissolved ^{137}Cs, and particulate ^{137}Cs. Volume 2 presents a very brief users guide for FETRA in Chapter 2 and a computer program listing of FETRA in Appendix A.

34363 **(ORNL/TM—8682) Investigation of the concentration, distribution, and inventory of radionuclides in the sediment of Process Waste System Basin 3524.** Braunstein, H.M.; Alexander, W.A.; Hubbard, H.M.; Oakes, T.W.; Ohnesorge, W.F. (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 44p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84013605.

Process Waste System Basin 3524 is used as a collection basin for process liquid waste from facilities at the Oak Ridge National Laboratory. This investigation was conducted to determine the radionuclide concentrations, distributions, and inventory of the sediments in this basin in preparation for future decontamination and decommissioning activities. Twenty-four sediment cores were extracted from the basin and 80 aliquots were analyzed for their radionuclide concentrations. The sediment is estimated to contain a total of 5.5×10^{12} Bq (150 Ci) of activity, 87% of which is contributed by two radionuclides, ^{137}Cs (68%) and ^{90}Sr (19%). The radionuclide content is estimated as follows: ^{137}Cs, 3.77×10^{12} Bq (102 Ci); ^{90}Sr, 1.07×10^{12} Bq (29 Ci); gross alpha, 4.06×10^{11} Bq (11 Ci); ^{241}Am, 1.70×10^{11} Bq (4.6 Ci); ^{60}Co, 8.32×10^{10} Bq (2.2 Ci); and ^{154}Eu, 3.35×10^{10} Bq (0.9 Ci). 9 references, 8 figures, 7 tables.

34364 **(PB—84-145531) Sedimentation studies relevant to low-level radioactive effluent dispersal in the Irish Sea. Part 1. Radionuclides in marine sediments.** Smith, T.J.; Parker, W.R.; Kirby, R. (Institute of Oceanographic Sciences, Godalming (UK)). 1980. 91p. NTIS, PC E06/MF E06.

Certain elements, particularly plutonium and americium, small quantities of which are routinely discharged into the marine environment from nuclear fuel reprocessing plants rapidly became associated with the sea bed sediments. This report examines the discharge of various radionuclides into the Irish Sea with particular reference to the interaction between the radionuclides and the sediments. A review of the relevant literature has revealed a variety of possible interaction mechanisms which are sensitive to many environmental parameters. Measurements of radionuclide distributions have previously been used to infer rates of sedimentary processes. The assumptions underlying these interpretations are considered and it is shown that a large amount of information on the sedimentological regime of a given area is required before confident interpretations of radionuclide distributions can be made. This background material is only partially available for the Irish Sea.

34365 **(SCPRI-RT—1-1983) 1. Quarterly progress report 1983.** (Service Central de Protection contre les Rayonnements Ionisants, 78 - Le Vesinet (France)). 1983. 34p. (In French). NTIS (US Sales Only), PC A03. Order Number DE84751577.

Paper copy only, copy does not permit microfiche production.

This report of the SCPRI interpretes the principal results of the surveillance of radioactivity in the environment: atmospheric dusts, rainwater, surface water, underground water, irrigation water, drinking water, food chain, sea water around nuclear plant sites and other sites. The activities of various radioisotopes are presented in tables (^{7}Be, ^{58}Co, ^{60}Co, ^{134}Cs, ^{137}Cs, ^{90}Sr, ^{106}Ru, K, ^{54}Mn, U and T). A bibliographic selection is also presented.

The activities of various radioisotopes are presented in tables (^{7}Be, ^{58}Co, ^{60}Co, ^{134}Cs, ^{137}Cs, ^{90}Sr, ^{106}Ru, K, ^{54}Mn, U and T). A bibliographic selection is also presented.

34367 **(SCPRI-RT—4-1982) 4. Quarterly progress report, 1982.** (Service Central de Protection contre les Rayonnements Ionisants, 78 - Le Vesinet (France)). 1982. 34p. (In French). NTIS (US Sales Only), PC A03. Order Number DE84751566.

Paper copy only, copy does not permit microfiche production.

This quarterly report of the SCPRI interpretes the principal results gained by surveillance of radioactivity in the environment: atmospheric dusts, rainwater, surface water, underground water, irrigation water, drinking water, food chain, sea water around nuclear plant sites and other sites. The activities of various radioisotopes are presented in tables (^{7}Be, ^{58}Co, ^{60}Co, ^{134}Cs, ^{137}Cs, ^{125}Sb, ^{90}Sr, ^{106}Ru, K, ^{54}Mn, U and T). A bibliographic selection is also presented.

34368 **Measurement of radionuclide diffusion in ocean floor sediment and clay.** Schreiner, F.; Fried, S.; Friedman, A.M. (Argonne National Laboratory Chemistry Division, 9700 South Cass Avenue, Argonne, Illinois 60439). *Nuclear Technology;* **59**: No. 3, 429-438(Dec 1982).

The mobility of cationic neptunium, plutonium, americium, and sodium, and of the anionic species pertechnetate, TcO^{-}_{4}, has been determined in samples of various sediments from the ocean floor, and in bentonite and hectorite clay. The experiments were conducted at ambient temperatures (298 + or - 5 K), and the periods of observation ranged from several hours to ten months. All tests were carried out under static conditions permitting only molecular diffusion of the ionic species. Results indicate very low mobilities for the transuranium elements plutonium and americium, for which the upper limit of the effective diffusion coefficient is $<10^{-10}$ $cm^{2}xs^{-1}$. Sodium, neptunium, and TcO^{-}_{4} were found to have higher mobilities characterized by values for the effective diffusion coefficient of 3×10^{-6}, 1.8×10^{-6}, and 3.2×10^{-6} $cm^{2}xs^{-1}$, respectively. Some implications of the measured results for the assessment of barrier effectiveness are discussed.

34369 **The influence of speciation on the geospheric migration of radionuclides.** Hadermann. (Swiss Federal Institute for Reactor Research CH-5303 Wurenlingen). *Nuclear Technology;* **56**: No. 1, 102-105(Jan 1982).

Radionuclides in groundwater can exist as different species whose retention factors may be strongly different. For one-dimensional transport in a porous medium, we give conditions for the existence of equilibrium between two species. In most cases, these conditions are probably well fulfilled when time scales of geosphere transport are considered. In these cases, the total concentration migrates independently of a particular speciation with an effective retention factor. Such an effective retention factor can also be defined if more than two species in liquid phase are in equilibrium. As a consequence, existing radionuclide transport models can be readily used by properly redefining the retention factor.

34370 **(DPST—84-445) Interim report of the Savannah River macroinvertebrate and periphyton studies.** Specht, W.L.; Kania, H.J.; Painter, W.B. (Environmental and Chemical Sciences, Inc., Aiken, SC (USA)). Sep 1983. Contract AC09-76SR00001. 69p. (ECS-SR—6). NTIS, PC A04/MF A01; GPO Dep. Order Number DE84013148.

A total of 231,421 macroinvertebrates were collected from Hester Dendy multiplate samplers placed at five locations in the Savannah River and three tributary streams (Upper Three Runs Creek, Four Mile Creek and Steel Creek) between September 1982 and March 1983. Forty-nine taxonomic groups, including 41 insect families and 8 non-insect taxa were collected from the samplers. The creeks contained significantly fewer invertebrate taxa and lower densities of macroinvertebrates than did the river. More invertebrate taxa, but lower densities of organisms were collected from bottom Hester Dendy samplers than from those placed near the surface. No significant differences were found between the macroinvertebrate communities of samplers placed near the South Carolina or Georgia banks of the river. No substantive conclusions can be drawn from the first six months of periphyton data from sampling locations in the Savannah River. However, data from the creeks indicate that thermal discharges into Four Mile Creek stimulate periphyton production during the winter months. 17 references, 8 figures, 3 tables.

Limited cross-sections of roadways and other workings in underground mines cause higher noise levels of machines in underground application compared to surface application. The measuring of noise levels in underground mines is rather complicated: protective regulations against fire-damp explosion have to be obeyed, environmental conditions like air humidity, dust, etc. are a hinderance to measuring. A planned law of the government will enforce the marking of machines with their sound power level. The underground noise level can be calculated if the surface noise level is known. In this research projekt factors have been defined on the basis of comparative underground and surface measurements carried out with a noise source - regarding underground special conditions and noise propagation. Surface and underground control measurements at mining machines proved the availability of these factors for the prediction of underground sound pressure levels.

Glutamine synthetase (GS) from E. coli consists of 12 identical 50 kD subunits arranged in a double hexagon with one six-fold axis of rotational symmetry and six two-fold axes. The divalent cations Mn^{2+} or Co^{2+} induce the formation of linear face-to-face aggregates of individual GS molecules, resulting in the formation of long linear arrays, GS. We have used an undecagold (11-Au) cluster ion, $((p\text{-}H_2NCH_2C_6H_4)_3\text{-}P)_7Au_{11}^{3+}$, which induces similar aggregation of native GS, resulting in a wide distribution of ordered linear arrays of GS/sub n/. These aggregates show the highly electron dense labels located exclusively at the face-to-face interaction surface. Specimens of the GS/sub n/ aggregates have been studied with the Brookhaven STEM and molecular weight values have been determined with the Brookhaven STEM mass measurement computer system. 7 references, 1 figure, 2 tables.

From 42. annual Electron Microscopy Society of America meeting; Detroit, MI, USA (13 Aug 1984).

Portions are illegible in microfiche products.

Mass measurement by scanning transmission electron microscopy (STEM) has been established as a sensitive and uniquely powerful technique for structure studies. The STEM excels for isolated particles above 10^6 Daltons, for interacting systems and for filaments or sheets. Domainal analysis adds even greater power, especially when the particle of interest can be aligned to permit image averaging. In that case the detectable change in mass can be made arbitrarily small by averaging enough particles. Mass can be subtracted by proteolysis or added by binding substrate, heavy atoms or other reagents. An example of this is mapping the ATP binding site of glutamine synthetase by comparison of labeled and unlabeled molecules. 17 references, 1 figure.

34378 (BNL—34679) Protein structure is only as good as the data. Schoenborn, B.P. (Brookhaven National Lab., Upton, NY (USA)). 01 Jun 1984. Contract AC02-76CH00016. 19p. (CONF-8206240—8). NTIS, PC A02; 1; GPO Dep. Order Number DE84012904.

From Brookhaven symposium biology 32; Upton, NY, USA (1 Jun 1982).

Paper copy only, copy does not permit microfiche production.

Careful selection of the best diffraction geometry matched to the sample, with use of high resolution two-dimensional detectors and a mask integration procedure will allow the collection of statistically accurate data for many proteins and crystals with a sample size of at least 1 mm^3. Accurate data and improved refinement techniques will allow the determination of all atoms including hydrogens, hydrogen-deuterium exchange, water of hydration, and solvent water densities. The developments in the above described neutron techniques have been gradually used in the analysis of myoglobins, gramicidin, trypsin, and crambin. 16 references, 11 figures, 2 tables.

34379 (BNL—34680) Neutron structure of the hydrophobic plant protein crambin. Teeter, M.M.; Kossiakoff, A.A. (Boston Univ., MA (USA). From Brookhaven symposium biology 32; Upton, NY, USA (1 Jun 1982).

Microfiche only, copy does not permit paper copy reproduction.

Crystals of the small hydrophobic protein crambin have been shown to diffract to a resolution of at least 0.88 A. This means that crambin presents a rare opportunity to study a protein structure at virtually atomic resolution. The high resolution of the diffraction pattern coupled with the assets of neutron diffraction present the distinct possibility that crambin's analysis may surpass that of any other protein system in degree and accuracy of detail. The neutron crambin structure is currently being refined at 1.50 A (44.9% of the data to 1.2 A has also been included). It is expected that a nominal resolution of 1.0 A can be achieved. 15 references, 6 figures, 2 tables.

34380 (DOE/SF/00034—1) Time-resolved laser studies on the energy transfer and the configurational changes in bacteriorhodopsin. Progress report, December 1, 1981-November 30, 1984. El-Sayed, M.A. (California Univ., Los Angeles (USA). Dept. of Chemistry and Biochemistry). 1984. Contract AT03-76ER70278. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013466.

Portions are illegible in microfiche products.

Using time-resolved photoselection techniques, it has been determined that the daughter transition moment following photon absorption is found to be parallel to that of the absorbing parent. This suggests rapid photochemistry and thus eliminates the possibility of energy migration. In bacteriorhodopsin, retinal changes its configuration on the picosecond time scale. This enabled authors to develop a new technique to determine the resonance Raman spectrum of picosecond transients. Tryptophan fluorescence intensity was followed as bacteriorhodopsin passes through its different intermediates. No change in fluorescence was observed during the rapid initial steps ($bR_{560} \rightarrow K_{610}$). However, a decrease in the fluorescence intensity took place in the $K_{610} \rightarrow L_{550}$ step and a further decrease took place in the $L_{550} \rightarrow M_{412}$. 13 references.

34381 (LA-UR—84-430, pp 2-31) Solitons in biology. Lomdahl, P.S.; Layne, S.P.; Bigio, I.J. 1984. NTIS, PC A05/MF A01. Order Number TI84011404.

In Los Alamos Science, Number 10, Spring 1984.

In 1973 scientists gathered at the New York Academy of Sciences to discuss an unanswered question in bioenergetics: how is chemical energy transduced and transported in biological systems. In the same year a Soviet solid-state physicist proposed a dynamic answer that was totally novel to the world of biology. Exploiting the regularity in the structure of α-helical proteins, he showed that simplified models of these proteins could self-focus, or trap, energy in stable, pulse-like waves known as solitons. If self-focusing is indeed a biological reality, it may account for many aspects of protein behavior, including the efficient transport of energy. This possibility is being studied at Los Alamos through analytical, numerical, and experimental techniques. 13 references, 17 figures.

34382 (LBL—17768) C_4 photosynthesis in Euphorbia degeneri and E. remyi: a comparison of photosynthetic carbon metabolism in leaves, callus cultures and regenerated plants. Ruzin, S.E. (Lawrence Berkeley Lab., CA (USA)). Apr 1984. Contract AC03-76SF00098. 151p. NTIS, PC A08/MF A01; GPO Dep. Order Number DE84013238.

Thesis.

Based on analysis of $^{14}CO_2$ fixation kinetics and assays of enzymes related to C_4 metabolism (NAD-ME, NADP-ME, NAD-MDH, NADP-MDH, AST, ALT), leaves and regenerated plants of Euphorbia degeneri exhibit a modified NADP-ME-type photosynthesis. Apparently, both aspartate and malate are used for transport of CO_2 to bundle sheath cells. Callus grown on either non-shoot-forming or shoot-forming media fixes CO_2 into RPP-cycle intermediates and sucrose, as well as malate and aspartate. $^{14}CO_2$ pulse/chase kinetics show no significant loss of label from C_4 acids throughout a one minute chase. Analysis of PEPCase revealed the presence of 2 isoenzymes in both leaf and regenerated plant tissues (K/sub m/ [PEP] = 0.080 and 0.550) but only one isoenzyme in callus (K/sub m/ = 0.100). It appears that C_4 photosynthesis does not occur in callus derived from this C_4 dicot but is regenerated concomitant with shoot regeneration, and β-carboxylation of PEP in callus, mediated by the low K/sub m/ isoenzyme of PEPCase, produces C_4 acids that are not involved in the CO_2 shuttle mechanism characteristic of C_4 photosynthesis. 161 references, 19 figures, 12 tables.

34383 (PB—84-162239) Acid rain and forest decline in West Germany. Binns, W.O.; Redfern, D.B. (Forestry Commission, Edinburgh (UK)). 1983. 17p. NTIS, PC E03/MF E03.

The report discusses the concern being shown throughout Europe concerning the possible effects of acid rain and metal pollution on aquatic and terrestrial ecosystems. In particular, studies are examined in which soil changes in Germany due to acid rain have reportedly caused dieback of several tree species. Acid precipitation was thought to increase soil acidity to the extent that root damage increases allowing bacteria to enter and cause 'wetwood' which leads to crown desiccation. The findings are detailed of visits to a number of forest areas in Germany to evaluate the dieback of spruce and fir, and to judge its relevance to Great Britain.

34384 (INIS-mf—8737) ^{3}H-thymidine autoradiographic study of cell proliferation and the influence of isoproterenol and kallikrein in various cell populations of the gastrointestinal tract in animal experiments. Albrecht, S. (Hamburg Univ. (Germany, F.R.). Fachbereich Medizin). 1 Dec 1981. 124p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780345.

Diss. (Dr.med.).

Morphological studies were carried out with the aim of studying cell proliferation in various tissues (stable and epithelial tissues) of the gastrointestinal tract. The cells were studied by ^{3}H thymidine autoradiography in the normal age cycle and under the influence of kallikrein or isoproterenol. Epithelial cells and smooth muscle cells of the forestomach, stomach, small intestine and colon were investigated and, in the case of the stomach, also connective-tissue cells of the mucotic stroma. Counts across the total epithelial thickness yielded similar results for the esophagus and the forestomach. A count of 1000 cells per animal was found to yield representative information on a defined type of cell. Kallikrein was not found to have a constant mitosis-promoting effect. Isoproterenol caused the labelling index to increase or to decrease; in higher concentrations, it increased the proliferation rate in all cell types. In male animals, the labelling indices of connective-tissue cells of the gastric mucosa were significantly higher than in female animals. (orig./MG).

34385 (LA-UR—84-1688) Model for antibody mediated cell aggregation: rosette formation. Perelson, A.S. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 8p. (CONF-840870—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012446.

From Symposium on mathematics and computers in biomedical applications; Bethesda, MD, USA (6 Aug 1984).

Portions are illegible in microfiche products.

Models are developed for the formation of cellular aggregates, called rosettes, composed of a central lymphocyte and surrounding antibody coated red blood cells. Kinetic and equilibrium models are considered from both the deterministic and stochastic viewpoints. Analytic solutions are given to the system of nonlinear ordinary differential equations that describe the formation of different size rosettes in the cases of both reversible and irreversible red cell adhesion. A comparison of the stochastic model with experimental data indicates that there may exist heterogeneity within the lymphocyte population with regard to the number of chemical bonds required to bind a red cell to a lymphocyte. 24 references, 2 figures.

34386 Water relations of cacti during desiccation: distribution of water in tissues. Barcikowski, W.; Nobel, P.S. (Univ. of California, Los Angeles). *Botanical Gazette (Chicago);* **145**: No. 1, 110-115(Mar 1984). Contract AC03-76SF00012.

Three species of cacti survived an average stem water loss of 81%. Fractional water loss was greater from water-storage tissue than from the chlorenchyma, as documented at the cellular level by determining changes in cell volume and at the tissue level by determining relative water content of chlorenchyma and storage tissues. For Carnegiea gigantea and Ferocactus acanthodes, this differential loss of water resulted from a decrease in the moles of solute per cell for storage tissue; hence, less water was retained at a given osmotic pressure than for the chlorenchyma. Opuntia basilaris lost less water from the chlorenchyma during drought because of a greater initial osmotic pressure in the chlorenchyma than in the storage tissue. Greater retention of water in the chlorenchyma would result in less disruption of photosynthetic activity in these cacti during drought.

34387 (INIS-mf—8725) Measurement of DNA strand break repair and survival rate after X-irradiation of synchronized CHO cells. Graubmann, S. (Hamburg Univ. (Germany, F.R.). Fachbereich Physik). 22 Sep 1981. 88p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780341.

The author investigated the induction and repair of DNA strand breaks and the survival rate of CHO cells after X-radiation at different stages of the cell cycle. His particular concern was the interdependence between cell inactivation and double strand break repair. (orig./AJ).

34388 Directed genetic modification of potentially useful microorganisms. Lidstrom, M.E. (Univ. of Washington, Seattle). *Biotechnology and Bioengineering Symposium;* No. 13, 239-244(1983). (CONF-830567—). Contract AM06-76RL02225.

From 5. symposium on biotechnology for fuels and chemicals; Gatlinburg, TN, USA (10 May 1983).

With the development of plasmid technology and recombinant DNA techniques, it is now possible to specifically modify strain characteristics. With these capabilities it is possible to move specific and recoverable DNA fragments from one organism to another and to obtain large quantities of specific DNA fragments. In addition, it is possible to study and alter DNA sequences in vitro using sophisticated approaches that have never before been possible. The potential these techniques hold for commercial applications is impressive and has, in part, fueled the current interest in biotechnology. Unfortunately, these techniques have not been developed in many of the most commercially attractive microorganisms. Much effort is now needed to apply recombinant DNA technology to commercially important strains. This paper describes the genetic strategies one laboratory has used to study one group of commercially important microorganisms, the methylotrophic bacteria. The approach serves to illustrate how recombinant DNA tech-

niques can be applied to strains with no prior genetic capabilities. Some of the applications of this technology are summarized. 19 references, 2 figures, 2 tables.

34389 **Apomictic and sexual pearl millet X Pennisetum squamulatum hybrids.** Dujardin, M.; Hanna, W.W. (USDA, Tifton, GA). *Journal of Heredity;* 74: 277-279(1983). Contract AS09-76EV00637.

Pennisetum squamulatum Fresen, an apomictic East African grass (2n = 54) was crossed to tetraploid (2n = 28) sexual pearl millet, P. americanum L. Leeke to study the potential for germplasm exchange. Twenty interspecific hybrids (2n = 41) with 14 pearl millet and 27 P. squamulatum chromosomes were obtained. All resembled P. squamulatum in perennial growth habit and inflorescence characteristics and resembled pearl millet in leafiness and pencillate anther tips. Seventeen of these hybrids were more vigorous than either parent. The most common chromosome association at metaphase I was 18 bivalents plus 5 univalents. At anaphase I and telophase I laggards, fragments, and unequal chromosome distribution were observed. Fifteen of 17 interspecific hybrids reproduced by facultative apomixis, one was sexual and one was an obligate apomict. Ovules with aposporous embryo sacs ranged from 1 to 93% in facultative apomictic plants. Morphological characteristics and chromosome numbers of open-pollinated progeny from the apomictic interspecific hybrid were identical to those of the seed parent indicating obligate apomictic reproduction. Both sexual and apomictic hybrids were partially male fertile with pollen stainability ranging from 29 percent to 79 percent and seed-set ranging from 1 to 60 seed per inflorescence under open-pollination. Development of fertile apomictic pearl millet-P. squamulatum interspecific hybrids appears to be a very useful tool for the transfer of genes for apomixis from the wild species to pearl millet.

34390 **Genetic control of tRNA methylation in inbred mice.** Dizik, M.; Wainfan, E. (New York Blood Center, New York). pp 399-403 of Biochemistry of S-adenosylmethionine and related compounds. Usdin, E.; Borchardt, R.T.; Creveling, C.R. (eds.). New York, NY; MacMillan Press (1982).

The tRNA methyltransferases from widely divergent species differ in their activity levels and base specificities. However, very little is known about intra-species differences in activities of these enzymes except for those found in bacterial mutants which lack certain base-specific tRNA methylases and in rat liver tRNA methylases which exhibit sex specific activity differences. In order to learn whether there are genetically determined intra-species differences in mammalian tRNA methyltransferases, the authors are investigating various characteristics of these enzymes in inbred strains of mice. Since the tRNA methyltransferases are known to have altered activities in tumors and during chemically induced carcinogenesis it seemed of interest to compare the enzymes from inbred mice with either high (AKR/J) or low (C57BL.6J) incidence of spontaneous leukemia.

34391 **(INIS-mf—8356) Comparative digoxin determination in serum by means of a radioimmuno- and an enzyme immunoassay. Clinical importance, comparison of methods examining sensitivity, accurateness and precision.** Reinhard, M. (Marburg Univ. (Germany, F.R.). Fachbereich Humanmedizin). 26 Jun 1981. 54p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780307.

Two immunologic measuring methods for the quantitative digoxin determination in serum were compared. One method bases on the principle of radioisotope dilution, the second one on the principle of enzyme inhibition. The radioimmunoassay served as reference method. The limit of detection for RIA is 0.23 ng/ml, for EIA 0.40 ng/ml. For both methods the measuring range extends up to approx. 5.5 ng/ml. The degree of precision in series is 8.2% for RIA, 10.8% for EIA. Day-to-day precision is 4.4% for RIA, 15.2% for EIA. On comparison, the 59 serum samples of patients who received digoxin did not show any systematic difference. The results obtained can be transformed by means of the equations Csub(EIA) = 0.041 ng/ml + 0.936 Csub(RIA). In pathologic sera, however, there are significant differences disfavoring EIA, because due to high color concentrations or turbidities these sera do not permit any or any exact extinction measurements. The enzyme immunoassay should not be used with such sera. With regard to practicability the EIA corresponds more or less to RIA. The EIA can essentially be economized by using semi-microcuvettes and applying only the half of the recommended enzyme and antibody volume. (orig.).

34392 **(PB—84-163765) Intravenous elimination and percutaneous absorption of topically applied Methotrexate-^{14}C (NSC 740) in Yorkshire White pigs. Report for Oct-Dec 78.** Skierkowski, P.; Murphy, J.C.; Wirth, P.W.; Miller, T.J.; Folk, R.M. (Battelle Toxicology Program Office, Vienna, VA (USA)). 5 Dec 1978. 34p. NTIS, PC A03/MF A01.

Also pub. as Mississippi Univ., University. Research Inst. of Pharmaceutical Sciences Rept. No. RIPS-CIPA-740-L-78.

The distribution and elimination of intravenously administered Methotre-^{14}C (NSC 740) was studied in female, weaning Yorkshire White pigs. After 7 days an average of 33.66% was excreted via the feces and 15.22% via the urine. The fecal elimination percentage was then used to determine the amount of Methotrexate-^{14}C absorbed after topical application. Among the whole organs sampled following intravenous administration, liver, kidney and ovaries had the highest specific activities of radioactivity. Intestine, bone, skin and fat had the highest specific activity levels of the random tissues sampled. An average of 59.99% of a topically applied dose of Methotrexate-^{14}C was absorbed at the end of 7 days. Significant levels of radioactivity were also detected in skin surrounding the site of application.

34393 **(PB—84-163773) Intravenous elimination and percutaneous absorption of topically applied CCNU-^{14}C (NSC-79037) in Yorkshire White pigs. Final report May-Oct 79.** Skierkowski, P.; Murphy, J.C.; Wirth, P.W.; Miller, T.J.; Frick, M.S. (Battelle Toxicology Program Office, Vienna, VA (USA)). 1 Oct 1979. 30p. NTIS, PC A03/MF A01.

Also pub. as Mississippi Univ., University. Research Inst. of Pharmaceutical Sciences Rept. No. RIPS-CIPA-79037-0-79. Sponsored in part by National Cancer Inst., Bethesda, MD.

The distribution and elimination of intravenously administered CCNU-^{14}C (NSC 79037) was studied in female, weanling Yorkshire White pigs. After 7 days an average of 68.18% was excreted via the urine and 2.66% via the feces. The urinary elimination percentage was then used to determine the amount of CCNU-^{14}C absorbed after topical application. Among the whole organs sampled following intravenous administration, kidney, ovary and liver had the highest specific activities of radioactivity. Skin and fat had the highest specific activity levels of the random tissues sampled. 4.78% of a topically applied dose of CCNU-^{14}C was absorbed at the end of 7 days.

34394 **(PB—84-169705) Measurement of ^{15}N in biological samples with particular reference to whole body protein turnover studies.** Preston, T.; East, B.W. (Scottish Universities Research and Reactor Centre, Glasgow (UK)). 1982. 20p. (SURRC—70/82). NTIS, PC E03/MF E03.

This paper describes methods used to analyze total nitrogen and ^{15}N-enrichment of faecal nitrogen, urinary total nitrogen, urea and ammonium and also briefly outlines the procedures adopted to measure whole body protein turnover.

34395 **(AD-A—137731/6) Radiation survey for installation of the cobalt-60 theratron-80 at Armed Forces Radiobiology Research Institute. Technical report.** Ferlic, K.P. (Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)). Dec 1983. 48p. NTIS, PC A03/MF A01.

This report documents the initial radiation survey for installation of the cobalt-60 teletherapy unit in the Standards Lab of the Armed Forces Radiobiology Research Institute. Room modifica-

tions, alarms, and interlocks for this installation are described. Exposure levels as observed for the approved irradiation configurations are provided. Estimated personnel exposures and additional shielding recommendations pro-rated to the maximum authorized source load are made.

34396 **(ARL/TR—059) Quality control procedure for dental x-ray film processing.** Tingey, D.R.C. (Australian Radiation Lab., Melbourne). Aug 1983. 19p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84702043.

Methods of obtaining the optimum processing from dental films are discussed. A method of quality control of developing conditions for dental x-ray films has been developed. It is relatively easy to maintain and is sufficiently accurate for practical purposes.

34397 **(GSF-S—708) Organ doses and effective dose equivalent for external neutron beams derived by the CHORD-method.** Wittmann, A.; Burger, G. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Strahlenschutz). Oct 1980. 110p. NTIS (US Sales Only), PC A06/MF A01. Order Number DE84751441.

The CHORD-method was applied to the anthropomorphic MIRD-V-phantom, to derive average organ doses for external neutron beams. The phantom was modified by adding suitable breasts, and introducing ovaries. The influence of a more realistic neck on the thyroid doses in comparison with the MIRD-bull-neck was assessed. The depth doses used were those for the total absorbed dose and dose equivalent, including the internally produced gammas, as well as for the neutron component only. The data were taken from ICRP 21 and fitted in the depth interval from zero to 26 cm by suitable analytical expressions. This allowed extrapolation beyond 30 cm phantom depths, as necessary in case of bone density corrections of relevant track length distributions for rays intersecting bone regions. All doses were normalized to the incoming unit neutron fluence, the absorbed doses also to soft tissue KERMA free in air. Based upon the organ dose equivalents, the effective dose equivalent, following ICRP 26, was derived.

34398 **(HRP—0904755/6) Nuclear Magnetic Resonance.** Watkins, D.; Netherton, N. (Central Arkansas Health Systems Agency, Inc., Little Rock (USA)). 26 Nov 1983. 42p. NTIS, PC A03/MF A01.

See also AD-030211.

Nuclear Magnetic Resonance (NMR) is a new technique which has been introduced into the medical diagnostic imaging field. NMR is a method of imaging the body by exposing it to low-energy magnetic and radio-frequency fields. This process yields biochemical information about the part of the body under study. The images can be re-created by computer, and can be used to study moving metabolic systems at work in the body (i.e., watching digestion at work in the stomach).

34399 **(INIS-mf—8327) Testicular tumors - clinical aspects and therapy. Results of the Clinic and Policlinic for Radiotherapy of Wuerzburg.** Hirschmann, K.E. (Wuerzburg Univ. (Germany, F.R.). Medizinische Fakultaet). 14 Jul 1981. 90p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780309.

In this study the author reports about classification, clinical experience, therapy and therapeutic results of testicular tumors on the basis of results given in literature and of own investigations performed at the Clinic and Policlinic for Radiotherapy at Wuerzburg. In total, 97 patients with testicular tumors were examined and their cases analysed. These patients had received radiotherapy between January 1, 1962 and December 31, 1979. The difficulties with the intended classification of testicular tumors and the advantages and disadvantages of the individual nomenclatures are described. Consideration of the affected age-groups showed that this disease concerns mainly younger males with a high life expectancy. The study depicts the relatively discrete symptoms and signs and the difficulties connected with clinical diagnosis. A more generous indication for the exposition of the testicles is demanded. Also the lymphatic drainage of the testicular region, the resulting paths of metastatic spread and the difficulties connected with the lymphographic detection of metastases are described. There are three therapeutic measures: surgical intervention, radiotherapy and cytostatic treatment. With seminomas mandatory semitestectomy and radiotherapy will suffice; with other affections than seminomas, semitestectomy shall be followed by a combined therapy comprising removal of lymphatic nodes and cytostatic treatment and not so much radiotherapy. The results of treatment given in literature are compared with our results. This comparison revealed good success with treatment of seminomas. With non-seminomal affections exclusive radiotherapy appears to be insufficient. Therefore a combined therapy is postulated, which must be rendered possible by a good interdisciplinary cooperation of pathologists, urologists and radiologists. (orig.).

34400 **(INIS-mf—8328) Alterations of serum potassium, serum magnesium and adenosine diphosphate due to various contrast media containing iodine.** Lehrberger, G. (Marburg Univ. (Germany, F.R.). Fachbereich Humanmedizin). 2 Nov 1979. 79p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780303.

As an introduction of the chemical structure of contrast media is explained. Then follows a survey about the complication rates in examinations with intravascularly applicable iodine-containing contrast media. In the next part clinical symptoms and signs of general and localized contrast media incompatibility reactions, the contrast medium protein reaction and the relationship between allergic reaction and contrast medium are explained. It was tried to attribute the large amount of side-effects to one primary reaction. In this connection the three above-mentioned components were investigated. (orig./MG).

34401 **(INIS-mf—8331) Informative value of radionative diagnostics in cases of patellar chondropathy.** Gloeckler, T.W. (Ulm Univ. (Germany, F.R.). Fakultaet fuer Klinische Medizin). 14 Dec 1979. 25p. (In German). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84780304.

The present study of 64 patients analyzes the diagnostic ability of patellar chondropathy on the basis of X-ray native images. The results were confirmed intraoperatively or arthroscopically. We evaluated images of both knees in a.p. and lateral projection and walking images with 30, 60, and 90° of joint bending. In all cases of chondropathy of third degree, radiomorphologic changes could be delineated; in stage I this was possible in 66% of the cases. The summarizing assessment of structural irregularities as discontinued contours of the subchondral osseous lamella, spot-like or diffuse demineralisation, osteophyteous peripheral serration, disintegration in the insertion area of the quadriceps tendo, soft-tissue swelling and hemarthrosis is significant for establishing the diagnosis. Whereas there is a causal relationship between defective axial positions of the patella or particularly posttraumatic defect and the development of a chrondropathy, we could not detect in the investigated patient-group a significantly higher incidence of chondropathy in cases of dysplasia of the patella or of the femoral condyles. A simple scheme - applicable in arthroscopy and radiology - is introduced: it shall help to record chondromalacious regions and considers the most frequently affected areas. (orig.).

34402 **(INIS-mf—8332) Evaluation of tests of X-ray equipment performed by experts in the hospitals of North Rhine-Westphalia.** Sprenger, D. (Duesseldorf Univ. (Germany, F.R.). Medizinische Fakultaet). 1980. 49p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84780312.

Tests of X-ray equipment by experts, which are required by paragraph 4, chapter 1 RoeV (X-ray Regulation), are considered as a effective measure for reducing exposure to irradiation during the application of X-rays for medicinal purpose. As soon as well detected deficiencies will be cleared out, a reduction of gonad exposure for patients and applicants by approx. 50% is expected to result. However, by December 31, 1978 14.8% of all tested X-ray systems had not achieved the experts' approval. (DG).

34403 **(INIS-mf—8338) Computer-aided radiometric densitometry.** Dahlmann, H. (Siegen Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 13 - Elektrotechnik 1). 12 Feb 1982. 149p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780314.

Densitometry by the Cs-137 γ-radiation principle has an extensively autonomous calibration of the measured length and an automatic adjustment of measuring time. A time constant switch is provided, and the influence of modules on measuring accuracy has been largely eliminated by diagnostic programs. The modular structure makes it feasible to provide a self monitoring of nearly all system components by means of the microcomputer without additional expenditure. The logarithmical dependency of impulse rate and density can be linearised by the microcomputer. The attenuation of intensity of the material caused by the radioactive decay is compensated. (DG).

34404 **(INIS-mf—8355) Clinic, diagnosis and therapy of tumors of the small intestine. A survey about 53 cases between 1961 and 1980.** Alberty, M.A.F. (Tuebingen Univ. (Germany, F.R.). Medizinische Fakultaet). 1981. 54p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780305.

53 cases of tumor of the small intestine were observed, of which 23 were benign, 14 carcinomas, 10 sarcomas, 6 carcinoid tumors. The age ranged from 1 to 81 years; an incidence peak was found between 51 and 60. The ratio of male and female patients was 3 : 2. Almost all patients with a malignancy came to our hospital with an already advanced stage, 65% of the malignant tumors had already developed metastases. Preoperative diagnostics was significantly improved during the last years. Since 1972, i.e. since hypotonous duodenography, double contrast technique and endoscopy are applied, accuracy of the diagnostic methods could be increased by more than 100%. But due to the fact that these improved techniques were applied too late because of atypical symptoms and signs, prognosis of malignomas of the small intestine has been bad also in the last years. 16% of the patients died of postoperative complications and the 5-year survival rate was only 18%. From this results that prognosis cannot be improved even by applying the modern diagnostic methods, because malignant tumors of the small intestine provoke pain almost exclusively in advanced stages. There don't exist typical early symptoms or signs. (orig./ARB).

34405 **(INIS-mf—8358) Results of radiotherapy of malignant tumors of the epi-, meso- and hypopharynx. A retrospective study from 1960 to 1978.** Gehrcke, M. (Muenchen Univ. (Germany, F.R.). Fakultaet fuer Medizin). 5 Aug 1980. 69p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780310.

It is reported about the treatment results of 256 patients who suffered from a malign pharyngeal tumor and were irradiated with Gammatron and/or Betatron (19 MeV). The intended dosage for tumors was 6000 rd, for the usually also radiated cervical lymphatic passages 5000 rd. Radiotherapy was performed over 6 weeks in single fractions of 200 to 250 rd. All three pharyngeal regions together present a 3-year-survival rate of 28% and a 5-year-survival rate of 17%. Those patients who received surgical intervention and radiotherapy reached a 3-year-survival rate of 36% and a 5-year-survival rate of 22%, the exclusively irradiated patients achieved rates of 26% and 16%. In about the half of all malignant cases relapses and/or metastases developed within two years after therapeutic treatment had been finished. Today 40 of the 245 patients who were followed up live without any symptoms or signs. The best symptom-free survival time is 19 years. (orig./MG).

34406 **(INIS-mf—8359) Comparison of CT and angiographic findings about tumors of the posterior cranial fossa.** Lohmann, I. (Wuerzburg Univ. (Germany, F.R.). Medizinische Fakultaet). 23 Feb 1981. 82p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780306.

The CT and angiographic criteria of localisation and classification of tumors of the posterior cranial fossa are explained on the basis of 44 histologically verified cases. (orig.).

34410 **(INIS-mf—8709) Extracorporeal radiotherapy of blood using conventional radiation sources for treatment of CLL.** Oehl, N. (Ulm Univ. (Germany, F.R.). Fakultaet fuer Theoretische Medizin). 19 Dec 1980. 106p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780252.

A comparison of extracorporeal irradiation of blood (ECIB) with other forms of therapy for treatment of CLL reveals that ECIB has considerably fewer side-effects. This justifies its application in the early stages of illness. Intermittent ECIR treatment over a period of months enables a partial remission attained following initial intensive treatment to be upheld without serious complications. ECIB treatment also appears useful in chemo-resistant cases, since chemotherapy has been reported to be successful in a number of cases directly following ECIB therapy. ECIB therapeutic trials for pregnant patients is highly recommended. Although no negative effects of ECIB have to date been observed on the normal blood cell physiology it is nevertheless possible that intact strains are destroyed and thus further adversely affect the already injured normal blood cell status. The question as to how far ECIB, in treating special cases of CLL, may cause an increase in proliferation rate of lymphatic cells, ultimately remains unclarified. Further studies on possible feedback mechanisms are essential. Should these reveal that a recruitment of pathological cells is influenced by stimulation then ECIB treatment combined chemotherapy would show promise in phases of increased cell division. (orig./MG).

34411 **(INIS-mf—8711) Normal anatomy and pathological changes of the infrapatellar pad of fat in double contrast arthrography.** Boehnke, E. (Duesseldorf Univ. (Germany, F.R.). Medizinische Fakultaet). 1980. 65p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780249.

The diagnostic validity of double-contrast angiography in patients with Hoffa's disease was studied by re-evaluation of 1566 arthrographs without knowing the surgical findings. In order to obtain more information on the anatomy and pathology of the intrapatellar pad of fat, so knee joints of corpses were dissected who had died at different stages of life. As the studies showed, the decisive diagnostic factors in Hoffa's disease are the clinical complaints and an enlarged pad of fat in the arthrographic picture. (orig.).

34427 **(PB—84-164037) Radioprotective capacity of phenylalanyl-cysteamine derivatives on cells in vitro.** Vos, O.; de Borst, C. (Rijksverdedigingsorganisatie TNO, Rijswijk (Netherlands). Medisch Biologisch Lab. TNO). 1982. 23p. (In Dutch). (MBL—1982-15). NTIS, PC E03/MF E01.

Also pub. as Prins Maurits Lab. TNO, Rijswijk (Netherlands) Rept. No. PML-1982-53.

The radioprotective capacity of some phenylalanyl-cysteamine derivatives was tested in mice and on cells in vitro. It was observed that phenylalanyl cysteamine provided some protection. Introduction of an acetyl group did not improve the protective capacity.

34428 **Portrayal of pheochromocytoma and normal human adrenal medulla by m-[^{123}I]iodobenzylguanidine: concise communication.** Lynn, M.D.; Shapiro, B.; Sisson, J.C.; Swanson, D.P.; Mangner, T.J.; Wieland, D.M.; Meyers, L.J.; Glowniak, J.V.; Beierwaltes, W.H. (Univ. of Michigan, Ann Arbor). *Journal of Nuclear Medicine;* **25**: No. 4, 436-440(Apr 1984). Contract AC02-76EV02031.

The radiopharmaceutical m-[^{131}I]iodobenzylguanidine (I-131 MIBG), which is readily taken up by adrenergic vesicles, produces scintigraphic images of pheochromocytomas in man but rarely visualizes normal adrenal glands. Iodine-123 has many potential advantages over I-131 as a radiolabel for MIBG, including shorter half-life, freedom from beta emissions, and increased gamma-camera efficiency. In this study, diagnostic doses of MIBG labeled with I-131 and I-123, with nearly equivalent radiation dosimetry, were compared as imaging agents in eight patients with known or suspected pheochromocytoma. Images of superior quality were obtained with I-123 MIBG. In addition, the normal adrenal medullae were visualized on the I-123 MIBG scintigrams in six out of eight patients.

34429 **A design study of the neutron irradiation facility for boron neutron capture therapy.** Oka, Y.; An, S.; Yanagisawa, I. (The University of Tokyo Nuclear Engineering Research Laboratory The Faculty of Engineering, Tokai-mura, Ibaraki 319-11). *Nuclear Technology;* **55**: No. 3, 642-655(Dec 1983).

A design study of the neutron irradiation facility for boron neutron capture therapy was performed using two-dimensional transport calculations. Dose depth distributions in a phantom head were calculated for various neutron energies. The epithermal neutrons having the energies between 10 eV and 0.5 keV are suitable for the therapy. To obtain the epithermal neutron beam, the neutrons leaking downward through the central hole of the annular core TRIGA reactor were moderated through a mixture of heavy water with aluminum whose volume ratio is 15:85. Bismuth and lithium fluoride tile was used to remove gamma rays and thermal neutrons from the beam. Iron, borated polyethylene, and lead were used as the shield surrounding the moderation layer. When the epithermal neutron column is used, the maximum usable depth and irradiation time are 6.9 cm and 7.25 h, respectively, at a 2-MW level.

(Brookhaven National Lab., Upton, NY (USA)). 14 May 1984. Contract AC02-76CH00016. 25p. (CONF-8405187—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012898.

From Plasmids in bacteria research conference; Urbana, IL, USA (14 May 1984).

The pairing between plasmid and the homologous part of the chromosome associated with plasmid establishment may differ from the pairing which results from integration of a homologous region of the plasmid into the chromosome. Thus the rate of novobiocin transformation decreases with duplication of the chromosomal portion in pMB2, but the rate of establishment of the plasmid increases with this duplication. A model to explain these data is given. 17 references, 5 figures, 4 tables.

34431 **(LA-UR—84-1796) Rapid microbial identification by circular intensity differential scattering.** Gregg, C.T.; Salzman, G.C. (Los Alamos National Lab., NM (USA)). Jun 1984. Contract W-7405-ENG-36. 28p. (CONF-8406148—1). NTIS, PC A03/MF A01; GPO Dep. Order Number DE84013894.

From 4. international symposium on rapid methods and automation in microbiology; Berlin, F.R. Germany (7 Jun 1984).

Circular Intensity Differential Scattering (CIDS) is one of the few really new approaches to microbial identification to have come into existence in the past several decades. The CIDS spectra can be measured as a function of wavelength, scattering angle, and/or matrix element, and a number of matrix elements can be measured virtually simultaneously. This panoply of measurements potentially gives the method resolving power for microbial identification. Some representative data taken over the past couple of years on CIDS spectra of several anti-viral vaccines is presented. 17 references; 9 figures.

34432 **(STF—21A82101) Final administrative report, the BIOSIS-project/. Canada 1980-1982.** Sendstad, E. (SINTEF, Trondheim (Norway)). Dec 1982. 115p. (In Norwegian,English). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84751020.

Includes as appendixes two working reports on the biodegradation of oil.

The microbal degradation of oil on shore is studied. The natural occurrence of oil degrading microorganisms on an arctic shore was investigated. The types and their mineralization capacity were determined. The shoreline sand and sediment contained low but detectable numbers of oil degrading microorganisms. A large increase in oil degrading bacteria could be registered during a week after spraying with weathered Lago Medio crude oil or the same oil as 50 % water-oil emulsion. Part of the microbal activity in the oil film can be increased about five times adding macro nutrients. The availability of macro nutrients more than the access to oxygen limited the oil degradation on the shores in question. Experiments with BP solidifying agent showed increase in heterotrophic activity compared to untreated oil film. It was also possible manually to remove about 50 % of the oil from the sandy and gravel covered beach. Mechanical mixing of oil sediments and the use of bark as an absorbing agent did not enhance the natural decomposition. 22 figures, 35 tables.

34433 (STF—21A82101, pp 48) **Microbiology: II. Biodegradation of oil - 1980 study results.** Eimhjellen, K.; Sommer, T.; Sendstad, E. 1981. NTIS (US Sales Only), PC A03/MF A01. Order Number TI84751020. (BIOS/WR—80-6).

Bound as an appendix to the Norwegian final administrative report for the project.

In Final administrative report,The BIOSIS-project/. Canada 1980-1982.

During autumn 1980 analyses of baseline parameters related to microbial degradation of oil were determined from the nearshore waters, sediments of a channel, in shoreline sand, sediments inside and outside a lagoon in the Cape Hatt area. Most probable number techniques were used to assess counts of oil/degrading microorganisms(bacteria), generally heterotrophic bacteria and antibiotica resistant oil/degrading microorganisms (fungi). An experimental laboratory technique was used to determine rates of mineralization of generally tritiated Lago Medio crude oil and ^{14}C-labelled n-hexadecane, naphthalene and benzopyrene. As a measure of general biological activity in shoreline sand and sediments a field method for determining CO_2-production were used. In the coastal water an average content of $4x10^4L^{-1}$ oil, degrading bacteria was detected, representing about 1% of the assessed viable count for generally heterotrophic bacteria. Experiments with tritiated Lago Medio crude oil yielded maximum rates (V/sub max/) of mineralization of oil by the microorganisms in water. Tentative results indicated a somewhat lower activity for mineralization of n-hexadecane. The shoreline sand and sediment contained low but detectable numbers of oil degrading microorganisms. After spraying with weathered Lago Medio crude oil or the same oil as a 50% water-oil emulsion an increase in oil/degrading bacteria from about 10^2 to 10^5 respectively 10^7 cells per ml sand/oil mixture could be registered over a period of 15 days. 4 figures, 15 tables.

34434 **Microbial degradation of dissolved proteins in seawater.** Hollibaugh, J.T.; Azam, F. (Univ. of California, San Diego). *Limnology and Oceanography;* **28**: No. 6, 1104-1116(Nov 1983). Contract AM03-76SF00010.

An experimental protocol using radiolabeled proteins was developed to investigate the rates and mechanisms whereby dissolved proteins are degraded in natural marine plankton communities. The results of field observations and laboratory experiments indicate that proteins are degraded by a particle-bound, thermolabile system, presumably bacteria-associated enzymes, with an apparent half-saturation constant of ca. 25 μg bovine serum albumin (BSA) per liter. Gel permeation chromatography indicated that peptides of chain length intermediate between BSA and the final products of degradation (MW<700) do not accumulate in the medium. Competition experiments indicate that the system is relatively nonspecific. Turnover rates for the protein pool in samples collected in the Southern California Bight were of the same order of magnitude as the turnover rate of the L-leucine pool and were correlated with primary productivity, chlorophyll a concentrations, bacterial abundance and biomass, and L-leucine turnover rate. These data suggest that amino acids derived from proteins are utilized preferentially and do not completely mix with the amino acids in the bulk phase.

5508 Morphology

34435 **(INIS-mf—8710) RNA synthesis of perinatal female and male gametes. Autoradiographic studies in Wistar rats.** Doering, R.; Hubaleck, K. (Duesseldorf Univ. (Germany, F.R.). Medizinische Fakultaet). 1980. 35p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84780244.

Intensity curves of RNA synthesis in the perinatal phase of gametogenesis were established for rat fetuses and young rats by ^3H-uridine autoradiography. Gonads of male and female rat fetuses were studied on days 15 to 22 p.c. and gonads of young animals on days 1 to 7 p.n. The nuclear surface of the gametes was found to increase continuously. The number of silver grains was the same for male and female gametes up to the 18th day of fetal life, and the same applies to the silver grain density. The rate of RNA synthesis of male germ celles remained at a constant, low level throughout the study; in the female germ cells, a 10-fold increase in RNA synthesis was measured after the 19th day of fetal life. (orig./MG).

34436 **(INIS-mf—8744) Radio in-vitro thyroid studies in newborn and children up to 14 years of age in consideration of present diseases.** Friese, M.E.; Jung, K. (Giessen Univ. (Germany, F.R.). Fachbereich Humanmedizin). 1981. 144p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780348.

In 630 children from newborn age to 14 years, T_3, T_4, T_3 uptake, reverse T_3 (RT_3) and TSH were determined by nuclear methods, and the overall balance of the free iodine hormone indices and the quotients T_4:T_3, RT_3:T_4 and RT_3:T_3 were calculated on this basis. There was a typical modification with age of these parameters which was most pronounced during the first 24 months of age. Induced by TSH secretion, which is very high in the postpartum stage and then decreases continuously, the primarily subnormal T_4 level increases by 60% in the first month of age and then goes back to normal after two months. The RT_3 levels changed inversely. The T_3 uptake increased to constant, normal levels within a 4-week period while the overall balance of the free iodine hormone indices reaches its peak after 4 weeks and the goes back to normal. Diseases cause characteristic changes in the hormone pattern. The central role of the liver in the peripheral conversion of T_4 to T_3 or RT_3 was confirmed. The increasing RT_3 level, which is correlated with a decreasing T_3 level, is a significant factor in many diseases; it is also a suitable parameter for screening newborns for hypothyreosis. (orig./MG).

34440 **(LBL—17826) Characterization of biophysical properties of baboon lipoproteins: modulation by dietary fat and cholesterol.** Babiak, J. (Lawrence Berkeley Lab., CA (USA)). Apr 1984. Contract AC03-76SF00098. 237p. NTIS, PC A11/MF A01; 1; GPO Dep. Order Number DE84013401.

Portions are illegible in microfiche products; Thesis.

The serum lipoproteins of baboons fed diets containing differing types and amounts of fat and varying amounts of cholesterol were examined by analytic ultracentrifugation, gradient gel electrophoresis, density gradient ultracentrifugation, sodium dodecyl sulfate-polyacrylamide electrophoresis, electron microscopy, and standard protein and lipid composition assays. These studies characterized the lipoproteins of the baboon, observed how concentrations and physical-chemical properties of the lipoproteins are modulated by dietary fat and cholesterol and described the suitability of the baboon as an animal model of human lipoprotein metabolism. Results indicate that baboon high density lipoproteins (HDL), though higher in total serum concentration than human HDL, are

remarkably similar to human HDL. The concentration of baboon HDL is increased by dietary saturated fat but decreased by the addition of cholesterol. While serum concentrations of low density lipoproteins (LDL) tend to be lower in baboons, the physical-chemical properties of the LDL of baboons and humans are comparable. The LDL of both species contains apolipoprotein B as their major apolipoprotein and exhibit considerable polydispersity in particle size. LDL of both species consists of seven discrete subpopulations. The analytical and statistical data presented in this dissertation indicate that the baboon is a good model for studying the role of lipoproteins in the development of atherosclerosis. 125 references, 31 figures, 28 tables.

34441 **(INIS-mf—8743) Statistical comparative study on a combined radioiodine test and extended protirelin test and correlation with the common in vitro parameters of thyroid function.** Kraemer, H.A. (Tuebingen Univ. (Germany, F.R.). Medizinische Fakultaet). 1982. 115p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780347.

Using the data of 339 patients, the following parameters of thyroid function were statistically evaluated. The in vitro parameters ET_3U, $TT_4(D)$, FT_4-index and $PB^{127}I$ and the radioiodine test with determination of $PB^{131}I$ before i.v. injection of 400 μg protirelin (DHP) and 120 minutes after the injection. There was no correlation between the percent change of the $PB^{121}I$ level 120 min after protirelin (DHP) administration and the percentage change of the TSH level 30 min after protirelin (DTP1) administration. The accuracies of the in vitro parameters ET_3U, $TT_4(D)$ and FT_4-index on the one hand and the extended protirelin test on the other hand were compared. (orig./MG).

34442 **(AD-A—137543/5) Initial human response to nuclear radiation. Technical report.** Anno, G.H.; Brode, H.L.; Washton-Brown, R. (Pacific Sierra Research Corp., Santa Monica, CA (USA)). 1 Apr 1982. 92p. NTIS, PC A05/MF A01.

This report documents the results of the first phase of an investigation into the nuclear effects on military troop performance. Both signs and symptoms associated with radiation sickness were examined to develop models of human response to radiation as a function of dose, time and symptom severity. Data on the early symptomatic effects of radiation exposure were gathered from some 150 books, articles and monographs. The analysis of this data focused on human data collected from the victims of nuclear accidents and therapy patients. Data from the survivors of the Japanese atomic bombs were excluded because of data imprecision and questions raised about the accuracy of reported exposure levels. A hypothetical exposed population was divided of reported groups based on the sensitivity of individuals to radiation: hyper-, hypo-, and normsensitives. The population was also classified by the severity of their symptoms; unaffected and mildly, moderately and severely affected. Using this data, relationships for the onset time and duration of acute symptoms after a given radiation dose were developed. Conceptual models were then derived for (1) individual response as a function of dose, time after exposure, and severity of symptoms, (2) population response (percentage affected in various degrees), and (3) links between individual and population responses.

34443 **(AD-A—137718/3) AFRRI (Armed Forces Radiobiology Research Institute) annual research report 1 October 1980-30 September 1981.** (Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)). 30 Sep 1981. 125p. (AFRRI-ARR—15). NTIS, PC A06/MF A01.

This report contains a summary of the research projects of the Armed Forces Radiobiology Research Institute for the period 1 October 1980 through 30 September 1981.

34444 **(EUR—8486) Radiation protection programme: Progress report 1982.** (Commission of the European Communities, Luxembourg). 1982. 1236p. NTIS, PC E20/MF E20.

The 1982 progress report of the radiation protection program contains summaries of reports on research projects under six headings: (1) radiation dosimetry and its interpretation (48 projects), (2) behavior and control of radionuclides in the environment (53 projects), (3) short-term somatic effects of ionizing radiation (44 projects), (4) late somatic effects of ionizing radiation (58 projects), (5) genetic effects of ionizing radiation (82 projects), and (6) evaluation of radiation risks (45 projects). Each report gives details of the contractor, the head of the research team, the general subject of the contract, and the list of projects involved.

34445 **(GSF-S—960) Radiation dose to the thyroid due to incorporation of iodine isotopes: Age dependence and reliability of dose factors.** Henrichs, K.; Mueller-Brunecker, G.; Paretzke, H.G. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.)). Aug 1983. 58p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84751502.

This is the first time that dose factors are published in the literature, together with an assessment of their reliability with regard to the quantification of the dose received by the population in the Federal Republic of Germany due to incorporation if iodine isotopes, taking into account the given age distribution among the population. The calculation of dose factors is based on the latest dosimetric and metabolic models issued by the ICRP (ICRP-30), and the impact of the various parameters and their variability on the accuracy of dose factor determination is assessed. The procedure followed to calculate the dose due to incorporation on the basis of metabolic models (ICRP 1978 and ICRP 1979) is explained. The main data (such as half life, mean frequency per decay, mean energy in keV) are given for I-123, I-125, I-129, I-131, I-132, I-133, I-134, and I-135 (ICRP-30) and listed in tables.

34446 **(INIS-mf—8384) Radioisotope studies for quantitative measurement of manganese absorption.** Helbig, U. (Technische Univ. Muenchen, Freising (Germany, F.R.). Fakultaet fuer Landwirtschaft und Gartenbau). 30 Jun 1981. 142p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780243.

Purpose of the present study was to quantitatively determine the manganese absorption in growing rats by means of radioisotopes. First of all the following factors had to be investigated, which are significant for this determination: Measurability of stable and radioactive Mn in rat tissues; labelling of stable Mn and distribution of stable and radioactive Mn in the organism; verification of the isotope dilution method and of the comparative balance method with regard to its applicability for the determination of the true Mn absorption. We used male and female Sprague-Dawley rats. The most important results are summarized in the following: in some separate tissues measurement of stable Mn was accompanied by difficulties. The measurement of radioactive Mn however, could be performed without any problems. 10 d after i.m. injection of ^{54}Mn only 17% of the administered Mn was still detectable in the organism. However, there was no uniform tissue labelling found. Therefore it is possible to an only restricted extent to draw quantitative conclusions on the content of stable Mn. A high percentage of stable and radioactive Mn was found above all in the liver. The isotope dilution method permits by feces analysis to differentiate between unabsorbed Mn coming from the food and endogenic Mn coming from the organism itself. The effective Mn absorption was also determined by means of the comparative balance method. By means of the isotope dilution method we determined the quantita-

tive Mn-absorption with staged Mn administration and the contribution of absorption and excretion to the homeostatic regulation mechanisms of Mn. We found that absorption and excretion help the organism to keep an almost constant Mn concentration even with a differing Mn supply. (orig./MG).

34447 (INIS-mf—8695, pp 133) **Genetic risk from irradiation of the Bulgarian population for medical purposes.** Bajrakova, A.; Vasilev, G. (Meditsinska Akademiya, Sofia (Bulgaria). Nauchen Inst. po Rentgenologiya i Radiobiologiya). 1983. (In Bulgarian). NTIS (US Sales Only), PC A07/MF A01. Order Number TI84780122. (CONF-8306167—Absts.).

From 4. scientific practical conference of the roentgenologists, radiologists and radiobiologists from North Bulgaria; Gabrovo, Buulgaria (4 Jun 1983).

Published in summary form only.

34448 (INIS-mf—8706) **Relationship between radiation load and chromosome aberrations in permanent staff of nuclear facilities.** Heubisch, W. (Muenchen Univ. (Germany, F.R.). Fakultaet fuer Medizin). 14 Jan 1982. 54p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780246.

Employees of nuclear power stations can be exposed to an increased risk. Using chromosome analytical methods an attempt is made to establish a dose-response relationship for relatively low radiation dose levels. Chromosome aberrations in lymphocytes at the stage of mitosis were classified according to morphological structure and gaps. Correlation and regression analysis produced a positive relationship compared to the previous year's dose and aberrations, whereas no dependence could be proved for the actual age dose and age. (DG).

34449 (INIS-mf—8712) **Determination of organ doses during radiological examinations and calculation of somatically significant dose.** Steiner, H. (Duesseldorf Univ. (Germany, F.R.). Medizinische Fakultaet). 1980. 33p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84780247.

Examples are used to demonstrate that a shift in the point of emphasis is necessary with regard to radiation hazard in medicinal X-ray diagnosis. The parameters employed in this study to calculate somatic dose (SD) and somatically significant dose (SSD) may well be in need of modification; nevertheless the numerical estimation of SSD arrived at here appears to reflect the right order of magnitude for the estimation of somatic risk. The consideration of the threshold dose for somatic injury remains a problem. (orig./MG).

34455 (INIS-mf—8943) **Effect of ionizing radiation with different ionizing density on the uni-cellular Alga Micrasterias denticulate Breb.** Reubel, B. (Salzburg Univ. (Austria)). 1982. 130p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780342.

The uni-cellular green alga Micrasterias denticulata Breb is very suitable for cytological, ultrastructural investigations as well as for growth studies of cell populations because of its size and its specific cellular pattern. Therefore these cells were investigated for their cell-cycle-dependent reaction to different types of radiation, dose-rates and cumulated doses and compared with results from the literature on radiobiological effects on single cells. Different types of ionizing radiation were used such as gamma rays (^{60}Co, ^{241}Am), alpha rays (^{241}Am) neutrons (^{252}Cf and 14 MeV-neutrons from a particle-accelerator) and protons (20-MeV-protons from a particle-accelerator). Irradiation with low doses (gamma-, neutron irradiation) did not show any statistically significant results. No effects could be observed after alpha irradiation because of the alpha particles could not penetrate the mucus cover. Irradiation with gamma rays and protons showed statistically significant reversible and irreversible effects. The reversible effect appeared in a dose-dependent division-delay of the populations. The results from literature, cell-cycle observations and ultra-structural investigations point to a block in the G_2-phase and prolongation of the S-phase. Irreversible irradiation damage is caused by neutron- and proton irradiation. In the first case the length of division delay shows no dose-dependence. In the second case the following cell-cycles are retarded. The dose-effect-curves of proton-irradiations with different dose-rates show a plateau at high doses, which seems to be effected by the turn-on of an additional repair-mechanism. (Author).

34456 (INIS-mf—8947) **Investigations on the influence of radiation with variable linear energy transfer (LET) on the DNA-content and DNA-repair-mechanisms in Vicia faba.** Eckl, P. (Salzburg Univ. (Austria)). 1981. 112p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780343.

This study was initiated to investigate, whether there are any radiation-induced changes in DNA-content and if these changes can be repaired. Seeds of Vicia faba L. were grown in glass culture vessels. After 10 to 20 days the seedings were irradiated using a 1 Ci ^{60}Co gammasource (90mrad/h and 33 rad/h) and a 5 mCi ^{252}Cf neutron source (90 mrad/h). Both, neutron and gamma irradiation cause a reduction in nuclear DNA-content even after low doses (1 to 10 rad). The extent of depression depends only on linear energy transfer. Parallel to the induced minimum in DNA-content, but shifted to higher doses, also the mitotic activity reaches a minimum. Whereas neutron irradiation results in a total stop after doses of 8

rad, gamma-irradiation only induces a depression of 80 %. Whith higher doses the mitotic activity increases again. The neutron-induced changes in DNA-content seem to be restored within 90 minutes after irradiation. No continuous increase could be found after low gamma-doses. Gamma-irradiation with higher dose rates (^{60}Co, 33 rad/h) causes a general decrease over the dose-range studied (100 to 1600 rad). Following doses of 100 rad the mitotic activity increases significantly. With higher doses the decrease is exponential. A dose-dependent mitotic delay could also be observed. As described by many authors, unscheduled DNA-synthesis (UDS) could not be detected in nuclei of Vicia faba. This indicates that an other system, perhaps acting in situ - at the damaged place - is responsible for the repair of radiation-induced thymine-damages. (Author).

34457 **(Juel—1868) Chemical and biological consequences of the radioactive decay of iodine-125 in plasmid DNA.** Linz, U. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Nuklearchemie). Sep 1983. 136p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84751498.

The consequences of the decay of iodine-125 incorporated into DNA were studied on a molecular basis. Doubly (^{14}C and ^{125}I) labelled 5-iodo-2'-deoxycytidine 5'-triphosphate (IdCTP) was synthesized and incorporated enzymatically into the SalI-cutting site of the plasmid pBR 322. Part of the radioiodinated DNA was treated with T4-DNA ligase in order to restore the circular structure of the native plasmid molecule. After 4 months of storage under various conditions the stable end products were analyzed by radio GC, radio HPLC and electron microscopy. The experiments were not only carried out with doubly-labelled DNA but also with solutions of ^{14}C-labelled DNA containing Na^{125}I as internal radiation source. The results clearly indicate that radiolysis alone causes only minor damage. Transmutation of the covalently bound iodine, on the other hand, leads to complete destruction of the labelled nucleotide, giving rise to $^{14}CO_2$ and ^{14}CO as main products. The production of $^{14}CO_2$ which originates from both the base as well as the sugar component shows a strong solvent effect. The electron microscopy analysis of the DNA reveals that the local effects are always connected with at least one double strand break directly at the site of decay. In addition, one finds DNA double strand breaks in areas which are hundreds of base pairs apart from that site. Under certain circumstances most of the DNA molecules exhibit up to 10 breaks. A comparison between ligase-treated and untreated DNA shows that the configuration of the DNA and the position of the labelled nucleotide play in important role in the extent of the overall damage. It could be demonstrated that there is a linear correlation between gaseous fragmentation products and the number of double strand breaks.

34458 **(LA—9893-MS) Estimating the risks of cancer mortality and genetic defects resulting from exposures to low levels of ionizing radiation.** Buhl, T.E.; Hansen, W.R. (Los Alamos National Lab., NM (USA)). May 1984. Contract W-7405-ENG-36. 117p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84013855.

Estimators for calculating the risk of cancer and genetic disorders induced by exposure to ionizing radiation have been recommended by the US National Academy of Sciences Committee on the Biological Effects of Ionizing Radiations, the UN Scientific Committee on the Effects of Atomic Radiation, and the International Committee on Radiological Protection. These groups have also considered the risks of somatic effects other than cancer. The US National Council on Radiation Protection and Measurements has discussed risk estimate procedures for radiation-induced health effects. The recommendations of these national and international advisory committees are summarized and compared in this report. Based on this review, two procedures for risk estimation are presented for use in radiological assessments performed by the US Department of Energy under the National Environmental Policy Act of 1969 (NEPA). In the first procedure, age- and sex-averaged risk estimators calculated with US average demographic statistics would be used with estimates of radiation dose to calculate the projected risk of cancer and genetic disorders that would result from the operation being reviewed under NEPA. If more site-specific risk estimators are needed, and the demographic information is available, a second procedure is described that would involve direct calculation of the risk estimators using recommended risk-rate factors. The computer program REPCAL has been written to perform this calculation and is described in this report. 25 references, 16 tables.

34459 **(LBL—17149) Cell proliferation kinetics and radiation response in 9L tumor spheroids.** Sweigert, S.E. (Lawrence Berkeley Lab., CA (USA)). May 1984. Contract AC03-76SF00098. 120p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84013398.

Portions are illegible in microfiche products; Thesis.

Cell kinetic parameters, including population doubling-time, cell cycle time, and growth fraction, were measured in 9L gliosarcoma spheroids. These parameters were studied as the spheroids grew from 50 μm to over 900 μm in diameter. Experiments relating the cell kinetic parameters to the radiation response of 9L spheroids were also carried out. The major findings were that the average cell cycle time (T/sub c/), is considerably longer in large spheroids than in exponentially-growing monolayers, the radiosensitivity of noncycling (but still viable) cells in spheroids is not significantly different from that of cycling spheroid cells, and the radiation-induced division delay is approximately twice as long in spheroid cells as in monolayer cells given equal radiation doses. The cell loss factor for spheroids of various sizes was calculated, by using the measured kinetic parameters in the basic equations for growth of a cell population. 157 references, 6 figures, 3 tables.

34460 **(NUREG/CR—3590) Evaluation of isotope dilution mass spectrometry for bioassay measurement of uranium, plutonium, and thorium in urine.** Dyer, F.F.; May, M.P.; Walker, R.L.; Scott, T.G.; Caton, G.M.; Stokely, J.R. (Oak Ridge National Lab., TN (USA)). Jun 1984. Contract AC05-84OR21400. 76p. (ORNL/TM—9006). NTIS, PC A05/MF A01; 1 - GPO; GPO Dep. Order Number DE84013641.

Portions are illegible in microfiche products.

A study was made to evaluate the sensitivity, precision and accuracy, and practicality of isotope dilution mass spectrometry (IDMS) for bioassay of uranium, plutonium, and thorium in human urine. The study showed that uranium at a concentration of 0.06 μg/L (0.04 pCi/L natural uranium), plutonium at 3 pg/L (0.2 pCi/L Pu-239), and thorium at 0.1 μg/L (0.01 pCi/L Th-232) could be measured with an uncertainty (RSD) of 10% using 10 ml samples. The lower limits of detection for uranium and thorium were set by background contamination, whereas the detection limit for plutonium was determined by chemical yield and intrinsic instrumental sensitivity factors. Precision and accuracy is excellent (~ 1 to 3%, RSD) at concentration levels where background contamination is insigificant and instrumental sensitivity is adequate. Comparison of IDMS with other methods shows the technique is more sensitive than conventional fluorometric methods but is similar in sensitivity to alpha-radioactivity measurement methods that utilize large sample volumes (1 L). Costs for urine analysis by IDMS ($60 to $100 per sample) are estimated to be considerably higher than cost for fluorometric analysis and approximately the same as the cost for alpha-radioactivity methods. Other methods that have been used or are currently under development are discussed. 100 references, 2 figures, 10 tables.

34461 **(ORNL—5981) PRESTO-PREP: a data preprocessor for the PRESTO-II code.** Bell, M.A.; Emerson, C.J.; Fields, D.E. (Oak Ridge National Lab., TN (USA)). Jul 1984. Contract AC05-84OR21400. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84014172.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

PRESTO-II is a computer code developed to evaluate possible health effects from shallow land disposal of low level radioactive wastes. PRESTO-PREP is a data preprocessor that has been developed to expedite the formation of input data sets for PRESTO-II. PRESTO-PREP utilizes a library of nuclide and risk-specific data. Given an initial waste inventory, the code creates the radionuclide portion of the associated input data set for PRESTO-II. 2 references.

From 6. congress of the International Radiation Protection Association; Berlin, F.R. Germany (7 May 1984).

As part of an overall remedial action program to evaluate the need for and institute actions designed to minimize health hazards from inactive tailings piles and from displaced tailings, methods for estimating health effects from tailings were developed and applied to the Salt Lake City area. 2 references, 2 tables.

34463 (TRI-PP—84-7) Interactive radiation dosimetry database. Giffin, N.M. (British Columbia Univ., Vancouver (Canada). TRIUMF Facility). Feb 1984. 4p. (CONF-840202—26). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84901239.

From 17. midyear topical meeting of the Health Physics Society; Pasco, WA, USA (5 Feb 1984).

Portions are illegible in microfiche products.

A radiation dosimetry system using direct reading dosimeters and an on-line interactive database program running on a VAX 11/780 under the VMS operating system has been developed to record, monitor, and report on exposure records of TRIUMF personnel. It is written in VAX FORTRAN-77 using the RMS file management system. Direct reading dosimeters are signed out and in through a DEC VT-100 terminal and personnel records are updated and displayed immediately. Each record contains a year-long dose history, annual and quarterly summaries, and sliding totals for the previous twelve months, three months and two weeks. A great variety of reports and summaries can be generated either directly from the program or through associated routines that have common access to the data. 2 figures, 2 tables.

34464 Relative biological effectiveness in V79 Chinese hamster cells of the neutron capture reactions in boron and nitrogen. Gabel, D.; Fairchild, R.G.; Larsson, B.; Boerner, H.G. (Univ. of Bremen, West Germany). *Radiation Research;* **98**: No. 2, 307-316(May 1984). Contract AC02-76CH00016.

V79 Chinese hamster cells were irradiated in the presence of different amounts of boric acid with thermal neutrons at the Medical Research Reactor at Brookhaven National Laboratory. From the linear dose-survival curves observed, a D/sub 0/ value of 150 rad obtained with 250 kVp X rays between 10 and 0.01% survival, an extrapolated RBE value of 2.3 was calculated. By irradiation of the same line of cells with cold neutrons at the Institut Laue-Langevin, a D/sub 0/ value for the $^{14}N(n,p)^{14}C$ reaction of 77 rad was obtained, with a corresponding RBE value of 1.9.

34465 Multifractionation of ^{60}Co gamma-rays reduces neoplastic transformation in vitro. Hill, C.K. (Argonne National Lab., IL (USA)); Han, A. (Argonne National Lab., IL (USA); University of Southern California, Los Angeles (USA). Cancer Research Lab.); Buonaguro, F. (Naples Univ. (Italy). Ist. di Patologia Generale); Elkind, M.M. (Argonne National Lab., IL (USA); Colorado State Univ., Fort Collins (USA). Dept. of Radiology and Radiation Biology). *Carcinogenesis (New York);* **5**: No. 2, 193-197(Feb 1984).

Incidences of neoplastic transformation of 10T1/2 cells, derived from a C3H mouse embryo, were measured following irradiation of cells with ^{60}Co γ-rays delivered in single total doses, from 25 to 300 rads, or in different numbers of fractions, and with different time intervals between fractions. Throughout the range of total doses that was examined (25 - 300 rads) exposure of asynchronous, actively growing 10T1/2 cells to a dose of γ-rays in five equal daily fractions, rather than in a single exposure, results in a significant reduction in transformation frequency. The initial part of the induction curve fits a straight line quite well. The slope of the line for five daily fractions is approx. 3-fold less steep than that for single exposures. A further increase in the interfraction interval, to 48 h, or further reductions in the dose per fraction, led to additional decreases in the incidence of neoplastic transformation. These observations are consistent with a net 'error-free' repair of subtransformation damage as a result of protracted irradiation with ^{60}Co γ-rays.

34466 Is radiation an appropriate model for chemical mutagenesis and carcinogenesis. Bond, V.P. (Associate Director for Life Sciences and Safety Brookhaven National Lab. Upton, NY). pp 539-552 of Genotoxic effects of airborne agents. Tice, R.R.; Costa, D.L.; Schaich, K.M. New York, NY; Plenum Publishing Corp. (1982). (CONF-8002106—).

From Associated Universities, Inc./Brookhaven National Laboratory Medical Department symposium on genotoxic effects of airborne agents; Upton, NY, USA (9 Feb 1980).

This chapter attempts to show why the quadratic, or "linear quadratic," relationship holds for organ dose-single cell radiation effects, and to explore the extension of this relationship to chemical exposures in general. Demonstrates that although the "$\alpha D + \beta D^2$ relationship" may be unexpected for normal pharmacologicalmedical dose-response relationships, a linear, no-threshold curve of this kind is expected for all stochastic-type (accidental or risk) situations with health consequences (e.g. all common accidents) including exposure to "low-level radiation" (LLR). Discusses the stochastic or risk approach, relevant radiobiology, and the stochastic for chemicals. Assumes that even though actual mutational rates cannot be expected to apply to the relevance of Tradescantia or any other single cell system as a predictor for mutagenesis and carcinogenesis in animals and man, the cardinal principles of genetics largely transcend species and the particular environment in which the cell is located. Concludes that with regard to LLR, the curve shapes and other relationships developed for Tradescantia would be expected to apply in principle to animal and human mutagenesis and carcinogenesis.

5603 Chemicals Metabolism And Toxicity

34467 (AD-A—137410/7) Chemical pretreatment. Effects on acetylcholine, behavior, and agent incapacitation. Final report 1 Oct 79-30 Sep 82. Harris, L.W.; Lennox, W.J. (Army Medical Research Inst. of Chemical Defense, Aberdeen Proving Ground, MD (USA)). 14 Sep 1983. 69p. NTIS, PC A04/MF A01.

The objective of this study were as follows: (1) to develop pretreatment regimens which are performance deficit-free when administered alone, and which are capable of protecting against nerve agent-induced lethality, (2) to test the effectiveness of deficit-free pretreatment regimens against nerve agent-induced lethality, and (3) to study cerebral acetylcholine levels, tissue AChE activity, and performance decrements in animals given pretreatment and exposed to nerve agent. Agent-induced performance decrements may be related to excessive levels of ACh at vital cholinergic synapses. Pretreatment with a carbamate (e.g., physostigmine) capable of entering the CNS prior to agent exposure will correct Soman-induced physical and behavioral incapacitation, as well as excessive levels of cerebral ACh. Pretreatment with pyridostigmine will not abolish Soman-induced debilitation or Soman-induced increases in cerebral ACh. These findings strongly suggest that it may be possible to formulate a performance decrement-free pretreatment regimen for man.

34468 (AD-A—137900/7) Action of cholinergic poisons on the central nervous system and effectiveness of potential antidotes. Annual report 1 Jul 81-30 Jun 82. Samson, F.; Nelson, S. (Kansas Univ., Kansas City (USA). Medical Center). Nov 1982. 31p. NTIS, PC A03/MF A01.

The research aim was to determine the effects of soman, related organophosphate toxins and potential antidotes on brain regional functions in rats: The (^{14}C)-2-deoxyglucose procedure (2-DG) was used for mapping brain regional glucose use. Quantitative autoradiography was used for muscarinic and nicotinic cholinergic receptors. The 2-DG procedure gives a quantitative measure of glucose utilization in brain regions and is in index of the 'functional activity' in brain regions and systems. Values were determined in

controls, rats with soman induced seizures, seizures induced by convulsants (DFP, strychnine, picrotoxin, pentylenetetrazol, penicillin) and soman pretreated with TAB. Brain regional cholinergic receptor maps were prepared and some regional muscarinic and nicotinic receptor densities have been quantified. Soman (112 micrograms/kg i.m.) causes strong, continuous seizures and a dramatic (2-6 fold) increase in the rate of glucose use in 10 major brain regions. Most intense increases were in septum, substants nigra reticularis and outer layer of hippcampal dendata gyrus. The overt seizures of rats induced by convulsants DFP, strychnine, picrotoxin, pentylenetetrazol and penicillin (in hippocampus) were strikingly different from that of rats with soman seizures. High doses (2X LD50) of soman in rats protected with TAB caused a 50% depression of glucose use in most brain regions. The effects of repeated soman exposure on muscarinic and nicotinic receptors are under study.

34469 **(AD-A—138715/8) Chemical carcinogen-induced changes in TRNA metabolism in human cells. Interim technical report 1 Oct 82-30 Sep 83.** Trewyn, R.W. (Ohio State Univ. Research Foundation, Columbus (USA)). 30 Nov 1983. 75p. NTIS, PC A04/MF A01.

It is hypothesized that transfer RNAs mediate endogenous promotion of carcinogenesis subsequent to chemical carcinogen initiation, and that without the appropriate changes in tRNA metabolism, the ultimate expression of the neoplastic state will not be attained. Current studies are concentrating on tRNA ribosyltransferase modification reactions which are considered to be the pivotal molecular aberrations in this process. A normal human cell culture model system responsive to phorbol ester tumor promoters was developed which allows the evaluation of the role of tRNA in promotion of carcinogenesis. Chronic exposure to the tumor promoters induces a transient 5 to 10-fold increase in the saturation density of human cells if the treatment is initiated at early population doublings in culture in medium supplemented with elevated levels of specific amino acids. A significant decrease in queuine modification in the anticodon of cellular tRNAs precedes the transient 5 to 10-fold increase saturation density, and queuine modification increases prior to the subsequent decrease in saturation density. The increase in queuine modification correlates to the induction of an endogenous queuine salvage pathway. Most importantly, the addition of excess exogenous queuine inhibits the transient increase in saturation density induced by the tumor promoters, i.e., it blocks the expression of a transformed phenotype.

34470 **(BNL—34807) Large animal model for health hazard assessment of environmental pollutants.** Chanana, A.D.; Joel, D.D.; Costa, D.L.; Janoff, A.; Susskind, H.; Weiss, R.A. (Brookhaven National Lab., Upton, NY (USA); State Univ. of New York, Stony Brook (USA). Health Science Center). 1984. Contract AC02-76CH00016. 5p. (CONF-8404149—3). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013230.

From International symposium on environmental pollution and man; Cape Town, South Africa (30 Apr 1984).

The requirements of large animals for the experimental assessment of human health hazards associated with inhaled pollutants are discussed. Results from studies designed to elucidate mechanisms controlling pulmonary function at the organismal, cellular and molecular level are presented. It is shown that studies in large animals permit technically sophisticated approaches not feasible in small animals and not permissible in man. Use of large animals also permits serial, non-invasive determinations of structural and functional changes which may be of temporal importance. 6 references.

(Brookhaven National Lab., Upton, NY (USA)). 1984. Contract AC02-76CH00016. 6p. (CONF-8404149—4). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013228.

From International symposium on environmental pollution and man; Cape Town, South Africa (30 Apr 1984).

The history, scope, and magnitude of the problem of occupational exposure to byproducts energy and chemical production is discussed in terms of risk assessment. Target organs, characteristics of carcinogens, and bioassay techniques are delineated. 15 references. (ACR)

34472 **(BNL—34848) Benzene toxicity and how to approach the problem of chemical leukemogenesis.** Cronkite, E.P.; Drew, R.T.; Bullis, J.E. (Brookhaven National Lab., Upton, NY (USA)). 1984. Contract AC02-76CH00016. 5p. (CONF-8404149—2). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013229.

From International symposium on environmental pollution and man; Cape Town, South Africa (30 Apr 1984).

We have studied the effect of varying concentrations of benzene in the inhaled air of mice being exposed 6 hrs/day, 5 days/wk., for from two weeks through 16 weeks and observed blood counts, absolute cellularity of bone marrow, levels of pluripotent stem cells, fraction of the stem cells in DNA synthesis, and/or the incidence of leukemia, and the development of solid tumors after cessation of exposure. 15 references, 2 tables.

34473 **(CONF-8405189—1) Decomposition of sparked SF_6 and cytotoxicity of SF_6 decomposition products.** Griffin, G.D.; Sauers, I.; Easterly, C.E.; Ellis, H.W.; Christophorou, L.G. (Oak Ridge National Lab., TN (USA)). 09 May 1984. Contract AC05-84OR21400. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012342.

From 4. international symnposium on gaseous dielectrics; Knoxville, TN, USA (3 May 1984).

Portions are illegible in microfiche products.

While previously reported that sparked SF_6 was cytotoxic to mammalian cells, SF_6 itself was without biological activity. Using quadrupole mass spectrometric analysis of sparked SF_6, we found the by-products to include SOF_2, SO_2F_2, SF_4, SOF_4, SiF_4, SO_2, and HF. We investigated the cytotoxicity of the decomposition products toward hamster lung cells using a colony formation assay. SO_2 and HF were not cytotoxic at any concentration tested. SO_2F_2 and SiF_4, although strongly cytotoxic at higher concentrations than found in sparked SF_6, were without cytotoxic activity at lower concentrations. SOF_2 concentrations of 2% were only weakly cytotoxic; 5% concentrations produced ~ 50% and 89% cell death following 1 and 4 h of exposure. SOF_4 had only weak cytotoxic activity at 0.2% concentration, although there was evidence of strong cytotoxic activity (>80% cell death) following 4 h of exposure to 1% SOF_4. SF_4 exhibited no significant cytotoxic activity at 0.5% concentration, although concentrations of 1 and 2% showed definite cytotoxicity, particularly after 4 h of exposure. 17 references, 6 figures, 1 table.

34474 **(DOE/NBM—4013441) Impact of O_3 on yield of four soybean cultivars (CSRCLAP).** Kress, L.W.; Miller, J.E. (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013441.

Portions are illegible in microfiche products.

The specific objective of this study was to determine the effects of daily O_3 exposure on the yield of four soybean cultivars. The loss estimates produced by the model generated using these data are nearly identical to those produced from the model of nine other data sets (six cultivars) - 12.1% at 0.05 ppM O_3, 17% at 0.06 ppM, and 30.7% at 0.09 ppM. These data suggest that different soybean cultivars exposed to O_3 in different regions and in different years may be responding to the O_3 stress in a similar fashion in terms of yield loss. These data will be combined with the other data generated in the National Crop Loss Assessment Network (NCLAN) program to evaluate the effects of O_3 on crop yield. Future research will attempt to quantify the confounding effects of soil moisture stress on soybean sensitivity to O_3. 4 references, 3 figures, 5 tables.

34475 **(DOE/NBM—4013442) Impact of O_3 and SO_2 on soybean yield (CSRCLAP).** (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013442.

Portions are illegible in microfiche products.

This study was initiated to evaluate the effects of daily O_3 and periodic SO_2 exposures on the yield of two soybean cultivars. The experimental exposure regime was designed to simulate SO_2 exposures from a point source superimposed on a regional O_3 stress. The results confirm the O_3 sensitivity of soybean. They also suggest that even low SO_2 concentrations (0.10 ppM) near a point source

could cause substantial (≈ 7%) yield reduction. These data will be combined with data from five other field sites for evaluation of the effects of O_3 on important agricultural crops. In areas where the potential for O_3 and SO_2 to co-occur exists, these data may be particularly useful. 7 references, 3 figures, 5 tables.

34476 **(DOE/NBM—4013443) Impact of O_3 on winter wheat yield (CSRCLAP).** (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013443.

Portions are illegible in microfiche products.

The present study was initiated to provide further biological response data suitable for evaluating ambient air quality standards and for use in the NCLAN economic assessment of the consequences of O_3 exposure to crops. Specifically, the objective was to establish exposure-response relationships between yield of two important cultivars of soft red winter wheat (both examined in 1982) grown in the Midwest and chronic exposures to a range of O_3 concentrations. The O_3 sensitivity was somewhat less in 1983 than it had been in 1982. It may be that the conditions of excess moisture and high fertility allowed the plants to overcome the O_3 stress at near ambient concentrations. Alternatively, the data on Heggestad suggest that moisture stress may potentiate O_3 effects at near ambient concentrations. Our 1982 wheat may have been under moderate moisture stress and thus was more sensitive to ambient O_3. Winter wheat (Abe and Arthur-71) is still to be considered as more sensitive than grain sorghum or field corn and less sensitive than soybean. The cultivar Roland, however, is more sensitive than Corsoy soybean. 7 references, 4 figures, 4 tables.

34477 **(INIS-mf—8948) Labelled radioactive adenosine nucleotides for the determination of toxic action.** Tahbaz, Z. (Technische Univ., Vienna (Austria)). 1983. 129p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780344.

Normal house flies have been fed with carrier free radiophosphate (phosphorus). Many phosphorous containing substances, including nucleotides, in the tissue of the housefly are labelled with radiophosphorus by this procedure. Suitable methods for processing and separation have been selected to isolate ^{32}P-ATP ^{32}P-ADP ^{32}P-AMD and ^{32}P-phosphate. Working at low temperature prevents chemical changes of the nucleotides. Extraction and thin layer chromatorgraphy proved effective separation procedures for preparing samples to measurement of the nucleotides. Autoradiographic techniques, scanning and liquid scitillation counting had been used for radioactivity measure radioactive zones of the chromatograms. The results of these measurements provide information concerning the normal composition of adenosin nucleotides in the tissues of the housefly. If the animals are exposed to toxic chemicals, to insecticides, the composition of the phosphate containing compounds may change. The concentration of ATP decreases while the concentration of phosphate increases. This can be very easily shown by scanning the chromatograms of the extracts of the muscles of houseflies after feeding the animals with radioactive phosphate. Using this method, it is possible to show the toxic action of insecticides upon the metabolism of adenosine-phosphates. The decrease of the radioactivity at the zone of ATP and the increase of the radioactivity at the phosphate zone corresponds to the toxic action of foreign chemicals like insecticides. By using this tracer technique, it may be possible to investigate the toxic action of several toxic chemicals, if they are applied at the same time, thus investigating synergetic actions of environmental poisons.

34478 **(NP—4770325) New kinds of forest damage in the Federal Republic of Germany.** (Bundesministerium fuer Ernaehrung, Landwirtschaft und Forsten, Bonn (Germany, F.R.)). 18 Oct 1983. 31p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84770325.

Portions are illegible in microfiche products.

According to preliminary results of the 1983 survey of forest damage the forest area affected comes up to 2,5 million ha. This means that one third of the overall forest area (34%) is damaged. The lowest damage category, No. 1, can be applied to the largest affected area (1,8 million ha = 25%). Medium damage (category 2) were found on 0,6 million ha (8,5% of the forest area) and 64 000 ha (= 0,9% of the forest area) are heavily damaged (category 3). The Federal Government faces the following requirements for environmental policy: attempts at reducing the emission of pollutants on a national level must be continued and strongly supported by additional use of instruments of market economy in order to make environmental measures more attractive; bearing in mind the great exchange of air pollution - across borders - one has to try harder and make more attempts at international measures for the reduction of pollutant emission in the EEC, the OECD, and the ECE, as well as in bilateral negotiations with the neighbouring countries. - The possibilities of forestry to analyse and alleviate damage as well as to reduce its ecological and economic consequences have to be fully exhausted and supported; research and development must be intensified and coordinated even more.

34479 **(NP—4770326) Topical report: Forest damage.** (Bundesministerium des Innern, Bonn (Germany, F.R.)). 6 Sep 1983. 29p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84770326.

Portions are illegible in microfiche products.

Taking the present state of science into account, the Federal Government has to realize that great efforts have to be made in fighting the tree dying. This applies especially to anti-air pollution measures, no individual pollutant or group of emitters is to be emphasized exclusively. The Federal Government therefore distinctively welcomes and supports the plans for establishing a Foundation entitled "Forest in danger - a joint venture to save our forest". The Federal Government approves of the action programme "Save the Forest" agreed upon by the Federal Ministers who took part in it. It considers the programme to be an important instrument in fighting forest damage. The responsible Federal Departments were given instructions to enhance and carry out the measures necessary in order to put the action programme into practice.

34480 **(NP—4770332) Metabolic alterations of the lungs of rats after intratracheal application of genuine pit-extracted fine dusts.** Engemann, H.U. (Technische Hochschule Aachen (Germany, F.R.). Medizinische Fakultaet). 27 May 1982. 69p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84770332.

Portions are illegible in microfiche products.

300 female Wistar rats were divided into 14 test groups. The rats of each group received single intratracheal administrations of fine dust samples type BAT II as suspension in 0,5 ml physiological saline solution. After 6 months half the animals of each test group and after 12 months the remaining animals were killed. In the animals killed the wet weight of the lungs, the dust, oxyprolin and lecithin contents and the phospholipids and lipids in the lungs were determined. Both after the six and the 12 months test period the wet weight of the lungs and the oxiprolin, lecithine, phospholipid and total lipid contents were found independent of the different dust contents in the lungs of the test animals.

34481 **(ORNL—6035) Nutritional requirements and contaminant analysis of laboratory animal feeds.** Pal, B.C.; Russ, R.H.; Milman, H.A. (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 109p. (EPA—560/6-83-005). NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84013519.

Portions are illegible in microfiche products.

The primary objectives of this report are to present information concerning the nutritional requirements of several commonly used laboratory animal species (i.e., mouse, rat, hamster, guinea pig, rabbit, and dog) and to discuss various aspects of the problem of contamination of laboratory animal feeds. In addition, this document discusses the different types of laboratory animal diets (e.g., open vs closed formula), the ingredients used in these diets, the interaction of dietary components, and the public comments received respective to the EPA proposed guidelines for the nutrient composition of laboratory animal diets. Much of the data are presented in tabular form. 567 references; 3 figures; 19 tables; 5 appendices.

34482 (ORNL/TM—9169) Chemical characterization and toxicologic evaluation of airborne mixtures: inhalation toxicology of diesel fuel obscurant aerosol in Spargue-Dawley rats. Final report, phase 2, repeated exposures. Dalbey, W.; Lock, S., Schmoyer, R. (Oak Ridge National Lab., TN (USA)). Jul 1982. Contract AC05-84OR21400. 100p. NTIS, PC A05/MF A01; GPO Dep. Order Number DE84013770.

A series of repeated exposures of rats to aerosolized diesel fuel was performed to help establish indices of potential toxicity resulting from aerosol exposure and the relative importance of duration of exposures, the frequence of exposures, and aerosol concentration in the induction of observed lesions. Body weight and food consumption were recorded on a weekly basis. Assays were performed on selected animals within 1-2 days after the last exposure or after 2 weeks without exposure. Endpoints included number and phagocytic activity of pulmonary free cells, pulmonary function tests, neurotoxicity assays, clinical chemistry, organ weights, and histopathology. Data were analyzed by analysis of variance. After exposure, the primary target organ was the lungs. Focal accumulations of pulmonary free cells were observed in the lung parenchyma, associated with thickening and hypercellularity of alveolar walls. The number of lavaged pulmonary free cells correlated well with histologic observations, remaining elevated after two weeks without exposure. Lung volumes were altered by exposure, including increased FRC, decreased TLC, and decreased VC. Carbon monoxide diffusing capacity was decreased in several exposed groups also. None of the more systemic changes observed were considered to be of biologic significance, even though the exposure conditions were considered to result in a maximum tolerated dose. Frequency of exposure was the dominant variable over the range of parameters used in this study, 3 exposures/wk being more deleterious than 1/week. Variation in duration of exposure appeared to have very little effect and a dose-response was often not apparent with differences in concentration. 12 references, 13 figures, 18 tables.

34483 (ORNL/TM—9195) Chemical characterization and toxicologic evaluation of airborne mixtures: diesel fuel smoke particulate dosimetry in Sprague-Dawley rats. Jenkins, R.A.; Manning, D.L.; Maskarinec, M.P.; Moneyhun, J.H.; Dalbey, W.; Lock, S. (Oak Ridge National Lab., TN (USA)). Jul 1984. Contract AC05-84OR21400. 50p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013769.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The use of decachlorobiphenyl (DCBP) as a dosimetric tracer for a diesel fuel smoke aerosol is described. DCBP added to the fuel prior to aerosolization is distributed solely into the particle phase of the resulting smoke. DCBP is distributed uniformly throughout the aerosol particles, regardless of particle size. Determinations of DCBP in tissue extracts of rats exposed to DCBP-containing smoke were performed by purifying the extracts on activated Florisil, and subsequently analyzing them by gas/liquid chromatography with electron capture detection. The largest internal amounts of smoke were found in the lungs. Smoke levels in the upper respiratory tract were only a very small fraction of those found in the lungs. Significant amounts of DCBP tracer were found in the digestive tract following smoke exposure. At a given exposure duration, animals exposed at higher smoke concentrations had greater levels of smoke deposited in their lungs.

34484 (PB—84-161942) Effects of ozone or SO_2 on growth and yield of rice. Final report Jan-Dec 82. Thompson, C.R.; Kats, G.; Dawson, P.; Wolf, J.; Bytnerowicz, A. (California Univ., Riverside (USA). Statewide Air Pollution Research Center). 3 Sep 1983. 53p. NTIS, PC A04/MF A01.

Three cultivars of rice produced commercially in California, M7, M9 and S201, were grown in pots, six plants per pot and were flooded continuously with tap water and supplied with all known mineral elements. The plants were provided with activated carbon filtered air to which ozone or SO_2 was added as a fumigant. Twenty greenhouses were divided randomly into 10 groups of two each. Twelve pots of each cultivar (36 pots/greenhouse) were fumigated with ozone and SO_2. Two greenhouses received carbon filtered air (controls). Final harvest showed that ozone reduced seed weight, height of plant and spikelets per panicle but increased number of panicles in all cultivars and reduced straw weight.

34485 (PB—84-163724) Preclinical toxicologic evaluation of 5-isoxazoleacetic acid, alpha-amino-3-chloro-4,5-dihydro- (nsc 163501), in dogs, monkeys, and cdf1 mice. Final report 24 Apr-13 Sep 78. Denine, E.P.; Stout, L.D.; Peckham, J.C.; Guarino, A.M.; Davis, R.D. (Battelle Toxicology Program Office, Vienna, VA (USA)). 10 Nov 1978. 459p. NTIS, PC A20/MF A01.

Also pub. as Southern Research Inst., Birmingham, AL. Rept. Nos. SORI-KM-78-586, and R-3980-V.

Dose-limiting gastrointestinal toxicosis was qualitatively similar in dogs, monkeys, and mice. In dogs and monkeys, anorexia and/or oligodipsia were cardinal signs. Severity of intoxication was indicated by progression to a diarrheal syndrome. Intoxication of the erythron was indicated in the dog and monkey studies. Quantitatively, mice were the most resistant to toxicity, and monkeys were more resistant than dogs. In dogs, fractionation of a single dose to five daily doses resulted in marked cumulative toxicity. Further fractionation to 10 daily doses produced only additive intoxication. Fractionation of a single dose to weekly doses offered some protection from additive toxicity. Similar results were obtained when 5 daily doses were fractionated to three 5-day courses of treatment separated by 9-day rest periods.

34486 (PB—84-167212) California commercial/sport fish and shellfish oil toxicity study. Volume 1. Executive summary. Final report. Kanter, R.G.; Wingert, R.C.; Vick, W.H.; Sowby, M.L.; Foley, C.J. (MBC Applied Environmental Sciences, Inc., Costa Mesa, CA (USA)). Dec 1983. 35p. NTIS, PC A03/MF A01.

See also PB84-167220. Prepared in cooperation with Science Applicatons, Inc., La Jolla, CA.

The effect of oil on three species of California marine organisms, California Halibut (Paralichthys californicus), Northern Anchovy (Engraulis mordax), and California Mussel (Mytilus californianus) were investigated. Adult, larval, and egg life stages of each species were exposed to the water soluble fraction (WSF) of Santa Barbara crude oil in flow-through experiments lasting through the life stage or as long as 120 days. Embryos of all species accumulated hydrocarbons and showed reduced survival with increasing test concentration. Larval halibut demonstrated bent notochords in high test concentration, reduced growth rate in all concentrations, and gill damage in adults in high concentration. Anchovy larvae and adults showed patterns similar to halibut with reduction in growth and head and jaw abnormalities.

34487 (PB—84-170687) Monticello experiment: a case study. Cooper, W.E.; Stout, R.J. (Michigan State Univ., East Lansing (USA)). 1984. 45p. NTIS, PC A03/MF A01.

A number of assumptions are inherent in the process of using animal toxicity tests to determine water quality characteristics that can be considered safe for aquatic life. These assumptions, expressed as hypotheses, include: (1) the transfer of laboratory acute toxicity tests to a field situation is possible without serious distortion; (2) multispecies or community level responses to toxicity exposure will not be markedly different from single-species responses; and (3) intermittent exposures with short time intervals between events will produce the same ecological responses as a continuous exposure of the same concentration-time integral. These hypotheses were tested in two recycling stream ecosystems at the Monticello Ecological Research Station of EPA's Duluth, Minnesota Environmental Research Laboratory.

34488 (PB—84-172519) Health hazard evaluation report No. HETA 80-197-1215, Pacific Gas and Electric-Geysers facility, San Francisco, California. Belanger, P.L.; Coye, M. (National Inst. for Occupational Safety and Health, Cincinnati, OH (USA)). Nov 1982. 16p. NTIS, PC A02/MF A01.

On August 7, 1980, NIOSH conducted an initial environmental and medical survey of three power plant facilities (units 3/4, 11, and 15) at the Geysers. On December 16-17, 1980, NIOSH conducted a follow-up environmental survey to evaluate employees ex-

posure to vanadium pentoxide, inorganic mercury and arsenic, nuisance dust, sodium hydroxide, and asbestos. No vanadium pentoxide, sodium hydroxide, asbestos, or inorganic mercury was detected. Medical interviews revealed concerns regarding a suspected high incidence of heart attacks, hypertension, and stress. A case-finding questionnaire was sent to all Geysers employees asking for information on heart attacks among workers under age 65. It was not possible to design an epidemiologic evaluation of the potential hypertension or stress-related symptoms because of the lack of an adequate comparison group.

34489 **(PB—84-172774) Health hazard evaluation report No. HETA 81-062-1211, Hatfield's Ferry Power Station, Masontown, Pennsylvania.** Chrostek, W.; Parkinson, D.K. (National Inst. for Occupational Safety and Health, Cincinnati, OH (USA)). Oct 1982. 24p. NTIS, PC A02/MF A01.

On November 11, 1980, NIOSH received a request to evaluate employee exposures to asbestos, fly ash, coal dust, and sulfur dioxide. Analysis of the benzene soluble samples for five polynuclear aromatic hydrocarbons - benzo(a)pyrene, chrysene, pyrene, benzo(a)anthracene, and fluoranthene - showed levels below the laboratory limit of detection for each sample. For a number of years the company has had a comprehensive program for asbestos removal and control, but careless handling by contractors could result in asbestos contamination/exposures. The company has an adequate respirator program. The medical evaluation included a respiratory questionnaire and measurement of blood pressure.

34490 (STF—21A82101, pp 75) **Microbiology II. Biodegradation of oil - 1981. Study results.** Eimhjellen, K.; Nilssen, O.; Josepsen, K.; Sommer, T.; Sveum, P.; Hoddo,T. 1982. NTIS (US Sales Only), PC A04/MF A01. Order Number TI84751020. (BIOS/WR—81-6).

Bound as an appendix to the Norwegian Final Administrative Report for the Baffin Island Oil Spill Project.

In Final administrative report,The BIOSIS-project/. Canada 1980-1982.

During the weeks of postspill sampling no drastic changes in the population of total viable heterotrophic bacteria (THV) and oil degrading bacteria (ODB) were recorded. Significant increases of ODB were registered in surface water and 5 m water above the levels in corresponding samples from the control bay. In the sediment samples no effects of the oil spill could be found. In experiments using tritiated Lago Medio crude oil the rate and level of oil mineralization was assessed in samples of sediments and in water of 5 m depth. All the analyzed samples could mineralize ^{3}H-Lago Medio oil as well as n-hexadecane. Only a minor percentage of the samples exhibited ability to mineralize ^{14}C-naphthalene and benzopyrene. The test plots oiled in 1980 had enhanced levels of TVH,ODB and respiratory carbon dioxide production compared to unoiled plots. The crude oil plot had less remaining oil than the oil-emulsion plot. Several new test plots with oil-emulsion were prepared. No stagnation in the respiratory carbon dioxide production as registered in 1980 was recorded. After treating the oiled sand with BP solidifying agent about 50% of the oil could be removed manually and enhanced respiratory activity resulted. The addition of composite fertilizer at all levels supported a rapid increase in bacteria, carbon dioxide production and in ODB in the oil-sand layer. 16 figures, 20 tables.

34491 **Deposition and fate of inhaled ethylene glycol vapor and condensation aerosol in the rat.** Marshall, T.C.; Cheng, Y.S. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Fundamental and Applied Toxicology;* 3: No. 5-6, 175-181(May-Jun 1983). Contract AC04-76EV01013.

Fischer-344 rats were exposed by nose-only inhalation for 30 min to ethylene glycol-^{14}C vapor at a concentration of 32 mg/m^{3}. A second group of rats was exposed for 17 min to an ethylene glycol-^{14}C aerosol formed by condensation of the glycol on 0.1 m $^{67}Ga_2O_3$ particles. The mass median aerodynamic diameter (MMAD) of the condensation aerosol was 2.3 μm (sigma g = 1.8) with an ethylene glycol concentration of 184 mg/m$_3$. Initial radiocarbon body burdens were at glycol levels of 0.7 mg/kg for the vapor exposure and 2.4 mg/kg for the aerosol exposure. Estimates indicated that at least 60% of the ethylene glycol inhaled for both exposures was deposited in rats with the highest concentration of radioactivity being in the nasal cavities. Distribution from the site of deposition was rapid since 75 to 80% of the initial body burden was found throughout the bodies of rats sacrificed immediately after exposure. The predominant routes of elimination during the first 4 days following exposure were via the expired air as $^{14}CO_2$ (63% for the vapor exposure and 70% for the aerosol exposure) and urine as the unchanged glycol (20% and 11%). The proportion of the doses excreted as $^{14}CO_2$ suggested more complete metabolism of ethylene glycol following inhalation relative to that observed after intravenous injection reported previously. The studies suggested that ethylene glycol plasma levels following acute exposure to high airborne concentrations of ethylene glycol vapor and/or aerosol would not approach the toxic concentrations associated with known dose-dependent changes in the glycol's metabolism.

34492 **Evaluation of biological indicators of body burden of cadmium in humans.** Ellis, K.J.; Yasumura, S.; Vartsky, D.; Cohn, S.H. (Brookhaven National Lab., Upton, NY). *Fundamental and Applied Toxicology;* 3: No. 5-6, 169-174(May-Jun 1983). Contract AC02-76CH00016.

The cadmium content in the left kidney (KCd) and concentration in the liver (LCd) were measured in vivo in 51 adult male workers actively employed at a cadmium plant and in 10 nonexposed controls. Cadmium levels in blood (BCd), urine (UCd) and hair (HCd) were also obtained for each subject. When the workers were classified on the basis of urinary excretion of β_2-microglobulin, albumin and total protein, 33 workers were judged to have normal renal function, and 18 workers were found to have renal dysfunction. In the two groups of industrial workers the mean value for each biological index of cadmium exposure was statistically elevated when compared with the mean value for the controls. Examination of the interrelationships among KCd, LCd, BCd, UCd and HCd provided the following conclusions: (a) Only on a group basis was UCd correlated (r = 0.61) with KCd in workers with normal renal function; (b) BCd was corrected with LCd in workers with normal kidney function (r = 0.53) and in workers with renal dysfunction (r = 0.68); (c) HCd had the largest variability of the biological indices and was unrelated to body burden; (d) KCd and LCd were positivley correlated in workers with normal kidney function, whereas KCd decreased with increasing LCd in workers with renal dysfunction. This study demonstrates that the qualitative nature of the relationship of BCd, UCd and HCd (biological indices of exposure) with KCd and LCd (body burden) is not sufficiently quantitative for predicting the body burden of an individual worker.

34493 **Techniques for the generation and monitoring of vapors.** Nelson, G.O. (Lawrence Livermore National Lab. Livermore, CA). pp 197-207 of Genotoxic effects of airborne agents. Tice, R.R.; Costa, D.L.; Schaich, K.M. New York, NY; Plenum Publishing Corp. (1982). (CONF-8002106—). Contract W-7405-ENG-48.

From Associated Universities, Inc./Brookhaven National Laboratory Medical Department symposium on genotoxic effects of airborne agents; Upton, NY, USA (9 Feb 1980).

This chapter examines the preparation and measurement of test atmospheres for animal exposure experimentation; points out that test gas and vapor mixtures must be produced continuously and dynamically to prevent a build-up of unwanted contaminants in the exposure chamber; discusses gas and vapor mixture generation techniques (flow dilution, solvent injection, saturation, permeation tubes, diffusion tubes); gas detection and monitoring techniques (hydrocarbon analyzers, photoionization detectors, electrochemical analyzers, infrared analyzers); and an ideal contaminant generation and measurement system; concludes that controlled test atmospheres can be produced using a variety of techniques, and the resulting concentrations of gas mixtures can be monitored and measured using flame ionization or photoionization techniques and recommends that electrochemical and infrared analytical systems be used if greater specificity is desired.

34494 **Genotoxic effects of airborne agents.** Tice, R.R.; Costa, D.L.; Schaich, K.M. New York, NY; Plenum Publishing Corp. (1982). 658p. (CONF-8002106—).

From Associated Universities, Inc./Brookhaven National Laboratory Medical Department symposium on genotoxic effects of airborne agents; Upton, NY, USA (9 Feb 1980).

This book explores the genotoxic effects of specific airborne agents and details current in vitro and in vivo methods for assessing their genotoxic potential. Describes analytical and exposure techniques covering microbial to mammalian cell to plant to whole-animal exposures. Examines benzene, a common constituent of gasoline; vinyl chloride, a chemical used in plastics; radon, a radioactive gas released from uranium tailings; and other pollutants. Discusses technical difficulties inherent to the generation of vapors and particulates; the extrapolation of data to human health effects; the monitoring of populations for genotoxic damage; and regulatory risk policy. Constitutes the proceedings of the Symposium on Genotoxic Effects of Airborne Agents held in 1980 at the Brookhaven National Laboratory, NY.

34495 **Cytogenetic effects of inhaled benzene in murine bone marrow.** Tice, R.R.; Costa, D.L.; Vogt, T.F. (Medical Dept. Brookhaven National Lab. Upton, NY). pp 257-275 of Genotoxic effects of airborne agents. Tice, R.R.; Costa, D.L.; Schaich, K.M. New York, NY; Plenum Publishing Corp. (1982). (CONF-8002106—).

From Associated Universities, Inc./Brookhaven National Laboratory Medical Department symposium on genotoxic effects of airborne agents; Upton, NY, USA (9 Feb 1980).

This chapter examines the ability of benzene to induce chromosomal aberrations or sister chromatid exchanges (SCEs) and to inhibit cellular proliferation in murine bone marrow. Uses cytogenetic methodologies based on the incorporation of 5-bromodeoxyuridine (BrdUrd) into DNA. Mice were exposed to benzene by inhalation. An attempt to assess: benzene's ability to induce different kinds of genotoxic damage; the importance of concentration, age, sex, and genetic constitution in modulating benzene's geotoxic potency; and the relationship between liver-specific metabolism and extrahepatic metabolism in determining the observed cytogenetic effects. Concludes that different metabolites of benzene may be responsible for the induced chromosomal aberrations and SCEs and for the inhibition of cellular proliferation in bone marrow tissue in older mice; the liver may not be the main site of production for the SCE-inducing metabolite; a 4-hr. exposure to ambient concentrations of benzene as low as 28 ppm induces a significant increase in bone marrow genotoxic damage as measured by SCE formation; age, sex and genetic constitution are important when extrapolating animal data to human health risks; two different routes of benzene exposure for genotoxic damage can be directly correlated; and the pharmacokinetic, metabolic and molecular mechanisms involved in benzene's ability to cause anemia and leukemia are extremely complex.

34496 **Cytogenetic monitoring of human populations.** Galloway, S.M.; Rice, R.R. (Litton Bionetics, Inc., Kensington, MD). pp 463-488 of Genotoxic effects of airborne agents. Tice, R.R.; Costa, D.L.; Schaich, K.M. New York, NY; Plenum Publishing Corp. (1982). (CONF-8002106—).

From Associated Universities, Inc./Brookhaven National Laboratory Medical Department symposium on genotoxic effects of airborne agents; Upton, NY, USA (9 Feb 1980).

This chapter examines the use of lymphocyte chromosomes to detect damage to genetic material. Explains that studies of chromosomes of peripheral blood lymphocytes can enable the evaluation of chromosomal aberrations, sister chromatid exchanges (SCEs), the frequency of dividing cells, and the rate of cell proliferation. Discusses chromosomal changes (morphology and mechanism of formation); applications of cytogenetic studies to human populations; and possible cytogenetic detection of individuals susceptible to cancer (chromosomal damage and cancer; detection of cancer prone individuals). Concludes that cytogenetic monitoring is the only established means of detecting damage to the human genetic material. Suggests that it is possible that the use of cytogenetics tests for in vitro susceptibility to chemical damage may be developed to identify individuals at particular risk from chemicals.

34497 **Impact of energy and industrial pollution on public health.** Morris, S.C. III. (Biomedical & Environ. Assessment Division Brookhaven National Lab., Upton, NY). pp 555-577 of Genotoxic effects of airborne agents. Tice, R.R.; Costa, D.L.; Schaich, K.M. New York, NY; Plenum Publishing Corp. (1982). (CONF-8002106—).

From Associated Universities, Inc./Brookhaven National Laboratory Medical Department symposium on genotoxic effects of airborne agents; Upton, NY, USA (9 Feb 1980).

This chapter demonstrates that considerable cancer is due to exposure to industrial and chemical pollutants, especially among workers. Derives dose-response functions from high dose situations (frequently occupational exposures) and applies them to low dose situations functions. Finds that people living in the immediate vicinity of industrial plants releasing pollutants are at increased risk for cancer; the least documented situation is whether there is an increased risk for cancers among the general public due to widespread, low level chemical exposure in air and water; the risk to the public from diesel exhaust is predicted to be extremely low; and the introduction of a new pollutant that is probably a carcinogen and to which millions will be exposed is a difficult problem for policy makers to face.

5604 Other Environmental Pollutant Effects

34498 **(AD-A—137664/9) Study of low level laser retinal damage. Annual progress report 1 Feb 83-31 Jan 84.** Hochheimer, B.F. (Johns Hopkins Univ., Silver Spring, MD (USA). Applied Physics Lab.). 1 Feb 1984. 55p. NTIS, PC A04/MF A01.

The general objective of this program is to document changes in the retina due to very low laser irradiation. We have two primary aims. One is to develop and improve methods that can be used, in vivo, to objectively determine changes that occur in the retina from laser irradiation. The second is to determine the mechanisms that cause these retinal changes. During this past year we have: (1) Measured the change in retinal reflectivity during YAG and Argon Ion laser burn periods. (2) Determined the fluorescence decay time of fluorescein dye in water, blood and monkey retinas. (3) Obtained estimates of the amount of scattered light in the eye in the green and red spectral regions.

57 HEALTH AND SAFETY

34499 **(DOE/NV/10327—8) Cross-index to DOE-prescribed occupational safety codes and standards.** (Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (USA). Occupational Safety and Fire Protection Services). Jan 1984. Contract AC08-84NV10327. 572p. NTIS, PC A24/MF A01; 1; GPO Dep. Order Number DE84013538.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This Cross-Index is the 1983 compilation of detailed information from more than three hundred and sixty DOE-prescribed or OSHA-referenced occupational safety codes, transportation safety codes, and fire protection codes and standards.

34500 (INIS-mf—8903, pp 155-156) **Basic international safety standards for radiation protection.** Schlesinger, T.; Shamai, Y. (Israel Atomic Energy Commission, Yavne. Soreq Nuclear Research Center). 1982. NTIS (US Sales Only), PC A11/MF A01. Order Number TI84780391. (CONF-821276—).

From Nuclear Societies of Israel joint annual meeting; Tel Aviv, Israel (14 Dec 1982).

34501 **(LA—10078-MS) High-efficiency particulate air filter behavior at high-speed flows.** Tang, P.K.; Gregory, W.S.; Ricketts, C.I.; Smith, P.R. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84014137.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This paper presents a filter model based on the principle of fluid flow through porous media. The model includes both laminar and turbulent effects. The coefficients used in the model are determined empirically based on existing data. Deviation from the model is discussed.

34502 **(NE-F—3-42-6-84) Operating policy of DOE filter test program.** (Oak Ridge National Lab., TN (USA)). Jun 1984. Contract AC05-84OR21400. 8p. Nuclear Standards Management Center, P.O. Box Y, Oak Ridge, TN 37831. Order Number TI84013306.

This standard establishes policies and procedures for the operation of US Department of Energy (DOE) Filter Test Facilities (FTF) at Oak Ridge, Tennessee; Golden, Colorado; and Richland, Washington.

34503 **(NE-F—3-43-6-84) Quality assurance testing of HEPA filters and respirator canisters.** (Oak Ridge National Lab., TN (USA)). 22 Jun 1984. Contract AC05-84OR21400. 33p. NSMC-ORNL, Box Y, Oak Ridge, TN 37830. Order Number TI84013308.

This standard covers requirements for the quality assurance inspection and testing of HEPA filters and respirator canisters by the US Department of Energy (DOE) Filter Test Facilities (FTFs) at Oak Ridge, Tennessee; Golden, Colorado; and Richland, Washington. The standard provides a basis for the preparation of written procedures for conducting primary FTF functions. These standards apply only to filters used at DOE installations for environmental protection purposes. These filters are described as Type B filters in Institute of Environmental Sciences HEPA Filter Practices, IES Designation RP-CC-001.

34504 **(NE-F—3-44-6-84) DOE filter test facilities quality program plan.** (Oak Ridge National Lab., TN (USA)). 22 Jun 1984. Contract AC05-84OR21400. 8p. NSMC-ORNL, Box Y, Oak Ridge, TN 37830. Order Number TI84013307.

This document covers scope, applicable documents, quality program plan preparation, requirements, control of nonconforming items and corrective actions, audits, and training. (DLC)

34505 **(NE-M—17-1T-6-84) Sodium carbonate, low-chloride fire extinguishing agent.** Eichelberger, R.L. (Oak Ridge National Lab., XN (USA)). 29 Jun 1984. Contract AC05-84OR21400. 14p. Nuclear Standards Management Center-ORNL, P.O. Box Y, Oak Ridge, TN 37831. Order Number TI84013988.

34506 **(ANL/ES—137-Pt.1) Crystalline rocks of the northeastern United States.** Harrison, W.; Flower, M.; Sood, M.; Tisue, M.; Edgar, D. (Argonne National Lab., IL (USA)). Oct 1983. Contract W-31-109-ENG-38. 330p. NTIS, PC A15/MF A01; 1; GPO Dep. Order Number DE84013673.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report is a compendium of the available information on exposed crystalline rocks in Maine, New Hampshire, Vermont, northeastern New York (Adirondack Mountains), Massachusetts, Rhode Island, Connecticut, southeastern New York, northern New Jersey, and southeastern Pennsylvania. Crystalline rocks are defined in this report as bodies of medium- and coarse-grained igneous and high-grade metamorphic rocks. The study was undertaken to provide background information to assist in evaluating the geologic suitability of such rocks for isolating high-level radioactive waste. Available information describing the size, shape, and location; relative and absolute age; origin; petrography; secondary intrusions; country rock; structure; and geophysical characteristics is presented for each crystalline rock body in the study region that has an area of at least 78 km² (30 mi²). 55 figures, 9 tables.

34507 **(ANL/ES—137-Pt.2) Crystalline rocks of the northeastern United States.** Harrison, W.; Flower, M.; Sood, M.; Tisue, M.; Edgar, D. (Argonne National Lab., IL (USA)). Oct 1983. Contract W-31-109-ENG-38. 106p. NTIS, PC A06/MF A01; GPO Dep. Order Number DE84013674.

This report is a compendium of the available information on Vermont, northeastern New York (Adirondack Mountains), Massachusetts, Rhode Island, Connecticut, southeastern New York, northern New Jersey, and southeastern Pennsylvania. Crystalline rocks are defined in this report as bodies of medium- and coarse-grained igneous and high-grade metamorphic rocks. The study was undertaken to provide background information to assist in evaluating the geologic suitability of such rocks for isolating high-level radioactive waste. This volume contains maps of the major crystalline rock associations and faults of the northeastern US.

34508 **(DTH-ISVA—33) Simulation of water flow in the unsaturated zone including the root zone.** Hoeg Jensen, K. (Danmarks Tekniske Hoejskole, Lyngby. Inst. for Stroemningsmekanik og Vandbygning). May 1983. 247p. NTIS (US Sales Only), PC A11/MF A01. Order Number DE84751000.

Portions are illegible in microfiche products.

A one-dimensional soil water flow model has been developed based on a finite difference approximation of the governing differential equation. In the flow equation is included a sink term representing the moisture extraction by root systems, and allowance for evaporation from the soil surface is made too. Estimation of these terms is based on a potential transpiration calculated from the Penman-Monteith equation, on a potential soil evaporation calculated from the Ritchie equation and in both cases on relations to soil moisture availability over various foil depths. In addition an interception description is included. The performance of the model is tested against extensive data collected from field studies of agricultural crops at two locations in Denmark, which represent two different soil conditions. Measured and simulated soil water contents and soil water pressure heads compare well. The physical basis of the model provides a potential for a wide range of applicatons and allows for a prediction of the effect of human activities. In this respect the model has been applied for predicting the consequences of irrigation on the hydrologic subprocesses of evapotranspiration and deep percolation. This prediction has been validated against measurements. The soil water flow model may be included in a distributed and physically based hydrologic catchment model to link the processes of overland and channel flow and groundwater flow. Since the model describes the variation of water flow and moisture content throughout the profile, it provides the necessary input for the calculation of the transport and dispersion of solutes in the soil profile.

34509 **(UCRL—89787) Historical controversies in the geological sciences.** Schock, R.N. (Lawrence Livermore National Lab., CA (USA)). 17 May 1984. Contract W-7405-ENG-48. 24p. (CONF-8308149—3). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012808.

From Conference on glass in planetary and geological phenomena; Alfred, NY, USA (14 Aug 1983).

The dispute over the origin of tektites, either in its scope or in the ferocity of the arguments, is typical of disputes which have characterized the geological sciences for at least 250 years. In view of the impossibility of reconstructing the events which created the debated result, it is perhaps surprising that even more controversies have not erupted. A review of the literature of these controversies suggests several points to consider that might if taken facilitate the resolution of the dispute with benefit to the progress of science. The first of these is to contemplate your arguments in the context of those of your detractors, not solely in terms of your own ideas. Make careful field observations, not only laboratory observations and theoretical arguments; the record of the natural event is in the field, not the office or the laboratory. Search for outrageous hypotheses and then test and refine them to see of some new insight is gained. Finally, look for the simplest explanation; it is likely to be

elegant despite its dress and it probably will be correct. 26 references, 1 figure.

34510 **(INIS-BR—118) Brazil-Angola alkaline - carbonatite province and its main economic aspects.** Loureiro, F.E.V.L.; Di Valderano, M.H.W. (NUCLEBRAS, Rio de Janeiro (Brazil)). (NUCLEBRAS, Rio de Janeiro (Brazil)). 1982. 12p. (In Portuguese). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84780340.

The principal characteristics of the Brazil-Angola Alkaline Carbonatite Province are defined and described with specific reference to tectonic setting and economic aspects. The economic aspects of the Brazilian uranium deposits are emphasised. The Brazil-Angola Alkaline-Carbonatite Province can be divided into six Brazilian sub-provinces and two Angolan sub-provinces. Correlation between the sub-provinces of Brazil and Angola remains speculative due to the lack of detailed information, especially age determinations on the Angolan rocks. However, an analysis of the tectonic and petrochemical aspects suggests that the two Brazilian sub-provinces situated along the littoral of Rio de Janeiro/ Sao Paulo and around the periphery of the Parana Basin may be more easily comparable to the two Angolan sub-provinces than the remaining four. (Author).

34511 (INIS-mf—8473, pp 342-350) **Historic eastern Canadian earthquakes. A reappraisal of near-field effects.** Asmis, G.J.K.; Atchison, R.J. (Atomic Energy Control Board, Ottawa, Ontario (Canada)). 1983. NTIS (US Sales Only), PC A19/MF A01. Order Number TI84780007. (CONF-8106200—PT.1; INFO—0039).

From 21. annual international conference of Canadian Nuclear Association and 2. annual conference of Canadian Nuclear Society; Ottawa, Canada (8 Jun 1981).

One would expect that near-field effects will be manifested near any earthquake, including any eastern Canadian earthquake. However is there any evidence of such effects, and how pertinent are data from the west coast of the United States to eastern Canada(question mark). To answer this question we have (a) reviewed the history of the three strongest earthquakes--St. Lawrence (1925), Temiskaming (1935), Cornwall (1944)--that have occurred in ΣmodernΣ times; (b) reviewed near-field strong motion records that have been collected by the USGS for the two year period 1978-1979, and carried out field studies to determine the extent of damage and non-damage to industrial facilities; and (c) carried out limited finite difference numerical modelling based on physical properties to simulate accelerograms for near-field motion.

34512 (INIS-mf—8903, pp 98-100) **Aerial radiometric survey over Israel.** Rapaport, M.S.; Vulkan, U.; Aviv, R. (Israel Atomic Energy Commission, Yavne. Soreq Nuclear Research Center); Itamar, I. (Ministry of Energy and Infrastructure, Jerusalem (Israel). Geological Survey of Israel). 1982. NTIS (US Sales Only), PC A11/MF A01. Order Number TI84780391. (CONF-821276—).

From Nuclear Societies of Israel joint annual meeting; Tel Aviv, Israel (14 Dec 1982).

34513 **(STF—28A83010) Seismic migration using the WKB approximation.** Ursin, B. (SINTEF, Trondheim (Norway)). Apr 1983. 26p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751030.

The linear acoustic equations for a horizontally layered medium are transformed into two coupled differential equations for the upgoing and downgoing wavefield. The zero-order and first-order WKB approximations are used to derive two new prestack migration algorithms for common-source point areal seismic data. It is shown that the Hankel transform may be used in the prestack migration of seismic line data. An exact equation is derived for zero-offset seismic data. Neglecting second-order derivatives with respect to offset coordinates results in an inhomogenous acoustic wave equation with half the velocity and twice the density of the real medium. The zero-order and first-order WKB approximations are used to derive two new algorithms for the migration of stacked seismic data.

34514 **(STF—28A83013) Interaction between airguns.** Vaage, S.; Ursin, B.; Haugland, K. (SINTEF, Trondheim (Norway)). May 1983. 33p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751031.

In the design of linear airgun arrays the non-linear interaction between the airguns is neglected. The different formulas which have been proposed for the minimum seperation between airguns at which the non-linear interaction is neglible, are reviewed. A large number of measurements in order to establish the amount of interaction between two airguns of various volumes at different pressures and depths has been analyzed. The changes in primary pulse amplitude, bubble period and primary/bubble peak-to-peak amplitude ratio are computed from the measurement data as a function of airgun separation, chamber volume, chamber pressure, and airgun depth. The influence of using a waveshape kit is investigated, and the effects of interaction and the effects of using a waveshape kit are compared. 9 drawings, 1 table.

34515 **(DP-MS—82-32) Effect of porosity and NaCl concentration on the osmotic efficiency of a sodium bentonite membrane.** Fritz, S.J.; Marine, I.W. (Texas A and M Univ., College Station (USA). Dept. of Geology; Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.). 1982. Contract AC09-76SR00001. 26p. (CONF-8210103—2). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013818.

From Geological Society of America meeting on geochemistry of radionuclide migration/retardation; New Orleans, LA, USA (18 Oct 1982).

Portions are illegible in microfiche products.

Osmosis has been cited as a mechanism for explaining anomalously high fluid pressures in the subsurface. Clays and shales act as membranes, and osmotic flux across these units may result in pressures sufficiently high to explain these anomalies. The theoretical osmotic pressures as calculated solely from solution properties can be quite large; however, it is not yet resolved whether these geologic membranes are sufficiently ideal to generate such pressures. Osmotic efficiencies of a Na-bentonite were measured by a series of hyperfiltration experiments using various molarities of NaCl at two different porosities. The highest osmotic efficiency (0.8912) occurred at the lower porosity and the lowest NaCl input solution. The lowest measured osmotic efficiency (0.0423) occurred at the higher porosity and the highest NaCl input concentration. 26 references, 2 figures, 2 tables.

34516 **(DPST—71-332) Mineralogy and ion exchange characteristics of Savannah River Plant streambed sediments.** Hawkins, R.H. (Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.). May 1971. Contract AC09-76SR00001. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013117.

Portions are illegible in microfiche products.

Samples were collected of bottom sediments from three Savannah River Plant (SRP) streams and of soils from the source areas of the sediments. The samples were analyzed for clay and organic matter contents, cation exchange capacity (CEC), and mineralogy of the sand, silt, and clay fractions. The results lead to the following conclusions: quartz is the dominant mineral in the sand and silt fractions; kaolinite is the dominant mineral in the clay fractions; no illite, chlorite, vermiculite, or montmorillonite minerals are present; the average clay content of the sediments is 32% by weight; the average organic matter content of the sediments is 1.26% by weight; the average CEC of the sediments is 2.61 meq per 100 g; and the highest sorptive capacity is in the downstream sediments near and in the Savannah River swamp. 21 references, 5 figures, 1 table.

34517 **(INIS-mf—8941) Annealing of vacancies induced by nuclear radiation in natural apatite by annealing at high temperatures.** Girstmair, A. (Innsbruck Univ. (Austria)). 1982. 39p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84780338.

Thermal annealing of fission tracks is an important problem of the age determination in minerals by the fission track method. The present work extends previous investigations on track annealing in natural apatite towards higher temperatures. Annealing times of a few minutes and temperatures of 300, 395, 422, 488 deg C were investigated and attempts were made to fit the data by a formula valid at lower temperatures. Surprisingly there is a sharp deflection in the Arrhennius plot of the annealing coefficient $\alpha(T)$ from linear around 370 deg C, i.e. a decrease of heating. The conditions of the experiment resemble those prevailing in meteorites entering the earth atmosphere. (G.Q.).

34518 **(INIS-mf—8950) Application of the fission track method to determination of temperature aging and of uranium concentrations. Absorption spectroscopy in apatite for investigation of the healing mechanism of radiation defects.** Ritter, W. (Innsbruck Univ. (Austria)). 1982. 87p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780339.

In part I fission track counting has been applied to a) age determination of apatite and titanite from Sweden and an estimation of their initial temperatures b) determination of uranium content of waters from droplets evaporated on plastic foils. In part II absorption spectrometry was used to investigate the recovery from radiation defects in natural apatite. Conclusions are drawn on the radiations defect healing mechanism during annealing. Part of the content of this work has already been published in journals and conference papers. (G.Q.).

34519 **(LA-UR—84-924) Numerical creep analysis.** Anderson, C.A. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 5p. (CONF-840833—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84009969.

34520 **(PB—84-145192) Benthic boundary layer. IOS (Institute of Oceanographic Sciences) observational programme interim report, January 1983.** Saunders, P.M. (Institute of Oceanographic Sciences, Godalming (UK)). 1983. 35p. NTIS, PC E04/MF E04.

Measurements have been made over a period of seven months of currents and mixing near the seabed. The location of the study was in the N. Atlantic approximately midway between the islands of the Azores and Madeira. Currents were measured near the seabed in a water depth exceeding 5000m with moored internally-recording instruments. Maps of near bottom flow have been constructed and the dispersion of particles of water and therefore mixing of a tracer, such as radionuclide has been inferred. The research described in this report is concerned with a small part of the scientific assessment of the feasibility of the disposal of heat generating radioactive waste (HGW) into the deep sea environment.

34522 **(AD-A—137163/2) Study of coronal precursors of solar flares. Final report 26 Jan 82-25 Jul 83.** Webb, D.F. (American Science and Engineering, Inc., Arlington, MA. Space Systems Div.). Aug 1983. 49p. (ASE—4818). NTIS, PC A03/MF A01.

This contract was to investigate the evidence for the characteristics of solar coronal flare precursors using high spatial resolution Skylab soft X-ray, H-alpha and magnetogram images. Transient preflare features were examined to develop an understanding of coronal flare precursors, especially what they tell us about changes in the local magnetic field. The results are as follows; Preflare X-ray enhancements were found in a statistically significant number of the preflare intervals searched, and consisted of one to three loops, kernels or sinuous features per interval. Typically, the preflare feature was not at the flare site and did not reach flare brightness. There was no systematically observed time within the preflare interval for the preflare events to appear, and, no correlation of preflare characteristics with the subsequent flare energy. Pressures of several preflare features were calculated to be on the order of a few dy/sq cm. H-alpha brightenings in the form of Knots and patches cospatial with or adjacent to the X-ray preflare features were found in nearly all of the intervals searched. Changing H-alpha absorption features were observed in about half of the cases, and took the form of surges or filament activations. The results do not provide support for loop preheating models, but do support models which require emerging flux as a means of activating larger coronal structures which flare.

34523 **(CEA-CONF—6877) Physics of ultra-high-density matter.** Soyeur, M. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Jul 1983. 43p. (In French). (CONF-8307120—1). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751572.

From Meeting on astrophysics and fundamentals interactions; Gargese, France (25 Jul 1983).

Portions are illegible in microfiche products.

This note deals with the study of the nuclear matter in two regions of the phase diagram: the low temperature-high baryon density region and the high temperature-low baryon density region. The specific subject of this work is to show the complementarity of the informations on the state of the nuclear matter in these regions obtained by the study of nuclei in laboratory or by observation of astrophysical phenomena in the good conditions of density and temperature. These phenomena are mainly: the gravitational collapses of massive stars, the evolution of neutron stars and the interaction of the very high energy cosmic rays with the nuclear emulsion chambers.

34524 **(DOE/ER/40048—82-L3) Identification of γ-ray lines observed from SS433.** Norman, E.B.; Bodansky, D. (Seattle Univ., WA (USA). Dept. of Physics; Washington Univ., Seattle (USA). Portions are illegible in microfiche products.

Lamb et al. recently have reported preliminary evidence for γ-ray line emission from the region of SS433. These authors have suggested that observed gamma-ray line features at 1.2 and 1.5 MeV may be the red- and blue-shifted components of the 1.369-MeV line from the first excited state to ground-state transition in

^{24}Mg. The purpose of this note is to point out some serious difficulties with this interpretation of the observed γ-ray lines.

34525 **(FERMILAB-CONF—84/40-T) Possible cosmological origin of the ultra high energy cosmic rays.** Hill, C.T. (Fermi National Accelerator Lab., Batavia, IL (USA)). Apr 1984. Contract AC02-76CH03000. 6p. (CONF-840150—6). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013083.

From 4. Moriond workshop on massive neutrinos in particle and astro-physics; La Plagne, France (15 Jan 1984).

Portions are illegible in microfiche products.

Using improved spectrum evolution results for nucleons propagation through the 3°K microwave background we present a model of the UHE cosmic rays, above 10^{18} eV, assuming a universal cosmological component associated with bright phase activity and a semi-local component associated with the Virgo cluster. The results for the spectrum and anisotropy are in good agreement with the Haverah Park EAS observations. An unambiguous and potentially detectable electron neutrino spectrum is derived.

34526 **(FRNC-TH—1544) Contribution to the study of velocity fields of chromosphere and solar transition zone.** Artzner, C. (Paris-7 Univ., 75 (France)). Jun 1982. 262p. (In French). NTIS (US Sales Only), PC A12/MF A01. Order Number DE84751567.

The LPSP (Laboratoire de Physique Stellaire et Planetaire) experiment on board 0508 is described. The properties of the instrument are discussed together with their evolution with time. The chromospheric oscillations and transients were studied (sunspost and active regions, prominences, oscillations in the chromosphere, chromosphere-corona transition lines). Simultaneous time-resolved observations of the H Lα, Mg k 2795A, and Ca, K solar lines were made. They indicate that the temporal variations of wavelength of the reversal of the solar H Lα and Mg k lines are correlated. A narrow absorption on the red part of the solar H Lα profile was observed and attributed to atomic hydrogen of the nearby interplanetary gas.

Order Number TI84780269. (CONF-8308112—).

From 3. international Swarm seminar; Innsbruck, Austria (3 Aug 1983).

Recent measurements in different laboratories have established that the reaction of O_2^+ with CH_4 produces protonated formic acid $HC(OH)_2^+$ with a large rate constant at very low temperatures. The $HC(OH)_2^+$ ion so produced may be a significant contributor to interstellar formic acid, formaldehyde and formyl radical production by dissociative recombination with electrons. The exothermic reaction of CH_3^+ with O_2 to form protonated formaldehyde may also occur at cloud temperatures and be a source of formaldehyde or formyl radicals by dissociative electron recombination. Moreover ions produced in fast radiative association of $HC(OH)_2^+$ with neutrals such as H_2O may be the source of observed molecules as complex as methanol.

34549 **(LA-UR—84-1595) Model for GCR-particle fluxes in stony meteorites and production rates of cosmogenic nuclides.** Reedy, R.C. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 27p. (CONF-840385—3). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84012435.

From 15. lunar and planetary science conference; Houston, TX, USA (12 Mar 1984).

Portions are illegible in microfiche products.

A model is presented for the differential fluxes of galactic-cosmic-ray (GCR) particles with energies above 1 MeV inside any spherical stony meteorite as a function of the meteorite's radius and the sample's depth. This model is based on the Reedy-Arnold equations for the energy-dependent fluxes of GCR particles in the moon and is an extension of flux parameters that were derived for several meteorites of various sizes. This flux is used to calculate the production rates of many cosmogenic nuclides as a function of radius and depth. The peak production rates for most nuclides made by the reactions of energetic GCR particles occur near the centers of meteorites with radii of 40 to 70 g cm^{-2}. Although the model has some limitations, it reproduces well the basic trends for the depth-dependent production of cosmogenic nuclides in stony meteorites of various radii. These production profiles agree fairly well with measurements of cosmogenic nuclides in meteorites. Some of these production profiles are different than those calculated by others. The chemical dependence of the production rates for several nuclides varies with size and depth. 25 references, 8 figures.

34550 **X-ray observations of a large sample of cataclysmic variable stars using the Einstein Observatory.** Cordova, F.A. (Los Alamos National Lab., NM); Mason, K.O. (Mullard Space Science Lab., Dorking, Great Britain). *Monthly Notices of the Royal Astronomical Society;* **206**: No. 4, 879-897(15 Feb 1984).

This paper presents the results of an X-ray survey of 31 known or suspected cataclysmic variables. Eighteen of these close binary systems are detected with infrared luminosities in the 0.1-4.0 keV band of between 10^{30} and 10^{33} erg s^{-1}. The majority have relatively hard X-ray spectra ($kT > 2$ keV) irrespective of luminosity state. Of seven dwarf novae observed during optical outbursts only U Gem exhibited enhanced ultrasoft X-ray emission (kT approx. 10 eV) in addition to weak, hard X-ray emission. Variability of the X-ray flux is observed in many of the stars, on time-scales ranging from tens of seconds to hours. The contribution to the flux from extended X-ray emission is investigated for SU UMa and GK Per.

34551 **Monopoles and bubbles in the early universe.** Steinhardt, P.J. (David Rittenhouse Laboratory University of Pennsylvania Philadelphia, PA 19104). pp 649-671 of Particles and fields. Capri, A.Z.; Kamal, A.N. New York, NY; Plenum Publishing Corp. (1983). (CONF-810882—). Contract AC02-76ER03071.

From 1981 Banff summer institute on particles and fields; Calgary, Alberta, Canada (16 Aug 1981).

This chapter reviews recent progress on 3 issues related to the description of first order phase transitions in field theories. Demonstrates how magnetic monopoles can act as impurity sites and mediate inhomogeneous first order phase transitions. Discusses the growth of bubbles nucleated in the decay process for the case of systems at non-zero temperature and density. Gives cases of field theories for which the semiclassical description of a first order

phase transition is inaccurate. Discusses applications to phase transitions in early cosmology. Examines monopole dissociation in the early universe; monopole and bubble growth in first order phase transitions; and the breakdown of the semiclassical approximation to bubble nucleation. Suggests that the modifications discussed or another modification yet to be discovered may lead to a more successful theory of the first order phase transitions that occurred in the history of the Universe and help to solve the cosmological mysteries that have hindered the present standard models.

34552 **Numerical calculations of gravity waves.** Wilson, J.R. (Lawrence Livermore National Laboratories, Livermore, CA 94550). pp 781-786 of Energy storage, compression, and switching. Nardi, V.; Bostick, W.H.; Sahlin, H. New York, NY; Plenum Publishing Corp. (1983). (CONF-751247—). Contract W-7405-ENG-48.

From Colloquium on thermal insulators at high temperature; Paris, France (3 Dec 1975).

This chapter outlines some recent work to calculate gravitational radiation emission in some interesting, but simple, astronomical settings. It uses approximations that are involved in replacing differential equations with finite difference equations so that a solution may be found using a computer. It suggests that the low efficiency for the emission of gravitational radiation is due to the fact that when the system has contracted enough so that velocities are near the velocity of light then the system is near to being a black hole. The gravitational wave energy that is then formed has to climb out of a deep gravitational potential well and in so doing becomes very weak by the time it reaches a large distance ("gravitational red shift").

34553 **(AD-A—137888/4) Study of low energy electron precipitations and auroral phenomena by using the USAF polar orbiting satellites. Final scientific report 1 Oct 78-30 Sep 83.** Meng, C.I. (Johns Hopkins Univ., Silver Spring, MD (USA). Applied Physics Lab.). Sep 1983. 55p. NTIS, PC A04/MF A01.

The main objective of this research project is to study the low energy electron precipitation and auroral phenomena over polar regions. The research is based on using various types of measurements from several USAF satellites at both low altitude polar orbits and high altitude geosynchronous orbits. These are focused on: (1) to investigate the different kinds of polar electron precipitations such as various auroral displays, the polar cusp region, conjugate photoelectrons, polar rain over the polar cap; (2) to determine precipitation characteristics for various kinds of magnetospheric and geophysical phenomena; (3) to investigate the physics and configuration of the polar cusp region and the polar cap region; and (4) to understand the morphology of magnetospheric particle population. The results of these studies can lead us to a better understanding of the interaction between the solar-wind and the geomagnetic field and also the coupling between the magnetosphere and the ionosphere.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

We perform a parametric study to evaluate the shielding effectiveness of a cloud of carbonaceous and model aerosols in space against a collimated laser beam. Our modeling is generally based on the small-angle approximation to multiple scattering; for aerosols having a size distribution corresponding to inventory smokes, the diffusion theory is employed. Both the power delivered to the target and the reflected signal have been computed as a function of optical depth with the single-scattering albedo varied parametrically in the range from 0.1 to 0.99. This study establishes the importance of multiple-scattering effects when the single-scattering albedo is larger than 0.3. 22 references, 20 figures.

34556 **(LA-UR—84-430) Los Alamos Science, Number 10, Spring 1984.** (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 82p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84011404.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The issue contains stories of three fascinating and novel explorations; first the exploration of a new idea in bioenergetics that may explain your body's remarkably efficient use of energy, second the exploration by satellite of the distant reaches of the earth's magnetosphere, and third, the exploration of surprising behavior in a tiny metallic crystal.

34557 (LA-UR—84-430, pp 32-57) **Journeys of a spacecraft.** Gosling, J.T.; Baker, D.N.; Hones, E.W. Jr. 1984. NTIS, PC A05/MF A01. Order Number TI84011404.

In Los Alamos Science, Number 10, Spring 1984.

With an assist from the moon, a spacecraft called ISEE-3 traveled far out along the nightside tail of our earth's magnetic field. There it discovered, among other things, huge ionic plasmoids breaking off from the earth's magnetosphere and hurtling out into space.

6403 Atomic, Molecular, And Chemical Physics

34558 **(CONF-8309252—1) Multiconfiguration wavefunctions for molecules: current approaches.** Dunning, T.H. Jr. (Argonne National Lab., IL (USA)). 1983. Contract W-31-109-ENG-38. 17p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013422.

From NATO Advanced Research workshop on vectorization of advanced methods for molecular electronic structure; Colorado Springs, CO, USA (25 Sep 1983).

For problems such as dissociation or reactions of molecules, multiconfiguration wavefunctions (MCSCF) are required in order to obtain the electron correlation effects. Two general methods are available for specifying the orbitals and configurations for use in MCSCF calculations: the generalized valence bond and the fully optimized reaction space (FORS) method. The complete active space self-consistent field method is conceptually related to the FORS method. Calculations using the various methods are presented for HF and N_2.

34559 **(DOE/ER/40001—T3) Source for intense collimated beams of fast Cs^+ and Cs^0.** Wise, T.; Haeberli, W. (Wisconsin Univ., Madison (USA)). 08 Jun 1984. Contract AC02-81ER40001. 28p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84013270.

The characteristics of a surface-ionization source for Cs^+ of 20 to 55 keV energy are described. For applications requiring fast Cs^0 atoms, the Cs^+ beam is neutralized to 90% by passage through Cs vapor. The observed Cs^0 beam intensity through a 1.1 cm diameter aperture 78 cm from the ionizer is 10 particle-mA. 8 references, 10 figures.

34560 **(DOE/ER/45022—1) Electron hybridization effects and the crystal structure of plutonium. Progress report as of January 31, 1984.** Cooper, B.R. (West Virginia Univ., Morgantown (USA). Dept. of Physics). 1984. Contract AS05-83ER45022. 5p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013642.

We have largely completed the technical development (including complex computer programming) necessary to carry out bulk LMTO electron energy band calculations. Such calculations will be used to include realistic band effects in our theory of crystallographic modifications of plutonium systems brought about through hybridization (mixing) between band electrons and relatively localized 5f electrons. In addition, we have developed and applied technique for including intermediate (between L-S and j-j) intraionic coupling on the plutonium ions. Treating such intermediate coupling is necessary for a fully quantitative treatment of the electron correlation effects on the ions. We have included such intermediate coupling and the possibility of long period structures to understand the magnetic behavior of PuSb. This demonstration of the importance of these two aspects of the behavior in hybridization mediated actinide systems is significant, because our hypothesis is that the low temperature crystallographic allotropes of plutonium (i.e., α, β, γ) are the crystal structure analogues of the long period magnetic structures found in cerium and light actinide monopnictides.

34561 **(DOE/ER/45039—1) Field ion microscopy and spectroscopy of hydrogen in metals. Progress report, August 1, 1983-March 1, 1984.** (Florida Univ., Gainesville (USA). Dept. of Materials Science and Engineering). 1984. Contract AS05-83ER45039. 15p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012972.

Progress is reported on the double-tilt holder for TEM, new sample holder improved cryogenics for FIM, ion source for ion implantation, transient waveform digitizer, other computer interfacing, and preliminary calibration experiments. (GHT)

34562 **(FRNC-TH—1427) Study of post-collision effect on autoionisation electron spectra in He^+-He collision.** Ioannis, K. (Toulouse-3 Univ., 31 (France)). Nov 1981. 151p. (In French). NTIS (US Sales Only), PC A08/MF A01. Order Number DE84751582.

Energy spectra of electrons ejected by autoionisation of the helium atom have been measured at low collision energy (3-20 keV) in the He^+-He collision system. Perturbations of the line shapes due to the Coulomb field of the spectator ion are studied. Our results are compared with the semi classical model of MORGENSTERN et al. Only for small (or great) emission angles relative phases as well as moduli of transition amplitudes towards the Msub(L)=0 sublevel of the $2p^2\ ^1D$ and $2s2p\ ^1P$ states are deduced. Near the $2s^2\ ^1S$ line, strong discrepancies with the model are observed (at thetasub(Lab)=11°) which are attributed to a contribution of autoionisation in the quasimolecule. Angular distributions have also been measured which seem to be not perturbed by the Coulomb field. An unexplained oscillatory behaviour of the singly differential cross section, when plotted against the collision energy has also been observed.

34563 (INIS-BR—107, pp 41) **340 nm emission system in I_2 induced by a two-photon excitation process.** Grieneisen, H.-P. (Centro Tecnico Aeroespacial, Sao Jose dos Campos (Brazil). Laboratorio de Estudos Avancados); Francke, R.E. (Rio Grande do Sul Univ., Porto Alegre (Brazil). Inst. de Fisica). 1983. NTIS (US Sales Only), PC A10/MF A01. Order Number DE84780267.

In Progress Report 1981-1982 - Instituto de Fisica - Universidade Federal do Rio Grande do Sul.

34564 **(INIS-mf—8341) Determination of the mean energy needed for the creation of an ion pair for hydrogen- and helium ions in different gases with energy in the range 95-1110 keV.** Werba, T. (Frankfurt Univ. (Germany, F.R.). Fachbereich Physik). 9 Jan 1980. 112p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780313.

As a result of the studies of N, CO_2 and CH_4, with decreasing energy of the primary ions a strong increase in the W-values has been found for He-ions. This increase is four times stronger as in the case of H-ions. For tissue equivalent gases the W-values can be determined from the different gas constituents by a mixing calculation. A special ionisation chamber set-up has been used for the present studies, including a monitoring system for the primary beam. (DG).

34565 **(LA-UR—84-1088) Metastable complexes of helium-hydrogen isotopes.** Taylor, R.D. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 3p. (CONF-840842—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84009995.

From 17. international conference on low temperature physics; Karlsruhe, F.R. Germany (15 Aug 1984).

Portions are illegible in microfiche products.

We have found a long-lived, metastable, bound state between helium-3 and tritium. We report on a number of experiments designed to help characterize this complex found to be present in both liquid and solid T_2. We have measured a number of physical properties, such as vapor pressure, electrical conductivity, magnetic susceptibility, and ionic mobility as functions of composition, temperature, pressure, decay time, and physical state (liquid, solid, and/or gas). The production rate of ^3He from T_2 is only 0.93 percent per month; nevertheless, changes in a number of physical properties from that of the initial ^3He-free liquid can be observed.

34566 **(LBL—17670) Energy redistribution in diatomic molecules on surfaces.** Asscher, M.; Somorjai, G.A. (Lawrence Berkeley Lab., CA (USA)). Apr 1984. Contract AC03-76SF00098. 27p. (CONF-8404166—1). NTIS, PC A03/MF A01; GPO Dep. Order Number DE84011442.

From 17. symposium on quantum chemistry and biochemistry: dynamics of molecule-surface interaction; Jerusalem, Israel (30 Apr 1984).

Translational and internal degrees of freedom of a scattered beam of NO molecules from a Pt(111) single crystal surface were measured as a function of scattering angle and crystal temperature in the range 450 to 1250K. None of the three degrees of freedom were found to fully accommodate to the crystal temperature, the translational degree being the most accommodated and the rotational degree of freedom the least. A precursor state model is suggested to account for the incomplete accommodation of translational and vibrational degrees of freedom as a function of crystal temperature and incident beam energy. The vibrational accommodation is further discussed in terms of a competition between desorption and vibrational excitation processes, thus providing valuable information on the interaction between vibrationally excited molecules and surfaces. Energy transfer into rotational degrees of freedom is qualitatively discussed.

34567 **(LBL—17822) Dynamic resonances in the reaction of fluorine atoms with hydrogen molecules.** Neumark, D.M.; Wodtke, A.M.; Robinson, G.N.; Hayden, C.C.; Lee, Y.T. (Lawrence Berkeley Lab., CA (USA)). May 1984. Contract AC03-76SF00098. 18p. (CONF-840415—24). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013240.

From 187. national meeting of the American Chemical Society; St. Louis, MO, USA (8 Apr 1984).

The reactions of F + H_2, HD and D_2 were studied in high resolution crossed molecular beams experiments. Center-of-mass translational energy and angular distributions were determined for each product vibrational state. In the F + H_2 reaction, the v = 3 product showed intense forward scattering while the v=2 product was backward-peaked. These results, in contrast to the backward scattering of all DF product vibrational states from F + D_2 at the same collision energy, suggest that dynamical resonances play an important role in the reaction dynamics of this system. In the F + HD reaction, the strong forward scattering of HF products and backward scattering of DF products is in agreement with the prediction of a stronger resonance effect for HF formation. The effect of the H_2 rotational excitation and the reactivity of F(^{2}P/sub 1/2/) are also discussed.

34568 **(N—8418322) Sputtering phenomena in ion thrusters. Final Report.** Robinson, R.S.; Rossnagel, S.M. (Colorado State Univ., Fort Collins (USA)). Feb 1983. 32p. (NASA-CR—168172). NTIS, PC A03/MF A01.

Sputtering effects in discharge chambers of ion thrusters are lifetime limiting in basically two ways: (1) ion bombardment of critical thruster components at energies sufficient to cause sputtering removes significant quantities of material enough to degrade operation through adverse dimensional changes or possibly lead to complete component failure, and (2) metals sputtered from these in-

tensely bombarded components are deposited in other locations as thin films and subsequently flake or peel off the flakes then lodge elsewhere in the discharge chamber with the possibility of providing conductive paths for short circuiting of thruster components such as the ion optics. This experimental work has concentrated in two areas. The first has been to operate thrusters for multi-hour periods and to observe and measure the films found inside the thruster. The second was to simulate the environment inside the discharge chamber of the thruster by means of a dual ion beam system. Here, films were sputter deposited in the presence of a second low energy bombarding beam to simulate film deposition on thruster interior surfaces that undergo simultaneous sputtering and deposition. Mo presents serious problems for use in a thruster as far as film deposition is concerned. Mo films were found to be in high stress, making them more likely to peel and flake.

34569 **(N—8419468) Ion extraction capabilities of two-grid accelerator systems.** Rovang, D.C.; Wilbur, P.J. (Colorado State Univ., Fort Collins (USA)). Feb 1984. 111p. (NASA-CR—174621). NTIS, PC A06/MF A01.

An experimental investigation into the ion extraction capabilities of two-grid accelerator systems common to electrostatic ion thrusters is described. This work resulted in a large body of experimental data which facilitates the selection of the accelerator system geometries and operating parameters necessary to maximize the extracted ion current. Results suggest that the impingement-limited perveance is not dramatically affected by reductions in screen hole diameter to 0.5 mm. Impingement-limited performance is shown to depend most strongly on grid separation distance, accelerator hole diameter ratio, the discharge-to-total accelerating voltage ratio, and the net-to-total accelerating voltage ratio. Results obtained at small grid separation ratios suggest a new grid operating condition where high beam current per hole levels are achieved at a specified net accelerating voltage. It is shown that this operating condition is realized at an optimum ratio of net-to-total accelerating voltage ratio which is typically quite high. The apparatus developed for this study is also shown to be well suited measuring the electron backstreaming and electrical breakdown characteristics of two-grid accelerator systems.

34570 **(ORNL—6052) 1982 bibliography of atomic and molecular processes.** Barnett, C.F.; Crandall, D.H.; Gilbody, H.B.; Gregory, D.C.; Kirkpatrick, M.I.; McDaniel, E.W.; McKnight, R.H.; Meyer, F.W.; Morgan, T.J.; Phaneuf, R.A. (comps.). (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 185p. NTIS, PC A09/MF A01; 1; GPO Dep. Order Number DE84013574.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This annotated bibliography includes papers on atomic and molecular processes published during 1982. Sources include scientific journals, conference proceedings, and books. Each entry is designated by one or more of the 114 categories of atomic and molecular processes used by the Controlled Fusion Atomic Data Center, Oak Ridge National Laboratory to classify data. Also indicated is whether the work was experimental or theoretical, what energy range was covered, what reactants were investigated, and the country of origin of the first author. Following the bibliographical listing, the entries are indexed according to the categories and according to reactants within each subcategory.

34571 **(ORNL/TM—9032) Radiative decay of plasma oscillations on nonplanar metal surfaces.** Little, J.W.; Callcott, T.A.; Ferrell, T.L.; Arakawa, E.T. (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 180p. NTIS, PC A09/MF A01; 1; GPO Dep. Order Number DE84013772.

Portions are illegible in microfiche products. Original copy available until stock is exhausted; Thesis. Submitted to the Univ. of Tennessee, Knoxville, TN.

We have studied the radiation resulting from electron bombardment of extremely small silver particles and of silver films containing closely spaced, periodic surface structure. Thin silver films which were heated to a temperature slightly below the bulk-silver melting point were found to break into collections of particles with approximately ellipsoidal cross sections. Electron microscopy and shadow-casting techniques were used to characterize the samples as to the distributions of particle sizes and particle shapes. The wavelength, polarization, and angular intensity characteristics of the radiation emitted by these samples were compared with the predictions of a theoretical model for the radiative decay of surface plasmons on nonspherical particles. The results indicated that two distinct modes of charge density oscillation contributed to the radiation. Very closely spaced periodic surface modulations were produced in silver films by using the technique of electron beam lithography. Radiation resulting from the electron bombardment of these films showed evidence of structure that has been predicted theoretically. However, this structure was not well resolved. We have made suggestions which should be useful in future studies of the origin of this radiation. 100 references, 41 figures.

34572 **(SAND—83-1809) Angular correlation in Auger cascade coincidence measurements.** McGuire, E.J. (Sandia National Labs., Albuquerque, NM (USA)). May 1984. Contract AC04-76DP00789. 34p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84013310.

It may be possible to measure a nonzero neutrino mass (of ~ 40 eV) by Auger cascade coincidence measurements (i.e., the M_1-$M_{4,5}N_{6,7}$-$(N_{6,7})^3$ cascade in Ho ($Z = 67$)), following nuclear capture of the 3s electron. The question arises, Are there detector locations that will enhance the (very low) counting rates. Expressions are obtained herein for the angular distribution of the two Auger cascade electrons, using both LSJ and jj coupling for the intermediate state. A simpler calculation, using Yb ($Z = 70$) (with an initially filled 4f subshell), jj coupling of the intermediate level, and a sum over final states, shows that the angular anisotropy is no more than 25% to 30%.

34573 **(SAND—84-0744C) Use of a tandem accelerator for light element analysis.** Arnold, G.W.; Doyle, B.L.; Bunker, B.C. (Sandia National Labs., Albuquerque, NM (USA)). 01 Jun 1984. Contract AC04-76DP00789. 17p. (CONF-8405191—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012551.

From International symposium on the nuclear accelerator impact in the interdisciplinary field; Padova, Italy (30 May 1984).

Portions are illegible in microfiche products.

The Sandia EN tandem Van de Graaff accelerator is being utilized to depth profile light elements (H, D, He, Li, B, C) in a variety of materials. It is particularly useful in glass studies; e.g., hydration, H/D exchange, alkali-ion depletion and crystallization in ion-implanted glasses. These investigations are primarily carried out by elastic recoil detection (ERD) in combination with Rutherford backscattering (RBS) and are discussed as illustrative examples.

34574 **(SAND—84-1082C) Highly sensitive high resolution Raman spectroscopy using resonant ionization methods.** Owyoung, A.; Esherick, P. (Sandia National Labs., Albuquerque, NM (USA)). May 1984. Contract AC04-76DP00789. 3p. (CONF-840868—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012240.

From 9. international conference on raman; Tokyo, Japan (26 Aug 1984).

Portions are illegible in microfiche products.

In recent years, the introduction of stimulated Raman methods has offered orders of magnitude improvement in spectral resolving power for gas phase Raman studies. Nevertheless, the inherent weakness of the Raman process suggests the need for significantly more sensitive techniques in Raman spectroscopy. In this we describe a new approach to this problem. Our new technique, which we call ionization-detected stimulated Raman spectroscopy (IDSRS), combines high-resolution SRS with highly-sensitive resonant laser ionization to achieve an increase in sensitivity of over three orders of magnitude. The excitation/detection process involves three sequential steps: (1) population of a vibrationally excited state via stimulated Raman pumping; (2) selective ionization of the vibrationally excited molecule with a tunable uv source; and (3) collection of the ionized species at biased electrodes where they are detected as current in an external circuit.

34575 Electron-electron correlation in highly charged atoms. Johnson, W.R.; Cheng, K.T. (Dept. of Physics Univ. of Notre Dame, Notre Dame, IN 46556). pp 463-488 of Quantum electrodynamics of strong fields. Greiner, W. New York, NY; Plenum Publishing Corp. (1983). (CONF-8106191—).

From NATO AST conference on quantum electrodynamics of strong fields; Lahnstein, F.R. Germany (15 Jun 1981).

The relativistic random-phase approximation (RRPA) is introduced to account for electron-electron correlation in atoms and ions of high nuclear charge where non-relativistic many-body methods are inadequate. To provide a basis for this study of the RRPA, the Dirac-Fock (DF) theory is reviewed. Applications of the DF equations to determine inner-electron binding energies in heavy atoms are given illustrating the influence of relativistic effects in situations where correlations are unimportant. The RRPA equations are derived as natural generalizations of the DF equations. Examples of RRPA calculations of discrete excitations and of photoionization are given illustrating situations where both relativistic and correlation effects play important roles.

34576 Coherence effects in heavy-ion-atom collisions. Bottcher, C. (Oak Ridge National Lab., TN). pp 403-411 of Coherence and correlation in atomic collisions. Kleinpoppen, H.; Williams, J.F. (eds.). New York, NY; Plenum Publishing Corp. (1980). Contract W-7405-ENG-26.

A new approach to charge capture and ionization by highly stripped projectiles is described and shown to explain cross-section systematics through the Periodic Table. Oscillations in cross section with respect to charge state observed around atomic number 70 are explained as an f-wave resonance in the target-electron-projectile scattering. The ratio of H_2 to H cross sections for both light and heavy projectiles is shown to fit a two-center coherent scattering model; independent scattering by the two centers is not a good assumption for velocities below 4 a.u. Similar coherence effects are predicted in stripping by molecular gases even in multielectron processes where the independent atom model might be thought valid. Recent experiments on the forward peak of electrons ejected from the projectile show interesting structure which can be partly explained without invoking interference effects.

34579 (INIS-SU—219, pp 210-215) Experimental study on the transient heat transfer when cooling with helium in different phase states. Dinaburg, L.B.; Senyuk, S.V.; Fokeev, F.F.; Shelounov, G.Ya. 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

To optimize cooling of sUperconducting systems, the cooling capacity of helium in different phase states at quick rise and drop of load is experimentally studied. A resistance thermometer is placed on a textolite washer in a small copper bottle 10 mm in diameter and 100 mm long. The thermometer crystal of cubic form with a 1 mm edge is used in experiments as both a heater and a high-sensitive temperature sensor. The small copper bottle is suspended on a thin-walled stainless tube in the cryostat sink where the liquid helium temperature can be kept in the (4.22-1.85)K range. The obtained experimental data show that helium-2 cooling is most effective, the sensor is cooled down during less than 1 ms after ceasing the heating. It takes 10-15 ms to cool down the sensor in boiling helium-1. Supercritical and underheated heluium is least effective in cooling, since after 80 ms after ceasing the heating the sensor has not yet atained the initial temperature.

34580 (LA-UR—84-904) Maximum supercoolign in liquid ^{3}He-^{4}He mixtures near the tricritical point. Sinha, D.N.; Hoffer, J.K. (Rockwell International Corp., Anaheim, CA (USA); Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 3p. (CONF-840842—3). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010076.

From 17. international conference on low temperature physics; Karlsruhe, F.R. Germany (15 Aug 1984).

Portions are illegible in microfiche products.

Measurements of supercooling in liquid ^{3}He-^{4}He mixtures near the tricritical point are presented. The reduced temperature range $0.001 < \epsilon$ identical to $(1 - T/T/\text{sub } t/) < 0.01$ was investigated for three different rates of cooling using a pressure-quench technique. For $\epsilon < 0.012$, the maximum supercooling was found to be a function of the cooling rate. Comparisons with data in organic binary mixtures are given.

34581 (LA-UR—84-905) Dynamical scaling in ^{3}He-^{4}He liquid mixtures. Hoffer, J.K.; Sinha, D.N. (Los Alamos National Lab., NM (USA); Rockwell International Corp., Anaheim, CA (USA)). 1984. Contract W-7405-ENG-36. 3p. (CONF-840842—4). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010072.

From 17. international conference on low temperature physics; Karlsruhe, F.R. Germany (15 Aug 1984).

Portions are illegible in microfiche products.

Light scattering data in decomposing ^{3}He-^{4}He mixtures yield the normalized dynamic structure factor anti S(k,t) and verify the dynamic scaling hypothesis anti $S(k,t) = k_1^{-3} F(k/k_1)$, where k_1 is the first moment of the (unnormalized) structure factor S(k,t), and F(x) is a time independent shape factor. Assuming that scaling is also valid for S(k,t), we trace the path of the quench in the temperature-composition plane.

34582 (LA-UR—84-944) Optical effects of the gravitationally induced concentration gradient in tricritical ^{3}He-^{4}He. Shiah, S.S.; Hoffer, J.K. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 3p. (CONF-840842—2). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009972.

From 17. international conference on low temperature physics; Karlsruhe, F.R. Germany (15 Aug 1984).

Tricritical scaling is used to calculate the gravitationally induced concentration gradients (∂ x/∂ z)/sub T/ in near-tricritical mixtures of ^{3}He-^{4}He. It is shown that superfluid and normal fluid can coexist at temperatures above the tricritical temperature, separated by a point where (∂ x/∂ z)/sub T/ diverges weakly. Calculations of the refraction of light induced by (∂ x/∂ z)/sub T/ are presented that reveal the presence of a sharp kink in the refraction angle α, leading to the physical observation of an interface between coexisting normal and superfluid phases.

34583 (LA-UR—84-1020) Onset of oscillations in symmetric convective states in a superfluid ^{3}He-^{4}He mixture. Maeno, Y.; Haucke, H.; Ecke, R.; Wheatley, J.C. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 3p. (CONF-840842—5). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009984.

From 17. international conference on low temperature physics; Karlsruhe, F.R. Germany (15 Aug 1984).

The oscillatory convective instability in a solution of 1.46% ^{3}He is studied in the Prandtl number range of 0.04 less than or approximately equal sigma less than or approximately equal 0.15. The observed behavior supports the theory of oscillatory convection for a classical, low-Prandtl-number, one-component fluid. A local temperature probe indicates a striking difference in the oscillatory amplitude when the sense of rotation of the convective rolls is reversed.

34584 (LA-UR—84-1052) Period-doubling two-torus state in a convecting ^{3}He-superfluid ^{4}He solution. Haucke, H.; Maeno, Y.; Wheatley, J.C. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 3p. (CONF-840842—10). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84009985.

From 17. international conference on low temperature physics; Karlsruhe, F.R. Germany (15 Aug 1984).

Portions are illegible in microfiche products.

We present observations of the nonlinear dynamical behavior of a convecting dilute solution of ^{3}He in superfluid ^{4}He which approaches a chaotic state via a period-doubling sequence of one of two incommensurate frequencies.

From 18. course: the high energy limit; Erice, Trapani, Italy (31 Jul 1980).

The contents of this volume take the form of theoretical lectures, seminars on specialized topics, and review lectures. Individual subjects explored include the nonlocal U(2) gauge theory, SU(5) without SU(5), the electroweak program for the 1980s, the theoretical implications of Isabelle physics, the Bianchi-Backlund transformations, the Grand Unification, Planck energy and subnuclear physics, the link between pp and e^+e^- phenomena, the nonexistence of "molecular quark states," "oo" resonance, the status of e^+e^- physics in the United States, the e^+e^- PETRA machine, "deep inelastic" phenomena induced by charged leptons and those induced by neutrinos, the Orsay e^+e^- experiment in the "low"-energy range, the possible existence of more than one Z^0, the possible existence of baryon instability, the status of "charmed" particles, the "theoretical desert," and the heavy lepton and the consequences of its discovery for the frontiers of subnuclar physics.

34588 QCD, unifications, and the road to Asymptopia. Lindenbaum, S.J. (Brookhaven National Lab. Upton, NY 11973). pp 575-598 of The high-energy limit. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-800778—). Contract AC02-76CH00016.

From 18. course: the high energy limit; Erice, Trapani, Italy (31 Jul 1980).

The Road to Asymptopia--that energy beyond which no important new phenomena which are not predictable occur--is surveyed. The road leads from classical physics, to modern asymptotic theories, to the unifications, as shown. The conclusion that the world is a hierarchy of nested gauge groups is upset by the introduction of enormous numbers of Higgs', and is therefore premature. The Great Desert, with possible oases, is mapped out. It is advised to keep building next step accelerators as mini deserts followed by important oases are likely to be discovered all the way to the Planck length.

6451 Particle Interactions And Properties - Experimental

REFER ALSO TO CITATION(S) 33965, 34658

34589 (DESY—83-100) Search for new particles. Yamada, S. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 39p. (CONF-8308101—12). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751487.

From International symposium on lepton and photon interactions at high energies; Ithaca, NY, USA (4 Sep 1983).

The following topics are discussed briefly: Free quarks, Axions, Right-handed charged weak currents, Higgs particles, Top quarks, Generations -sequential heavy leptons, - exotic heavy leptons, - neutrino counting, - familons, Supersymmetric particles, Composite leptons, Magnetic monopoles. The experiments which are reviewed here employ two different methods. One way is to study a known process very precisely. Another way is to plan an experiment or choose analysis parameters in accordance with the predicted characteristics of the particle in order to remove the background. Usually the latter method is sensitive to a few events, but the former can lead to an unexpected surprise.

34590 (DESY—83-114) Properties of charm jets produced in e^+e^- annihilation near 34 GeV. Althoff, M.; Braunschweig, W.; Kirschfink, F.J.; Luebelsmeyer, K.; Martyn, H.U.; Peise, G.; Rimkus, J.; Rosskamp, P.; Sander, H.G.; Schmitz, D. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751425.

Dsup(*+-) production via e^+e^- -> Dsup(*+-)X was studied at c.m. energies near 34 GeV. The charged particles produced in the hemisphere opposite to that of the Dsup(*) were used to investigate the fragmentation of charm jets. All spectra studied show a close similarity between the charm jet and the average jet obtained by summing over all quark flavours. The spectra of particles produced in the Dsup(*) hemisphere were used to study separately first rank and higher rank fragmentation.

34591 (DESY—83-115) Observation of hard processes in collisions of two quasi-real photons. Althoff, M.; Braunschweig, W.; Kirschfink, F.J.; Luebelsmeyer, K.; Martyn, H.U.; Peise, G.; Rimkus, J.; Rosskamp, P.; Sander, H.G.; Schmitz, D. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751483.

Hard processes in photon-photon collisions are studied using high statistics data without requiring an electron tag. A high yield of hadrons with psub(t) in the range 1.5 to 3.0 GeV/c is observed. This yield exceeds the expectation of the Born term by a factor of four.

34592 (DESY—83-117) Recent results on e^+e^- annihilation from PETRA. Cords, D. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 16p. (CONF-8308131—6). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751481.

From 3. international conference on physics in collision; Como, Italy (31 Aug 1983).

Over the past year the energy of PETRA has been steadily increased in order to extend the search for the top quark. Neither topponium bound states nor a threshold for open top production has been found below a c.m. energy of 43 GeV. The implication of the measurement of R, the ratio of the hadronic to the point-like μ-pair cross section, on the determination of the strong coupling constant αsub(s) is discussed. The analysis of jets reveals, that the primary hadron fragments are heavy, that the fragmentation function of heavy quarks c and b is hard, and that gluons tend to have a wider transverse momentum distribution than quarks. The search for exotic particles is reported as negative for new heavy leptons, for scalars - like charged Higgs mesons or technipions - and for supersymmetric particles. Mass limits are given.

34593 (DESY—83-119) Observation of F meson production in high energy e^+e^- annihilation. Althoff, M.; Braunschweig, W.; Kirschfink, F.J.; Luebelsmeyer, K.; Martyn, H.U.; Peise, G.; Rimkus, J.; Rosskamp, P.; Sander, H.G.; Schmitz, D. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751443.

Production of the F meson by e^+e^- annihilation at high energies has been observed in the phiπ final state with a mass of 1.975+-0.009+-0.010 GeV and a width consistent with the mass resolution. The yield of F production times branching ratio relative to μ pair production is Rsub(F)(x>=0.3)xB(Fsup(+-)->phiπsup(+-))"0.061+-0.012+-0.018.

34594 (DESY—83-121) Production and muonic decay of heavy quarks in e^+e^- annihilation at 34.5 GeV. Althoff, M.; Braunschweig, W.; Kirschfink, F.J.; Luebelsmeyer, K.; Martyn, H.U.; Peise, G.; Rimkus, J.; Rosskamp, P.; Sander, H.G.; Schmitz, D. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 31p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751485.

The production of prompt muons in e^+e^- annihilation has been studied at centre of mass energies near 34.5 GeV. The measured semi-muonic branching ratios of b and c quarks are B(b->X$\mu\nu$) = 0.117 +- 0.028 +- 0.01 and B(c->X$\mu\nu$) = 0.082 +- 0.012 sub(-0.01)sup(+0.02). The fragmentation functions of heavy quarks are hard, <zsub(b)> = 0.85 sub(-0.12)sup(+0.10) sub(-0.07)sup(+0.02) and <zsub(c)> = 0.77 sub(-0.07)sup(+0.05) sub(-0.11)sup(+0.03). Limits have been set on flavour changing neutral current decays: B(b->X$\mu^+\mu^-$)<0.02 and B(c->X$\mu^+\mu^-$)<0.007 (95% confidence level).

34595 (DESY—83-122) Exclusive production of hadron pairs at large momentum transfer in photon-photon interactions. Berger, C.; Deuter, A.; Genzel, H.; Lackas, W.; Pielorz, J.; Raupach, F.; Wagner, W.; Klovning, A.; Lillestoel, E.; Olsen, J.M. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751484.

We report on the exclusive production of π, K and proton pairs from photon-photon interactions at momentum transfers vertical stroketvertical stroke >= 1 GeV^2. Using the PLUTO detector at the e^+e^- storage ring PETRA, we have observed 15 events in an integrated luminosity of 41.7 pb^{-1}. The data lie far below the expectations for point-like hadrons, and are in reasonable agreement with the QCD-based predictions of Brodsky and Lepage.

34596 (DESY-L-Trans—285) Perturbative corrections to sigma sub(tot) (e^+e^- -> hadrons) in supersymmetric QCD. Kataev, A.L.; Pivovarov, A.A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 4p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751490.

Translated from Russian.

sigmasub(tot) (e^+e^- -> γsup(*) -> hadrons) have been calculated in QCD at two-loop level. Three-loop corrections due to gluon pair production are quoted accompanied by quark-antiquark two-jet events.

34597 (DOE/ER/03130—20) Progress report of a research program in experimental high energy physics. Progress report, January 1, 1984-December 31, 1984. Lanou, R.E. Jr. (Brown Univ., Providence, RI (USA)). 15 Jun 1984. Contract AC02-76ER03130. 69p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84013553.

Portions are illegible in microfiche products.

An experimental program in strong and electro-weak interaction physics of elementary particles is being carried out using electronic detection techniques. Experiments have been performed or are being prepared utilizing the accelerators of the laboratories at Brookhaven and Fermilab. The experiments described in this report by the Electronic Detector Group include the following: (1) experiments to measure neutrino-electron scattering and other neutral current phenomena, (2) preparations for experiments at the FNAL anti P P Collider, (3) neutrino oscillation experiments at BNL, and (4) a monopole search.

34598 (DOE/ER/40125—1) Indiana University High Energy Physics Group technical progress report, November 1, 1983-November 30, 1984. Ahlen, S.P.; Brabson, B.B.; Crittenden, R.R.; Dzierba, A.R.; Heinz, R.M.; Martin, H.J. Ogren, H.O. (Indiana Univ., Bloomington (USA). Dept. of Physics). 1984. Contract AC02-84ER40125. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012688.

Portions are illegible in microfiche products.

The Indiana University High Energy Physics Group has been actively involved in a variety of research programs during the current contract period. These programs are associated with major experiments conducted by our group at SLAC, Fermilab, and Brookhaven. The physics areas under investigation include studies of e^+e^- interactions at high energy at SLAC (PEP HRS experiment), jet and dimuon production utilizing the Multiparticle Spectrometer at Fermilab (E110/E557/672), and glueballs (Brookhaven E771). The status of these efforts are discussed.

34599 (FERMILAB-Conf—84/49-T) Transverse momentum distributions of jets and weak bosons. Ellis, R.K. (Fermi National Accelerator Lab., Batavia, IL (USA)). May 1984. Contract AC02-76CH03000. 10p. (CONF-8403130—3). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013081.

From 4. topical workshop on proton antiproton collider physics; Bern, Switzerland (5 Mar 1984).

Portions are illegible in microfiche products.

The theoretical description of processes leading to events at large transverse momentum is reviewed. Numerical estimates are given for jet cross-sections and for W and Z production cross-sections. The influence which uncertainties in the input parameters have on the theoretical predictions is also discussed.

34600 (INIS-mf—8735) High energy photon-photon scattering in 2-photon processes and test of quantum electrodynamics. Sakurayama, Y. (Muenchen Univ. (Germany, F.R.). Fakultaet fuer Physik). 31 Jan 1983. 130p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780276.

For the test of the electron propagator of quantum electrodynamics at high energies and large momentum transfer the electron-positron scattering with production of two high energy photons is suited. The reaction e^+e^-->$e^+e^-\gamma\gamma$ contains in the lowest perturbation theoretical order the radiation of two bremsstrahlung quanta as well in higher order the production of two γ-quanta by internal photon-photon scattering processes. For the test of quantum electrodynamics expecially this photon-photon scattering contribution is of interest. In the present thesis this part was calculated and compared with the bremsstrahlung contribution. Thereby among other the already known scattering amplitude of two virtual photons had to be mode accessible for the numerical evaluation by elimination of all apparent singularities. The calculated photon-

photon scattering contribution was compactly formulated by use of all symmetry properties. For the control of the exact calculation also approximation formulae of the main parts of the photon-photon scattering contribution as well the bremsstrahlung contribution were developed. The discussion of the results showed that by the measurement of the reaction $e^+e^-\to e^+e^-\gamma\gamma$ with an accuracy of 10% at a photon energy of 1 GeV a test of the electron propagator is reachable up to a length of about 0.2×10^{-13}cm. Thereby also the influence of the vacuum polarization by μsup(+-), πsup(+-) and psup(+-) was regarded. (orig./HSI).

34601 **(INIS-mf—8750) Semi-inclusive hadron production in the deep inelastic μp scattering. Results of experiments of the European Muon Collaboration.** Becks, K.H. (Wuppertal Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 8 - Naturwissenschaften 1 - Physik). 1982. 99p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780332.

Results on semi-inclusive hadron production of the μp scattering experiment of the European Muon Collaboration are presented. The gross features of the longitudinal properties of the observed final state mesons are well described by the Quark Parton Model predictions. Comparing the high energy data of this experiment with low energy data, no strong energy dependence is found. The predicted charge asymmetry of charged mesons at high x and z is seen in the data. The production rate of neutral pions equals the half sum of charged pions. The fragmentation process of quarks into mesons seems to be process independent (environmental independence). A possibel explanation of the observed high baryon rate (10% to 15% of all charged hadrons) in the current direction at high center of mass energies W is the diquark pair production in the fragmetnation cascade. Because of the observed Q^2 dependence, higher twist effects cannot be the main source of the observed proton and antiproton signal in the measured kinematical range. For high W and high Q^2 first evidence is found for scaling violations and factorization breaking of the fragmentation functions. The observed pattern of the data is consistent with beyond-to-leading order QCD calculations. A quantitative description of the transverse properties of the final hadrons and the observed jet structure at high W can only be obtained by including the increase of the transverse momentum due to hard gluon emission.

34602 (INIS-mf—8935, pp 73-101) **Colour exchange of high energy hadrons in nuclei.** Kopeliovich, B.Z.; Lapidus, L.I. (Joint Inst. for Nuclear Research, Dubna (USSR)). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

It is very difficult to investigate experimentally the basic process of hadron-nucleo.n interactions, described by quantum chromodynamics, because of the macroscopic distance of detectors from the reaction volume and because of the fast hadronization process. To detect the primary color-exchange process it is necessary to use two targets displaced away from each other to a distance of the order 1 fm, i.e. inside a nucleus. Thus the hadron-nucleus reactions at high energy represent a laboratory for the investigation of color dynamics of the hadronic interactions. Some theoretical problems, e.g. diffractive hadron-nucleus scattering, multiple color exchange, multiparticle production and effects of quark confinement on color exchange reactions are surveyed. Suggested methods for evaluation of experimental data of hadron-nucleus collisions are described. (author).

34603 **(KFK—3643) Semileptonic decays of c and b quarks.** Schneider, H. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Dec 1983. 24p. (CONF-830718—26). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751448.

From International Europhysics conference on high energy physics; Brighton, UK (20 Jul 1983).

Recent results on the semileptonic branching ratios of c and b quarks are reviewed. Mainly the high energy data from PEP at $\sqrt{s}$ proportional 29 GeV and PETRA at $\sqrt{s}$ proportional 34 GeV are presented. The influence of the parton fragmentation into hadrons is discussed.

34604 **(LBL—17806) Recent results from the PEP-4 TPC.** Madaras, R.J. (Lawrence Berkeley Lab., CA (USA)). May 1984. Contract AC03-76SF00098. 33p. (CONF-8403121—4). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013241.

From New particle production at high energy meeting: The Recontre de Moriond; La Plagne, France (4 Mar 1984).

Portions are illegible in microfiche products.

Presented are the latest results from the PEP-4 TPC on inclusive charged and neutral particle production, resonance production, heavy quark fragmentation and flavor correlations. 27 references.

34605 **(LBL—17845) Hadron production in e^+e^- annihilation at PEP.** Hofmann, W. (Lawrence Berkeley Lab., CA (USA)). May 1984. Contract AC03-76SF00098. 30p. (CONF-8404163—2). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013236.

From 6. international conference on high energy physics; Nashville, TN, USA (5 Apr 1984).

Portions are illegible in microfiche products.

Recent results from PEP on quark and gluon fragmentation are reviewed. Topics include: inclusive stable particle production and resonance production, particle distributions in jets, heavy quark fragmentation, flavor correlation studies and tests of fragmentation models. 37 references.

34606 **Multiparticle hadronic systems produced in high-energy (pp) interactions, and comparison with (e+e-).** Basile, M.; Cifarelli, L.; Contin, A.; D'Alf, G.; Esposito, B.; Giusti, P.; Massam, T.; Nania, R.; Palmonari, F.; Romeo, C.C. (CERN, Geneva). pp 495-507 of The high-energy limit. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-800778—).

From 18. course: the high energy limit; Erice, Trapani, Italy (31 Jul 1980).

The similarity between the inclusive fractional momentum distribution of the particles produced in (e+,e-) annihilation and hadronic systems produced in (pp) interactions is established by subtracting "leading" proton effects. The use of leading hadron effect (a general phenomenon in all hadron physics) in (pp) interactions has brought a vast amount of low-pT physics into the domain of comparison with (e+,e-) physics. Inclusive fractional momentum distribution, inclusive transverse momentum distribution, average charged particle multiplicity, the ratio of charged to total energy, and planarity, are compared in this paper. The old belief that only high -pT phenomena could be compared to (e+e-) physics seems to be over.

34607 **Theoretical implications of ISABELLE physics.** Chau, L.L. (Physics Dept. Brookhaven National Lab. Upton, NY 11973). pp 447-493 of The high-energy limit. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-800778—).

From 18. course: the high energy limit; Erice, Trapani, Italy (31 Jul 1980).

This paper updates the analysis of a proton-proton colliding storage ring in the context of ISABELLE physics. Z^0, W + or - will be produced plentifully at ISABELLE. The production of intermediate bosons will serve as a factory of heavy quark states. Onia of mass up to 120 GeV are detectable at ISABELLE. The Higgs boson can be searched by observing the bump signature in the dilepton invariant mass from its bremsstrahlung off the Z^0. New sources of gluon-gluon interactions will produce Higgs bosons, and technicolor pseudo scalars. But new complex triggering systems besides the dilepton detection will be necessary to detect these new particles. A brief historical review of ISABELLE is also included.

From 4. topical workshop on proton antiproton collider physics; Bern, Switzerland (5 Mar 1984).

The parameters discussed include: the renormalized weak mixing angle, masses and widths of the W plus and minus and of the Z boson, radiative Z and W boson decays. The Higgs-top quark mass connection and the Grand Unification theories are briefly reviewed. It is suggested that a new pseudoscalar particle with a mass near 93 GeV could be produced by gluon-gluon fusion. 28 references. (LEW)

34609 **(CNRS-CPT—82-P-1414) Comment on QCD sum rules and weak bottom decays.** Guberina, B.; Machet, B. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Jul 1982. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751554.

Portions are illegible in microfiche products.

QCD sum rules derived by Bourrely et al. are applied to B-decays to get a lower and an upper bound for the decay rate. The sum rules are shown to be essentially controlled by the large mass scales involved in the process. These bounds combined with the experimental value of BR ($B \to e\nu X$) provide an upper bound for the lifetime of the B^+ meson. A comparison is made with D-meson decays.

34610 **(DOE/ER/70004—369) Relation of parton distribution functions in Drell-Yan process to deeply inelastic scattering.** Collins, J.C.; Soper, D.E.; Sterman, G. (Illinois Inst. of Tech., Chicago (USA). Dept. of Physics; Oregon Univ., Eugene (USA). Inst. of Theoretical Science; State Univ. of New York, Stony Brook (USA). Inst. for Theoretical Physics). Apr 1983. Contract AT06-76ER70004. 6p. (OITS—209). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013832.

Portions are illegible in microfiche products.

We consider certain parton distribution functions P(x,k/sub T/) that appear in a proposed form of factorization for the Drell-Yan process at measured Q/sub T/. We argue that these Drell-Yan parton distribution functions P/sub q/A/(x, k/sub T/) are related by a light cone expansion to the distribution functions f/sub q/A/(x) measured in deeply inelastic lepton scattering. 12 references.

34611 **(FRNC-TH—1404) Experiments on multiparton final states in e^+e^- annihilation at $\sqrt{s}$=30 GeV (MARK-J/PETRA).** Hariri, S. (Grenoble-1 Univ., 38 (France)). Mar 1982. 254p. (In French). NTIS (US Sales Only), PC A12/MF A01. Order Number DE84751581.

This work is devoted to an experimental study of the quantum chromodynamics (Q.C.D.) matrix element. The first chapter consists of a general introduction, theoretical and phenomenological. In the second chapter, we give an elementary description of the detector. In addition to the topological methods given there, the third chapter contains a presentation of the MULTIJET analysis especially designed to study Q.C.D. matrix element. The fourth chapter begins with an application to MARK J data of the topological analysis described in the third chapter. Since the detector is a calorimeter, the transformation of particles into pseudo-particles introduces an additional effect which adds to hadronization effects. The BantiB model is a restriction of the quark model to the production of b quarks. The comparison of this model to the data shows that such a purely hadronic model is able to reproduce the experimentally observed rate of events called three jets. Nevertheless, the matrix element, corresponding to the BantiB model three jet events, is completely excluded by the data. The same statement applies to the quark model with wide hadronization. The fact that the data favours clearly Q.C.D. predictions is shown for differents values of (epsilon, delta) and for different variables (Nsub(J), Tsub(J), σsub(3J). In the fifth chapter our Q.C.D. model with 2 and 3 jets is precisely defined. The systematical errors, experimental and theoretical are given in this chapter. Since the number of active flavours can affect our results, the exclusions of an open production of a sixth flavour with +-2/3 or +-1/3 is given there and an upper limit on the possible rate of 4 jet events is defined. The obtained results being in full agreement with our (2 and 3)-jet Q.C.D. model, the rapid convergence of the perturbative series at $\sqrt{s}$=30 GeV is confirmed once more.

34619 (INIS-mf—8953) Separable representation of the proton-proton interaction. Schweiger, W. (Graz Univ. (Austria)). 1982. 130p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780331.

For the p-p system reliable experimental phase shifts and low energy parameters are available. Comparison with theory is complicated by corrections from the long-range Coulomb potential. Previous separable potentials failed to reproduce the experimental data. Therefore a new separable potential is introduced which 1) gives a correct account of the p-p system in the partial waves l<-2 and 2) allows an analytical treatment of the Coulomb distortion. With this potential calculated values for the partial wave l<-2 phase and the effective range L<-2 are given and compared with experimental data and the old Gray potential. Assuming charge symmetry predictions concerning the n-n system are made. General properties of the off-shell T-matrix of Coulomb-like potentials and possible consequences are investigated. Finally the influence of Coulomb distortion on the nuclear part of the half-shell T-matrix is discussed qualitatively.

From Meeting on phenomenology of modern unified field theories from standard model to supersymmetries; Dubrovnik, Yugoslavia (22 May 1983).

Portions are illegible in microfiche products.

Recent results from high-energy e^+e^- colliding facilities are reviewed in the context of gauge theories. First QCD analyses are discussed and difficulties are seen to arise from the interplay between perturbative QCD and non-perturbative fragmentation processes. Many results have been recently obtained on weak electromagnetic interference, strengthening our faith in the standard SU(2) x U(1) theory: however some pieces are still missing and looked for. Finally, vigourous searches are pursued to find clues for physics beyond the SU(3) x SU(2) x U(1) framework: among those supersymmetric particles are being actively hunted in a large variety of situations.

34621 (MPI-PAE/Exp.El.—120) Introduction to neutrino oscillations and neutrino masses. Schmitz, N. (Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.). Werner-Heisenberg-Inst. fuer Physik). Aug 1983. 82p. (CONF-8309219—2). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84751424.

From International school of elementary particle physics; Kupari, Yugoslavia (18 Sep 1983).

In these lectures we first summarize the general formalism of neutrino oscillations and treat the cases of two and three neutrino flavors in more detail. We then discuss some general experimental and numerical aspects and give a survey of the various types of experiments to look for neutrino oscillations. We describe the searches for oscillations carried out so far and present the experimental results. Finally we discuss the methods to determine the neutrino masses directly and give the present upper limits on these masses.

34622 Hadronic physics of qq^- light quark mesons, quark molecules and glueballs. Lindenbaum, S.J. (Brookhaven National Lab. Upton, NY 11973). pp 509-574 of The high-energy limit. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-800778—). Contract AC02-76CH00016.

From 18. course: the high energy limit; Erice, Trapani, Italy (31 Jul 1980).

The status of model classifications for conventional u, d, and s, quark meson states is reviewed. Evidence for narrow (mock) baryonium was contradicted in BNL Multiparticle Spectrometer experiments. Nor was any convincing evidence for wide (true) baryonium discovered. But Jaffe's low energy qqqq states have been made more plausible by the P-matrix treatment. Glueballs, and how to find them, are also discussed. The failure of the OZI rule in pi$^-$p psi-psi n is explained. Precision studies of low energy hadron spectroscopy are recommended.

34623 Why most flavor dependence predictions for nonleptonic charm decays are wrong. Lipkin, H.J. (Fermi National Accelerator Lab. Batavia, IL 60510). pp 389-413 of The high-energy limit. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-800778—).

From 18. course: the high energy limit; Erice, Trapani, Italy (31 Jul 1980).

Nonleptonic weak decays of strange hadrons are complicated by the interplay of weak and strong interactions. The discovery of charmed particles with open channels for nonleptonic decays has lead to new understanding of decays. Final state interactions by a full dynamical calculation, including enhancement factors and couplings to inelastic channels, must be taken into account. Since these calculations are not possible at present, two alternative approaches--phenomenological models, and the use of subgroups--are suggested. Related symmetry breaking mechanisms are also discussed. The approach is then generalized to the use of larger flavor symmetry groups, and the interplay between different types of flavor symmetry is seen.

34624 Exotic multiquark states with charm. Lipkin, H.J. (Fermi National Accelerator Lab. Batavia, IL 60510). pp 599-625 of The high-energy limit. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-800778—).

From 18. course: the high energy limit; Erice, Trapani, Italy (31 Jul 1980).

Suggestions that quarks and leptons are not elementary but made of more fundamental objects called rishons and preons is discussed. A rishon model, and the Han-Nambu cube, is studied. The possible existence of multiquark states is studied. Diproton, and dipon are rejected, but the "threshold exotics," dikaon, baryon B, and anticharmed D meson, which would give unambiguous signatures for a multiquark hadron, are studied. The MIT bag model, and a quasinuclear colored quark model, are rejected in favor of a naive quark model. The success of the model with n=2 and n=3 systems leads to its application with n=4 multiquark systems.

34625 Deep inelastic phenomena. Prescott, C.Y. (Stanford Linear Accelerator Center Stanford Univ., Stanford, CA 94305). pp 677-733 of The high-energy limit. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-800778—). Contract AC03-76SF00515.

From 18. course: the high energy limit; Erice, Trapani, Italy (31 Jul 1980).

This paper reviews and brings up to date the picture of nucleon structure as seen in the context of inelastic scattering. The quark-parton model, which forms the basis of understanding of lepton-nucleon inelastic scatterings, is studied. A new theory of strong interactions, quantum chromodynamics, was developed, when the quark-parton model began to fail. Basic couplings of QCD are studied. Burras and Gaemers' analysis indicates that leading order QCD provides a good description of eN, muN, and vN inelastic scattering. Moments of the structure function, and the parameter R are also examined. Finally, current experiments in the field-the CHIO, European Muon, BCDMS, and BFP collaborations--are all reviewed in detail.

34626 Double beta decay and majorana neutrinos. Right-handed currents or nonzero masses?. Rosen, S.P.; Perlmutter, A. (Purdue Univ., West Lafayette, IN 47907). pp 333-347 of Gauge theories, massive neutrinos, and proton decay. Kursunoglu, B. New York, NY; Plenum Publishing Corp. (1981). (CONF-810134—).

From Orbis scientiae conference; Fort Lauderdale, FL, USA (19 Jan 1981).

This chapter describes some new developments concerning the mechanism for lepton number nonconservation in no-neutrino double beta decay. Explains that lepton number nonconservation in no-neutrino double beta decay comes about either because both left- and right-handed components of a Majorano neutrino are coupled to the electron in the weak leptonic current, or because the neutrino has nonzero mass. Shows that while nuclear ground-state to ground-state transitions arise from right-handed currents and from neutrino mass terms, transitions to low-lying excited states with J /SUP P/ $=2^+$ can arise only from right-handed currents. Emphasizes that the possibilities of detecting small admixtures of

right-handed currents, and of setting limits on neutrino masses that are either very small or very large, make double beta decay a most rewarding phenomenon to study.

6453 Particle Invariance Principles And Symmetries

34627 (CNRS-CPT—83-P-1499) Analysis of instanton contribution for the periodic CP_1-model. Richard, J.L. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Apr 1983. 4p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751555.

Portions are illegible in microfiche products.

The analysis of the instanton contribution for the CP_1-model with periodic boundary conditions is performed using isospin invariance. An interpretation in terms of a neutral Coulomb gas is given.

34628 (CONF-840275—10) Forward-backward asymmetries in W and Z decays. Rosner, J.L.; Langacker, P.; Robinett, R.W. (Chicago Univ., IL (USA). Dept. of Physics; Pennsylvania Univ., Philadelphia (USA). Dept. of Physics; Institute for Advanced Study, Princeton, NJ (USA); Massachusetts Univ., Amherst (USA). Dept. of Physics). 13 Feb 1984. Contract AC02-76CH03000. 15p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013481.

From Workshop on anti pp options for the SSC; Chicago, IL, USA (13 Feb 1984).

The leptons emitted in decays of W and Z bosons produced in pp or anti pp collisions exhibit characteristic asymmetries with respect to the beam direction, as measured in the W or Z center-of-mass. The asymmetries appear in both pp and anti pp collisions. For anti pp collisions they appear to be approximately constant over the whole y range for values of $M/\sqrt{s} \geqq 0.1$. For smaller values of $M/\sqrt{s}$, the asymmetries become more and more washed out in the central region as sea-sea collisions begin to play a larger role in gauge boson formation.

34631 (CEA-CONF—7049) Quantum chromodynamics, chiral symmetry and bag models. Soyeur, M. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Aug 1983. 53p. (CONF-8308160—2). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84751559.

From International school of intermediate energy nuclear physics; San Miniato, Italy (19 Aug 1983).

This course deals with the following subjects: quarks; quantum chromodynamics (the classical Lagrangian of QCD, quark masses, the classical equations of motion of QCD, general properties, lattices); chiral symmetry (massless free Dirac theory, realizations, the σ-model); the M.I.T. bag model (basic assumptions and equations of motion, spherical cavity approximation, properties of hadrons); the chiral bag models (basic assumptions, the cloudy bag model, the little bag model); non-topological soliton bag models.

34632 (CNRS-CPT—83-P-1500) Behavior of the Wilson parameter in U(1) lattice gauge theory with long range gauge invariant interactions. Ruiz, J. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Apr 1983. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751556.

Portions are illegible in microfiche products.

The U(1) lattice gauge model with fermions can be expressed after integration over the fermionic variables as a "long range gauge model": the effective action is a sum over all possible gauge field loops with corresponding weight factors. Different behaviors of the Wilson parameter are shown according to the hypothesis on the weight factors.

34633 (DESY—83-106) Restoration of Lorentz invariance in SU(2) and SU(3) lattice gauge theories. Teper, M.; Schierholz, G. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Oct 1983. 11p. (LAPP-TH—89). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751428.

We calculate the energy-momentum dispersion relation for the Osup(+(+)) glueball in SU(2) and SU(3) lattice gauge theories. We find that this relation takes the usual relativistic continuum form $E^2 = psup(->2) + m^2$ for $\beta >= 2.2$ in the case of SU(2) and $\beta >= 5.5$ in the case of SU(3), thus demonstrating the dynamical restoration of Lorentz invariance. We obtain similar results, albeit with larger statistical errors, for the 2^{++} glueball.

34634 (DESY—83-112) Scaling of the quark-antiquark potential and improved actions in SU(2) lattice gauge theory. Montvay, I.; Gutbrod, F. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 19p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751427.

The scaling behaviour of the quark-antiquark potential is investigated by a high statistics Monte Carlo calculation in SU(2) lattice gauge theory. Besides the standard one-plaquette action we also use Symanzik's tree-level improved action and Wilson's block-spin improved action. No significant differences between Symanzik's action and the standard action have been observed. For small β Wilson's action scales differently. The string tension value chi extracted from the data corresponds to Asub(latt) = (0.018 +- 0.001) √chi for the one-plaquette action.

34635 (DESY—83-113) Variational determination of the string tension and the glueball mass in (2+1) dimensional U(1) lattice gauge theory for all values of the coupling constant. Langguth, W. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751426.

Using variational ansaetze of the product type we calculate the massgap and the stringtension of (2+1) dimensional U(1) lattice gauge theory in the Hamiltonian formalism for all values of the coupling constant. In the strong coupling limit our results agree with high order strong coupling series. In the weak coupling limit both, glueball mass and stringtension vanish exponentially with the coupling constant.

34636 (DESY—83-120) Monte Carlo simulations with Symanzik improved actions. Berg, B. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 25p. (CONF-8310265—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751486.

From International symposium on the theory of elementary particles; Ahrenshoop, German D.R. (9 Oct 1983).

I summarize Monte Carlo results, which were recently obtained using Symanzik improved actions.

34637 **(DOE/ER/02978—11) Inelastic strong interactions at high energies. Final report, June 1, 1976-May 31, 1984.** Suranyi, P. (Cincinnati Univ., OH (USA)). 1984. Contract AC02-76ER02978. 18p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013647.

Work in Reggeon Field Theory is described. Multiparticle processes were studied. Cut RFT's were examined and convergence of perturbation expansions was considered. An RFT with an internal symmetry was also investigated. We made a study of model independent predictions for various high energy cross-sections, introducing the concept of sections. We examined the quantum mechanics of polynomial potentials as a model for quantum field theories. We determined various convergence properties of approximate calculational methods. Various aspects of GUT's were studied. The Higgs sector was examined and various symmetry breaking patterns were found using different representations for the Higgs. Bounds were put on parameters of the theory at finite temperature. Lattice gauge theories were studied. We looked at one exactly soluble one-dimensional model, and then began an extended investigation of Hamiltonian Lattice gauge theories. We studied the weak coupling behavior of global and local abelian lattice gauge theories in arbitrary dimensions, using various periodic trial functions and the WKB approximation. Supersymmetry and supergravity were investigated. We examine the compatibility of scale transformations in super space and the properties of scale invarient theories in ordinary spacetime. We discovered the largest possible local linear symmetry which is allowed given the structure of spacetime. We developed a systematic method for performing dimensional reduction on theories which admit abelian killing vectors. 68 references.

From Workshop on gauge theory on a lattice; Argonne, IL, USA (5 Apr 1984).

Portions are illegible in microfiche products.

The influence of weak coupling corrections on tests of the universality of lattice actions is discussed. The two loop corrections described in this paper were performed using the background field method. An estimate is also provided of the perturbative corrections to asymptotic scaling for the Wilson action. Monte Carlo simulation of Lattice QCD is carried out at finite, large values of the bare coupling g, but the continuum limit of the theory corresponds to vanishing g. When extracting physical results from lattice calculations it is therefore important to correct for the non-zero value of the coupling constant. The results of some perturbative calculations are reported, which address this question.

34639 **(FERMILAB-Conf—84/48-T) Monte Carlo renormalization group calculations for SU(2) lattice gauge theory.** Mackenzie, P.B. (Fermi National Accelerator Lab., Batavia, IL (USA)). Apr 1984. Contract AC02-76CH03000. 9p. (CONF-8404119—5). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013082.

From Workshop on gauge theory on a lattice; Argonne, IL, USA (5 Apr 1984).

Portions are illegible in microfiche products.

A Monte Carlo renormalization group calculation of the β function in SU(2) lattice gauge theory is presented, using the blocking transformation proposed by Swendsen. I outline a strategy for improving the action using Monte Carlo methods and present some preliminary results.

34640 **Bianchi-Backlund transformations, conservation laws, and linearization of various field theories.** Chau, L.L. (Physics Dept. Brookhaven National Lab. Upton, NY 11973). pp 249-277 of The high-energy limit. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-800778—).

From 18. course: the high energy limit; Erice, Trapani, Italy (31 Jul 1980).

The parallel development of parametric Bianchi-Backlund transformations (BT), local conservation laws, non-local conservation laws, and inverse scattering equations ("linearization") in chiral fields, super-chiral fields, self-dual Yang-Mills equations in 4 dimension, and loop-space chiral equations is studied. From this exercise the elegance of introducing fermion fields via super-space symmetry, to view these theories in a unified way, can be appreciated. The status of the development of BT, conservation laws, linearization, and s-matrix are summarized for all fields.

34641 **SU(5) without SU(5): why B-L is conserved and baryon number not in unified models of quarks and leptons.** Lipkin, H.J. (Fermi National Accelerator Lab. Batavia, IL 60510). pp 281-305 of The high-energy limit. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-800778—).

From 18. course: the high energy limit; Erice, Trapani, Italy (31 Jul 1980).

The search for a gauge theory to unify SU(2) and U(1) has led to SU(5). Quark-lepton unification of SU(5) is examined without assuming higher symmetries to preclude the discovery of accidental symmetry (which happened in SU(3)). Properties generally attributed to SU(5) but which are already present without the assumption of SU(5) are sought. The conservation of B-L is studied. The most general S matrix for thirty quarks and leptons in the first generation are examined. Three types of helicity occurring in four point functions--helicity conserving, double flip, and single flip processes are studied. An underlying SU(5)-like structure in the quantum numbers of existing particles, and SU(5)-like properties in the four point S matrix are found.

34642 **Death of fractional topological charge.** Pinsky, S.S. (Ohio State Univ., Columbus, OH 43210). pp 349-358 of Gauge theories, massive neutrinos, and proton decay. Kursunoglu, B.; Perlmutter, A. New York, NY; Plenum Publishing Corp. (1981). (CONF-810134—).

From Orbis scientiae conference; Fort Lauderdale, FL, USA (19 Jan 1981).

This chapter examines the varying of vacuum energy of QCD with respect to arbitrary chiral SU(N) rotations at a fixed instanton angle. Offers comments on confusions in the literature concerning chirality selection rules and fractional topological charge. Discusses notation, chiral selection rules and fractional topological charge. Attempts to identify the correct perturbative Hamiltonian and the perturbative vacuum when an absolute minimum is achieved.

6455 Scattering Theory

34643 **(CNRS-CPT—82-PE-1412) Short range expansion.** Holden, H.; Hoegh-Krohn, R.; Johannesen, S. (Centre National de la Recherche Scientifique, 13 - Marseille (France). Centre de Physique Theorique). Nov 1983. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751558.

Portions are illegible in microfiche products.

Let V be short range potential and lambdasub(i)(epsilon) analytic functions. We show that the Hamiltonians Hsub(epsilon) converge in the strong resolvent sense to the point interactions as epsilon $\rightarrow$ 0, and if Vsub(i) have compact support then the eigenvalues and resonances of Hsub(epsilon) which remains bounded as epsilon $\rightarrow$ 0, are analytic in epsilon in a complex neighbourhood of zero. We compute in closed form the eigenvalues and resonances of Hsub(epsilon) to the first order in epsilon.

34644 **(DESY—83-116) Relation between finite size effects and elastic scattering processes.** Luescher, M. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 22p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751482.

Finite volume effects on the mass spectrum of massive quantum field theories (including QCD) are shown to be related to forward scattering amplitudes of the infinite volume theory. Using theoretical and experimental information on the latter, the finite size effects can be estimated. For the pion and the nucleon they are

found to be small, provided msub(π)L>=1 (msub(π): pion mass, L: box size).

34645 (DOE/ER/70004—363) Quadratic constraints in amplitude analysis. Moravcsik, M.J. (Oregon Univ., Eugene (USA)). 1983. Contract AT06-76ER70004. 14p. (OITS—219). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013753.

Portions are illegible in microfiche products.

The quadratic constraints among bilinear products of reaction amplitudes for a reaction with arbitrary spins are discussed in terms of the experimental observables. While the specific form of these constraints may be quite lengthy, the optimal formalism of polarization phenomena exhibits the structure of these constraints transparently and gives a systematic procedure to calculate them. Some general features of these constraints are exhibited which are useful for planning experiments. Such features can be recognized without the lengthy calculations, with the help of a diagrammatic analog combined with the transparent structure of the optimal formalism.

34646 (KFK—3063-Suppl.1) Karlsruhe code MODINA for model independent analysis of elastic scattering of spinless particles. Gils, H.J. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Dec 1983. 78p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84751450.

The Karlsruhe code MODINA (KfK 3063, published November 1980) has been extended in particular with respect to new approximations in the folding models and to the calculation of errors in the fourier-Bessel potentials. The corresponding subroutines replacing previous ones are compiled in this first supplement. The listings of the fit-routine-package FITEX missing in the first publication of MODINA are also included now.

34651 (INIS-mf—8935, pp 579-591) Closing talk. Nagamiya, S. (Tokyo Univ. (Japan). Dept. of Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The closing talk of the International conference on high energy nuclear physics (Hungary, June 1983) summarizes the main topics discussed during the conference: new developments in the field of basic dynamics, concurrent cascade and flow models, new four-pi data, considerations and experiments on phase transitions in nuclear matter (liquid-gas or nuclear matter - quark matter), pion condensation, exotic nuclei produced in heavy ion reactions, and the subjects under hot discussion: anomalon, entropy production, possible stable exotic states etc. The papers presented on the conference are abstracted and indexed individually. (D.Gy.).

34652 (Juel-Spez—202) Annual report 1982 of the Institute of Nuclear Physics at Kernforschungsanlage Juelich. Gruemmer, F.; Mayer-Boericke, C.; Schult, O.; Seyfarth, H.; Speth, J.; Turek, P. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Apr 1983. 162p. Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik.

This annual report contains extended abstracts about the work performed at the named institute during 1982 together with a list of publications. The work concerns the study of nuclear reactions and scattering processes, nuclear spectroscopy, the theory of nuclear structure and nuclear reactions, heavy ion reactions, solar energy, the development of the isochronous cyclotron, the spectrometer BIG KARL, detectors, and targets, as well as computer developments.

6511 Experimental Techniques

34653 Behavior of nuclei at high angular momentum. Stephens, F.S. (Lawrence Berkeley Lab., CA (USA)). pp 2-22 of Proceedings of 1982 INS international symposium on dynamics of nuclear collective motion, at the foot of Mt. Fuji. High spin states and transitional nuclei. Ogawa, K.; Tanabe, K. (eds.). Tokyo, Japan; Tokyo Univ., Inst. for Nuclear Study (1982). (CONF-820738—).

From INS symposium on dynamics of nuclear collective motion; Mount Fuji, Japan (6 Jul 1982).

The present report begins with a brief overview of nuclear shapes and level structures at high-spin values. The new spectroscopy associated with angular-momentum alignments is described, and some of the exciting possibilities of this spectroscopy are explored. Nuclear moments of inertia are discussed and a somewhat different one is defined, together with a method for measuring it and some early results. Finally a few comments on the future prospects for high-spin physics are offered.

From Conference on the intersections between particle and nuclear physics; Steamboat, CO, USA (23 May 1984).

Portions are illegible in microfiche products.

The K^+-nucleus system is reviewed and comparison with data is made. The principal conclusions are that the theoretical uncertainties in relating the K^+-nucleus interaction to the K^+-nucleon interaction are very small and hence the positive kaon makes an excellent probe of the nucleus. It is suggested that this particle may be more sensitive to non-nucleonic degrees of freedom (especially quarks) than classical probes.

From International symposium on in-beam nuclear spectroscopy; Debrecen, Hungary (14 May 1984).

Portions are illegible in microfiche products.

The study of hypernuclei is a frontier area of nuclear physics. As more intense beams of strange mesons have become available, methods of in-beam spectroscopy have been applied to the study of hypernuclei. The feasibility of detecting hypernuclear electromagnetic radiation has been demonstrated at the Brookhaven Alternating Gradient Synchrotron. Studies have been made of the effective LAMBDA hyperon-nucleon interaction in p-shell hypernuclei. The first results are described and they place useful constraints on the effective interaction and the shell model description of hypernuclear states.

34660 **(INIS-mf—8392) Analyzing power Asub(y)(THETA) for ^{12}C(n vector,nsub(0,1))^{12}C in the neutron energy range from 6.8 to 17.3 MeV.** Woye, E. (Tuebingen Univ. (Germany, F.R.). Fakultaet fuer Physik). 7 Jun 1982. 118p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780238.

The analyzing power for the elastic and inelastic neutron scattering to the first excited state on ^{12}C was measured at 21 energies from 6.8 to 17.3 MeV. The data from 8.9 to 14.9 MeV were together with very precise cross section data from the literature studied in the framework of the spherical optical model and the coupled channel formalism. The coupled channel analysis of the elastic and inelastic scattering on ^{12}C in the framework of the rotator model yielded a good agreement between measured and calculated angular distributions. The determined quadrupole deformation parameter β_2 = -0.67 agrees well with values from the literature. The existence of different qudrupole deformations for the central and spin-orbit components of the optical potential was studied. Large differences for the quadrupole deformations $\beta_2$sup(c) and $\beta_2$sup(so) were found at 8.9, 11.9, and 12.9 MeV. Especially at 8.9 MeV by this a great improvement of the fit to the data was reached. (orig./HSI).

Good resolution cross section and analyzing power (p vector, p') data for many states in ^{12}C up to an excitation energy of 21 MeV and spanning a momentum transfer range of 0.3 to 2.1 fm^{-1} were obtained using the High Resolution Spectrometer at the Clinton P. Anderson Meson Physics Facility at incident beam ener-

gies of 398, 597, and 698 MeV. Optical model potentials were obtained from the elastic scattering data. Inelastic data were analyzed in the Distorted Wave Impulse Approximation using the Love-Franey effective nucleon-nucleon interaction. The energy dependent isoscalar natural parity cross sections were underestimated, while phase difficulties were encountered in fitting analyzing powers. The energy independent isovector natural parity cross sections were reasonably reproduced, but analyzing powers were not, the calculations yielding positive trends whereas the data are of opposite sign. The energy independent isoscalar and isovector unnatural parity cross sections were quite well reproduced up to moderate momentum transfers, and striking successes were observed for some analyzing power data. Systematics of energy dependence together with the results of the DWIA calculations permitted the assignment of spin, parity and isospin quantum numbers to states in the 18-21 MeV excitation region. 64 references.

In the first part of this thesis, we present a study of the charge exchange reaction $^{28}Si(^{18}O,^{18}F)^{28}Al$ at 56 MeV. This reaction can be easily understood in terms of a one-step direct charge exchange mechanism. With a very simple shell model, it can be interpreted that a neutron of the ^{18}O in the Jsup(π)=0^+, T=1 state interacts with a proton in the dsub(5/2) shell of ^{28}Si and they exchange their spin and charge forming Jsup(π)=1^+, T=0 ^{18}F, and Jsup(π)=3^+ or 2^+, T=1 ^{28}Al. In the present analysis of data, we have first performed the direct charge exchange DWBA calculations. These results are compared with the exact-finite-range (EFR) second order DWBA calculations which take into account the successive one-nucleon stripping and pickup, and pickup and stripping process. In the second part, we wish to report results and analysis concerning the $^{24}Mg+^{12}C$ system. The 180° c.m. angle scattering excitation functions were measured between 12- and 27-MeV c.m. corresponding to a range in the compound ^{36}Ar excitation energy of 28.3 to 43.3 MeV. Several angular distributions for the elastic and inelastic scattering have been measured on the top of the bumps of the elastic scattering excitation function. These elastic scattering angular distributions cannot be fitted by a single squared Legendre polynomial of order L. A complete phase shift analysis is presented. We discuss also the shapes of the first ^{24}Mg 2^+ inelastic scattering angular distributions with respect to the shape of the elastic scattering differential cross section.

(CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Nov 1983. 15p. (CONF-8310269—2). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751573.

From French-Japanese colloquium on comparison between hadronic and nuclear research at intermediate energies; Dogashima, Japan (3 Oct 1983).

Portions are illegible in microfiche products.

We have used alpha particle beams of 340 MeV and 480 MeV bombarding isotopically enriched ^{208}Pb, ^{116}Sn and ^{58}Ni targets to explore with good confidence the nuclear structure of the continuum. In that study, we have used a consistent way for extracting the back-ground. We have made a multipole decomposition of the spectra, without any assumption on shape and position of the resonances. We have found a good agreement with previous studies for the low part of the spectra, and make a full exploration of the previously suspected hexadecapole peak. In the 3hω we have shown the presence of L=5 strength, and put at it exact value the L=1 compression mode, for the three studied nuclei. Moreover, we have indications of L=4 and L=2 resonances in the 4hω mode, and possibly of L=5 and 3 numbers of the 5hω modes: they should be compression modes. Then, it seems, that, with intermediate energies with good statistics and coherent ways of treating the data, we have been able to see the highest excitations predicted by the models.

34678 **(KFK—3642) Investigation of the reaction ^{6}Li + ^{40}Ca at 156 MeV in a coincidence experiment.** Freindl, L.; Grotowski, K.; Planeta, R.; Klewe-Nebenius, H.; Neumann, B.; Buschmann, J.; Gils, H.J.; Rebel, H.; Zagromski, S. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik; Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Radiochemie). Dec 1983. 23p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751449.

The cross sections for inelastic break up have been studied for the ^{6}Li + ^{40}Ca reaction at Esub(Li) = 156 MeV. For this, gamma ray spectra from the heavy residual nuclei were measured in coincidence with beam velocity projectile fragments. The cross sections were found to be: 34 +- $_{9}^{14}$ mb for protons, 30 +- $_{7}^{12}$ mb for deuterons, and 78 +- $_{41}^{142}$ mb for α-particles, respectively. These values are small when compared to total break up cross sections. A comparison of the cross section sum of all known reaction paths induced by ^{6}Li + ^{40}Ca at 156 MeV with total reaction cross section indicates a missing cross section of the order of a few hundred millibarns. It is discussed whether this cross section may be attributed to pick up reactions.

34679 **Cross section measurement for the ^{52}Cr(n,p)^{52}V reaction near threshold.** Smith, D.L.; Meadows, J.W. (Argonne National Laboratory, Applied Physics Division 9700 South Cass Avenue, Argonne, Illinois 60439). *Nuclear Science and Engineering;* **76**: No. 1, 43-48(Oct 1980).

Cross sections for the ^{52}Cr(n,p)^{52}V reaction have been determined in the 5.3- to 9-MeV range using a previously reported pulsed-accelerator technique to measure gamma-ray activity from 3.75-m ^{52}V. Very few experimental data have been reported for this reaction, and little was known about the threshold region prior to the present experiment. The results of this work (in conjunction with other available cross section information) have been used in the computation of fission-spectrum averages, which are of interest for reactor applications.

34680 **(CONF-8404170—2) Half-life of ^{60}Fe.** Kutschera, W.; Billquist, P.J.; Frekers, D.; Henning, W.; Zeng, M.X.; Pardo, R.; Paul, M.; Rehm, K.E.; Smither, R.K.; Yntema, J.L. (Argonne National Lab., IL (USA); Brookhaven National Lab., Upton, NY (USA)). 1984. Contract W-31-109-ENG-38. 21p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013446.

From 3. international symposium on acceleration mass; Zurich, Switzerland (10 Apr 1984).

The half-life of ^{60}Fe has been measured to be T/sub 1/2/ = (1.5 +- 0.3) x 10^{6} y, significantly longer than the only previous measurement of Roy and Kohmann which reported a value of 3 x 10^{5} y uncertain by a factor of 3. The present value was obtained from a specific activity and radioisotope concentration measurement of a material produced by spallation of copper with 191-MeV protons. ^{60}Fe/Fe ratios in the range of 10^{-8} were measured with the Argonne FN tandem-superconducting linear accelerator system in conjunction with an Enge split-pole spectrograph. The specific activity was measured through the grow-in of the 1.332 MeV gamma-ray line of the ^{60}Co daughter activity. 13 references.

34685 **Activation cross sections for ^{66}Zn(n,p)^{66}Cu.** Smith, D.L.; Meadows, J.W. (Argonne National Laboratory, Applied Physics Division Argonne, Illinois 60439). *Nuclear Science and Engineering;* **76**: No. 1, 61-66(Oct 1980).

Cross sections for the ^{66}Zn(n,p)^{66}Cu reaction have been measured in the 4.2- to 10-MeV energy range using conventional activation techniques. This work provides results for an energy region where no other data are available. These results, and values from the literature for energies above 13 MeV, are used to provide an estimation of the cross section excitation function from about 4.2 to 20 MeV. An extrapolation of the cross section from 4.2 MeV to the effective threshold at about 3 MeV is derived from calculations based on a semiempirical model that is fitted to the experimental data at higher energies. This excitation function is used to compute fission-spectrum-average cross sections, which are compared with corresponding values from the literature.

34686 **Measurement of cross sections for the $^{63}Cu(n,\alpha)^{60}Co$ reaction from threshold to 10 MeV.** Winkler, G.; Meadows, J.W.; Smith, D.L. (Argonne National Laboratory, Applied Physics Division 9700 South Cass Ave., Argonne, Illinois 60439). *Nuclear Science and Engineering;* **76**: No. 1, 30-42(Oct 1980).

Cross sections for the $^{63}Cu(n,\alpha)^{60}Co$ reaction have been measured by activation for neutron energies from threshold to 10 MeV relative to well-known ^{238}U fission cross sections. The data obtained are compared with values from the literature and the resulting spectrum-averaged cross sections based on the new results are given for the ^{235}U thermal fission and ^{252}Cf spontaneous fission neutron field. The new results indicate tbat the long-standing discrepancy between differential and integral data for the reaction $^{63}Cu(n,\alpha)^{60}Co$ has been eliminated.

From French-Japanese colloquium on comparison between hadronic and nuclear research at intermediate energies; Dogashima, Japan (3 Oct 1983).

Portions are illegible in microfiche products.

The role of high energy electrons as a probe of nuclear structure is expanding considerably. It is now possible to determine much more accurately the structure of the nucleus and to disentangle some of the interactions between its constituents. The nuclear charge and magnetization densities can be determined in great detail by electron scattering, giving the spatial distribution of the nucleons very precisely even in the innermost region of the nucleus. The remarkable advantage of high energy electron scattering for studying the short range processes in nucleon-nucleon interactions is the possibility of mapping out, quantitatively and with great accuracy, the currents associated with meson exchanges between nucleons. This is accomplished by selecting carefully the kinematical conditions of the experiments. For example, the various currents which contribute to the electron scattering cross section can often interfere strongly with each other resulting in minima in the cross section at specific momentum transfers. Therefore the different meson-exchange-currents can be isolated by varying the momentum transferred to the nucleus, q, by the electrons, provided that a sufficient range of q is available. Existing accelerators at MIT and Saclay provide energies of the order of 700 MeV which are sufficient to probe details of the order of Δr approximately equal to 0.8 fm; at SLAC with 20 GeV electrons, a scale of distance of 0.1 fm can be explored. In between it is a great desert which is now one of the challenge of the future. In this talk, I have chosen only a few striking examples of the progress achieved recently.

34688 **(FRNC-TH—1532) Study of neutron-deficient Sn isotopes.** Auger, G. (Paris-7 Univ., 75 (France)). May 1982. 165p. (In French). NTIS (US Sales Only), PC A08/MF A01. Order Number DE84751578.

The formation of neutron deficient nuclei by heavy ion reactions is investigated. The experimental technique is presented, and the results obtained concerning Sn and In isotopes reported: first excited states of ^{106}Sn, high spin states in ^{107}Sn and ^{107}In; Yrast levels of ^{106}Sn, ^{107}Sn, ^{108}Sn; study of neutron deficient Sn and In isotopes formed by the desintegration of the compound nucleus ^{112}Xe. All these results are discussed.

34699 **(UCID—20101) Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb.** Scobel, W.; Blann, M.; Komoto, T.; Trabandt, M.; Grimes, S.M.; Hansen, L.F.; Pohl, B.A.; Wong, C. (Lawrence Livermore National Lab., CA (USA)). Jun 1984. Contract W-7405-ENG-48. 158p. NTIS, PC A08/MF A01; 1; GPO Dep. Order Number DE84013190.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Cross sections for the inclusive production of neutrons from reactions of 25 MeV protons with $^{50\ 52\ 53}$Cr, $^{54\ 56\ 58}$Fe, ^{59}Co, ^{60}Ni, ^{63}Cu, ^{89}Y, $^{90\ 91\ 92\ 94}$Zr, $^{92\ 94\ 95\ 96\ 97\ 98\ 100}$Mo, ^{110}Pd and ^{159}Tb and of 18 MeV protons with $^{90\ 91\ 92\ 94}$Zr have been measured with time-of-flight techniques for 16 angles between $3.5^{0} \leqq \theta$/sub lab/ $\leqq 159.0^{0}$. After a short presentation of the motivations for these measurements, the experimental set up is discussed with emphasis on the systematic and statistical error sources pertinent to this work, in particular the question of background correction in the continuous parts of the spectra. The main purpose of this report is to make the experimental results of this work (angle integrated spectra, angular distributions) available for distribution, reducing thereby the data required in publication of the results of these experiments. 20 references.

34700 **Cross section measurement for the reaction /sup 103/Rh (n,n') /sup 103m/Rh .** Paulsen, A.; Liskien, H.; Vaninbroukx, R.; Widera, R. (Commission of the European Communities, Joint Research Centre Central Bureau for Nuclear Measurements, B-2440 Geel). *Nuclear Science and Engineering;* **76**: No. 3, 331-335(Dec 1980).

The excitation function for the reaction /sup 103/Rh (n,n') / sup 103m/Rh was measured by the activation technique from 0.2 to 6.1 MeV in 0.1-MeV steps and from 13.0 to 16.7 MeV in 1-MeV steps. This excitation function is normalized through an absolute measurement at 1.8 MeV. This measurement is based on n-p scattering for neutron flux determination and on liquid scintillation counting of /sup 103m/Rh separated from /sup 103/Pd solutions for the activity determination. The total uncertainty of the cross-section results is typically + or -5% above 0.5 MeV (about + or -10% above 13 MeV). Concurrence with existing data is good except below 0.35 MeV, where the present results are considerably higher.

34701 **Ru(n,γ) cross sections above 2.6 KeV.** Macklin, R.L.; Halperin, J. (Oak Ridge National Laboratory, P.O. Box X, Oak Ridge, Tennessee 37830). *Nuclear Science and Engineering;* **73**: No. 2, 174-185(Feb 1980).

Neutron capture by the heavier stable ruthenium isotopes and by natural rhodium has been measured at the Oak Ridge Electron Linear Accelerator time-of-flight facility up to 500 to 700 KeV. Most of these isotopes are important as fission products. Strength functions S^{0}, S^{1}, S^{2}, and S /SUP ug/ were fitted to the average cross sections derived for the pure isotopes up to 113 KeV. Resonance parameters were fitted for about100 cross-section peaks for each isotope.

From International symposium on in-beam nuclear spectroscopy; Debrecen, Hungary (14 May 1984).

Portions are illegible in microfiche products.

Recent experimental results in $^{182-188}$Hg are presented. The levels in ^{182}Hg are identified for the first time. Presently available theoretical interpretations are discussed. The results indicate that there are multiple competing nuclear structures along the yrast line. We interpret that the gradual upbend of I/sub x/ in the deformed band and the next super band are the result of aligning two h/sub 9/2/ or i/sub 13/2/ protons. 33 references.

34703 **Lifetime results for high-spin states in ^{160}Yb and ^{161}Yb.** Johnson, N.R. (Oak Ridge National Lab., TN (USA)). pp 144-157 of Proceedings of 1982 INS international symposium on dynamics of nuclear collective motion, at the foot of Mt. Fuji. High spin states and transitional nuclei. Ogawa, K.; Tanabe, K. (eds.). Tokyo, Japan; Tokyo Univ., Inst. for Nuclear Study (1982). (CONF-820738—).

From INS symposium on dynamics of nuclear collective motion; Mount Fuji, Japan (6 Jul 1982).

The data on the E2 transition intensity of collective excitation accumulated through both Coulomb excitation yield and lifetime measurement have played important part in the understanding of higher angular mementum behavior. The lifetime measurement of ^{160}Yb and ^{161}Yb at ORNL is presented, and the results extracted are discussed. In order to carry out the lifetime measurement on the excited state of these nuclei, a Doppler-shift recoil-distance device ("plunger") has been designed and constructed. To produce the very high-spin state in ^{160}Yb isotopes, the 25 MV tandem accelerator was utilized. The results on the lifetime of some yrast state for ^{160}Yb and ^{161}Yb are presented as well as the problem of feeding in extracting lifetime from decay curves. The transition quadrupole moment for two members of the ground band was obtained from the measured lifetime. For both Yb isotopes, there appears to be a recognizable trend in the dropoff in transition quadrupole moment as a function of the rotational frequency, independent of the quasiparticle configuration.

34704 **(HMI-P—28/83-HF(Prepr.)) Spectroscopy of high-spin states in ^{217}Ra.** Mittag, C.; Fernandez-Niello, J.; Puchta, H.; Riess, F.; Roy, N.; Decman, D.J.; Kluge, H.; Maier, K.H.; Maj, A. (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.). Bereich Kern- und Strahlenphysik). 1983. 38p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751495.

The high-spin level structure of ^{217}Ra has been established up to a spin of (47/2) by means of in-beam γ-ray and conversion electron spectroscopy with (sup(12,13)C,xn) reactions on ^{208}Pb. Positive-parity levels up to $27/2^{+}$ and negative-parity states up to $(31/2^{-})$ can be qualitatively understood in terms of neutron excitations arising out of shell model configurations νg^{3}sub(9/2), νg^{2}sub(9/2) isub(11/2) and νg^{2}sub(9/2) jsub(15/2). The isomeric state at 2.4 MeV and the levels above it require both neutron and proton excitations. The E1 transitions between the negative parity and the ν^{3}sub(9/2) states suggest the presence of octupole deformed configurations. Shell model calculations provide only a qualitative description of the levels. The experimental level spac-

ings and their moderate agreement with the calculated ones suggest also the onset of deformation and of collective vibrational characteristics.

Portions are illegible in microfiche products.

The division of the excitation energy between the projectile-like and target-like fragment was measured for ^{56}Fe+^{238}U at 8.5 MeV/A incident energy. The excitation energy in the heavy fragment was determined from the mass asymmetry of fission fragments coincident with projectile-like fragments. For total energy losses between 30 and 70 MeV the excitation energy is found to divide more nearly equally than predicted by thermal equilibrium models and is in good agreement with expectations based on nucleon exchange models.

34709 (FRNC-TH—1590) **Study of ^{231}Th fission barrier by (d,pf) reaction. Observation of a third minimum in the fission barrier associated to the fissioning nucleus configurations.** Fabbro, B. (Paris-11 Univ., 91 - Orsay (France)). Jul 1983. 195p. (In French). NTIS (US Sales Only), PC A09/MF A01. Order Number DE84751562.

Results of fission probability and fission fragment angular distribution measurements are presented for the ^{230}Th(d,pf) reaction in the region of the sub-fission threshold resonance (E^{*}=5,85 MeV). A tandem Van de Graaff accelerator is used. The proton energy is measured by means of a QD3 magnetic spectrometer and two gas counters. The energy resolution obtained is 8 keV(deltaE/E approximately = 9.10^{-4}). The fission fragments emission angles are measured with two parallel-plates detectors, the anodes of which are made of several angular sectors. A fine structure is observed in the resonance at 5.85 MeV, the properties of which (parity splitted rotational bands) permit to conclude that a third minimum exists in the fission barrier of the ^{231}Th nucleus.

The intensive study of fission products and their effects carried out over the past decade has resulted in a thorough understanding of their behavior and an accurate predictive capability. A convenient form, a fitted linear combination of exponentials, has been developed for representing aggregate time-dependent decay spectra. The resulting parameters are useful in a wide variety of fission product applications. The fitted functions, which include beta and gamma aggregate spectra for total and gaseous fission products from ^{233}U and ^{239}Pu over the 0- to 10^{9}-s time interval, are readily used with any power history.

34715 **A simple formula for calculation of prompt neutron yield from spontaneous fission of transuranics.** Pai, H.L.; Andrews, D.G. (University of Toronto Department of Chemical Engineering and Applied Chemistry Toronto, Ontario M5S 1A4). *Nuclear Science and Engineering;* **76**: No. 3, 323-330(Dec 1980).

The simple statistical model statement relating the yield Y / SUB P/ of fission fragments to the effective neutron binding energy B /SUB n/ , namely Y /SUB P/ α exp(-B^{-} /SUB n/ /T), can be used as a basis for parallel developments, one leading to the well-known empirical delayed-neutron statement Y = Y_0exp(-K(3Z - A)), where Y is the number of delayed neutrons per fission. Repeating the development for prompt neutron emission leads to the analogous result $\nu^{-} = \nu^{-}_{0}\exp(-b(3Z - A))$ where ν^{-} is the prompt neutrons per fission. This semi-empirical result implies that a semi-logarithmic experimental plot of ν^{-} against (3Z - A) should be a family of straight lines. Currently available experimental results justify this prediction. The theoretical precision of this semi-empirical formula is estimated to be + or -10% or better, depending mainly on the part and shape of the fission yield-mass curve taken into account. The existence of the above empirical and semi-empirical formulas strongly suggests that the yield of fission neutrons, as well as their

spectrum, can be calculated by using the standard statistical model with non-adjustable parameters.

34716 **Note on the prompt-fission-neutron spectra of uranium-233 and -235 and plutonium-239 and -240 relative to that of californium-252.** Smith, A.; Guenther, P.; McKnight, R.; Winkler, G. (Argonne National Laboratory, Applied Physics Division 9700 South Cass Avenue, Argonne, Illinois 60439). *Nuclear Science and Engineering;* **76**: No. 3, 357-361(Dec 1980).

The prompt-neutron-induced fission spectra of ^{233}U, ^{235}U, ^{239}PU, and ^{240}PU were measured relative to the prompt-spontaneous-fission-neutron spectrum of ^{252}CF. analysis of the measured values indicates that the incremental average-fission-neutron energies relative to a ^{252}CF fission-neutron spectrum of maxwellian form with an average energy of 2.13 mev are -123 + or - 30 (^{233}U), -157 + or - 24 (^{235}U), -76 + or - 29 (^{239}PU), and -46 + or 29 (^{240}PU) kev.

34717 **The foil thickness correction in ¯ measurements and the (¯ - /eta/) discrepancy.** Bolderman, J.W.; Frehaut, J. (Centre d'Etudes de Bruyeres-le-Chatel Service de Physique Neutronique et Nucleaire, B.P. No. 561 92542 Montrouge Cedex). *Nuclear Science and Engineering;* **76**: No. 1, 49-52(Oct 1980).

The effect of the source thickness in gated Nu¯ measurements has been determined accurately. All existing Nu¯ data for thermal fission of ^{233}U, ^{235}U, ^{239}Pu, and ^{241}Pu have been revised and a comparison is made with values of Nu¯ derived from the / eta/ values.

34718 **Near-equilibrium measurements of delayed neutron spectra from fast fission of plutonium-240.** Grant, P.J.; Woodruff, G.L. (University of Washington, Department of Nuclear Engineering Seattle, Washington 98195). *Nuclear Science and Engineering;* **76**: No. 1, 56-61(Oct 1980).

The near-equilibrium energy spectrum of the delayed neutrons from the fast neutron-induced fission of ^{240}Pu has been measured over the energy range from 40 to 1500 keV. The spectrum is somewhat similar in shape to near-equilibrium spectra previously reported for other isotopes, and the peak structure is consistent with results from both fissionable isotopes and from various individual delayed neutron precursors.

34719 **Experimental determination of photofission neutron multiplicities for ^{235}U, ^{236}U, ^{238}U, and ^{232}Th using monoenergetic photons.** Caldwell, J.T.; Alvarez, R.H.; Berman, B.L.; Dowdy, E.J.; Meyer, P. (University of California, Los Alamos Scientific Laboratory P.O. Box 1663, Los Alamos, New Mexico 87545). *Nuclear Science and Engineering;* **73**: No. 2, 153-163(Feb 1980).

The prompt neutron multiplicities for photofission of the four isotopes ^{235}U, ^{236}U, ^{238}U, and ^{232}Th have been measured with monoenergetic photons over the energy range from 5.5 to 18 MeV using the annihilation in flight of fast positrons. The delayed neutron yield has been measured for all four isotopes at 10.9- and 16.8-MeV photon energies. The ratio of first- to second-chance fission has been measured as a function of energy up to 17-MeV excitation energy for ^{236}U and ^{238}U photofission.

34720 **Fission product yields for thermal-neutron fission of plutonium-239.** Dickens, J.K.; McConnell, J.W. (Oak Ridge National Laboratory, P.O. Box X Oak Ridge, Tennessee 37830). *Nuclear Science and Engineering;* **73**: No. 1, 42-55(Jan 1980).

Absolute cumulative yields have been determined for 49 fission products representing 36 mass chains created during thermal-neutron fission of ^{239}Pu, including 3 mass chains for which no prior data exist. Using Ge(Li) spectroscopy, spectra were obtained of gamma rays from decay of fission products between 1550 s and 31 days after a 100-s irradiation. Data were obtained for all fission products simultaneously. Gamma rays were assigned to the responsible fission products by matching gamma-ray energies and half-lives. Gamma-ray data associated with decay of ^{135}I and ^{140}Ba-^{140}La, in particular, were thoroughly studied; uncertainties were obtained for the two largest intensity gamma rays from decay of ^{135}I that are smaller than previously evaluated uncertainties. Fission product yields were obtained from the data by first determining the appropriate gamma-ray activity as of the end of the irradiation, then correcting for detector efficiency and gamma-ray branching ratio, and, finally, dividing by the number of fissions created in the sample. The number of fissions was determined by direct comparison of gamma rays emanating from fission products created during a careful irradiation of a wellcalibrated ^{239}Pu-loaded fission chamber. The resulting fission product yields are compared with previous measurements and with recommended yields given in two recent (and independent) evaluations.

34721 **(CEA-N—2371) Piece-wise analytic evaluation of the radiative tail from elastic and inelastic electron scattering.** Maximon, L.C.; Williamson, S.E. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Dec 1983. 108p. (In French and English). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84751574.

Portions are illegible in microfiche products.

We consider here the calculation of the radiative tail from the elastic peak in medium and high energy electron scattering as well as from a discrete inelastic level of the recoiling nucleus. We examine the method generally used for this calculation, viz., a numerical integration of the differential cross section over the angles of the unobserved photon, and discuss the difficulties inherent in this numerical integration due to the sharp peaking of the integrand. We present an alternative method for calculating the radiative tail, in which the region of integration is divided into an arbitrary number of subintervals, the structure functions are fitted by cubic spline functions in each subinterval, and the integrations are performed analytically in closed form. This method has the advantages of a greatly increased accuracy and a reduction of the computation time by a factor which can vary between 10 an 10^3, depending on the kinematics.

34722 **(DOE/ER/10405—8) Theoretical studies of multistep processes and isospin effects in nuclear scattering. Progress report, May 1, 1983-April 30, 1984.** Madsen, V.A. (Oregon State Univ., Corvallis (USA). Dept. of Physics). 1984. Contract AT06-79ER10405. 5p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013845.

Progress is reported on the following studies: calculation of microscopic optical potentials, calculation of scattering cross section from nonlocal microscopic optical potential, nuclear β/sub n/ and β/sub p/ and an extended schematic model, calculation of transition densities in open-shell nuclei, and coupled-channel equations treating antisymmetry. Publications are listed. (WHK)

From International symposium on quarks and nuclear structure; Bad Honnef, F.R. Germany (13 Jun 1983).

Portions are illegible in microfiche products.

A phenomenological approach which enables the size of quark effects in various nuclear processes is discussed. The principle of conservation of probability provides significant constraints on six quark wave functions. Using this approach, it is found that the low-energy proton-proton weak interaction can be explained in terms of W and Z boson exchanges between quarks. That the value of the asymptotic ratio of D to S state wave functions is influenced (at the 5% level) by quark effects, is another result of our approach. We have not discovered a nuclear effect that can be uniquely explained by quark-quark interactions. However it does seem that quark physics is very relevant for nuclear physics. 52 references.

34724 **(DOE/ER/70004—376) Parton description of the nucleus fragmentation region in heavy-ion collisions.** Hwa, R.C. (Oregon Univ., Eugene (USA)). Oct 1983. Contract AT06-76ER70004. 15p. (CONF-8309168—6). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013751.

From 3. international conference on ultra-relativistic nucleus-nucleus collisions; Upton, NY, USA (26 Sep 1983).

Portions are illegible in microfiche products.

In nucleus-nucleus collisions, the rapidity distribution of partons in the nucleus fragmentation region is highly asymmetrical. Thermalization that randomizes the momenta of partons far apart in rapidity cannot be expected. A local thermalization model is introduced which relates temperature to the range of parton interaction in rapidity. The parton number density and energy density are then calculated.

34725 **(GSI—83-38-Prepr.) Expansion and disassembly phase of energetic nuclear reactions: A problem of dynamical instabilities.** Strack, B.; Knoll, J. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Dec 1983. 3p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751435.

The expansion phase of a hot nuclear system as created in an energetic heavy ion collision is calculated and discussed by a self-consistent field-theoretical model which consideres dynamical growth of instabilities arising from strong fluctuations of the one-body density. First multiplicity distributions and mass spectra resulting from a series of numerical runs in a two dimensional model world are presented and discussed.

34726 **(GSI—84-1(Prepr.)) Diabatic two-center shell model.** Noerenberg, W.; Lukasiak, A.; Cassing, W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Jan 1984. 41p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751497.

Diabatic single-particle representation for the microscopic description of central nucleus-nucleus collisions within the framework of dissipative diabatic dynamics (DDD) are investigated. Based on the scaling condition for diabatic states, two construction methods referred to as the methods of maximum overlap and maximum symmetry, respectively, are studied within a two-center shell model. The conservative diabatic potential and the associated mass tensor for the pure diabatic single-particle motion, are calculated as functions of three collective variables for $^{92}Mo+^{92}Mo$ and $^{86}Kr+^{166}Er$. The calculated diabatic potentials are strongly repulsive and essentially depend only on the distance between the centers of mass in the region of strongly overlapping nuclei. The diabatic mass tensors are smooth functions of the collective variables and are close to the values for irrotational incompressible flow.

34727 **(GSI—84-2(Prepr.)) Diabatic interaction potential for nucleus-nucleus collisions.** Noerenberg, W.; Lukasiak, A. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Jan 1984. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751496.

Within a refined method for the construction of diabatic states allowing for the treatment of the full spin-orbit coupling, characteristic features of the diabatic potential for nucleus-nucleus collisions are investigated. Approximately 90% of the strong repulsion results from diabatic particle-hole excitations, while only 10% is due to compression. The diabatic interaction potential describes a physical situation intermediate between adiabatic and sudden approximations.

From Conference on the intersections between particle and nuclear physics; Steamboat, CO, USA (23 May 1984).

The inclusion of Lambda N-ΣN coupling in the A = 4 Lambda-hypernuclei is shown to be required in order to obtain proper ordering of the 0^+ ground state and 1^+ spin-flip excited state, when exact four-body equations are solved. It is argued that suppression of the off-diagonal Lambda N-ΣN coupling in the A = 5 system, similar to that in the A = 4 isodoublet, should account for the anomalously small binding of ^{5}He. An alternative quark model explanation is also considered.

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Portions are illegible in microfiche products.

A qualitative classification of nucleus-nucleus reactions into four types is described, a consequence of the existence of up to three milestone configurations that a fusing system may be faced with. These considerations lead to phenomenological formulae for fusion and compound-nucleus cross-sections that may be compared with experiments by the use of rectilinear cross section plots. Examples of more specific model calculations of nuclear reactions employing the Chaotic Regime Dynamics are described. Some misunderstandings regarding the Wall and Wall-and-Window formulae, underlying this type of dynamics, are discussed in the appendix. 23 references.

34744 **Shell structure at high spin and the influence on nuclear shapes.** Khoo, T.L.; Chowdhury, P.; Ahmad, I. (Argonne National Lab., IL (USA)). pp 256-274 of Proceedings of 1982 INS international symposium on dynamics of nuclear collective motion, at the foot of Mt. Fuji. High spin states and transitional nuclei. Ogawa, K.; Tanabe, K. (eds.). Tokyo, Japan; Tokyo Univ., Inst. for Nuclear Study (1982). (CONF-820738—).

From INS symposium on dynamics of nuclear collective motion; Mount Fuji, Japan (6 Jul 1982).

Nuclear structure at high spin is influenced by a combination of liquid drop and shell structure effects. For N < 86 both contribute towards the occurrence along the yrast line of high-spin oblate aligned-particle configurations. Shell effects are mainly responsible for the prolate deformation of nuclei with N > 90. The competition between oblate and prolate driving effects leads to a prolate-to-oblate shape transition in $_{66}{}^{154}$Dy$_{88}$. The role of rotation-aligned configurations in the shape change is discussed.

The results of Monte-Carlo calculations of the neutron transmission of a vertical catenary-shaped neutron guide are presented. A two-dimensional problem was considered. Focussing and special coatings are investigated.

34746 **(INIS-mf—8726) Intensity profiles behind a five-stage neutron interferometer.** Kischko, U. (Dortmund Univ. (Germany, F.R.). Abt. Physik). 18 Feb 1983. 84p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84701930.

By means of the quantitative photography intensity profiles behind a five-stage ideal-crystal neutron interferometer at the thermal channel H25 of the high-flux reactor at the institute Laue-Langevin in Grenoble/France were dermined and compared with theoretical profiles. Contravily to X-rays by neutrons the hole Borrmann range is excited. This leads in the interference picture to superposition of several wave field components. It was shown that the spherical wave theory, as it was developed by W. Bauspiess, U. Bonse, and W. Graeff for the absorption-free neutron interferometer, describes well quantitatively the experimental intensity profiles. Expecially for the t-2t-t geometry the theoretically predicted focusing was confirmed. For the H-beam the intensity profile is symmetric and spatially limited; the O-beam is asymetric with intensities decreasing slowly up to the boundary. Geometrical differences within single stages lead to unique changes in the intensity profile. The pigtail pattern leading in the past to some puzzle guessing

could be explained by the influence of geometrical defocusings on the phase shift. Important conclusions for the geometrical tolerances, which have to be regarded in the construction of neutron interferometers, could be obtained. (orig.).

A semi-analytic numerical solution to the two-dimensional (x,y)-geometry multigroup discrete ordinates transport equations over a mesh of arbitrarily shaped triangles is derived. The numerical method uses the analytic solution of the discrete ordinates equations with a linear function for the source to generate a linear representation of the angular flux on the boundaries of the triangle. Two cases must be solved for triangular mesh cells; inflow through one face and inflow through two faces of the triangle. The one inflow side problem is solved by the linear characteristic method. The characteristic solution is used to formulate a linear moment representation of the angular flux on the two outflow faces of the triangle. The two inflow sides case is solved by the linear nodal method. The angular flux on the single outflow face is represented by a linear moment expansion. The coefficients of this expansion are obtained from the solution of the zero'th and first spatial moments of the discrete ordinates equation with a linear source representation. The linear flux coefficients are edge-centered and the cell source data are vertex centered. The moments required for the linear source are formed by finite difference expressions of the vertex source data.

From Colloquium on thermal insulators at high temperature; Paris, France (3 Dec 1975).

This chapter reports on how recent relativistic electron beam deposition experiments at the Sandia Laboratories have measured high material temperature and inferred correspondingly high deposition rates using 2 different diode configurations: pinched beam incident on a planar foil and C-diode (a stalk mounted foil). The pinched beam experiment was performed on the Proto-I accelerator (1.1 MV, 300 kA, 25 nsec), and the C-diode experiment was performed on the MITE accelerator (2 MV, 400 kA, 40 nsec).

34751 **Measurements of neutron and gamma-ray streaming in a cavity-duct system and an analysis by an albedo Monte Carlo method.** Shin, K.; Hyodo, T.; Murakami, R.; Oka, Y.; Taniuchi, H. (Kyoto University, Department of Nuclear Engineering Yoshida-Honmachi, Sakyo-ku, Kyoto 606). *Nuclear Science and Engineering:* **81**: No. 2, 161-171(Jun 1982).

Spectral and spatial distributions of neutrons and gamma rays were measured in a simple cavity-duct configuration to observe profiles of cavity streaming. The change of the profiles of neutrons and gamma rays is examined by blocking source neutrons with a 32-cm-thick aluminum plug. The following observations resulted from the experiments: Fast neutrons of several million electron volts energy streamed through ducts. The neutron and gamma-ray spectra were similar except in the source neutron beam. The gamma rays were predominantly those arising from neutron capture in iron. The aluminum plug greatly decreased the fast neutron flux but had only a limited effect on the low energy neutron flux. The applicability of the albedo Monte Carlo calculational method to this problem was examined with the following conclusions: For ducts of small radius, the calculations overestimate the streaming because the albedo data were given for plane geometry. Low energy neutrons were underestimated by the calculation due to the neutron penetration through the cavity wall.

34752 **Conserving average rate of energy loss in transport calculations for light charged particles.** Cullen, D.E.; Perkins, S.T. (Lawrence Livermore National Laboratory, University of California P.O. Box 808, Livermore, California 94550). *Nuclear Science and Engineering:* **81**: No. 1, 75-91(May 1982).

Methods for treating nuclear plus interference elastic scattering of light charged particles in continuous energy or multigroup transport calculations are given. These methods conserve the rate of projectile energy loss and maintain energy balance by ensuring that, on the average, the rate of projectile energy loss equals the rate of target energy gain. It is shown that this approach is equivalent to conserving the P_0 and P_1 moments of the angular distribution of scattered projectiles and targets in the center-of-mass system. The authors include an approximate method that corrects for the temperature of the medium. To illustrate the application of these methods to a multigroup problem, the authors give multigroup data for all 25 projectile/target combinations of protons, deuterons, tritons, ^{3}He ions, and alpha particles based on an example 10-group energy structure. The results are in a compact form from which the group-to-group transfer matrices can be easily calculated.

34753 **A recursive Monte Carlo method for estimating importance function distributions in deep-penetration problems.** Goldstein, M.; Greenspan, E. (Israel Atomic Energy Commission, Nuclear Research Center-Negev P.O. Box 9001, Beer Sheva). *Nuclear Science and Engineering:* **76**: No. 3, 308-322(Dec 1980).

A recursive Monte Carlo (RMC) method for estimating the importance function distribution in three-dimensional systems, intended for importance sampling applications, is developed. The method consists of dividing the system into relatively thin geometrical regions and solving the inhomogeneous forward transport equation for each of the regions. The RMC method is found to possess a number of unique features, including the ability to infer the importance function distributions pertaining to many different detectors from essentially a single Monte Carlo run. Various technical questions concerned with the practical application of the RMC method, including the questions of the accumulation of statistical and systematic errors and their dependence on the details of the system division and source batch size, are investigated. A promising algorithm for the application of the method is formulated. The practicality and efficiency of the RMC method is investigated for a number of monoenergetic problems.

34754 **A point detector scoring method compatible with Monte Carlo transport calculations of specularly reflected particles.** Iida, H.; Seki, Y. (Japan Atomic Energy Research Institute Division of Thermonuclear Fusion Research Tokai-mura, Naka-gun, Ibaraki-ken). *Nuclear Science and Engineering;* **76**: No. 3, 302-307(Dec 1980).

In using a Monte Carlo transport code, particle fluxes are underestimated with a calculational model using specular reflection boundaries when a point detector estimator that scores only the direct contribution to the detector from a collision point within the model is used. This underestimation occurs because the contributions from collision points outside the calculational model are neglected. An additional scoring scheme is developed to compensate for the discrepancy; the new scheme is implemented to threedimensional Monte Carlo transport code MORSE-GG. Validity of the method is shown by test calculations with ANISN and revised MORSE-GG.

34755 **Gamma-ray buildup factors for concrete slab shields under slant incidence conditions.** Fournie, E.M.; Chilton, A.B. (University of Illinois, Nuclear Engineering Program Urbana, Illinois 61801). *Nuclear Science and Engineering;* **76**: No. 1, 66-69(Oct 1980).

Monte Carlo calculations have been made for the penetration of slab shields by gamma radiation of monoenergetic character. The radiation is in the form of parallel, broad beams incident on the front face of the slab at various angles having cosines between 0.25 and 1.0. The beam photon energies vary between 0.661 and 6.13 MeV. The slab thicknesses extend to 10 mean-free-paths. The results are provided in the form of tables and graphs for exposure transmission buildup factors as a function of slab thicknesses. Comparison with previous work shows good agreement; however, this work goes somewhat beyond previous contributions.

34756 **A Multiregion calculation in the theory of neutron diffusion.** Garcia, R.D.; Siewert, C.E. (North Carolina State University, Nuclear Engineering Department Raleigh, North Carolina 27650). *Nuclear Science and Engineering;* **76**: No. 1, 53-56(Oct 1980).

The method of elementary solutions and the F /SUB N/ method are used to compute and report especially accurate numerical results relevant to a previously established four-region test problem in the theory of neutron diffusion.

34757 **(AD-A—138590/5) Provision of guidance, information and basic criteria for radiation protection and measurements. Final technical report 1 Jul-31 Dec 83.** Walker, J.T. (National Council on Radiation Protection and Measurements, Bethesda, MD (USA)). 27 Feb 1984. 24p. NTIS, PC A02/MF A01.

This report will highlight the activities of the National Council on Radiation Protection and Measurements (NCRP) and in particular, the efforts of those NCRP scientific committees or subgroups which were supported during the period between July 1983 and 31 December 1983. The report will briefly outline the overall objectives of the work, as they were defined in the original contract, including a statement about the objectives of each study, and when it is appropriate, a proposed outline of the major sections of the draft scientific reports being produced and a statement describing the current status of each project.

34758 **(AD-A—139033/5) Kerma factors for use in 37-group neutron spectrum calculations. Technical report.** Zeman, G.H.; Bice, W.S. Jr. (Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)). Dec 1983. 19p. NTIS, PC A02/MF A01.

Neutron kerma factors have been regrouped from the format of the International Commission on Radiation Units and Measurements Report 26 (ICRU-26) to supplement those available in the 37-group format of the Oak Ridge Data Library Collection 31 (DLC-31). Lists of regrouped neutron kerma factors are presented for eight elements and for seven compounds and mixtures. For several elements, disagreements in excess of 15% were observed between those neutron kerma factors available in DLC-31 and the regrouped neutron kerma factors of ICRU-26.

34759 **(INIS-mf—8904) Ordinance of 14 March 1983 concerning the Federal Commission for the Safety of Nuclear Installations.** (French Government, Paris). 14 Mar 1983. 5p. (In French). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84780324.

The Frederal Council issued a new Ordinance concerning the Federal Commission for the Safety of Nuclear Installations. This Ordinance replaces an Ordinance of 13 June 1960 and takes into account the distribution of tasks decided several years ago between the Commission, which operates on a part-time basis, and the principal Division for the Safety of Nuclear Installations attached to the Federal Office of Energy. (NEA).

34760 **(INIS-mf—8917) Act No. 25 of 31 January 1983 amending Act No. 1103 of 4 August 1965 and Decree No. 680 of 6 March 1968 on regulations governing the activities of technicians in medical radiology.** (Italian Government, Rome). 9 Feb 1983. 3p. (In Italian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84780321.

Published in the Italian Official Gazette No. 38.

This Act amends Act No. 1103 of 4 August 1965 and Decree No. 680 of 6 March 1968 of the President of the Republic regulating the activities of auxiliary personnel engaged in medical radiology. It establishes new conditions for training and qualifications of such technicians in respect of radiodiagnosis, radiotherapy and nuclear medicine. (NEA).

In 60 years of the Institute for Research, Production and Application of Radioisotopes 1919-1979.

Work is briefly described of the department for sealed sources production of the Institute, including leak testing and surface contamination of sealed sources. The department also provides technical services including the inspections of sealed sources used in medicine and geology and repair of damaged sources. It carries out research of the mechanical and thermal strength of sealed sources and of the possibility of reprocessing used ^{226}Ra sources. The despatch department is responsible for supplying the entire country with home and imported radionuclides. The department of technical services is responsible for testing imported radionuclides, assembling materials testing, industrial and medical irradiation devices, and for the collection and storage of low-level wastes on a national scale. (M.D.).

Portions are illegible in microfiche products.

A quantum mechanical expression for the real part of the refractive index of a III-V, II-VI, or IV-VI binary, ternary, or quaternary semiconductor has been derived which predicts the dispersion observed near the fundamental absorption edge. The calculation is made in terms of measurable experimental quantities only, with no adjustable parameters, using the Kane theory of the band structure. Results have been calculated for a wide variety of materials, and comparison made with available experimental data. An expression for the nonlinear intensity dependent refractive index is given. An extension of the Drude theory has been made which predicts the quantum result for the complex dielectric constant at high frequencies and reduces to the usual quasiclassical result in the far infrared. The results of this research are expected to find application in implementation of optical processing systems in the infrared and in the design of integrated circuits, systems, and devices based on the III-V, II-VI or IV-VI compounds. 20 references.

Theoretical basis for identifying the origin of deterioration of high temperature materials by diffusion has been sought. The need for an appropriate form of irreversible statistical mechanics, rather than commonly utilized irreversible thermodynamics, to this problem was identified. The Path Probability method of irreversible statistical mechanics was thus adapted to diffusion problems and necessary modifications of the method suitable for transport problems in multicomponent systems were made. Thermal diffusion (diffusion which occurs under temperature gradient) was then formulated by the Path Probability method for the first time, and so far elusive concepts such as the heat of transport were thus microscopically identified. An example of demixing of originally homogeneous solid solutions under general chemical potential gradients was thus worked out.

Los Alamos, NM 87545). pp 217-228 of Structural elements in particle physics and statistical mechanics. Honerkamp, J.; Pohlmeyer, K.; Romer, H. New York, NY; Plenum Publishing Corp. (1983). (CONF-8108108—).

From Conference on structural elements and statistical mechanics on field theory; Freiburg, F.R. Germany (31 Aug 1981).

A subject at the interface between field theory and statistical mechanics is polyacetylene (((CH) /SUB x/), a quasi-one-dimensional-organic polymer. Recent theoretical studies are reviewed in this paper. Background chemistry determines the schematic for

trans (CH) /SUB x/ . A trans (CH) /SUB x/ chain is modelled microscopically by describing the coupled motions of the lattice backbone of C-H units and the single pi-orbital electron per carbon that determines where the double bond goes. Continuum theory is focused on here. Kink and polaron nonlinear excitations, fractionally charged solitons, and confinement of kinklike solutions in cis (CH) /SUB x/ are then studied. Finally, it is shown that the continuum electron-phonon equations for trans-(CH) /SUB x/ are identical to the static, semi-classical equations of the N=2 Gross-Neveu model. Another such field theory connection involves an alternate description of kink solutons in trans (CH) /SUB x/ . The possible existence of fractionally charged solutons is touched upon in conclusion.

34776 **Self-consistent approximations beyond the CPA: Part II.** Kaplan, T.; Gray, L.J. (Solid State Division Oak Ridge National Lab. Oak Ridge, TN 37830). pp 129-146 of Excitations in disordered systems. Thorpe, M.F. New York, NY; Plenum Publishing Corp. (1982). (CONF-8109228—). Contract W-7405-ENG-26.

From NATO Advanced Study Institute conference on excitations in disordered systems; East Lansing, MI, USA (4 Sep 1981).

This paper concentrates on a self-consistent approximation for random alloys developed by Kaplan, Leath, Gray, and Diehl. The construction of the augmented space formalism for a binary alloy is sketched, and the notation to be used derived. Using the operator methods of the augmented space, the self-consistent approximation is derived for the average Green's function, and for evaluating the self-energy, taking into account the scattering by clusters of excitations. The particular cluster approximation desired is derived by treating the scattering by the excitations with S /SUB T/ exactly. Fourier transforms on the disorder-space clustersite labels solve the self-consistent set of equations. Expansion to short range order in the alloy is also discussed. A method to reduce the problem to a computationally tractable form is described.

In Los Alamos Science, Number 10, Spring 1984.

Measurements of low-temperature electrical resistance of UPt_3 to see how defect-free its crystal lattice was showed clear indications of superconductivity. Until this time no known superconductors had shown evidence of enhanced spin fluctuations and no known spin fluctuators exhibited superconductivity. The data now available refute the conventional wisdom of a dichotomy between superconductivity and a tendency toward magnetism. In UPt_3, spin fluctuations and superconductivity are known to coexist on the same electrons and at the same temperature. (GHT)

In the general framework of stochastic control theory we introduce a suitable form of stochastic action associated to the controlled process. Then a variational principle gives all main features of Nelson's stochastic mechanics. In particular we derive the expression of the current velocity field as the gradient of the phase action. Moreover the stochastic corrections to the Hamilton-Jacobi equation are in agreement with the quantum mechanical form of the Madelung fluid (equivalent to the Schroedinger equation). Therefore stochastic control theory can provide a very simple model simulating quantum mechanical behavior.

34780 **(FRNC-TH—1525) Ground state of charged Bose and Fermi fluids in strong coupling.** Mazighi, R. (Paris-6 Univ., 75 (France)). Mar 1982. 159p. (In French). NTIS (US Sales Only), PC A08/MF A01. Order Number DE84751560.

The ground state and excited states of the charged Bose gas were studied (wave function, equation of state, thermodynamics, application of Feynman theory). Thesis.

This thesis deals with four independent topics in statistical mechanics: (1) the dimer problem is solved exactly for a hexagonal lattice with general boundary using a known generating function from the theory of partitions. It is shown that the leading term in the entropy depends on the shape of the boundary; (2) continuum models of percolation and self-avoiding walks are introduced with the property that their series expansions are sums over linear graphs with intrinsic combinatorial weights and explicit dimension dependence; (3) a constrained SOS model is used to describe the edge of a simple cubic crystal. Low and high temperature results are derived as well as the detailed behavior near the crystal facet; (4) the microscopic model of the λ-transition involving atomic permutation cycles is reexamined. In particular, a new derivation of the two-component field theory model of the critical behavior is presented. Results for a lattice model originally proposed by Kikuchi are extended with a high temperature series expansion and Monte Carlo simulation. 30 references.

We are interested in solving the sparse linear systems, Av = b, that arise from finite difference or finite element approximations to partial differential equations. May iterative methods require solving an easier approximate equation, Pv = b, on each iteration. This is often called preconditioning or operator splitting [1,2,4,6-9,12-14]. The methods we consider factor A approximately into the product of an upper and lower triangular matrix P is identical to LU $\approx$ A. These methods are called incomplete LU factorization methods and their convergence rate depends on how well P approximates A. We describe some new algorithms to generate accurate LU decompositions based on the continuity of the solution v.

This paper discusses the use of relationships within data subsets, as viewed in marginal scatterplots, for finding and interpreting patterns in multivariate data. The data are represented by juxtaposition of scatterplots corresponding to variable pairs or triples. Subsets are defined either graphically or by the use of relational and Boolean operations on sets. Points in the same subset are linked across plots by color and symbol. The paper discusses strengths and weaknesses of exploration based on subsets linked across marginal scatterplots. Extensions to three-dimensional scatterplots are briefly indicated.

34786 **(SAND—84-0812) Some practical Runge-Kutta formulas.** Shampine, L.F. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1984. Contract AC04-76DP00789. 31p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013539.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A new selection is made of the most practical of the many explicit Runge-Kutta formulas of order 4 which have been proposed. A new formula is considered, formulas are modified to improve their quality and efficiency in agreement with improved understanding of the issues, and formulas are derived which permit interpolation. It is possible to do a lot better than the pair of Fehlberg currently regarded as best. 21 references, 2 figures.

34787 **(SLAC/AP—22) Implicit function method for the Liouville equation.** Kheifets, S. (Stanford Linear Accelerator Center, CA (USA)). May 1984. Contract AC03-76SF00515. 4p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013282.

Portions are illegible in microfiche products.

In the present short note I derive a rather general method of solving the Liouville equation. No discussion will be presented on how fast the solution can be found or how convenient the method is in practical applications. Nor any numerical calculations will be done. All these tasks can be subjects of further studies should the method become useful later.

34790 (CONF-791240—, pp 80-89) **Calculation of KAM surfaces.** Greene, J.M. (Princeton Univ., NJ). 1980. New York Academy of Sciences, 2 East 63rd Street, New York, NY 10021. Order Number TI84005490. Contract AC02-76CH03073.

From International conference on nonlinear dynamics; New York, NY, USA (17 Dec 1979).

One of the most engaging problems in nonlinear dynamics is that of understanding how simple deterministic equations can yield apparently random solutions. Systems with this behavior appear in many of the branches of scientific endeavor. Among the simplest of these are Hamiltonian systems with a small number of degrees of freedom. The considerations that this paper deals with apply especially to two closely related types of Hamiltonians and to a more abstract conceptualization that they share. The first type of Hamiltonian depends on one coordinate and one momentum and has a periodic dependence on time. This periodicity is important for the phenomena considered here, as an implicit distinction is made between orbital information that depends on the precise number of revolutions of the time variable and that which depends only on its phase. The second of these types of Hamiltonian depends on two coordinates and two momenta, but is independent of time. Since the time variable and the conserved energy can be eliminated from the equations of motion, the orbits of this system exist in a space of the same dimensionality as that considered in the previous paragraph. The condition equivalent to the periodicity of the time variable is that the motion be bounded in the phase space. Then the orbits must be recurrent, or nearly recurrent, and periodic variables are appropriate. Only a brief review of the nature of these Hamiltonian systems is given.

From International conference on nonlinear dynamics; New York, NY, USA (17 Dec 1979).

Since 1941, turbulence theory has been dominated by attempts to prove, disprove, develop, or test experimentally and numerically certain central conjectures of Kolmogoroff and Obukhov. Virtually none of these conjectures have been established with anything like the mathematical rigor one might want, but there seems to be little doubt that they are largely accurate representations of reality. Our intention here is to show what the implications are if one generalizes one of these conjectures to two-dimensional turbulence and to magnetohydrodynamics. Certain numerical tests of the conjecture are also described. 39 references.

34792 (CONF-791240—, pp 223-235) **Plasma transport in three dimensions.** Grad, H. (New York Univ., New York). 1980. New York Academy of Sciences, 2 East 63rd Street, New York, NY 10021. Order Number TI84005490. Contract AC02-76ER03077.

From International conference on nonlinear dynamics; New York, NY, USA (17 Dec 1979).

Alternating dimension formulations of plasma transport have been given for general three-dimensional plasma configurations with scalar resistivity and heat conductivity; also for general anisotropic transport coefficients in axial symmetry. These formulations are here generalized to combine arbitrary three-dimensional toroidal configurations with general anisotropic transport coefficients. All these formulations alternate marching of one-dimensional profiles with only occasional three-dimensional evaluation of plasma equilibria to obtain geometric coefficients for the one-dimensional system. The anisotropic formulation does not introduce any new geometric coefficients. Boundary conditions at the magnetic axis and at the plasma edge are briefly mentioned.

34793 **(EUR-CEA-FC—1212) Calculations of stationary solutions for the non linear viscous resistive MHD equations in slab geometry.** Edery, D. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Nov 1983. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751586.

Portions are illegible in microfiche products.

The reduced system of the non linear resistive MHD equations is used in the 2-D one helicity approximation in the numerical computations of stationary tearing modes. The critical magnetic Raynolds number S (S=tausub(r)/tausub(H) where tausub(R) and tausub(H) are respectively the characteristic resistive and hydro magnetic times) and the corresponding linear solution are computed as a starting approximation for the full non linear equations. These equations are then treated numerically by an iterative procedure which is shown to be rapidly convergent. A numerical application is given in the last part of this paper.

34802 **(INIS-mf—8713) Fast current stiff 200 kV plasma focus (SPEED 1) - is it different from other plasma foci.** Kies, W. (Duesseldorf Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). 7 Dec 1982. 138p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84701931.

Starting from some ideas on impedance matching, a plasma focus with extreme storage parameters is presented and compared with conventional plasma focus designs with respect to the operation characteristics and the discharge - and emission behaviour. The aim of this work is a better efficiency of the plasma focus machine (ratio of the number of neutrons produced per discharge to the energy stores Y/Wo). With the realisation of the SPEED 1 experiment an instrument is available which extends the parameter region of focus machines appreciably. The (limiting) opeartion parameters are: 20(30) kJ stored energy, 160(200)kV charging voltage, current increase $> 5x10^{12}$ A/s, current rise time 400 nsec, discharge current 0.9(1.1) MA, battery impedance 160 mΩ. (orig./HT).

34803 **(INIS-mf—8734) Studies on the behaviour of neutral particles in a tokamak plasma.** Ritter, G. (Duesseldorf Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). 19 Jul 1982. 161p. (In German). NTIS (US Sales Only), PC A08/MF A01. Order Number DE84701932.

The presence of neutral particles allows for some new methods of plasma diagnostics. The ion temperature can be determined indirectly by spectroscopic measurements and an energy analysis of the neutral particles in the wall region. In addition the particle flux, the electron density and the plasma position can be controlled, as is demonstrated in this work. Based on a plasma confinement experiment of the tokamak type (UNITOR) the neutral particle behaviour has been studied theoretically and experimentally. The relevant processes in the plasma and at the wall are studied to estimate their relative importance. Several techniques are presented for the solution of the Boltzmann equation, which is used to describe the neu-

tral particles: integral iteration methods and Monte Carlo schemes. (orig./HT).

34804 (INIS-mf—8957) Mass spectrometer diagnostic technique in the study of stationary afterglow plasmas in helium, argon and krypton. Langenwalter, M. (Innsbruck Univ. (Austria)). 1979. 179p. (In German). NTIS (US Sales Only), PC A09/MF A01. Order Number DE84780392.

Since some years the method of massspectrometric monitoring has become an important tool in the analysis of time resolved (or stationary) afterglow plasmas. The present thesis reports the construction and testing of a new fully bakeable UHV-stationary-afterglow-apparatus using a hollow cathode discharge as plasma source for the first time. The hollow cathode is moveable perpendicular to its axis relative to the sampling orifice (i.e. a very small hole at the centre of the plasma container's boundary), so that the radical distribution of the charged particle density can be studied. Several specific extraction conditions for ions from the plasma especially the sampling probe potential have been systematically investigated. Results are illustrated and discussed. The new apparatus has been tested by determining the ambipolar diffusion coefficient of the molecular ion He_2^+ in a pure Helium-plasma in thermal equilibrium. The present result (Dsub(a2) = 603 +- 38 / P_0 cm^2s^{-1}) is in agreement with results reported by other workers. Finally an example for the radial behaviour of the Ar^+-sampling current in an Argon-discharge for several different times in the afterglow period is given. The shown behaviour agrees relatively well with the theoretically predicted radial ion density distribution, i.e. the zero-order Ressel'function. (Author).

34805 (INIS-mf—8959) Boltzmann collision term and energy transfer in a stationary two-component plasma. Riedler, J.M. (Technische Univ., Graz (Austria)). 1982. 126p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780393.

The problem considered is the feasibility of unconventional - other than Tokamak - fusion methods: driven plasma and DD or p + $B^{11} \rightarrow 3\ He^4$ reactions. A necessary condition is that the energy loss rate from the injected ion beam to the plasma should be smaller than the power generated. In the introduction the energy loss mechanism are enumerated Part I is concerned with the derivation and solution of a Boltzmann equation appropriate to the problem. At the end of this part the reasons are discussed why the attempt at the solution failed. Apparently because of lack of time this sophisticated method is abandoned and simpler methods are used in Part II. An estimation of the energy transfer rate is made and a result identical to that of Glasstone-Lovberg is obtained. A parametrical study with emphasis of the He^3 semicatalysed DD reaction is undertaken. One conclusion is that the assumption of Tsub(e) = 1/10 Tsub(i) gives only for the latter reaction a power ratio of 0724 < 1 at Tsub(i) = 1000keV and Tsub(e) = 100keV. The other conclusion is that kTsub(i) approximately kTsub(e) should be fulfilled (i.e. thermal equilibrium) in order that the energy taken away by the ions disappearing through the loss cone should be smaller than the fusion energy generated. (G.Q.).

34806 (INIS-mf—8960) Integration theory of the inhomogenous Fokker-Planck equation using certain orthogonal systems. Sgouridis, S. (Technische Univ., Graz (Austria)). 1982. 116p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780394.

Starting from the stochastic probability distribution of particles in a plasma a general Fokker-Planck (FP) equation is rederived for the Coulomb case and point fusion reactor model conditions. Following Rosenbluth et al. Phys. Rev. 107(1),1957 an appropriate collision term and a corresponding transport (FP) equation is obtained and transformed for special cases and different coordinates. Sonine polynomials, an orthogonal set of functions separable in time and velocity is put forward for the solution of this kind of equations, the method being series expansion in Sonine polynomials around the equilibrium Maxwellian distribution. To familiarise with the technique is applied to a series of problems of rising complexity. Boltzmann equation, one-dimensional FP equation, culiminating in the two-dimensional (axial symmetry). FP equation with a loss cone and source terms. This nonhomogenious and non-stationary equation is converted into an infinite system of equations which in practice must be evaluated numerically by successive approximations. (G.Q.).

34807 (INIS-SU—202, pp 121-135) Main physical and technological problems of construction of a tokamak with a strong magnetic field and plasma adiabatic compression. Glukhikh, V.A.; Karasev, B.G.; Krylov, V.A. 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Technological problems of construction of a tokamak with a strong magnetic field and adiabatic plasma compression are considered. The results of sketch designing of the installation with the following parameters are presented: large filament radius after compression-0,415 m, small filament radius after compression-0,125 m, plasma current after two compressions up to 1,2 MA, mean plasma density upon two compressions up to 10^{15} cm^{-3}, average plasma temperature upon compressions 7 keV, energy confinement time 30-100 ms. The toroidal field winding consist of 32 single-twin sections. Each section represents a massive twin of chromous bronze enclosed in a steel bandage. Maximum winding current is 830 kA, maximum magnetic field on the winding surface 21,2 T. A poloidal field is formed without using ferromagnetic core by means of inductor winding, compression winding, two equilibrium windings and two initial fiel, correction windings. The parameters of the power supply system of the toroidal field winding, inductor supply system and compression winding, equilibrium winding supply system, generak power supply system are given. Nowadays different versions of the metallic chamber design without cuts are studied.

34808 (INIS-SU—202, pp 173-180) Optimization of an electrodynamic acceleration system and characteristics of a liner in the "torus-liner"thermonuclear scheme with quasispherical compression. Es'koV, A.G.; Kurtmullaev, R.Kh.; Kitaev, M.I.; Semenov, V.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Experimental and numerical investigations of the thermonuclear system "torus-linear" (TL) are presented. Main TL features are a quasispherical form of a heavy shell and closed magnetic configuration in its cavity. TL consists of three functional parts: shaping chamber and compact torus heating, transport channel with coils for creating a leading field, acceleration and liner compression system comprising a multitime pushing coil capacitance storage with commutators and low-inductive current guide, profiled liner and toroid capture coils in the liner chamber. As a result of the experiment quasispherical closed cavity shaping is reached after face collapse in 20 μs with cavity 2,5 x 10^5 cm/ rate. The plasma toroid has been replaced from the shaping chamber through the transport channel into the liner chamber without noticeable energy and magnetic flux losses and captured in the linear chamber. The dependences of electrodynamic acceleration system efficiency and compression coefficients on initial plasma pressure for battery energies 2 x 10^5 and 6 x 10^5 J. Are given oscillograms of the pushing field in the liner-coil gap and total acceleration system current are given. The calculation is in perfect agreement with the experiment.

34809 (INIS-SU—202, pp 247-251) High-velocity dense plasma production at high carrying out currents. Komel'kov, V.S.; Perebejnos, V.V.; Solomonov, M.T. (Gosudarstvennyj Nauchno-Issledovatel'skij Ehnergeticheskij Inst., Moscow (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

For the purpose of obtaining dense high-temperature plasma the process of plasma motion in an accelerator where plasma jets of

"spouting" pinch type are formed is considered. The process when acceleration inside the mozzle related to gas raking is presented as an accessory process. The latter is required for current increase in the discharge while the main process accompanied by mass drop and velocity jump occurs out side the mozzle in the working chamber. The accelerator and the chamber have been filled with hydrogen under pressure of 100 tor. The central shorter tantalum electrode represents a rod of 10 mm diameter the outer stainless steel electrode has an internal diameter of 40 mm. The discharge has been ignited at a certain distance from the insulator and propagated in the form of a continuous plasma piston along the electrodes of 240 mm length. The discharge current equals 1400 kA. The typical longitudinal photoscanning of plasma bunch motion outside the nozzle is given. Maximum plasma bunch velocity has reached 1.7×10^7 cm/c. The pointed out effects of mass drop and the presenece of intraplasma magnetic insulation open the prospects of obtaining high temperature plasma flows with 10^{19}-10^{21} cm^{-3} densities.

34810 (INIS-SU—202, pp 252-259) **Spread of a plasma sheath with a current.** Komel'kov, V.S.; Kuznetsov, A.P.; Perebenos, V.V.; Pleshanov, A.S.; Solomonov, M.T. (Gosudarstvennyj Nauchno-Issledovatel'skij Ehnergeticheskij Inst., Moscow (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of theoretical and experimental investigation of spread plasma sheath with a current are presented. The plasma bunch has been generated by the coaxial pulse accelerator. It is shown that the hydrogen plasma motion in the near-axial region leads to a stationary regime, energy "pumping" into plasma bunch is realized with a constant velocity. The calculation results point out to the real possibility of using plasma accelerators for plasma speeding-up to very high parameters behind the accelerators section. In case of taking into consideration the regimes with discharge current high values the estimation of front velocity values and flow rate values can be obtained by multiplication by 2 of the corresponding values measured in the accelerator coaxial. The temperature estimation is obtained by multiplication of the value of plasma temperature in the accelerator by the number proximate to 3, density estimation is reduced to multiplication by 2 of gas density in the accelerator before to the discharge. As to pressure it practically remains the same as it has been in gas compressed inside the accelerator.

34811 (INIS-SU—202, pp 260-267) **Plasma acceleration in the maximum of a discharge circuit current.** Komel'kov, V.S.; Petrushchenko, G.Yu. (Gosudarstvennyj Nauchno-Issledovatel'skij Ehnergeticheskij Inst., Moscow (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Theoretical investigations of plasma motion outside coaxial accelerator nozzle with plasma sheath and current filament are reported. Estimations of plasma acceleration in the maximum of a discharge circuit current are given. The conclusion is drawn that if in the plasma acceleration process the movable plasma bunch mass drop exists plasma acceleration becomes possible in the regime when a discharge current is close to its maximum value. It is advantageous to raise the value of a discharge circuit induction as this contributes to reaching higher plasma velocities as well as increasing of duration of high velocity plasma flows existence.

34812 (INIS-SU—202, pp 481-488) **High-current ion beam production in a plasma-filled triode.** Arbuzov, A.I.; Bystritski, V.M.; Didenko, A.N.; Petrov, A.V. (Tomskij Politekhnicheskij Inst. (USSR). Inst. Yadernoj Fiziki, Ehlektroniki i Avtomatiki). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

With the purpose of investigating the possibility of increasing the beam intensity at the thermonuclear installation target intense ion beam (IIB) production in a plasma-filled triode theoretically and experimentally has been studied. The triode anode performed in the form of a metalic ring of 180 mm diameter on which a tungsten grid with 75% transparance has been placed between two grid cathodes of 100 mm diameter. The triode has been placed in the longitudinal magnetic field up to 3 kE. Plasma produced by the coaxial plasma gun with a pulse gas leak-in (lH_2,D_2,N_2,He) filled accelerating triode gaps through one of grid cathodes. The plasma flow velocity constituted $(2\text{-}4) \times 10^6$ cm/s at plasma concentration up to 10^{14} cm^{-3}. The IIB current density at the distance of 8 cm. of the cathode for protons constituted 68 A/cm^2 at the distance of 31,5 cm for protons 41 A/cm^2 deuterons 24 A/cm^2 nitrogen ions 12 A/cm^2. IIB production efficiency attained 25%. It is concluded that the plasma-filled triode can be used for IIB production with atomic number > 1.

34813 (INIS-SU—202, pp 372-379) **Linear theta pinch devices with a fast rising magnetic field for dense plasma heating.** Burtsev, V.A.; Guad, C.A.; Zheltov, V.A.; Zhukov, A.P.; Kalinin, N.V.; Kozhevin, V.M.; Leonov, S.A.; Litunovskij, V.N.; Ovsyannikov, V.A. 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number DE84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The experimental results of studying mega-ampere currents commutation in electric circuits of the theta-pinch device UTRO with induction-capacitance energy storage of 1,1 MJ power are presented. As current breakers foil releases are used. A solenoid of 50 cm length and diameter 7 cm has been inductive charge. In experiments the breaking capacity level 0,5 TW has been reached which permits to create in the solenoid magnetic fields with 60 kGs induction and rising time 0,5 μs. On the basis of the data obtained the possibility of designing the UTRO-M device for studying possibilities of optimum combination of different methods of dense plasma heating including using CO_2-laser power radiation is considered. Numerical simulation data have shown the possibility of increasing the device efficiency up to some percent at optimum release parameters. The methods of increasing the temperature of plasma and neutron yield based on programming initial profile of plasma density and generation of colliding shock waves are proposed.

34814 (INIS-SU—219, pp 39-45) **Megagauss magnetic field production and eValuation of their application for dense plasma confinement in a linear theta-pinch reactor.** Bocharov, Yu.N.; Krivosheev, S.I.; Kruchinin, A.I.; Chechel', A.N.; Shneerson, G.A.; Shutov, V.L. (Leningradskij Politekhnicheskij Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Estimations of the plasma confinement time, taU, in a single turn megagauss solenoid defined by the field diffusion into plasma and solenoid walls and by the solenoid expansion under the action of magnetic pressure, heating of the solenoid walls and plasma radiation. The solenoid expansion is shown to be the main factor defining tau. The results are presented of experimental investigation into the deformation of thin-walled turns of small diameter in the magnetic field with the induction amplitude up to 390 T. The results also show the possibility of plasma confinement in small-sized solenoids with the magnetic field of about 400 T during a period corresponding to the Lawson criterion of 10^{13} cm^{-3} at the 10 keV plasma temperature.

34815 (INIS-SU—219, pp 54-60) **Probe measurements of the magnetic field structure of toroidal eigenmodes in the Texas Tech Tokamak.** Coleman, P.D.; Kuistiansen, M.; Hagler, M.O. (Texas Tech Univ., Lubbock (USA). Dept. of Electrical Engineering); Blackwell, B.D. (Massachusetts Inst. of Tech., Cambridge (USA). Francis Bitter National Magnet Lab.). 1982. NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Magnetic probes, covered by protective sheaths, were used to make detailed measurements of the field structure of fast Alfven wave toroidal eigenmodes in the Texas Tech Tokamak. Rods of alumina, Macor, quartz and boron nitride were inserted into the plasma to determine the feasibility of using these materials as protective sheaths. Results indicate that alumina, Macor, and quartz are unacceptable as sheath materials. Boron nitride, however, survived the plasma environment without affecting the plasma parameters too seriously and without serious material ablation or damage. It was hence used as a protective probe sheath. Radial scans of the z and THETC components of the fast waves magnetic field structure have been made using these boron nitride sheaths for protection of the probes.

34816 **(IPP—2/252) Fast plasma tomography routine with second-order accuracy and compensation for spatial resolution.** Smeulders, P. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Jul 1983. 54p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84751431.

If the rotation of the mode structures in front of an X-ray pinhole camera is known, the full cross-section of the structures can be obtained. Where various modes are observed simultaneously, the experimental well-established phase coupling of these modes is implied. This allows the transition from time to poloidal angle to be made and modes with different toroidal mode numbers to be separated. With one pinhole camera, however, it is not possible to separate more than two modes with different poloidal mode numbers. In the first sections the computer code is described; examples of various tearing modes measured in a current-carrying stellarator plasma are then presented. The time evolution and the structure of these modes is discussed.

34817 **(LA—10020-MS) Toroidal equilibrium in an iron-core reversed field pinch.** Miller, G. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 26p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84013858.

An analytical theory of toroidal equilibrium in the ZT-40M reversed field pinch is obtained, including effects of iron cores and resistive shell. The iron cores alter the form of the equilibrium condition and cause the equilibrium to be unstable on the shell resistive time scale.

34818 **(LA—10029-MS) Thermal instabilities in the edge region of reversed-field pinches.** Goedert, J.; Mondt, J.P. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 31p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013861.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Thermal stability of the edge region of reversed-field pinch configurations is analyzed within the context of a two-fluid model. Two major sources of instability are identified in combination with a parallel electric field: either an electron temperature gradient and/or a density gradient that leads to rapid growth (of several to many ohmic heating rates) over a region of several millimeters around the mode-rational surfaces in the edge region. The basic signature of both instabilities is electrostatic. In the case of the density gradient mode, the signature relies on the effects of electron compressibility, whereas the temperature gradient mode can be identified as the current-convective instability by taking the limit of zero diamagnetic drift, density gradient, thermal force, drift heat flux, and electron compressibility.

34819 **(LA—10065-MS) Compton scattering of photons from electrons in thermal (Maxwellian) motion: electron heating.** Devaney, J.J. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 50p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013860.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The Compton differential scattering of photons from a relativistic Maxwell distribution of electrons is reviewed. The exact theory and the approximate theories due to Wienke and Lathrop were verified for application to particle transport codes. We find that the ordinary (zero temperature) Klein-Nishina formula can be used up to electron temperatures of 10 keV if errors of less than 1.6% in the total cross section and of about 5% or less in the differential cross section can be tolerated. Ohterwise, for photons below 1 MeV and temperatures below 100 keV the Wienke-Lathrop isotropic approximation is recommended. Were it not for the four integrations effectively required to use the exact theory, it would be recommended. An approximate (Cooper and Cummings), simple, accurate, total cross section as a function of photon energy and electron temperature is presented.

34820 **(LA—10084-MS-Vol.1) Compilation of interim technical research memoranda. Volume I.** Shanahan, W.R. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 37p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84014139.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Four interim technical research memoranda are presented that describe the results of numerical simulations designed to investigate the dynamics of energetic plasma beams propagating across magnetic fields.

34821 **(ORNL/TM—9015) Electron transport in EBT in the low collision frequency limit.** Hastings, D.E. (Oak Ridge National Lab., TN (USA)). Jun 1984. Contract AC05-84OR21400. 90p. NTIS, PC A05/MF A01; GPO Dep. Order Number DE84013601.

A variational principle formulation is used to calculate the electron neoclassical transport coefficients in a bumpy torus for the low collisionality regime. The electron radial drift is calculated as a function of the plasma position and the poloidal electric field which is determined self-consistently. A bounce-averaged differential collision operator is used and the results are compared to previous treatments using a BGK operator.

34822 **(ORNL/TM—9075) Propagation and absorption of electromagnetic waves in fully relativistic plasmas.** Batchelor, D.B.; Goldfinger, R.C.; Weitzner, H. (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 44p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84013627.

The propagation and absorption of electromagnetic waves in a relativistic Maxwellian plasma are investigated by solving the uniform plasma dispersion relation. Both the Hermitian and the anti-Hermitian parts of the plasma conductivity tensor σ are calculated relativistically. The Bessel functions occurring in σ are not expanded, and many cyclotron harmonic terms are included at high temperatures. The dispersion relation is solved numerically for perpendicular propagation, k/sub parallel to/ = 0, where the relativistic effects are maximum and are not masked by Doppler broadening, which has been more thoroughly investigated. It is found that relativistic broadening has a substantial effect on wave dispersion, shifting the extraordinary mode right-hand cutoff and the upper hybrid resonance to a higher magnetic field with increasing temperature. Above a critical temperature the cutoff disappears entirely. There is a broad range of temperatures, 20 keV $\leq$ T/sub e/ $\leq$ 500 keV, for which the wave number k/sub perpendicular/ to differs significantly from both the cold plasma value and the vacuum value. This has important implications for ray tracing in relativistic plasmas. Wave damping rates are calculated and compared to results from a previous formulation using the Poynting theorem, in which only the Hermitian part of σ is calculated relativistically.

34823 **(ORNL/TM—9127) Reliability of initial-value MHD calculations of tokamak disruptions.** Hicks, H.R.; Carreras, B.A.; Garcia, L.; Holmes, J.A. (Oak Ridge National Lab., TN (USA)). Jun 1984. Contract AC05-84OR21400. 80p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84013600.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

We have proposed the nonlinear coupling of resistive tearing modes as the mechanism for some tokamak disruptions. This is based primarily on initial-value resistive magnetohydrodynamic cal-

culations performed with a finite-difference grid in minor radius and Fourier series expansion in the poloidal and toroidal angles. The calculations show that, for certain q profiles, the nonlinear interaction of tearing modes of different helicities leads to the rapid destabilization of other modes. The resulting effects and the time scale are consistent with the tokamak disruption.

34824 **(ORNL/TM—9133) Accelerated convergence of the steepest-descent method for magnetohydrodynamic equilibria.** Handy, C.R.; Hirshman, S.P. (Oak Ridge National Lab., TN (USA)). Jun 1984. Contract AC05-84OR21400. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013602.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Iterative schemes based on the method of steepest descent have recently been used to obtain magnetohydrodynamic (MHD) equilibria. Such schemes generate asymptotic geometric vector sequences whose convergence rate can be improved through the use of the ϵ-algorithm. The application of this nonlinear recursive technique to stiff systems is discussed. In principle, the ϵ-algorithm is capable of yielding quadratic convergence and therefore represents an attractive alternative to other quadratic convergence schemes requiring Jacobian matrix inversion. Because the damped MHD equations have eigenvalues with negative real parts (in the neighborhood of a stable equilibrium), the ϵ-algorithm will generally be stable. Concern for residual monotonic sequences leads to consideration of alternative methods for implementing the algorithm.

34825 **(PPPL—2106) Recent results from TFTR.** Hawryluk, R.J.; Bell, M.G.; Bitter, M.; Blanchard, W.R.; Bretz, N.; Bush, C.; Cecchi, J.L.; Cohen, S.; Coonrod, J.; Davis, S.L. (Princeton Univ., NJ (USA). Plasma Physics Lab.). May 1984. Contract AC02-76CH03073. 34p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84013100.

During the past year, the research activities on TFTR have encompassed three broad areas. The first was to extend the operating range of TFTR. Plasma currents up to 1.5 MA were achieved in discharges with a = 0.83 m, R = 2.55 m at a toroidal field of 2.7 T. In these large plasmas, the maximum line average density was 3.35 x 10^{19} m^{-3}. The second activity was a study of the scaling of the energy confinement time, tau/sub E/, in ohmically heated discharges as a function of plasma current, density, and plasma size. These experiments indicate a favorable scaling of tau/sub E/ with size and density. Energy confinement times in excess of 0.25 s were obtained in deuterium discharges. The third activity was a study of adiabatic compression. During compression, the plasma current and ion temperature scaled approximately as predicted; however, the electron temperature and density scaled less strongly than predicted for ideal compression.

34826 **(PPPL—2107) High-n ideal and resistive shear Alfven waves in tokamaks.** Cheng, C.Z.; Chen, L.; Chance, M.S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). May 1984. Contract AC02-76CH03073. 54p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84013099.

Ideal and resistive MHD equations for the shear Alfven waves are studied in a low-β toroidal model by employing the high-n ballooning formalism. The ion sound effects are neglected. For an infinite shear slab, the ideal MHD model gives rise to a continuous spectrum of real frequencies and discrete eigenmodes (Alfven-Landau modes) with complex frequencies. With toroidal coupling effects due to nonuniform toroidal magnetic field, the continuum is broken up into small continuum bands and new discrete toroidal eigenmodes can exist inside the continuum gaps. Unstable ballooning eigenmodes are also introduced by the bad curvature when $\beta > \beta$/sub c/. The resistivity (n) can be considered perturbatively for the ideal modes. In addition, four branches of resistive modes are induced by the resistivity: (1) Resistive entropy modes which are stable ($\Delta' < 0$) with frequencies approaching zero as n/sup 3/5/, (3) Resistive periodic shear Alfven waves which approach the finite frequency end points of the continuum bands and n/sup 1/2, and (4) Resistive ballooning modes which are purely growing with growth rate proportional to eta/sup 1/3/β/sup 2/3/ as eta $\rightarrow$ O and $\beta \rightarrow$ O.

34827 **(PPPL—2108) Conductivity of rf-heated plasma.** Fisch, N.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). May 1984. Contract AC02-76CH03073. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013088.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The electron velocity distribution of rf-heated plasma may be so far from Maxwellian that Spitzer conductivity no longer holds. A new conductivity for such plasmas is derived and the result can be put in a remarkably general form. The new expression should be of great practical value in examining schemes for current ramp-up in tokamaks by means of lower-hybrid or other waves.

34828 **(PPPL—2110) New fluctuation phenomena in the H-mode regime of PDX tokamak plasmas.** Slusher, R.E.; Surko, C.M.; Valley, J.F.; Crowley, T.; Mazzucato, E.; McGuire, K. (Princeton Univ., NJ (USA). Plasma Physics Lab.; Bell Labs., Murray Hill, NJ (USA)). May 1984. Contract AC02-76CH03073. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013684.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A new kind of quasi-coherent fluctuation is observed near the edge of plasmas in the PDX tokamak during H-mode operation. (The H-mode occurs in neutral beam heated divertor plasmas and is characterized by improved energy containment as well as large density and temperature gradients near the plasma edge.) These fluctuations are evidenced as VUV and density fluctuation bursts at well-defined frequencies ($\Delta\omega/\omega \leqq 0.1$) in the frequency range between 50 and 180 kHz. They affect the edge temperature-density product, and therefore they may be important for understanding the relationship between the large edge density and temperature gradients and the improved energy confinement.

34829 **(SAI—84/1628-PRI-79) Finite poloidal gyroradii effects on tokamak transport.** Catto, P.J. (Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.). Jun 1984. Contract AC03-76ET53057. 28p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84012675.

A gyrokinetic equation is derived which treats the E x B drift in the poloidal magnetic field as the same order as the species thermal speed. This equation along with quasi-neutrality permit a self-consistent treatment of the poloidal variation of the electrostatic potential which becomes important at finite poloidal gyroradii. A plateau regime calculation is presented to illustrate how the modifications to the transport can be evaluated explicitly.

34830 **(UCRL-Trans—11970) Probing a plasma with high-energy beams of atoms using threshold detectors.** Bocharov, V.N.; Konstantinov, S.G.; Kudryavtsev, A.M.; Myskin, O.K.; Panasyuk, V.M.; Tsel'nik, F.A. (Lawrence Livermore National Lab., CA (USA)). Jun 1984. Contract W-7405-ENG-48. Translation of ; Novosibirsk Preprint, 1982. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013360.

Portions are illegible in microfiche products.

A method is described for a significant increase (to 10^4) of the signal/noise ratio during active corpuscular diagnostics of plasma by using a high-energy (to 80 keV) beam of helium atoms and a system of silicon semiconductor detectors with low registration threshold, ~ 15 keV. Amplification factors of detectors in the 10 to 70 keV range were measured, and the results of measurements of the radial profile of density and potential of a spinning plasma are given.

34831 **(UCRL-Trans—11972) Protective plasma envelope.** Bocharov, V.N.; Konstantinov, S.G.; Kudryavtsev, A.M.; Myskin, O.K.; Panasyuk, V.M.; Tsel'nik, F.A. (Lawrence Livermore National Lab., CA (USA)). Jun 1984. Contract W-7405-ENG-48. Translation of ; Novosibirsk Preprint 83-77, 1983. 16p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013316.

A method of creating an annular plasma envelope used to protect the hot plasma from flows of impurities and gases from the

walls of the vacuum chamber is described. The diameter of the envelope is 30 cm, the thickness of the wall is 1.5 cm, the length is 2.5 m, and its density is from 10^{13} to 10^{14} cm^{-3}. The envelope attenuates the incident (from outside) flow of helium 10-fold and the low of hydrogen 20-fold.

34832 **(UCRL-Trans—11971) Transverse ion losses through the outer plugs of an ambipolar trap under conditions of few collisions.** Pekker, L.S.; Stupakov, G.V. (Lawrence Livermore National Lab., CA (USA)). Jun 1984. Contract W-7405-ENG-48. Translation of ; Novosibirsk Preprint 81-95, 1981. 32p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84013315.

Qualitative estimates are given for the rate of losses in a regime of low collisions and indicate conditions of its applicability. The exact expressions for the flow of ions from the trap are described.

34833 **(UCRL-Trans—11973) Influence of the finite Larmor radius effect on plasma equilibrium.** Stupakov, G.V. (Lawrence Livermore National Lab., CA (USA)). Jun 1984. Contract W-7405-ENG-48. C;Institute of Nuclear Physics of the Academy of Sciences, USSR, Novosibirsk, Preprint 84-15. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013363.

Portions are illegible in microfiche products.

Equilibria of a small β plasma immersed in a magnetic field with parallel straight lines of force are considered. It is shown that finite ion Larmor radius effects (in hydrodynamical description of plasma these effects correspond to accounting for collisionless ion viscosity and ion inertia), even being small, considerably reduce the class of possible equilibrium configurations predicted by the usual MHD model. The microscopic origin of the effect is due to the ion drifts appearing in high (third) orders of drift theory. Relevance of this effect to magnetic traps is briefly discussed.

34834 **Quantitative comparison of experimental and theoretical growth rates of the positional instability in Doublet III.** Yokomizo, H. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment); McClain, F.W.; Jensen, T.H. (GA Technologies, Inc., San Diego, CA (USA)). *Nuclear Fusion;* **23**: No. 12, 1593-1598(Dec 1983).

Experimentally measured growth rates of the positional instability of vertically elongated plasmas in Doublet III are compared with those obtained from a numerical code based on linear perturbation theory. The relevant elements of the circumstances of the experiment have been included in the code. The perturbations of plasma currents and currents in the wall of the vacuum vessel as well as in the coils surrounding the plasma are included in the model. The modelling of the complicated external circuitry of the coils is based on a simple assumption which was supported by observation. Comparison of the measured growth rates with those calculated suggests that the essential phenomena are adequately described by the model.

34835 **Comment on the calculation of Tsub(e) from Thomson scattering data.** Lazarus, E.A. (Oak Ridge National Lab., TN (USA)). *Plasma Physics;* **25**: No. 11, 1271-1273(Nov 1983).

Short communication.

34836 **Retarded time superposition principle and the relativistic collision operator.** Hizanidis, K.; Molvig, K.; Swartz, K. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). *Journal of Plasma Physics;* **30**: 223-248(Oct 1983).

A retarded time superposition principle is formulated and proved for the two-particle correlation function in a multi-species relativistic, and fully electro-magnetic, plasma. This principle is used to obtain the relativistic collision operator.

34837 **Guided modes between upper-hybrid and plasma resonance.** Morales, G.J.; Maggs, J.E. (California Univ., Los Angeles (USA). Dept. of Physics). *Journal of Plasma Physics;* **30**: 267-274(Oct 1983).

The structure of driven electrostatic oscillations is determined for a cold plasma with a zero-order density gradient along the magnetic field. A set of well-behaved structures, bounded at plasma resonance, exists for discrete values of the perpendicular wavenumber. A Green's function suitable for sources located in the overdense region of the plasma is constructed. The driven medium responds as a loss free guide.

34838 **Relaxation processes and persistence of stability in finite β plasmas.** Coppi, B.; Crew, G.B.; Ramos, J.J. (Massachusetts Inst. of Tech., Cambridge (USA)). *Comments on Plasma Physics and Controlled Fusion;* **8**: No. 1, 11-22(Jul 1983).

Fusion burn conditions can be attained through a heating sequence of finite β plasma equilibrium configurations that preserves magnetic flux and macroscopic (ideal MHD) stability. This condition can then be maintained as the heating phase is completed and the achieved equilibrium configuration relaxes, due to the effects of finite electrical resistivity, toward states in which the rationalized rotational transform, is larger than unity over a considerable portion of the plasma column. In fact, both ballooning and internal ($m^o = 1$) kink modes exhibit a "second stability" region in the relevant parameter space.

34839 **Numerical analysis of the Boltzmann equation including Fokker-Planck terms.** Przybylski, K.; Lizou, J. (Institut de Genie Atomique, Ecole Polytechnique Federale de Lausanne EPFL-Ecublens, CH-1015 Lausanne). *Nuclear Science and Engineering;* **81**: No. 1, 92-109(May 1982).

After a short presentation of the Boltzmann-Fokker-Planck (BFP) equation, which was derived in a previous work, two numerical approaches to solve this equation are investigated--the multigroup method and a diamond scheme applied in a consistent way to space and energy variables. Because of the parabolic nature of the Fokker-Planck operator, it is shown that the standard neutron transport codes cannot solve such an equation. With the one-dimensional time-dependent BFP-1 code, many numerical results have been produced. All deal with the transport of charged particles in dense plasmas because such a problem is very severe from a numerical point of view. Other applications can be imagined since the BFP formalism is quite general.

From Meeting of the French Society of Physics; Grenobel, France (19 Sep 1983).

Portions are illegible in microfiche products.

This experiment is being installed at Bruyeres-le-Chatel CEA. In this article, experimental device is described and principal technical and physical constraints to respect for taking up experiments in the following fields are analysed: the ionization state study of a heavy ion beam through a plasma; the heavy ion slowing-down study in a light or heavy plasma; the ionization study of the plasma itself with the help of a probe beam technique.

34841 **(CONF-840520—8) Synergistic effects in plasma surface interactions.** Roberto, J.B.; Behrisch, R. (Oak Ridge National Lab., TN (USA); Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). 1984. Contract AC05-84OR21400. 33p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84012346.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

The possible synergistic effects which can contribute to plasma surface interaction phenomena in fusion devices are re-

viewed. These effects include the influence of reactive ions, surface modification, temperature, radiation damage, and external forces and fields on erosion yields, hydrogen retention and release, and other surface processes. The important synergistic effects are described in terms of surface and edge conditions encountered in present fusion devices and expected in future reactors. Priority data needs include the chemical erosion of graphite at high particle fluxes, melt-layer stability under disruption-induced eddy current forces, the influence of bulk neutron damage on hydrogen retention, and an in-situ evaluation of synergistic effects in operating fusion devices.

34843 **(DOE/ER/10846—T2) Research and development of a plasma jet mass accelerator as a driver for impact fusion. Final report.** Goldstein, S.A.; Tidman, D.A.; Burton, R.L.; Massey, D.W.; Winsor, N.K. (GT-Devices, Alexandria, VA (USA)). 13 Jun 1984. Contract AC05-81ER10846. 57p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84012940.

Portions are illegible in microfiche products.

A Ten Module Accelerator has been designed, fabricated and tested at projectile velocities up to 5 km/sec. It has been shown that a projectile with mass less than a half gram can be accelerated by a succession of momentum kicks from plasma jets. The significance of this acceleration mechanism is that it can be used, in principle, to accelerate projectiles to several hundred kilometers per second as a driver for inertial fusion or other energy-related applications. A theoretical base has been developed to understand the physics of plasma jet generation and the coupling of the jet momentum to the projectile.

34844 **(FRNC-TH—1364) Electron density interferometry measurement in laser-matter interaction.** Popovics-Chenais, C. (Paris-11 Univ., 91 - Orsay (France)). May 1981. 172p. (In French). NTIS (US Sales Only), PC A08/MF A01. Order Number DE84751579.

This work is concerned with the laser-interferometry measurement of the electronic density in the corona and the conduction zone external part. Particularly, it is aimed at showing up density gradients and at their space-xime localization. The first chapter recalls the density profile influence on the absorption principal mechanisms and the laser energy transport. In chapter two, the numerical and analytical hydrodynamic models describing the density profile are analysed. The influence on the density profile of the ponderomotive force associated to high oscillating electric fields is studied, together with the limited thermal conduction and suprathermal electron population. The mechanism action, in our measurement conditions, is numerically simulated. Calculations are made with experimental parameters. The measurement interaction conditions, together with the diagnostic method by high resolution laser interferometry are detailed. The results are analysed with the help of numerical simulation which is the experiment modeling. An overview of the mechanisms shown up by interferometric measurements and their correlation with other diagnostics is the conclusion of this work.

34845 **(GA-A—17151) GA effort of the DOE 12 Tesla Coil Development Program. Progress report, 1983.** Alcorn, J.S. (GA Technologies, Inc., San Diego, CA (USA)). Dec 1983. Contract AT03-84ER53158. 48p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013657.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report covers the FY 83 effort of the GA 12 Tesla Coil Development Program. During the course of this six-year program, Team One (GA/MCA/University of Wisconsin) has developed a generic concept for a 10 to 12 tesla tokamak toroidal field coil system, employing cabled NbTi/Cu conductor, bath-cooled with superfluid helium at 1.8 K. Following a conductor development effort (FY 79, 80), a 40-cm bore coil/cryostat unit was constructed, using conductor/support/cooling features prototypical of those envisioned for full-scale TF-coils. This was delivered to LLNL in September 1983, for testing within the LLNL High Field Test Facility (TFTF) during FY 84. This report describes the test coil, and its fabrication. Included are facsimiles of the fabrication drawings, and procedures for testing in the LLNL HFTF.

34846 **(GA-A—17377) Doublet III ac power systems.** Varga, H.; Cowles, C.; Overett, T.; Unmack, F. (GA Technologies, Inc., San Diego, CA (USA)). Dec 1983. Contract AT03-76ET51011. 7p. (CONF-831203—159). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012961.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Doublet III is a magnetic confinement fusion experiment using the Tokamak plasma confinement configuration. Plasma experiments started early in 1978. In the succeeding five years, the demand for additional electrical power has increased as various elements have been added to the original Doublet III device, including neutral beam heating and additional plasma control power supplies. Doublett III is a pulsed device, with a repetition rate of one pulse per five minutes. The ac power is provided by a combination of utility supply systems and from Doublet III energy storage generators. The system incorporates special features to provide a high degree of flexibility and redundancy.

34847 **(GA-A—17378) Performance analysis of 180° reflection magnet in Doublet III neutral beamline.** Hong, R.; Colleraine, A.P.; Kamperschroer, J.H.; Kim, J.; Treglio, J.R. (GA Technologies, Inc., San Diego, CA (USA)). Dec 1983. Contract AT03-76ET51011. 6p. (CONF-831203—160). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012958.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The beam power transmission and deposition in the bending magnet region of the Doublet III neutral injection beamline are examined. Two effects are investigated: the change in power transmitted through the magnet with the calorimeter in and out of the beamline, and the lack of ion power returning to the ion dump. It will be shown that gas evolving and reflecting from the calorimeter raises the gas pressure in the magnet gap to produce charge exchange losses resulting in ~ 13% decrease in neutral beam power passing through the gap. It has also been determined that the missing ion power is deposited on the magnet pole piece shields. The design and operation of the bending magnet are described. The missing neutral power caused by charge exchange losses is discussed. The experimental data are compared with that calculated using two Monte Carlo computer codes, TRAN3D and REION, and it is concluded with an examination of an accident which resulted in the melting of copper louvers bordering the magnet gap.

34848 **(GA-A—17379) Operating experience with 80-keV/80-A ion sources in use for Doublet III NBI experiments.** Kim, J.; Colleraine, A.P.; Fasolo, J.A.; Hong, R.; Kamperschroer, J.H.; McColl, D.B.; Palmer, H.L.; Silagi, R.L.; Tooker, J.F. (GA Technologies, Inc., San Diego, CA (USA)). Dec 1983. Contract AT03-76ET51011. 7p. (CONF-831203—158). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012962.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The present phase of the Doublet III neutral beam injection experimental program uses three beamlines, each beamline employing twin 80 kV/80 A, 10 cm x 40 cm, LBL-type, hydrogen ion sources. This is the first neutral beam heating experiment to use industrially fabricated sources with a two-stage accelerator system and to operate at such high energy per nucleon. In this paper, we present actual online performance of these ion sources, compare the performance of these ion sources, compare the performance data with the design values, and discuss hardware aspects of ion source fabrication and maintenance.

34849 **(GA-A—17380) Feedback-controlled gas feed system for ion sources.** Tooker, J.F.; Kamperschroer, J.; Burrell, K. (GA Technologies, Inc., San Diego, CA (USA)). Dec 1983. Contract AT03-76ET51011. 5p. (CONF-831203—161). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012963.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The gas feed system, which supplies the gas to the ion sources, used on the Doublet III neutral beam injectors was workable, as originally configured, but has a number of inconveniences and difficulties. A new gas system is being developed which is an adaptation of a system used in a variety of applications in tokamak experiments. For each ion source, the system is comprised of four valve assemblies and valve controllers, three for the ion source and one for the neutralizer. Each valve assembly consists of a length of submillimeter tubing a pressure transducer, and a piezoelectric valve. A flow of 0 to 40 Torr-liter/s of hydrogen is achieved through a 400 cm length of 0.53 mm radius tubing. This tubing is plastic to provide the high voltage isolation between the high voltage of the ion source and the valve assemblies which are located at ground potential. The system is interfaced via one of the neutral beam computers and CAMAC to a console in the control room from where the flow is programmed. System description and adaptations will be presented. Performance of the system as operated and adjusted on the bench will be presented.

34852 (INIS-SU—202, pp 38-47) **Tokamak-7 operation in experiments with a plasma.** Buzanki, V.V.; Bychkov, A.V.; Denisov, V.F. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of experiments with plasma at the Tokamak-7 (T-7) device are presented. The experiments have been carried out with a constant diaphragm of 31,5 cm radius and two movable graphite diaphragms at the 26-28 cm plasma filament radius and 1,6-1,9 T magnetic field. Two stable regimes with 150 and 200 kA and 250 ms discharge current length have been investigated. It is shown that the strongest poloidal filed perturhations have been observed at the beginning of the discharge. Electron plasma temperature Tsub(e) has been determined from the spectrum analysis of soft X radiation by the foil method. Stable plasma regimes with current up to 200 kA, bypass voltage being equal 1,58V electron density -0,5-5,0 x 10^{13} cm^{-3}, Tsub(e)=1,1-1,3 keV ion temperature-490 eV. The range between discharge pulses has reached 3 min. at the discharge current-240 kA. No considerable effect of magnetic field variables on the superconducting magnetic system has been observed.

34853 (INIS-SU—202, pp 48-58) **Experimental investigations of the "Angara-5" facility module.** Beruchev, N.G.; Bol'shakov, E.P.; Buytsev, V.A. 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The description and results of experimental investigation of the head module of the "Angara-5" facility are presented. The module represents and energy storage consisting of the Arkadiev-Marx generator and double shaping line (DSL). The intermediate DSL electrode is conneeted with the generator by two conductors passing through the separating section with four dielectric partitions. In the course of DSL commutation realized by five gass-filled commutators internal electrode charging is performed through the cantilever being isolation induction. Basic DSL characteristics are given. In the process of operation on increasing charge module voltage about 180 pulses with DSL charge voltage-1 MV, 80 pulses with charge voltage 1,6 MV and 10 pulses with 2,1 MV voltage have been performed. In all module operation conditions no breakdown in water have been observed. Time spread of commutators switch on not exceeding +- 2,6 ns. Gas discharge channel losses are given. The module power balance under capacitor charging voltage +- 80 kV is presented.

34854 (INIS-SU—202, pp 67-88) **JET, the Joint European torus - a status report.** Rebut, P.H.; Green, B.J. (JET Joint Undertaking, Abingdon, Oxon, UK). 1982. NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Present status of the construction of the Joint European Torus (JET) is described. Cutaway view of JET showing the main compononts is given. Main JET parameters are presented. Of the 32 toroidal field coils required, 27 have been manufactured and delivered (April 1981) to the JET site. The production of poloid l field coils is proceeding very satisfactorily. Progress with the manufactur of the magnetic circuit has been very satisfactory. The design of the neutral beam injection system is well advanced. Work began on the site in May 1979. The control building is complete and most of the computers and consoles of the JET Control and Data Acquisition system are already installed. The power supplies building and the generator building are complete and the installation of equipment is proceeding rapidly. The experimental or operational phase should begin in mid-1983.

34855 (INIS-SU—202, pp 89-96) **Design and first results of the ASDEX TOKAMAK.** Rapp, H.; Wesner, F. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.); European Organization for Nuclear Research, Geneva (Switzerland)). 1982. NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The design principles of the ASDEX divertor tokamak and its main rasults of technical interests are presented. It has been successfully operated since February 1980 as a divertor tokamak. In this mode experiments have been carried out with plasma currents of up to 450 kA and pulse length of up to 11 s. The most striking results are: the use of a magnetic limitor instead of a mechanical limiter reduces effects caused by plasma-wall interaction; the use of feedbacks for the vertical and radial plasma positions for the plasma current and for the electron density allow very stable and reproducible discharges without plasma disruptions for pulse lengths of up to 11 s; for the ignition of the discharge an open loop voltage of only 10 V is needed. The plasma parameters reached so far with ohmic heating are: plasma current-450 kA, pulse length-3 s (with superthermal electrons-11 s), ion temperature - 0,8 keV, electron temperature - 1,2 keV, average density - 6,5x10^{13} cm^{-3}, energy confinement time <= 70 ms.

34856 (INIS-SU—202, pp 97-104) **Some aspects of research and development for thermonuclear fusion facilities in Toshiba.** Yamimoto, K.; Itoh, S.; Nagamura, J. (Toshiba Corp., Fuchu (Japan). Fuchu Works). 1982. NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Some results of research and development for thermonuclear fusion facilities such as magnetic field systems, vacuum systems and neutral beam injection systems fabricated in Toshiba (Japan) are presented. In order to evaluate analytical results on magnetic field the testing device has been manufactured. A superconductor is developed whose critical current is 3000 A at 10 T. Large D-shaped superconducting test coil was constructed. The diagram of a test device for a titanium getter pump is given. Neutral beam injection systems have been developed. The constructed fusion research facilities are enumerated.

34857 (INIS-SU—202, pp 105-112) **Robototechnical complex for the "INTOR" installation remote control.** Popov, E.P.; Kuleshov, V.S.; Ushakov, V.I. (Moskovskoe Vysshee Tekhnicheskoe Uchilishche (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The robototechnical complex for the thermonuclear power installation "INTOR" remote control is developed. By means of maniputators possible is substitution of ampules with vertical lead-in into the chamber, remote control of the side part of installation protection sheath substitution of experimental modules units and first wall protection units as well as blanket divertor units, revision and repair of the first wall. Maniputation remote operation control is realized from a united control center. The control center ensures general control organization and comprises central control station and control stations of separate robots. In case of failure of one of the manipulators remote control can be realized by another robot. Automatic and remote regimes of the robot actions control are the main ones. However in the system envisaged is as well the possibility of combined control with direct operator participation in the process of manipulator motion control.

34858 (INIS-SU—202, pp 113-120) **Main technological and physical problems of the new torsatron- "Uragan-3".** Ameliya, V.Z.; Bronnikov, V.V.; Burchenko, P.Ya. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Basic technological and physical problems of the "Uragan-3" torsatron (U-3) are enumerated. U-3 represents a torsatron without special winding of a toroidal magnetic field. Equiinclined helical winding combined with a compensating winding consisting of two current rings ensures creation of a regulated magnetic configuration with a divertor at the high level of magnetic field induction required for stable plasma confinement. Magnetic surface parameters are given. The divertor specific features are described and U-3 subsequent modernization possibilities are shown: magnetic field increase up to 5 T, using superconducting pumping out facilities of efficiency up to $2x10^6$ l/sec and neutrat particle injectors installation for plasma additional heating. U-3 is to realize two functions: plasma production in the non-current regime of ohmic heating and plasma heating up to high temperature. The HF heating methods which are to be realized in U-3 are enumerated.

34859 (INIS-SU—202, pp 136-142) **Main concepts for a stationary reactor-torsatron.** Bykov, V.E.; Volkov, E.D.; Georgievskij, A.V.; Rudakov, V.A.; Suppunenko, V.A.; Tolok, V.T. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of investigations on studying the possibility of designing a stationary reactor with 2-4 GW electric power on the l=3 torsatron basis are presented. Calculations have shown that reactor plasma parameters may correspond to the "plateau" regime as well as "superbanana" regime of the neoclassical transport theory. The influence of plasma contamination by α particles on reactor parameters is studied. Stable burn up regimes have been found. It is shown that burn up stability is ensured by transport coefficients certain regularities characteristic of stellarator systems. The reactor characteristics dependences on collision parameter and wall loading in the "plateau" regime are given. Reactor parameters at various regimes are given as well. The reactor typical parameters are as follows: average plasma boundary radius-2 m, aspect radio-20-25, magnetic induction 5,5-7,5 T, ion component temperature 6,5-8 keV, criticaly factor β=5-10 %, electric power 2-4 GW.

34860 (INIS-SU—202, pp 156-163) **Reactor considerations for the "compart torus" thermonuclear facility with an autonomous ignition chamber.** Kurtmullaev, R.Kh.; Malyutin, A.I.; Semenov, V.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The specific features of a compact torus discovering new prospects within the solution framework of thermonuclear reactor technological problems are shown. Estimation parameters of the "Compact torus" system with an inductive storage of 100 M7, 270 cm diameter and 3m length are given. The discharge chamber, diameter equals 40 cm. For production in plasma a captured reverse magnetic flux it xs suggested to use the proper magnetic field of the "charged" storage by means of placement in its cavity of a shock chamber. The torus injection from dielectric shock chamber is a powerful method of its radiation protection while continuous plasmoid trial run accross the long ignition chamber reduces neutron and thermal first wall loading. Compact torus are ejected into the ignition chamber where they release energy with the amplification coefficient Q, which depending on generator characteristics of a pulse magnetic field is to constitute .10-50.

34861 (INIS-SU—202, pp 164-172) **"Magnetic trap" type thermonuclear device with minimum B for a plasma with β approximately 1.** Konkashbaev, I.K.; Popova, V.A.; Skvortsov, Yu.V.; Tserevitinov, S.S.; Shneerson, G.A.; Shutov, V.L. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii; Leningradskij Politekhnicheskij Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The description of the "magnetic trap" type thermonuclaar device with minimum B for plasma with β approximately 1 is given. The thermonuclear device comprises two pulse injectors with plasmaguides and a working chamber which represents a thin wall liner in the volume of which by means of a multiturn solenoid an initial magnetic flux is specified. At passive liner faces coils creating acute-angle geometry of the confined magnetic field are mounted. The liner heating factors are est tic field are mounted. The liner heating factors are estimated in the course of reaction which allows to determine the liner wall thickness equal 1-2 cm and internal diameter for the 30 T induction field not exceeding 4-6 cm. Total system length constitutes 5,5 m. The system is to produce approximately $6x10^{17}$ neutrons for a pulse and at 1 Hz operation frequency can run in the blanket up to $1.2x10^{18}$ plutonium atoms per second. Thermal energy of 50-100 MJ are to release which at the thermal cycle efficiency equal 0,4 permit to obtain 20-40 MW of electric energy.

34862 (INIS-SU—202, pp 181-188) **Technological problems for construction of a "Combined pinch" device.** Butov, I.Ya.; Bubnov, S.V.; Gvaladze, Yu.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Sukhumi. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of the "combined pinch" (CP) device development with the stored up in the capacitors battery 2 MJ energy intended for investigating pulse high-current plasma with high β at joined zet and theta-pinch discharge are presented. Main CP systems are briefly described and their technical characteristics are

given. As a result of designing CP an energy storage is constructed which permits to produce in a working chamber an axial discharge current with maximum amplitude 2 x 10^6 A and growth rate 5 x 10^{12} A/c, axial magnetic field with amplitude 10 Tl and growth rate 5 x 10^6 T/s and quasistationary magnetic field 1 T. A preliminary working gas ionization and its preheating up to 1-10 eV temperature is realized. The storage control system and the device technical parameters control system are developed. The expected plasma parameters variation range is as follows: electron density 5 x 10^{14}-10^{16} cm^{-3}, electron and ion temperature 1-10 eV - in the preheating phase and electron density 2 x 10^{16}-3 x 10^{17} cm^{-3}, electron temperature 0,5 keV, ion temperature 0,5-3 keV in the maximum pinch compression phase.

34863 (INIS-SU—202, pp 196-201) **Estimation of reliability of a nuclear power plant with tokamak reactor.** Klemin, A.I.; Smetannikov, V.P.; Shiverskij, E.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of the analysis of INTOR plant reliability are presented. The first stage of the analysis consists in the calculation of the INTOR plant structural reliability factors (15 ibs main systems have been considered). For each system the failure flow parameter (W(1/h)) and operational readiness Ksub(r) have been determined which for the plant as a whole besides these factors-technological utilization coefficient Ksub(TU) and mean-cycles-between failures Tsub(o). The second stage of the reliability analysis consists in investigating methods of improving its reliability factors reratively to the one calculated at the first level stage. It is shown that the reliability of the whole plant to the most essential extent is determined by the power supply system reliability. The following as to the influence extent on the INTOR plant reliability is the cryogenic system. Calculations of the INTOR plant reliability factors have given the following values: W=4,5 x 10^{-3} 1/h. Tsub(o)=152 h, Ksub(r)=0,71, Ksub(TU)=o,4 g.

34864 (INIS-SU—202, pp 202-207) **Technological tokamak reactors with a high density plasma.** Vojtenko, D.A.; Demirkhanov, R.A.; Kirov, A.G.; Stotland, M.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Sukhumi. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

With the purpose of determining the efficiency criterion of the engineering-technological tokamak-reactor (ETTR) with high plasma density the equation system of the stationary zero-dimension tokamak plasma model jointly with the ETTR system of physical and technological restrictions and cost estimates has been solved. As efficiency criterion the concept of specific cost of fluence storage rate called "fluence cost" Ssub(f)=S/p, where S is ETTR cost, p-specific neutron first wall. The leading ETTR versions with p=100,400 and 1000 $Wxcm^{-2}$ have been considered which distinguish by two different toroidal field winding versions-cryoresistive based on superpure aluminium and superconductive based on Nb_3Sn. It follows from the analysis results that at high p values optimal ETTR with minimum "fluence cost" are realized. From the ETTR comparison with superconductor and cryoresistive toroidal field windings one can see that the Ssub(f) main dependences course on reactor parameters is analogous, however Ssub(f) and S values in the case of cryoresistive toroidal field windings is 5 time lower.

34865 (INIS-SU—202, pp 215-223) **First results of the MT-1 tokamak start-Up, TsIFI Hungary.** Byurger, G.; Kardon, B.; Kostka, P. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of the MT-1 tokamak start up with the parameters: large radius 0,4 m, round limiter radius from Msub(o) 0,09 m, copper case radius-12 cm are presented. Toroidal coil consists of 20 turns. Maximum magnetic induction 2 T. At the present stage metering schemes of usual electric diagnostics are mounted at the MT-1. The Tomson scattering measuring system neutral particles spectrometer, active corpuscular diagnostics and microwave interferometer as well as data acquisi- tion and processing system on the computer base are prepared. The first results of MT-1 performances are presented. The stable discharge is obtained within the plasma current limits 7-35 kA, 2-4 V voltage, H_2 gas pressure in the chamber (0,8-6)10^{-4} tor. The maximum energy confinement time-0,9 m/s is obtained. Soft and hard x radiation spectra are given. Distributions of plasma atom-contaminators in the dark region behind the liner are presented.

34866 (INIS-SU—202, pp 224-231) **VT-6-2 screw torus type thermonuclear device.** Vizgalov, I.V.; Dobryakov, A.V.; Igritskij, A.N. (Moskovskij Inzhenerno-Fizicheskij Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

With the purpose of designing a stationary thermonuclear reactor engineering-physical and structural design development of the VT-6-2 six-period screw type torus calculated for ion-hot stable plasma production with the 2,5 T field is realized. The VT-6-2 axis length equals 15,07 m. The radius of curvature and twisting of the magnetic exis equals 0,55 m. The rotational transformation angle equals 4,63 rad. The plasma average radius is 0,13 m. The plasma expected parameters are: ion temperature 3-5 keV, plasma density 10sup(19-20)msup(-3), β=0,3. The longitudinal field solenoid is chosen in the form of 120 identic coils arranged along the spiral in such a manner that the spiral tangent coincides with a normal to the central coil region. The electromagnetic system parameters are given. Possibility of the VT-6-2 device practical realization is shown.

34867 (INIS-SU—202, pp 232-239) **Parametric analysis of a power plant with an electron beam hybrid fusion reactor.** Kalmykov, Yu.K.; Komin, A.V.; Krivosheev, M.V. 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of themonuclear power plant parametric analysis with an electron beam microexplosion initiation are presented. The estimations have been performed with high energy release in a target with a liquid first wall-blanket (LFWB) and nuclear fuel conversion in the outer blanket. The hybrid plant model comprises the following elements: reactor chamber LFWB, outer blanket target unit reaction ignition system, energy conversion system. In the course of ignition system modeling it has been assumed that its costs capacitance storage costs. The energy transferred to the target has been accepted to be equal 5 MJ, storage energy with regard to efficiency of energy transfer into the beam and transport losses-2a MJ. The chamber form has been accepted as a cylindrical one. As LFWB material eutectics has been considered. It is shown that the maximum permissible cost of the failure reactor part under pulse energy release of 10 ^{11} J order showed constitute 3 dollars for a purely thermonuclear and 10 dollars for hybrid version of the plant.

34868 (INIS-SU—202, pp 240-246) **Parametric study on a reactor with a liner using a simplifed economical model.** Krivosheev, M.V.; Mineev, A.B. (Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)); Sorin, V.M. (Leningradskij Politekhnicheskij Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of optimization calculations of thermonuclear power plant (TNPP) based on the reactor with a cumulating nonevaporated liner made of the Pb_4Li eutectics melt with the following

characteristics: density $9x10^3$ kg/m^3, evaporation heat 1,1 MJ/kg, heat capacity 0,2 kJ/kg degr. Injector efficiency has been accepted to be equal 0,5 TNPP operation time a year 7000 h. Dependences of the relation of given specific expenditures to the substituted power plant expenditures on liner compression degree, β relation in the compression maximum, Ksub(ei)-of initial value of external-internal liner radii relation and g parameter determining the relation of energy returned to the storage at a reverse liner scattering to initial storage energy. From the optimal TNPP view point the system parameters are as follows: plasma pressure $3x10^8$ Pa, injected plasma temperature 1 keV, plasma temperature in the compression maximum 10 keV, g=1,4, β approximately equal 2, Ksub(ei) approximately equal 2, external initial liner radius and its length 4,4 m and 3,4 m, respectively, pulse energy 8 GJ, cycle duration 7 s, TNPP electric power netto 0,7 W. Apart of direct energy conversion in total supplied energy to the consumer is 20 %. It follows from the results analysis that the given specific TNPP expenditures even for a pure reactor do not strongly differ from expenditures on electric energy produced for substituted plants.

34869 (INIS-SU—202, pp 274-281) **Preliminary parametric investigations of a thermon clear power plant with a torsatron reactor.** Artyugina, I.M.; Kantan, V.V.; Semenov, A.A. (Leningradskij Politekhnicheskij Inst. (USSR)); Mineev, A.B.; Komin, A.V.; Krivosheev, M.V. (Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)); Georgievskij, A.V.; Rudakov, V.A.; Suprunenko, V.A. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of parametric analysis of thermonuclear electric plant (TNPP) based on a pure thermonuclear torsatron reactor are presented. As an optimization criterion the minimum of specific investments netto has been accepted. The performed investigations allow one to recommend as optimum for the thermonuclear torsatron reactor the value of aspect ratio 17-19 number of screw winding periods 6-7 and first wall loading 4,5-5 MW/m^2.

34870 (INIS-SU—202, pp 282-288) **Forecasting parameters of a the monuclear power plant with a torsatron reactor.** Artyugina, I.M.; Semenov, A.A.; Smirnov, A.N. (Leningradskij Politekhnicheskij Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A number of problems related to forecasting technical economical factors of thermonuclear electric plant (TNPP) based on the torsatron reactor is considered. Possible methodic approaches to the estimation of TNPP nonstandard equipment construction-mounting works and the results of forecasting the investment structure in TNPP are analysed. The influence of TP basic systems on the total investment value depending on accepted price level is shown. Quantitative estimations of specific investments and electric energy production cost permit to estimate rather optimistically the considered TNPP type and to draw a conclusion on advisability of the further study.

34871 (INIS-SU—202, pp 289-296) **Design of the T-13 tokamak.** Bortnikov, A.V.; Brevnov, N.N.; Efimov-Ilovajskij, A.V.; Zhokin, A.M.; Sokolov, N.I.; Shurov, O.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The description of the T-13 tokamak device intended for experimental investigation of the dependence of plasma energy lifetime on various parameters of plasma filament for studying additional heating methods at the expense of adiabatic compression of non-circular cross section filament and during fusion of several filaments. By the device it is possible to obtain the plasma filament with the following parameters small radius 0,09 m, plasma concentration 5 x 10^7 m^{-3}, electron temperature 100-400 eV, energy confinement time 2 ms. The T-13 electromagnetic system consists of 20 coils (wafers) of toroidal magnetic field having magnetic induction value 1,4 T at the 0,4 m radius. The vacuum chamber represents a rectangular cross section torus with internal dimensions a,2 x 0,68 m. The chamber consists of four sections and is made of stainless nonmagnetic steel. Inside the chamber a conducting copper sheath is installed. The vacuum pumping out system ensures the rarefaction degree 1 x 10^{-9} mm. Hg.

(CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of parametric analysis of power plant on the basis of laser fusion are presented. The model taking into account only the basic systems: laser, laser supply source, chamber, blanket, heat power system has been used. The calculation results are presented in the form of dependences of expend,ture for electric energy production by the complex hybrid plant-nuclear fuel reprocessing plant-NPP on laser energy. It is shown that the hybrid plant fissile material breeder can be competitive in relation to nowdays NPP at a certain 01,5-3 times nuclear fuel price increase. For this purpose one must obtain high energy amplification coefficients in the thermonuclear target (>=100) rather high frequency of laser pulse recurrence (>1Hz), to ensure large radius of laser and fuel elements operation (>10^8 pulses) and a relatively low cost of the laser system (<= 100 doll./7).

34873 (INIS-SU—202, pp 305-312) **Some parameters of a stellarator reactor with helical magnetic axis.** Georgievskij, A.V.; Nemov, V.V.; Sergeev, Yu.F.; Shishkin, A.A. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Some parameters of a stellarator reactor on the basis of magnetic system consisting of helical coils and solenoid with plane-geometry and helical magnetic axis are analysed. The parameters and main geometric relations of the stellarator reactor are: aspect ratio 15, plasma radius 1m, toroidal field 5 T. Due to allocation of blanket and protection with varied thickness, the efficiency in using the volume limited by the magnetic system has increased. The given stellarator reactor type has some advantages over the reactor with a traditional stellarator magnetic system, such as somewhat increased β value (β <= 10 %) and possibility of substantial current value decrease in the helical coil. Besides the system with a space axis in contrast to hel+cal torus does not require helical toroidal vacuum chamber which can result in a more simple structure of similar systems.

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The present status of the design and construction of two plasma-focus devices PF-1000 of an energy 1,15 MJ and PF-300 of an energy 360 kJ are described. The principal properties of these devices are shown. The chamber of PF devices will be pumped out to a pressure of 10^{-5} Tr. To select appropriate electrodes matched to the power supply system a number of computations have been performed. From calculations it results that the maximal value of the pinch current will be obtained for 10 cm diameter inner electrode. The scheme of PF electrodes connection is given. The PF-300 device will be used for testing the subunits constructed for PF-

1000 and for preliminary verification of the concepts of physical experiments and theoretical considerations. The PF-1000 will be installed in a three-floor high hall of dimension 18 x 18 m. Chamber dimensions are: diameter 150 cm; length 200 cm. Diameter of external electrode 90 cm cable collector diameter 250 cm.

(AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

With the purpose of constructing neutron plasma sources which are able to imitate radiation conditions in a thermonuclear reactor electromagnetic traps (EMT) are considered. In the traps plasma is produced by working gas ionization with an electron beam directly in the trap volume while high power ions may be indroduced thorugh magnetic slits. Two EMT regimes are considered. In the first regime deuterium and tritium are introduced into the trap in the form of neutral gas while plasma production and its heating are realized by means of electron injection of electron cyclotron resonance. In the second regime into the EMT plasma produced by gaseous deuterium ionization through the magnetic slits introduced is tritium ion beam with energy ensuring their capture in a potential well of negative volumetric electron charge. In this case the EMT plasma represents a target in which tritium ion beam is slow down initiating thermonuclear reactions accompanied by 14 MeV neutron emission. It concluded that injecting into the EMT plasma ion beams with currents approximately 100 A (which nowadays is technically feasible) one can produce a neutron source with approximately 10^{19} n/s, intensity creating close to the first wall neutron fluxes approximately 10^{14} n/cm^{2}xsec i.e. quite suitable for radiation testing materials of future thermonuclear reactors.

34876 (INIS-SU—202, pp 331-336) **System of electron-cyclotron heating of a plasma in the T-15 tokamak.** Alikaev, V.V.; Arsen'ev, Yu.I.; Doohenkov, A.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Technical solutions in development of complex of SHF plasma heating in the T-15 tokamak are reported. Plasma heating is supposed to be realized by electromagnetic waves at electron-cyclotron frequency. The T-15 generator complex consists of 24 operating independently of each other generators with output power 0,2-0,3 MW each. SHF energy is transfered to the plant from each generator by a separate wakeguide. The HFE energy is realized by means of two input facilitigs joined to branch pipes of the toakmak discharge chamber. As SHF radiation source power gyrotrons are used. The SHF energy input into the T-15 chamber is supposed to be realized by the mirror system. The SHF power supply system of generator complex consists of a 80 kV modulator and low-voltage sources for gyrotron filament supply of superconducting and correcting solenoids of the built in electric discharge pump.

34877 (INIS-SU—202, pp 337-343) **Design of a technical complex for ecr heating of a plasma in the L-2 stellarator.** Borisov, A.V.; Kolik, L.V.; Krasnikov, E.Yu.; Petrov, A.E.; Sapozhnikov, A.V.; Sarksyan, K.A. (AN SSSR, Moscow. Fizicheskij Inst.); Usov, V.G.; Frajman, A.A. (AN SSSR, Gor'kij. Inst. Prikladnoj Fiziki). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The design of a technical complex for experiments on electron-cyclotron heating (ECH) of hydrogen plasma in the L-2 stellarator is presented. For ECH at the first and second harmonics of gyrofrequency two types of gyrotrons with wavelength 10 and 3,6 mm and radiation power 100 and 300 kW at pulse duration 1 and 20 ms respectively are used. For consistent radiation input into plasma a quasioptical channel is employed. As a result during ECH at the first gyrofrequency harmonic an unusual wave with lambda=10 mm through the four mirrors system is introduced into the L-2 upper branch pipe of 60 mm diameter in the form of gaussian wave beam of 55 mm diameter. For the second gyrofrequency harmonic through the three mirrors system SHF-beam with lambda=3,6 mm gets into the branch pipe of 86 mm diameter with dimensions 46x62 mm. In the ECR region its dimensions constitute 40x60 mm. As a switch-lamp high-voltage triode GMI 43 A is employed in the circuit control regime. As a storage a single artificial shaping nonconsistent line with oil filling is used.

34878 (INIS-SU—202, pp 344-351) **Charged particle energy recuperation in thermonuclear device in reactors.** Vizgalov, I.V.; Vinogradova, O.A.; Dimitrov, S.K.; Luts'ko, A.S.; Makhin, A.V.; Smirnov, V.M.; Tel'kovskij, V.G. (Moskovskij Inzhenerno-Fizicheskij Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Recuperation systems for hybrid thermonuclear reactor injector of open type (TROL) are considered. The ion source D^- with 50 A current and 50 keV energy shapes a sheet beam. In the separating magnet the beam separates from the electron flow is focused and accelerated in electrostatic accelerator field up to 1,4 MeV energy. Further on the beam recharges in D^0 atoms in hydrogen plasma target. A part of the flow remains in the form of D^- and D^+ ions and is directed into the recuperator with crossed electric and magnetic fields. Subsequently fast neutral atom flux with 56 MW power is directed to the TROL main end trap but a part of the flux (16 MW) passes by the trap without interacting with plasma. After the trap almost all neutral atoms (98%) are transformed into D^+ ions in a steam-jet met lithium target. Subsequently 13 MW of D^+ ion kinetic energy are converted into electric energy in the end electrostatic recuperator. The recuperator with crossed fields consists of two symmetric parts each of which comprises the system of electrodes creating a decelerating field and ion collector. Overall recuperator dimension is 2 m. In the electrostatic recuperator electrodes are assembled in a packet on four ceramic rods. The collector is manufactured in the form of water cooled homogeneous flit shields. The recuperator basic parameters are; general ion current at the recuperator inlet 11 A "volumetric charge parameter" 0,16 recuperator general length-300 cm, recuperator efficiency 0,9. The D^+ energy conversion is realized by means of a scheme in which the collector current converted into alternative supplies primary high-voltage winding of the reducing transformer.

Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The development of construction of full-scale experimental stand of T-15 tokamak injectors-IREK injector and its main supply systems is accomplished. IREK is calculated for the operation of one module of ion source with emission area 420x160 mm which can yield an ion beam with 100 A current at the energy up to 160 keV and injection pulse duration up to 20 s. IREK consists of two rectangular vacuum-injector chambers and a diagnostic chamber. An ion source with beam neutralizer is mounted at the injector chamber. In the vacuum chamber current-collectors, diaphragms, deflecting electromagnet, magnetic flit shield gas pumping out means are located. In the diagnostic chamber the diagnostic atom receptor and gas pumping out means are placed. The diagnostic volume and injector chamber are linked with atomguide. Internal chamber dimensions: height 3,5 m, length 3,5 m, width 2m IREK ensures transport of atom beam of power up to 3 MW to the distance of 9 m. A greater part of the IREK systems is in the manufacturing and mounting stage.

34880 (INIS-SU—202, pp 357-363) **Design of ion-atom channel of the T-15 tokamak injector.** Chukhin, I.A.; Nikulin, V.A.; Seregin, V.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Calculation parameters of ion-atom channel elements are given and the design of T-15 tokamak injectors meant for input of atom beam of 10 MW power at 80 keV energy and pulse duration 1,5 sec. into the tokamak chamber for plasma heating as described. Injection system is based on simultaneous operation of three autonomous injectors. In each injector two modules of ion sources are mounted. The ion-atom channel of the injector consists of two ion sources neutralizer of ions beam into fast atoms beam magnetic flit shield, diaphragms ion and atom receptors deflecting electromagnet, cryopanels of 15 cm^2 general area, rectangular vacuum chamber manufactured of sheet steel 12Kh18N10T of 16 mm thickness. The vacuum chamber weight constitutes 25 tons volume 24,5 m^3. Ion sources are situated one above another by vertical order. In neutralizers ion beams formed are converted into fast atom beams on gas base. Behind the neutralizer situated is magnetic flit shield along the length of which gas pumping out occurs. Separation of atoms and non recharged ions is realized by the deflecting electromagnet. The deflected ions get to the receptor and fast atoms by atomguide into the tokamak. The injector diaphragm protects the electromagnet construction from overheating.

34881 (INIS-SU—202, pp 364-371) **IBM-5C stationary in source without an external magnetic field.** Kulygin, V.M.; Malakhov, N.P.; Panasenkov, A.A.; Pleshivtsev, N.V.; Romanov, V.I.; Semashko, N.N.; Seregin, V.S.; Chukhin, I.A.; Shmeleva, V.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

With the purpose of constructing efficient injectors of hydrogen fast atoms for plasma heating in magnetic traps problems arising in the course of creation of stationary high-current ion sources and specific methods of solution of these problems are considered. The design and characteristics of the YVM-50 stationary ion source without an external magnetic field intended for obtaining hydrogen ion beams with energy up to 40 keV, current 30 A and pulse duration over 2 sec. are described. Thermal regime of ion source direct heating cathode is considered. It is shown that the lanthanum hexaboride cathode at the temperature 1700 deg C ensures 30 A/cm^2 emission density radiating about 60 W/cm^2. YBM-5c consists of a gas-discharge chamber (GDC) and ion-optical system (IOS). GDS is composed of a cathode unit, anode flange, casing, gas supply system, IOS consists of emission accelerating and earthed electrodes. At the discharge pulse duration less than 1 sec. current emission density attains 0,5 A/cm^2 which permits to extract from the ion source 30 A current beam. The ion source operation in complex with a high-voltage supply system has shown that one of the most important problems is reliability of high-voltage protection from break-downs and stability of modulators operation.

34882 (INIS-SU—202, pp 380-386) **System of energy transfer for HF heating of the T-10 tokamak plasma.** Longinov, A.V.; Kovalenko, V.I.; Miroshnichenko, G.A.; Nizhnik, G.Ya. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of development and investigation of the system of HF energy transfer for plasma heating at the T-10 tokamak are presented. Structural features of the transfer system comprising radiating surface, transfer band line and electrostatic shield are described. Basic chapacteristics of the transfer system are given: power interoduced into plasma 5 MW, pulse duration <0,3 s, efficiency 0.8-0.93 operating frequency 30-60 MHz. The results of the system testing have shown that due to small input impedince of the radiating surface it ensures transfer into plasma of high energy levels at a relativey low HF-potential value on its elements situated near the plasma filament, the transfer system has a large area of the radiating surface and its structure permits to perform Mounting operations in the chamber. The conclusion is drawn that the developed type of the transfer system can be applied in designing HF plasma heating systems in large scale tokamaks.

34883 (INIS-SU—202, pp 387-389) **Some technological problems for pulse thermonuclear systems with an exploding linear.** Azizav, Eh.A.; Bazilevskij, V.P.; Bogdanets, A.D. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of calculation of and magnetic field plasma compression and confinement by a multilayer linear at specified linear velocity 1 km/s and plasma compression velocity 5-10 km/s and linear kinetic energy of striker 2+5 MJ/cm are presented. For obtaining plasma for filling the liner it is proposed to use a pulse electrodynamic accelerator. For throwing strikers toroidal coil of 9m diameter, height 2.2m, maximum current $4x10^6$A, Voltage $5x10^4$V, magnetic pressure 726 bar is used. The coil is switched to the inductive storage of 167 power, optimum dimensions and characteristics of the thermonuclear system constituting: system length 220 cm, initial plasma radius 4 cm, plasma concentration $3.4x10^{18}cm^{-3}$, plasma temperature 0.6 keV compression velocity 2.3 km/s. Initial magnetic field at the linea+ radius 6 cm equals 0,06 MPs. At the moment of maximum compression the plasma radius constitutes 0.36 cm concentration $4.13x10^{20}cm^{-3}$ temperature 8.32 keV, pressure 11 mbar. Total energy released in the liner and striker constitutes 8.6 GJ.

34884 (INIS-SU—202, pp 399-401) **Ion source cathodes of melted and sintered lanthanum hexaboride.** Malakhov, N.P.; Semashko, N.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii); MorozoV, V.V.; Shlyuko, V.Ya.; Kresanov, V.S.; Goncharuk, A.I. (Kievskij Politekhnicheskij Inst. (Ukrainian SSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

With the purpose of choice of optimum conditions of ion source cathode operation investigations on manufacturing cathodes lanthanum hexaboride by the sintering or melting method. It is shown that the sintered material structUre consists of a large quantity of grains which permits to heat the cathode using maximum possible velocities (1000-1300 degr./min.). In the melted material the structure is coarse-grained, such structure requires less heating Velocities (not more than 300 degr./min). The melted cathodes advantage over the sintered ones is shown. It is shown as well that application of titanium diboride on current-carrying elements permits to increase reliability and stability of the cathode unit operation.

34885 (INIS-SU—202, pp 402-409) **Monolithic fiberglass metalloceramic insulating unit.** MalakhoV, N.P.; NoVikoVa, G.P.; Semashko, N.N.; GUrevich, A.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii); Goremykin, V.A.; Murashko, L.N. 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The design and technology of manufacturing monolithic fiberglass metalloceramic insulating units of ion sources of the ion magnetless module type are developed. Structurally the insulating unit represents a three-flange system divided by insulating seals. Thermal properties of insulating units are studied. Determined are

the maximum permissible thermal flows when insulators serviceability is not changed. Temperature distribution orer the external side of the ceramic insert its profection properties are determined as well. Structural materials for manufacturing carrying part of insulating elements, ceramic insert material and compound compositions are chosen. Their electric characteristics are measured. Serviceability control of insulators in ion sources has shown that they successfully operate in pulse (20- 50 ms) high current ion sources in which ion energy equals 25 keV while ion current constitutes 30 A.

34886 (INIS-SU—202, pp 424-431) **Choice of optimal parameters for a fast atom injector.** Vetrov, V.A.; Latyshev, L.A.; Rybaulin, N.M.; Semashko, N.N.; Seregin, V.S.; Chuyan, R.K. (Moskovskij Aviatsionnyj Inst. (USSR); Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The present investigation deals with optimization of imitation model of hydrogen (deuterium) fast atoms injector ensuring energy input into the thermonuclear reactor plasma. The injection scheme with recharge of fast positive ions is considered. As optimicability criterion the function determining energy costs for power unit introduced into the reactor is used. The injection system comprises a number of elements: ion source with a gas discharge chamber neutralizer separator ion receptor atom caloriqeter-receptor atomguide and cryogenic vacuum chamber. The analysis of structural scheme of the injector imitation model has shown that output parameters of one group of modules are input parameters for calculation of the other. The initial investigations are carried out at three variable values: relation of initial geometric beam dimensions, neutralizer length and total area of cryopanels.

34887 (INIS-SU—202, pp 432-437) **To the calculation and optimization of an ion injector focusing system.** Sitina, G.S.; Chuyan, R.K. (Moskovskij Aviatsionnyj Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of simulation of ion beam accelerating-shaping systems in thermonuclear system injectors are puesented. The imitation model represents two groups of modules. The first module group serves for determining electrostatic field in the acceleration space, the second module group is related to calculation of state and wear of electrode surfaces. The accuracy of the results obtained has been compared with the results of analogous simulation in an electrolytic bath and turns to be quite satisfactory.

34888 (INIS-SU—202, pp 459-466) **Powerful generators for plasma Alfven heating.** Kirov, A.G.; Lyashenko, O.N.; Majburov, V.B.; Savchenko, I.S.; Tolpegov, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Sukhumi. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

For plasma HF heating by the Alfven waves a "linear" HF generator is designed where the basic element is an artificial line short-circuited at one end and switched to the consistent loading at the other end. Such a line ensures obtaining in loading two periods of sinusoidal current oscillations. Transistor-diode switches in charge circuits and capacitor discharge are switched in turn. On the mock up obtained are pulse HF oscillations with 3-4 on-off time ratio at the frequency 400 kHz, pulse power about 1,5 kW and transformation efficiency 75%. For obtaining continuous oscillations powers of several generator are added together. The loading is the bridge network. In each bridge diagonal through commutators two artificial lines are switched on. Calculation switch parameters for the generator of 100 MW power at the 1 MHz frequency are given.

34889 (INIS-SU—202, pp 467-474) **Technical peculiarities of plasma ohmic heating at the "Uragan-3" torsatron-stellarator.** Amelin, V.Z.; Burchenko, P.Ya.; Krizskij, V.I.; Pinos, I.B. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

For the purpose of studying plasma with current at the "URAGAN-3" torsatron and obtaining maximum parameters of plasma ohmic heating a highly effective inductor design with a spatial divertor is proposed. The inductor coil fully repeats the torsatron magnetic system configuration. The helical inductor coil turns of copper plates are connected in series and placed on the bottom of power carcasses. Two compensating turns formed of power carcasses of compensation coil and copper rings are connected in parallel. It is shown that despite a strong electromagnetic connection of inductor with the torsatron magnetic system, overvoltages and currents arising in the magnetic system at plasma ohmic heating current excitation can be decreased down to acceptable values by the choice of the corresponding magnetic system power supply or application of capacitor filters.

34890 (INIS-SU—202, pp 475-480) **Optimization of ignition in a torsatron-reactor.** Volkov, E.D.; Rudakov, V.A.; Suprunenko, V.A. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

With the purpose of search for optimum method of torsatron-reactor output into the combustion regime typical methods of reactor ignition are considered. The following method of plasma production and heating is suggested. Preliminary plasma is produced with concentration of the order of some percent of the operating one and 10 eV temperature. Then heating up to 5 keV temperature occurs after which density storage takes place up to concentrations required for combustion and then further plasma heating up to ignition is carried out. The required for the ignition 300 MW power can be switched on by means of HF modules for example one for each torsatron module. Manufacturing HF modules with power of 10-15 MW order presents no technical difficulties nowadays.

34891 (INIS-SU—202, pp 522-530) **System of HF-energy input into large tokamaks when icr heating.** Alikaev, V.V.; Vdovin, V.L. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The calculations are given and the design of input system of HF-energy into reactor-tokamak plasma in the course of ion-cyclotron heating is proposed. The input module permits to introduce under stationary conditions 20 MW of HF power. An antenna has a radiating surface 2x2 m and shapes the spectra of axial wave numbers with the required lagging. Two antenna versions are considered: antenna on loop exciters and antenna-resonator. As material for antenna the alloy 95% of vanadium+5% titanium is used. For input of 75 MW of HF power in the course of ion-cyclotron heating into INTOR device four antennas arranged on the external side of the tor in the first wall region are employed.

34892 (INIS-SU—202, pp 59-66) **Development status of technological problems of laser thermonuclear fusion.** Feoktistov, L.P.; Skliznov, G.V.; Rozanov, V.B. (AN SSSR, Moscow. Inst. Vysokikh Temperatur; AN SSSR, Moscow. Fizicheskij Inst.; Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

With the purpose of designing laser thermonuclear plant (LTP) suggestions of technical character on simulation of conditions in the chamber and blanket of the thermonuclear reactor after the realized microexplosion and analysis of factors affecting the first wall of the reactor are presented. The results of simulation of processes related to absorption of part of thermonuclear microexplosion energy by the surface of the first wall moistened by liquid lithium film are presented. The flowsheet of the developed experimental plant is given which permits to study film rate dynamics, obtain evaporation rate data, investigate the absorption process of microexplosion energy in surface and near-wall layer when the preheating and partial evaporation of the first wall material by the reflected laser and x radiation is to shield the wall surface from α particles and target fragments. For the development of x ray measurements technique a serios of model experiments on studying the laser radiation interaction with the surface of different materials is performed.

34893 (INIS-SU—202, pp 446-453) **Heavy ion accelerator.** Logachev, E.I.; Lopatin, V.S.; Remnev, G.E.; Usov, Yu.P. (Tomskij Politekhnicheskij Inst. (USSR). Inst. Yadernoj Fiziki, Ehlektroniki i Avtomatiki). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of experimental investigation of heavy ions production from explosion-emission plasma are presented. The experiments have been performed at the TONUS accelerator comprises voltage pulse generator, double shaping line, two discharges, induction switched to the gun electrode and to the vessel. Two voltage pulses of different polarity with a certain break between them have been applied to the diode gap. The first pulse is intended for creating explosion-emission plasma, the second pulse is an operating one. The delay time smooth control range between the pulses is 200-800 hs. The potential electrode finished with a steel rod of 4 mm diameter, 2 cm length. The interelectrode gap varied from 1 to 300 mm. The earthed electrode in the form of a plane washer of 1-5 mm thickness with 14-25 mm opening diameter has been manufactured from polyethylene teflon, graphite and Li,Al,Fe,Mo and Ta metalls. On the CD_2 target a neutron yield up to $2x10^8$ for a pulse is obtained. It is shown that for each type of ions there exists an optimum value of a break between voltage pulses will ion acceleration efficiency under optimum conditions is higher than in Luce diodes.

34894 (INIS-SU—202, pp 454-458) **High-frequency power supply for plasma heating in toroidal traps.** Longinov, A.V.; Arkatov, I.M.; Berezov, D.V. (AN Ukrainskoj SSR, Kharkov. From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The HF power supply "KEDR" for tokamak T-10 plasma heating in the frequency-band the order of ion cyclotron frequency is described and its testing results are preseneted. "KEDR" comprises HF generator, feeder system, loading equivalent, anode and grid supply systems control and measurement systems. The hFgenerator is designed according to the two-cascade circuit. The mastergenerator is designed on the triode base of GMI-37A type, power amplifier on the GI-56A triode base. Circuit schemes of both cascades represent coaxial resonator. The feeder consists of 12 in parallel connected cables of RK-50-24-17 type "KEDR" testing in the pulse duration regime 40 μs, at the frequency 38 MHz have shown the presence of a considerable storage as compared with design parameters. The power level in the loading equals 12 MW.

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of optimization electrostatic fields calculations in nanosecond high current electron accelerators (NHEA) are presented. The calculation technique is described and the results of fields calculation in accelerator units "Angara-5" and "Parus" are presented. The performed numerical field investigations for NHEA different units have shown the possibility of using for designing accelerator technologicl purposes of analytical plane-parallel field calculations of corresponding typical regions. In case if the field is to be specified the results of such calculations can be used as a perfect initial approximation at numerical optimization calculations.

34896 (INIS-SU—202, pp 489-496) **Intense ion beam production in a ballistic focusing diode.** Bystritskij, V.M.; Didenko, A.N.; Krasik, Ya.E.; Matvienko, V.M.; Tolmacheva, V.G.; Tolopa, A.M. (Tomskij Politekhnicheskij Inst. (USSR). Inst. Yadernoj Fiziki, Ehlektroniki i Avtomatiki). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of experimental investigation of intense ion beam (IIB) production in a coaxial magnetic insulated diode are presented. The diode consists of a coaxial external anode of 94-120 mm diameter and internal cathode with longitudinal slits of 12 mm width. Two types of insulating magnetic fields: Bsub(Z)-field created by external solenoid and Bsub(o)-pulse field obtained in the course of current transmission from the external battery along the cathode. In the regime with Bsub(Z)=0,42 T the IID amplitudes for anodes from teflon, copper, lead have reached 3,7, 1, 1,3 kA and densities - 330 A/cm², 87 A/cm², 114 A/cm², respectively. In the regime with Bsub(o)=1 T maximum IIB density on the cathode surface has reached 220 A/cm², IIB maximum current constitutes 10 and 11 kA for the current getting to the cathode ribs and penetrating into slits, respectively. The production efficiency constitutes 67%.

34897 (INIS-SU—202, pp 501-505) **Hollow cathode ion source without magnetic field.** Elizarov, L.I.; Martynov, M.I.; Chesnokov, V.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

On the base of the IBM-4 ion source a hollow cathode source operating in the continuous regime is developed. The gas discharge chamber diameter equals 100 mm, chamber height - 50 mm. A hollow cathode represents a molybdenum tube with an internal diameter 13 mm and wall thickness 0,7-0,8 mm. An emitter is manufactured from zirconium carbide and lanthanum hexaboride. The investigations of the source operation have shown both cathodes operated efficiency. Electron emission density consitutes 25 A/cm². At the 50 A discharge current ion current density in a center of plasma emitter constitutes 120 mA/cm². As a result of the investigations carried out the compatibility of the hollow cathode and the IBM-type source is shown.

34898 (INIS-SU—202, pp 506-513) **Development of a high-voltage accelerating channel of an ion injector.** Bobrov, Yu.K.; Ierusalimov, M.E.; Il'enko, O.S.; Khominich, V.I.; Shostak, V.A. (Kievskij Politekhnicheskij Inst. (Ukrainian SSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The purpose of the investigation is simulation and optimization of high-voltage elements of accelerating channel of the hollow beam injector of negative ions. Developed are the algorithm and the program of solution of self-consistent problem of quasistatic field calculation of the injector accelerating channel are developed. The comparison of anlaytical and numerical solutions has shown that the approximate analytical expressions obtained can be used for preliminary calculations.

34899 (INIS-SU—202, pp 497-500) **Hydrogen negative ion stationary source with a hollow cathode.** Elizarov, L.I.; Martynov, M.I.; Chesnokov, V.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number TI84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

For the purpose of designing the negative ion beam injector for future thermonuclear plants hydrogen negative ion plasma source with crossed· electric and magnetic fields operating in the stationary regime has been designed and investigated. The source basic elements are magnetic system, cesium hollow cathode, accessory and basic anodes as well as ion-optical system. In the ion source the stationary H^- ion beam with 0,1 A current has been obtained. The highest ion current is obtained with the magnetic field equal 10-20 Gs.

34900 (INIS-SU—202, pp 6-22) **Tokamak-15. Basic parameters and design status.** Andreev, V.R.; Bondarenko, I.M.; Bondarchuk, Eh.N. (and others). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number DE84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The description of design state of Tokamak-15(T-15) device intended for producing and studying plasma with thermonuclear parameters is given. The T-15 specific feature consists in using superconductor coils of toroidal field on one Nb_3Sn alloy base and using for heating plasma along with neutral omjection of SHF-waves in the electron cyclotron resonance. T-15 and its system parameters are given. The T-15 nominal operation conditions are calculated for a toroidal magnetic field 3,5 T and plasma current of 1,4 MA. At the second stage of experiments field increase up to 4,5-5 T and current-up to 2-2,3 MA and power increase of plasma additional heating from 10 to 15 MW is planned. The T-15 overall dimensions are as follows: external diameter 10,9 m, height-11 m. Total weight-1500 t. The T-15 comprises the following systems: fast atoms injection system, electromagnetic system power supply, vacuum pumping out and gas leak in system, cryogenic supply system, power supply of additional plasma heating devices, diagnostic complex, T-15 control system, experiment automation complex, magnetic system units test bench and T-15 injector physical process studying test bench. Design of almost all systems is accomplished and partially started T-15 equipment manufacturing. The T-15 investigation program is described.

34901 (INIS-SU—202, pp 23-30) **Computer calculation of electromagnetic chapacteristics of toroidal inductive energy strages with account for a real geometry of the magnetic system.** Kolyadin, N.M.; Kondratenko, A.K.; Kosabova, I.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii); Yudas, V.I.; Lapionov, A.E. (Moskovskij Aviatsionnyj Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number DE84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results of numerical calculation of electromagnetic characteristics of toroidal magnetic systems (TMS), assembled of cylindrical sections of round or arbitrary cross section are presented. Four types of algorithms are developed in which as elementary current region thin, twin, thin cylinder, small cross section prism, thin finite length and width plate are employed. Experimental check of correctness and accuracy of mathemaical models contained in algorithms has been performed at the TMS 6-section model with cylindrical sections of the round cross section. In the field of section joining maximum values of magnetic induction, volumetric and linear radial force can be calculated by formulas for continuous toroidal windina with accuracy up to 1-2 %. Mathematical models realized in developed algorithms and programs permits to calculate electromagnetic TMS characteristics with sufficient for practical purposes accuracy.

34902 (INIS-SU—202, pp 143-149) **Thermonuclear power plant with a reactor-torsatron.** Emel'yanov, G.S.; Kantan, V.V.; Semenov, A.A. (Leningradskij Politekhnicheskij Inst. (USSR)) (and others). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number DE84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Main physical preconditions of designing industrial thermonuclear power plant (TNPP) on the pure stationary reactor-torsatron base are reported. Power installation parameters, analysis of main systems and ma+n technical solutions adopted in designing TNPP with the reactor of the above type are presented. Some TNPP technical economical estimations with a reactor-torsatron are given, a TNPP approximate capital investment structure is determined. This consideration is based on a reactor in which burn up is maintained by dissipation of producing α particles. The following main reactor parameters are adopted: total thermal power-10060 MW, plasma radius 2,0 m, aspect ratio 19, plasma temperature 6,8 keV, plasma density $6x10^{20}$ m^{-3} collision parameter 2,0 m, axial magnetic field strength 5,4 T, total first wall thermal loading 4 MW/m^2, β=3 %, number of superconducting winding periods 7. As plasma heating system the HF method of heating on ion-cyclotron frequency is chosen. The reactor modulation principle has been assumed as a basis of TNPP arrangement solutions.

34903 (INIS-SU—202, pp 150-155) **Some considerations on construction of a two-cycle tokamak type thermonuclear reactor.** Glukhikh, V.A.; Dojnikov, N.I.; Monoszon, N.A.; Sadakov, S.N.; Filatov, O.G.; Churakov, G.F. 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number DE84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

To avoid constructive complications related to divertor usage in tokamak-reactors a modification of classical nondivertor tokamak is proposed by means of which levellinq in time of blanket irradiation by neutrons and cyclicity harmful influence decrease are possible. A tokamak reactor comprises toroidal field windings inside of which two discharge chambers surrounded by a common blanket and protection are placed. Outside the toroidal fietd winding inductor winding and equilibrium winding coils are located. The tokamak reactor operation principle reminds of the two-cycle internal combustion engine operation principle. In such tokamak reactor substantial levelling in time of blanket operation conditions is possible as it is irradiated in turn by neutrons from one or another chamber. The two-cyclicity principle provides the possibility for designing a power tokamak reactor with a rather high utilization factor without a divertor.

34904 (INIS-SU—202, pp 189-195) **Choice of a technique for estimating maximum design accident of a tokamak reactor.** Kochetkov, S.S.; Smetannikov, V.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number DE84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The problems of the INTOR reactor safety with the purpose of developing the technique for estimating maximum design accident (MDA) are considered. The formula for determining the accident risk as accident probability product by the quantitative measure of the above event consequences is proposed. Main tokamak reactor systems are considered as possible accident situation sources. It is shown that MDA possessing the greatest risk is to be bound

with the magnetic and cryogenic system failures. To abtain acceptable failure frequencies and reliable accident localization in the magnetic field system the autonomous specialized emergency protection (EP) system development is required. Calculations of emergency situations related to the first wall failure have shown that in the case of water first wall cooling, the vacuum chamber pressure upon fracture is to be essentially less tan in the case of usinghelium as coolant. It is shown that the steel first wall structure with a graphite shield permits to essentially increase the first wall reliability factors.

34905 (INIS-SU—202, pp 268-273) **Parametric investigation of a power hybrid tokamak reactor.** Komin, A.V.; Mineev, A.B.; Seko, E.V. (Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)); Kukushkin, A.S.; Kurbatov, D.K.; Orlov, V.V.; Pistunovich, V.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The description of mathematical model and optimization results of the system consisting of a thermonuclear power plant (TNPP) and NPP consuming TNPP breeded plutonium is given. As optimization result the following system parameters are obtained: TNPP electric power netto-1,7-1,8 GW, plutonium production-3,6-3,9 t/year NPP total electric power-7,2-7,8 GW. It is concluded that the system consisting of a hybrid reactor and NPP is competitive if specific capital costs for thermonuclear reactor exceed the NPP costs not more than 2,1-2,9 times. Economic factors of the system practically are constatnt in the 7-10 GW thermonuclear reactor heating capacity range. The optimum thermonuclear neutron flux for the first wall is of the 1 MW/m² order. The magnetic field in the region of magnetic coils location in optimum versions does no exceed 10 T.

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The description of the design and results of start up of the plasma generator with Matter-type electrodes reffered to as a neutran source are presented. It consists of a capacitive energy storage, the chamber with electrode set, vacuum system, of the chamber, and a supporting frame. Generator is designed in the form of a cylinder. The basic dimensions of the generator are 1500x1200 mm. The inner electrode diameter was varied from 20 to 25 mm, the distance between electrodes from 12,5 to 15 mm and the electrode length from 86 to 100 mm. Plasma generator was operated at energies of 1,5-3.5 kJ (25-40 kV) with a lifetime af 1.4 μs. The obtained neutron yield was $2x10^7$-$6x10^8$ n/pulse obtained at 4O kV. The generator is intended for studying radiation effects in reactor materials.

34907 (INIS-SU—202, pp 393-398) **Ion source ion-optical system electrodes fabricated by the method of plastic shape formation.** Malakhov, N.P.; Semashko, N.N.; Romanov, V.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii); Zhilkin, V.Z.; Pletyukhin, A.S.; Kirpichev, Yu.V. (Voronezhskij Politekhnicheskij Inst. From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

For the choice of optimum technological parameters in manufacturing ion source ion optics electrodes the design of four-roller die is developed and the results of experiments on profiling ion-optical system (IOS) elements are puesented. For obtaining profiles by the rolling method the multistreaM rolling mill system has been designed. In the process of experimental studies the dependence of drawina force and metal pressu e on rollers depending on rollers diameter deforMation degree, countertension and thickness Of pulled billet wall. It is concluded that using of plastic shape formation methods one can obtain element profiles. Profiling of IOS elements made of a molybdenum tube it is best of all to perform by forming in a die with a parting matrix. IOS elements profiling from continuous monocrystalline molybdenum one can carry out by rolling in a two-shaft mill with cut on shafts different cross section streams. The best results in obtaining contour profile for IOS from a continuous monocrystalline molybdenum results in drawing through the four-roller die.

34908 (INIS-SU—202, pp 410-417) **Study on deformation of thick-wall short-circuited solenoids in a strong magnetic field in application to their use in a reactor with plasmoid in ection.** Adam'yan, Yu.Eh.; Shneerson, G.A.; Shutov, V.L. (Leningradskij Politekhnicheskij Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A23/MF A01. Order Number DE84780274. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

For the purpose of investigating the possibility of using pulse linear systems with in ection of colliding plasmoids as a neutron source for subcritical nuclear reactor cylindrical liners deformation in stpong magnetic fields (30-50T) is studied. Lead, copper and brass cylinders of 30-60 mm length with internal diameter from 23 to 40 mm have been investigated. Wall thickness varied from 5 to 20 mm' The inductor made of copper strip with external diameter from 31 to 40 mm permits to produce currents up to 250 kA, which ensures in the inductor-passive liner gap fields up to 70 T. MaximuM velocity which attaing 105 m/s has been recorded. From the comparison of tiMes of attaining maximum on current and field oscillograms in the gap the conclusion is drawn that basic expansion occurs when current in the inductor begins to drop. Variations of external cylinder radii in time are given.

34909 (INIS-SU—202, pp 514-521) **High-Voltage pulse power supply for gyrotrons for ecr heating of a plasma in the T,10 facility.** Alikaev, V.V.; Bajborodov, YU.T.; Popov, I.A.; Titishov, B.N.; Khromkov, I.N. (CONF-8106209—Vol.1).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

For performing experiments on electron-cyclotron plasma heating in the T-10 facility a complex of four gyrotrons with general power of 800 kW has been designed. The system of high-voltage gyrotron power supply representing high-voltage pulse modulator is described. The modulator scheme represents a capacitance storage with voltage duplication at the operating pulse moment. Basic feature of the scheme is application of the feedback system which controls the stotage discharge process. The coefficient of using the battery equals 40% in the 100 ms duration pulse. The energy stored in the storage is equal 1,2 MJ. The description of schemes of the system of modulator and gyrotrons protection is given. By the described modulator the experiments on investigation of plasma electron-cyclotron heating in the T-10 facility are conducted.

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

An electromagnetic system (EMS) of the T-15 tokamak device is a spatial construction consisting of doughnut and poloidal field coils. The main feature of the T-15 EMS is the use of a superconducting current-carrying element (SCCE) for the doughnut field coil. The multi-turn superconducting coil is enclosed into a steel power casing of a box cross section. To estimate the strength of the power casing of the doughnut field superconductiong coil (DFSC) of the T-15 device, the equivalent stresses are determined according to the power strength theory. The stresses and minimum safety margins in the characteristic cross sections of the DFSC block casing and in the most stressed cylinder cross section, as well as the SCCE relative strains are presented as calculated for three rated regimes. The maximum block displacements in the forced mode with plasma current break are as follows: circuit displacement in the block plane=1.9 mm, displacement perpendicular to the block plane=4.2 mm. The maximum SCCE relative deformation, taking into account the in-service deformation, is 0.28%.

34912 (INIS-SU—219, pp 128-135) **Calculating study an temperature and pressure increase in the channels of superconducting current-carrying elements in the T-15 device during energy removal.** Ivanov, D.P.; Lelekhov, S.A.; Posadskij, I.A. From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Methods and algorithms for calculating temperature deformations in large superconductina magnet systems as a result of uncontrolled transition into the normal state are developed. According to a simplified model of the real process the maximum pressure and temperature in the system and time-dependent variations in these parameters are detcrmined. The calculation results satisfactorily agree with the eXperimental data. The developed methods and algorithms can be used for calculating strengths of superconducting current-carrying elements of the circulation systems of superconducting magnets.

34913 (INIS-SU—219, pp 216-222) **Analytical calculation of momentum-free toroidal solenoids with nonuniform current distribution.** Mingalev, B.S. 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Formular are obtained for analytical solutions of characteristics of toroidal magnetic systems consisting of coils of finite thickness with a momentum-free form of the axial line. The calculations are aimed at minimizing a relative turn displacement under the action of electromagnetic forces during operation of the magnetic system.

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A method is presented for calculating the voltages and deformations of a superconducting current-carrying element (SCCE) of the Tokamak-15 toroidal field coil. The SCCE is a composite structure consisting of superconductor and insulator layers bound to each other with an epoxy compound. The proposed method takes into account the SCCE and steel case force interactions, as well as the volumetric character of ponderomotive loading, acting in the assembly plane, using the two-dimensional version of the finite element method. Numerical realization of the problem of determining the SCCE stressed-strained state is performed on ES-1040, ES-1022 computers using the "PLATWEC" program. The calculations show the following: 1) the SCCE strains are variable both in the tangential and radial directions, their maxima being epsilonsub(THETA)0.92x10^{-3} and epsilonsub(r)=0.90x10^{-3}, respectively; 2) the SCCE maximum stresses are as follows: the normal tangential stress σΞsub(THETA)=400 kg/cm^2, normal radial stress σΞsub(r)=285 kg/cm^2, shearing stress tausub(rTHETA)=47 kg/cm^2. These values do not exceed the permissible values for conducto.r and insulator materials.

(AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A design and fabrication procedure of the magnet system (MS) of the "Uragan-3" torsatron are presented. The two-stage force-free MS consists of a triplex spiral coil (SC), a compensating and a correcting coils. The accepted MS version has the following design features: a) the magnet system is located in a vacuum volume; b) the spiral coil poles are enclosed in separate carrier cases fixed in a supporting frame; c) the SC pole is filled up with conductor in a multilayer section-like pattern; d) large coil dimensions and high conductor rigidity; e) the availability of a divertor. The explosion technique of SC punch-free stamping is described in brief. The conclusion is made that the developed special manufacturing methods have permitted to design a reliable torsatron system with a spatial divertor to a sufficient accuracy and with high parameters.

34916 (INIS-SU—219, pp 251-257) **Design problems on development of the system for plasma filament position fast control in the T-15 device.** Bondarchuk, Eh.N.; Karnaukh, V.A.; Ostroumov, Yu.N.; Pravdin, A.H.; Suvorov, M.M.; Shmal'ko, G.I.; Churakov, G.F. 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A design of a fast response control coil (FRCC) of the T-15 device is given, the use of which compensates fast disturbances of the equilibrium filament position through the control system feedback. To uncrease the FRCC effect on plasma, it is maximally approximated to the plasma, i.e. it is located in the toroidal ring cavity between the vacuum chamber and superconducting toroidal field coils (STFC). The internal shield decreasing the heat flux coming from the vacuum chamber to the STFC both in operating conditions and chamber heating is also described. In the operating mode the shield is cooled by nitrogen circulating in a pipe soldered up to the shield envelope.

34917 (INIS-SU—219, pp 297-306) **Study of the cooling conditions and thermal characteristics of superconducting magnetic system of the "Kristall-2" torsatron.** Glasov, B.V.; Druj, O.S.; Kurnosov, V.I.; Skibenko, E.I.; Skrypin, S.I.; Yuferov, V.B. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A design and operating conditions of a superconducting magnetic system (SMS) of the "Kristall-2" triplex torsatron with 60 cm long torus radius are described. The SMS cooling flowsheet,

temperature dependence of SMS thermophysical parameters, SMS cooldown and coolup dynamics and energy expenses for attaining the operating temperatures are presented.

34918 (INIS-SU—219, pp 307-314) **Results of analysis of the poloidal magnetic system and operation regimes of the "T-15" device.** Bondarchuk, Eh.N.; Dojnikov, N.I.; Shmal'ko, G.I. 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Operation of the poloidal magnetic system of the "T-15" device under normal and boosting conditions is analysed. The calculation results for physical processes in the inductor coil and control coils are presented. Currents in the poloidal coil system providing the discharge evolution in the plasma filament and maintaining its equilibrium during the whole discharge period are given. Magnetic-flux linkage with coils and electrodynamic forces acting on them, as well as induction values for the core and pillars are also considered.

34919 (INIS-SU—219, pp 289-296) **High-temperature electrical insulators for electrophysical devices.** Buzhinskij, O.I.; Lopatin, V.V.; Ushakov, V.Ya.; Chernenko, V.P. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The main physical properties of ceramics that meet the strict requirements for electric insulators used in hot areas of thermonuclear devices are presented. In particular, the properties of some oxiden ceramics of BeO, Al_2O_3 and ZrO_2, as well as nitride ceramics of BN, AlN and boron pyronitride are given. The results of experiments and experience on nitride ceramics permit to make a conclusion as to the expediency of their utilization as high-temperature electric insulators.

34920 (INIS-SU—219, pp 136-143) **Protection system of the immersed-type superconducting magnet system at accidental loss of superconductivity.** Shaposhnikov, V.A.; Mikhajlov, I.I.; Gorbachev, S.P. (Nauchno-Proizvodstvennoe Ob"edinenie Kriogennogo Mashinostroeniya, Balashikha (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A heat protection system of superconducting magnets for protecting against aftereffects of accidental superconductivity loss is developed. The system permits to solve the problem of collecting helium evacuated from the cryostat in the emergency situation. The heat protection is based on the hydraulic lock prnciple. The magnet coil located in the cryostat is fully immersed in liquid helium. The coil is surrounded by an impermeable shell at the top and at the sides. The shell has at the bottom part the ways for free access of liquid helium to the coil and at the upper part - the channel with limited transmissibility for removing helium vapours produced under normal operating conditions of the magnet. In case of an emergency heat release in the coil the vapour generation shaply increases. The vapours displace liquid from under the shell into the free cryostat space, and thus the coil gets surrounded by the gas. The conditions of heat transfer from the coil to liquid in this case deteriorate greatly, and it is possible then to pump helium removed from the cryostat into receivers using usual pumping units instead of blouring helium off into the atmosphere. The normal phase quickly propagates along the coil providing a uniform heat evolution over the coil volume and excluding the possibility of a burnout. To check the heat protection system efficiency comparative experiments have been carried out on a magnet simulator with a single protective shell and without heat protection, with the gas re– lease from the cryostat closed. The heat protection is found to reduce the heat flow transferred from the magnet simulator to the cooling liquid by more than an order. The experiments have confirmed the efficiency and reliability of the heat protection system, correctness of physical concepts of the calculation method as well as authenticity of the method.

34921 (INIS-SU—219, pp 186-192) **Study on the conductor-insulator friction at liquid helium temperature.** Batakov, Yu.P.; Kostenko, A.I.; Semenov, O.V.; Trokhachev, G.V. 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A study is made on conductor heating as a result of friction following displacements under coolina conditions close to those for conductors in superconducting magnets with cryostatic stabilization. Sliding of a 2x15 mm^2 copper plate an averawithge surface roughness of 1m over fiberglas0 μ textolite and teflon is studied. "Sudden" displacements are caused by application of the displacing force exceeding the static frictional force several times. If in case of friction displacements.are caused by the action of a force equal to the static frictional force, stops increasing the displacement time are possible. This may ta.ke place following the displacement of the conductor parts in the superconducting magnet coils, owing to which the displacement may turn out to be not "sudden". In this case in designing superconducting magnets the tolerances for conductor portion displacements, which do not affect the magnet normal operation, may be less strict.

34922 (INIS-SU—219, pp 17-22) **Synthesis of the plasma eqUilibrium system in a tokamak reactor at inaccurate basic data.** Dojnikov, N.I.; Filatov, O.G. 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A problem of plasma equilibrium system synthesis in a tokamak reactor is considered which consists in determination of th currents across the system coils. Since it is necessary to make some or other assumptions on parameters characterizing plasma, such a problem is considered as a synthesis problem at inaccurate initial data. The Tikhonov regularization method is used for solving the problem. For numerical realization of the above method the TOPOL code is developed. The problem is solved by method of successive approximations. At every iteration step (over the plasma current distribution) the functional is minimized with choosing the regularization parameter. Such a solution is shown to be stable to inaccuracy of the initial data.

34923 (INIS-SU—219, pp 23-30) **Force-free magnet system of the "Uragan-3" torsatron.** Georgievskij, A.V.; Koryavko, V.I.; Litvinenko, Yu.A. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.); Kornilov, G.L.; Naryzhnyj, A.G. (Khar'kovskij Aviatsonnoj Inst. (Ukrainian SSR)). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Formulation and solution results of a problem are outlined for determining free parameters of the U-3 torsatron magnet system, the parameters complying with the "force-free" state of a spiral coil. The results of calculations of electrodynamic forces in the magnet system are given and mechanical strength of the latter is estimated. The analysis has shown that the main factor defining the ultimate field of such systems is the biaxial compression forces in the spiral coil. According to conditions of the "U-3" spiral coil yield strength, the limiting field is 7T. The conclusion is made that the problem solution for further magnetic field increase should be sought for by decreasing the stressed state level of pole compression, e.g. by realizing a design close to all-round compression.

34924 (INIS-SU—219, pp 31-38) **Divertor configurations of the torsatron magnetic field.** Bazaeva, A.V.; Bykov, V.E.; Georgievskij, A.V.; Peletminskaya, V.G. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Results of a detailed investigation of characteristics of the divertor magnetic fluxes are given. The investigation is carried out by mathematical simulation of large poles of the magnetic system with a modulated (equally inclined) three start spiral coil at high toroidality. Each pole of the spiral coil is simulated by 20 current filaments. The compensating coil is defined in the form of two axisymmetric rings. The equilibrium field H is assumed homogeneous in the whole volume studied. At the first stage the magnetic surface parameters are determined versus the H value. They are shown to be rather high. At the second main stage near-separatrix areas are studied; they are characterized by the presence of destroyed surfaces the field lines of which form the divertor layer. A method is developed and the behaviour of the above field lines is studied, which permits to determine the spiral spatial divertor magnetic field configuration. The divertor flux distribution is studied experimentally using a torsatron magnet system model. The magnetic flux distributions agree with the calculations mainly.

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

An electromagnetic system (EMS) of a large demonstrational tokamak T-15 is described. The T-15 device is designed for generating and studying plasma with parameters close to thermonuclear ones. The design and characteristics of the EMS with a toroidal field superconducting winding made on the Nb_3Sn base are given. The T-15 device design is completed and its construction is started.

34926 (INIS-SU—219, pp 94-103) **Study on the properties of a superconducting current-carrying element and its stability to pulsed poloidal fields in the "Tokamak-15".** Ivanov, D.P.; Kejlin, V.E.; Kovalev, I.A.; Lelekhov, S.A.; Pozvonkov, M.M.; Posadskij, I.A.; Cherpoplekov, N.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

To ensure stability of supercondUcting current-carrying elements (SCCE) two versions of cooling toroidal field superconducting coils (TFSC) are studied experimentally. Using a SCCE model the dependence of the critical current Isub(c) on the temperature T and magnetic field B is studied. The relationship Isub(cr)B=f(T) confirms that the SCCE transition to the normal state is a result of the critical current rather than of local heat releases related for example with turns displacement. It is found from the experimental and calculated results that, at the flow rates close to the nominal values in T-15, the two-phase helium coolina is preferable. It follows from calculations and experiments that, when the SCCE rated parameters are achieved (Isub(cr)=8 kA in the 8.5 T field, operating current =5 kA) under the T-15 nominal operating conditions (plasma current =1.4 MA), current blowouts will not lead to transition of the superconducting magnet system to the normal state, however, under the forced conditions (plasma current =2.3 MA). the SCCE stability to plasma current blowout will not be provided and extra protection of the toroidal field coils is reguired.

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Specifications are formulated and a structural diagram is described of the normal phase detection device (NPDD) developed for the Tokamak-15 protection system. Besides the protection functions in the NPDD of the T-15 tokamak device, the possibility of cut-off or decrease in the feeding current in the toroidal field superconducting coil (TFSC) specified, if the normal phase (NP) propagates slowly along the coil or exists in the limited ranges. The NPDD is based on determining the voltage across the ohmic resistance of the TFSC sections converted to the normal state. In that case the protection system performs two functions. The first one is to detect the NP at a high NPDD sensitivity, while attempting to restore the superconductivity by changing the TFSC current regime. The second function to exercise a protective power lead out from the TFSC when the current changed has not lead to a NP "collapse " and reached the level permissible by heating. The NPDD of the T-15 device provides detection of a NP signal in the protective extraction mode at the 100-500 mV level, in the control mode - at 2-50 mV at +-0.5 V noise voltage. The detection time is chosen within the 0.01-0.5 s range depending on the noise duration; high voltage decoupling is up to 3 kV. The availability of a back-up channel and an emergency protection channel with a follow-up control of the state of the main NPDD units and appropriate alarm system ensures a hiah system reliability.

34928 (INIS-SU—219, pp 112-120) **Cryogenic system for the "Tokamak-15" device.** Barmin, N.V.; KoValenko, V.D.; Korshunov, Yu.N. (Nauchno-Proizvodstvennoe Ob"edinenie Kriogennogo Mashinostroeniya, Balashikha (USSR)) (and others). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A cryogenic system (CS) is described for the "Tokamak-15" device which provides for cooling of the toroidal field superconducting coil (TFSC), superconducting magnets of the SHF plasma heating system generators, the cryovacuum exhaustion system of in ectors, as well as a number of cryogenic devices to be cooled down to nitrogen temperatures. Functionally the CS is divided into a helium cryogenic system (HCS) and a nitrogen cryogenic system (NCS). The two-circuit HCS ensures rather high thermodynamic efficiency: the specific power consumption for producing 1 W of cold at the 3.5-4.5 K temperature level does not exceed 400 W and for producing 1 l of liquid helium is not more than 1.3 kWh. The NCS is intended for cryostatic cooling of a number of cryoresistive objects: an inductor coil, a control coil, a horizontal and a vertical control field coils. Besides, the NCS provides cooling of heat insulating shields of the Tokamak-15 cryostat, injectors, HF heating system, helium- and current lead-in unit. Cryostatic cooling of cryoresistive and heat insulation shields is provided by circulation technique.

34929 (INIS-SU—219, pp 121-127) **StructUre and test results of the Tokamak-7 device cryogenic system.** Babaev, I.V.; VolobUev, A.N.; Zhul'kin, V.F. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii) (and others). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A cryogenic system (CS) of the Tokamak-7 (T-7) installation with the longitudinal field superconducting magnetic system (SMS) is described. The CS is designed for cool-down, cryostatic cooling and heating of the T-7 cryogenic objects and consists of a helium system (HS) and a nitrogen cryogenic system (NCS). The HS consists of:a a heliUm delivery system intended for distributing and controlling the helium flows in the SMS; cryogenic helium units; a 1.25 m^3 volume for storing liquid helium; a compressor compartment using piston compressors at the 3 MPa operating pressure and 140 g/s total capacity; gaseous helium storages (3600 m^3 under normal conditions); helium cleaning and drying systems; a gas holder of 20 m^3 operating volume; cryogenic pipelines and pipe fittings. The NCS operates on delivered nitrogen and includes a 120 m^3 liquid nitrogen storage, evaporators and electric heaters producing up to 230 g/s of gaseous nitrogen at 300 K, a separator, cryogenic pipelines and fittings. It is found that the CS has the necessary cold production reserve, ensures reliable operation of the Tokamak-7 device and permits to carry out practically continuous plasma experiments.

34930 (INIS-SU—219, pp 159-166) **Main design elements of the superconducting magnet for the LIN-5B baseball trap.** Arsent'ev, V.F.; Bezbatchenko, A.L.; Golovin, I.N.; Panov, D.A.; Chukhin, I.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A design of superconducting magnet system (SMS) is described for the LIN-5B baseball trap elaborated for the OGRA-3B experimental installation. The general layout of the trap, cross sections of the superconducting coil and load-bearing frame, the current leads arrangement and main LIN-5B SMS parameters are presented. A three-year experience in operation of the baseball LIN-5B SMS and successful tests followed by achieving critical conditions four times permit to make the conclusion that the design and SMS assembly meet the requirements.

34931 (INIS-SU—219, pp 167-170) **Thermal conductivity coefficient of materials for superconducting magnet system of the T-15 device.** Deev, V.I.; Panteleev, E.A.; Sobolev, V.P. (Moskovskij Inzhenerno-Fizicheskij Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The results are presented of eXperimental determination of thermal conductivity of some materials used in one of the versions of the T-15 toroidal magnetic field superconducting coil. The material of the coil body (Kh18N10T stainless steel), electric insulating gaskets of fiberglass laminate, electric insulating material (several layers of varnished cloth impregnated with binding compound used as interturn electic insulation) and separate parts of the cuurrent-carrying busy As regards the bus, the data are obtained on the thermal conductivity coefficient for the coolant pipe (M2 copper), bus body material (electrolytical copper), superconducting cable of nine NT-50 wires with copper coating and for the bus cross section. The thermal conductivity coefficient measurements are carried out on experimental installations using the stationary method of axial heat flux in the 4-300 K temperature range. The measurement error does not exceed 6%.

34932 (INIS-SU—219, pp 171-177) **Study on thermal process in superconducting magnet system of the "T-15" device.** Vakhnenko, B.A.; Deev, V.I.; Merinov, I.G.; Filippov, A.V. (Moskovskij Inzhenerno-Fizicheskij Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Numerical calculations are carried out of thermal processes in the superconducting magnet system (SMS) of the T-15 device in the cool-down and cryostatic cooling modes. To perform thermohydraulic analysis a mathematical model is elaborated for cooldown of one of the helical SMS bus groups connected parallel to the coolant flow. The model is based on a combined solution of the one-dimensional equations of energy and momentum for a one-phase coolant and the thermal conductivity equation for the bus. The equation system is solved numerically using the developed FIL-2 and FIL-3 programs. The distributions of the bus temperature, coolant temperature and peressure during cooldown, and those of the helium pressure and temperature along the bus length under conditions of cryostatic cooling are presented. The calculations have shown that in case of sufficiently long (seconds) and extended (tens of cm) sources the evolution of thermal disturbance is defined rather by properties a coolant than of bus materials.

34933 (INIS-SU—219, pp 178-185) **Calculation of hydraulic and temperature characteristics of cryoresistive coils of the "T-15" device with account for heat transfer between coil layers in the regimes of preliminary cooling and cryostatic cooling.** Volkov, A.F.; KonstantinoV, A.B.; Kalinin, V.V. 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Problems are considered of circulation cooling of cryore--sistive coils of the "Tokamak-15" device electromagnetic system under pulsed thermal loading conditions. An analysis of the temperature state of the cryoresistive two-layer coils has shown that the interlayer heat transfer inside the coil produces a considerable effect on the cooling efficiency. The results obtained have permitted develop recommendations for required dimensions of the cooling channels in the current-carrying element, interlayer insulation thicknesses, coolant flow-rates, which provides for reasonable designing of cryoresistive coils of the Tokamak-15 electromagnetic system.

34934 (INIS-SU—219, pp 193-198) **Magnet systems for superconducting induction-type power storages without external fields.** Egorov, S.A. 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Magnetic systems (MS) of superconducting induction-type power storages are analyzed numerically. The MS with active current shielding and a great number of compensated harmonics of external field expansion are considered. The MS principal and shielding coils have the form of cylindrical solenoids. In such MS there is no significant magnetic field in the close vicinity of external coil surfaces and the problem of securing the turns is solved rather easily. The calculations have shown that for the optimal as regards the superconductor consumption, rather short systems (with the section number in the shielding coil greater than 30-50) the external field in the immediate proximity of the external surface of the shielding coil does not exceed 0.01-0.02% of the maximum induction of the system, and it decreases with the section number increase. For systems with a planar butt end "magnetic plugs" the optimum length of the shielding coil exceeds the length of the principal coil of the D diameter by (1 to 1.5)D. Then the axial forces acting on the butt end sections of the shielding coil (butt end "magnetic plugs") become small, and the total force compressing the principal coil decreases approximately 1.5 times in comparison with the ellipsoidal coils.

34935 (INIS-SU—219, pp 199-205) **Study on the pulsed superconducting solenoids development.** Egorov, S.A.; Kostenko, A.I.; Monoszon, N.A.; Tishchenko, V.A.; Trokhachev, G.V. 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The problems of designing pulsed superconducting solenoids conserving the superconductivity in cyclic operatio.n at high rates of magnetic field changes, as well as in case of fast energy extraction are considered. The work is aimed at designing superconducting induction-type energy storages for power supplies of pulsed thermonuclear devices and superconducting poloidal coils of tokamak installations. To develop the design of intensively cooled coils coated with compound, to study their thermophysical properties and determine the ultimate, as to the superconductivity conservation conditions, rates of magnetic field variation, two pulsed solenoids of 20 and 200 kJ, respectively, 4 kA curremnt and 4 T magnetic induction are designed and tested. The solenoids are wound with multiwire transposed superconducting cable 6 mm in diameter of 36 superconducting and 13 copper insulated wires of 0.5 mm diameter. The dependence is given of the current for solenoids transition to the normal state on the rate of the solenoid charging and discharging. The tests confirm the possibility of rapid energy ex-

traction from a two-section solenoid with current doubling using two superconducting switches.

34936 (INIS-SU—219, pp 206-209) **Destruction of single-tupn solenoids by a strong pulsed magnetic field.** Churaev, V.A.; Dashkina, S.I. (Leningradskij Politekhnicheskij Inst. (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

Conditions of typical destruction of single-turn solenoids following generation of strong- and superstrcng pulsed magnetic fields - the so-called "slow skin-layer explosion" are analyzed. Destruction is a metal outburst along the solenoid axis and depends on the ultimate mechanical stress of a solenoid metal cut. To define criteria characterizing appearance of the "slow-skin-layer explosion", the equilibrium conditions of a surface layer partion of unit width having thickness equal to the depth of magnetic field penetration into metal are considered. Comparative evaluations of stability of different metals against destructions of such type are carried out. The maximum lengths are presented of the internal surfaces of solenoids without destructions for the following materials: VR-27VP alloy, Ta+3.6%Re alloy, VM-1 alloy, MR-47VP alloy, W, Mo, Zr, Cr, Ta, Nb.

34937 (INIS-SU—219, pp 237-244) **Magnetic surface parameter control by means of a transverse magnetic field in stellarators and torsatrons.** Bazaeva, A.V.; Bykov, V.E.; Georgievskij, A.V.; Peletminskaya, V.G. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The possibility is analysed of controlling parameters of the stellarator and torsatron magnet surfaces by adding a transverse (relative to the torus plane) magnetic field B to the toroidal magnetic field as applied to triplex devices of high toroidality with different (modulated) laying laws. Numerical solutions are carried out on a BESM-6 computer, and the magnetic field is calculated according to the Biot-Savart law. It is shown that in the torsatron with a modulated spiral coil the conditions for optimal magnet surfaces coincide with a simultaneous presence of "min B" approximately 10% and a rather high approximately 0.2 "shear". This fact is one of the most important advantages of a torsatron with a modulated spatial spiral coil. The torsatron magnet configuration with a modulated spiral coil proves to be more stable to the transverse field action in comparison with stellarators.

34938 (INIS-SU—219, pp 258-264) **Development and study on putties for cryogenic coils of the "T-15" thermonuclear device.** Stepanov, A.N.; Chemokhud, L.M.; Shirshova, T.M. (Spetsial'noe Konstpuktorskoe Byuro Sinteticheskoj Izolyatsii); Barantseva, G.E.; Studennikova, A.G. (Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The paper deals with the development and study on putties intended for smoothing out the surfaces and scaling cryoresistive conductors and superconductors in the electromagnetic system coils of the "T-15" tokamak devices. The studies covered the effect of the putty compositions on electric insulating, mechanical, technological propertieS, as well as the determination of their resistance to thermal shocks and subsequent changes in the properties. The objects of the studies are putty compositions produced on the base of epoxy dianil resin hardened by isomethyltetraphthalic acid anhydride. Boron nitride, talc, grinded mica, boron carbide and their mixture are fillings. An analysis of the experimental data permits to make conclusion that among the studied putty compositions most suitable, according to the set of properties, for smoothing out the superconducting surfaces in cryogenic coils is a putty on the base of EhD-22 resin with the filler of a mixture of ground mica and tals. This putty has high mechanical and electrical strength parameters, satisfactory technological properties. After hardening it permits to get a solid insulation system. The putty mechanical strength losses after 150 thermal chock cycles are 10-20%.

34939 (INIS-SU—219, pp 265-273) **Study on the stress-strained state of the toroidal field coils of tokamak type devices.** Bortovoj, V.V.; Kolomak, V.D.; Lavinskij, V.I.; Khavin, V.L.; Shergin, S.Yu. (Khar'kovskij Politekhnicheskij Inst. (Ukrainian SSR)). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A method of numerical analysis of the stressed-strained state (SSS) of curved rod systems is proposed. On the basis of the method the SSS of toroidal field coils of a large tokamak are studied. The given distpibutions of internal force factors permit to determine dangerous cross sections. The stresses in the dangerous cross section points can be calculated according to the theory of a small curvature bar rather easily. The given analysis of SSS of the toroidal field coil permits to pass over to the problems of rational designing connected with the problem of the joint unit unloading.

34940 (INIS-SU—219, pp 274-280) **Weight optimization of a coil of the electromagnetic system of the TB-O device.** Bortovoj, V.V.; Garev, O.L.; Grinev, V.B.; Lavinskij, V.I.; Khavin, V.L. (Khar'kovskij Politekhnicheskij Inst. (Ukrainian SSR)). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

To optimize the magnet coil designs for large tokamaks, the optimum coil configuration is calculated. The coil is modelled as a flat curved bar of small curvature with the reduced rigidity characteristics, which is loaded with ponderomotive forces. The accepted mathematical model permits to formulate the optimization problem already at the designing stage and so to reasonably choose the design parameters. The optimization effects for a curved bar are attained by redistributing the curvature radius, the radius size being restricted by some design factors. The optimum outlines of a curved bar are calculated. The calculations confirm the validity of the technique suggested.

34941 (INIS-SU—219, pp 281-288) **Study of the magnetic fields of the electromagnetic system of a tokamak without a shell.** Ermilov, I.V.; Kubarev, L.P.; Igonin, G.V. (Vsesoyuznyj Ehlektrotekhnicheskij Inst., Moscow (USSR)). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The experiments are aimed at studying on a model of magnetic fields generated on tokamak-type devices without shells and comparing the data obtained with the calculations. The following problems are studied: the magnetic field induction in the vicinity of the discharge chamber for different inductor types under no-load operating conditions, the deviation of the magnetic field generated by different coils from the axisymmetric one. The model magnetic system is an O-shape yoke contour of 400 cm^2 cross section into which inductors of different types are installed. The magnetic field induction is measured at alternating current by induction transducers in the form of 6x1.5 mm coils. The magnetic field for the control coil, without the magnetic system core is also numerically calculated. Calculations are carried out for a magnetic system of shell-type. The steel magnetic permeability of the upper and lower yokes is taken as infinity, and for the ¹. core and side yokes is taken from the experimental data. The magnetic system yoke discontinuity is not taken into account. The deviation of calculated data from the experimental measurements in the magnetic core "window" for Z=0 plane does not exceed 10%. The field in and outside the "window" of magnetic system with different inductors is studied in detail. The calculation results agree with the experimental data.

34942 (INIS-SU—219, pp 46-53) **Magnet system of the "AMBAL" experimental trap with ambipolar mirrors.** Dimov, G.I.; Lysyanskij, P.B.; Tadber, M.V.; Timoshin, I.Ya.; Shrajner, K.K. (AN SSSR, Novosibirsk. Inst. Yadernoj Fiziki). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A magnet system of the "AMBAL" ambipolar trap under construction is described. The trap magnetic field configuration, geometry of the main coils and diagram of the whole device magnet system are outlined. Drift surface cross sections in the equatorial plane of the ring mirror device, in the median plane and at different distances from the trap median plane are presented. The magnet system design is described in brief.

34943 (INIS-SU—219, pp 61-67) **Two-winding inductor for a tokamak reactor.** Monoszon, K.A.; Sadakov, S.K.; Suvorov, M.M.; Churakov, G.F. 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The main parameters are compared of the inductor windings of a large experimental tokamak T-15 and a promising tokamak reactor INTOR. The INTOR inductor will have two windings - a superconducting one, capable of generating and sustaining the main magnetic flux of the inductor and a cryoresistive one, operating only for a short time at the discharge start and providing fast changes of the magnetic flux necessary for initiating the plasma current. The cryoresistive inductor winding in the INTOR reactor permits to reduce the maximum rate of the magnetic field changes in the superconductor from 18 T/s to 3-5 T/s, i.e. down to the level acceptable for the present-day superconductors. The magnetic field level in the superconducting winding is also somewhat decreased. Besides, a possibility of extra voltage boosting in tracing the plasma path at the moment of discharge initiation, which must expand the experimental potentialities of the installation. The two-winding inductor concept considered is accepted as the basic one for further design studying of the International INTOR reactor project.

34944 (INIS-SU—219, pp 245-250) **Strength-limited magnetic field intensity of toroidal magnet systems fabricated or the base of layer-by-layer shrouded solenoids.** Litvinnko, Yu.A. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The possibilities, as to the ultimate magnetic field strength, of tokamak magnet systems made on the base of layer-by-laeyer shrouded coils are considered numerically. The toroidal magnet system is considered which consists of N skewe, layer-by-layer shrouded, equistrong coils in the ideal torus approximation. The dependences of the ragnetic field strength on the internal- and external torus radii, pulse duration and aspect ratio for copper coils shrouded with fiberglass are calculated as an example. The analysis of the obtained results shows that using of the layer-by-layer shrouding scheme for toroidal solenoid coils leads to a considerable growth of the ultimate magnetic field strengths in a wide duration range. For example, the limiting field strength along the toroidal solenoid axis of the considered type inside the "FT" installation toroidal solenoid at equivalent field pulse duration of approximately 0.3 s reaches $H_0 = 1.3zx10^7$ A/m.

34945 **(KFK—3563) Muonic and polarized fusion for inertial confinement fusion.** Seifritz, W.; Goel, B. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.)). Nov 1983. 7p. (EIR—499; CONF-830632—). Special print from Atomenerg. Kerntech. (1983) v. 43(3) p. 198-202.

From 3. international conference on emerging nuclear energy systems; Helsinki, Finland (6 Jun 1983).

It is investigated whether or not the application of two novel concepts could facilitate the ignition of DT-pellet in the inertial confinement technique of fusion: The muonic fusion catalysis and the idea of polarized fusion. It seems that due to the overall energetics and inefficiencies involved the muonic fusion catalysis has no chance for a practical application and that in the case of the utilization of polarized DT-fusion material either for the spark region or in the highly compressed cold outer shell or in both pellet-regions the "gain of the gain" is only marginal. The driver energy requirement by the use of polarized fuel can, however, be reduced by a factor of 2.

34946 **(LBL—16890) Spot heating calculation for a heavy ion driven high temperature experiment.** Lee, E.P.; Mark, J.W.K. (Lawrence Berkeley Lab., CA (USA)). Apr 1984. Contract AC03-76SF00098. 38p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013879.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

An analytical model is used to predict the temperature reached in a spot heating experiment driven by a heavy ion beam. A discussion of physical processes and approximations is included. 10 references, 9 figures, 3 tables.

34947 **(MPQ—79) Heavy-ion driven inertial confinement fusion.** Arnold, R.C. (Max-Planck-Institut fuer Quantenoptik, Garching (Germany, F.R.)). Oct 1983. 41p. Max-Planck-Institut fuer Quantenoptik, Garching (Germany, F.R.).

Heavy-ion induced nuclear inertial fusion is a promising technology for electrical power generation. In common with other nuclear fusion reactor concepts, HIF would provide an inexhaustible energy supply, without fear of catastrophic failure modes, ultimately using raw material for fuel which is available in all regions of the world in sea water. Research and development required for the driver is of reasonable scope. The fuel cycle and reactor development would be comparable to any other method for fusion power. Target design will require detailed experiments, but at the present time the available information from all sources leads to gain estimates which would suffice for power production with driver energies of a few MJ.

34948 **(MPQ—80) Charge-changing ionic collisions as a method for increasing specific deposition energy in heavy ion drivers.** Arnold, R.C. (Max-Planck-Institut fuer Quantenoptik, Garching (Germany, F.R.)). Oct 1983. 23p. Max-Planck-Institut fuer Quantenoptik, Garching (Germany, F.R.).

The ring-fill times estimated should be increased; a facotr of vsub(REL)/v_0 should be included, on page 8, multiplying f_{43}, where vsub(REL) is the relative (cente-of-mass) collision velocity between the two beams, and v_0 the velocity of the fastest incoming beam. This change corrects for the fraction of collision path length available to each incoming ion as it traverses the interaction region (in the laboratory frame). This would increase the fill time by a large factor if the same kinematic choices were made. Instead, we will choose to make the relative H-C velocity approximately 1 x 10^7 cm/s, while keeping the spread in C velocities small to avoid intra-beam collision losses. In this case f_{43} proportional 10^{-7}, and in the following line on page 8 we would have "10^{-7} pmA of C^{3+}". On page 9, tausub(FILL) is increased to 6 sec., which corresponds roughly to 10^7 turns. The first three lines on page 12 should be changed to read "... tau_1 proportional 10^{-1} sec. we find tausub(FILL) proportional 10^2 sec., which may be tolerable with sufficiently good vacuum. (This time estimate is based on an interaction length of 10 M, and higher currents than in the previous example.)" On page 6, following the first reaction formula, the rest of that sentence should read "at collision velocities of order 10^7 cm/sec." The following sentence should be deleted.

34949 **(NRL-MR—5225) NRC survey on plasma physics and fluids fusion plasma confinement and heating. Chapter 8. Inertial confinement fusion.** Ripin, B.H.; Kruer, W.L. (Naval Research Lab., Washington, DC (USA)). 18 Jun 1984. Contract W-7405-ENG-48. 18p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013291.

A survey of inertial confinement fusion research is presented; current issues are emphasized.

34950 **(ORNL/TM—8976) Neutronic evaluation of fissile fuel breeding blankets for the fission-suppressed Tandem-Mirror Hybrid Reactor.** Johnson, J.O.; Burns, T.J. (Oak Ridge National Lab., TN (USA)). Jun 1984. Contract AC05-84OR21400. 38p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013624.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A computational study was performed on the blanket design of the Lawrence Livermore National Laboratory (LLNL) fission-suppressed Tandem Mirror Hybrid Reactor (TMHR) to qualify the methods and data bases available at Oak Ridge National Laboratory (ORNL) for use in analyzing the neutronic performance of fissile fuel breeding blankets. The eventual goal of the study was to establish the capability for analysis and optimization of advanced fissile fuel production blanket designs. Discrete ordinates radiation transport calculations were performed in one-dimensional cylindrical geometry to obtain the blanket spatial distribution and energy spectra of the neutron and gamma-ray fluxes resulting from the monoenergetic (14.1 MeV) fusion first wall source. Key macroscopic cross sections of the blanket materials were then folded with the flux spectra to obtain reaction rates critical to evaluating blanket feasibility. Finally, a time-dependent depletion analysis was performed to evaluate the blanket performance during equilibrium cycle conditions. The results of the study are presented both as graphs and tables.

34951 **(ORNL/TM—9203) ORACT: a 174-neutron-group activation cross-section library for fusion and fission reactor design studies.** Santoro, R.T.; White, J.E.; Drischler, J.D. (Oak Ridge National Lab., TN (USA)). Jun 1984. Contract AC05-84OR21400. 58p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84013603.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A 174-neutron-group activation cross-section library for 233 ground-state target isotopes and 22 isomeric target isotopes is described. The library, ORACT, was derived from the ACTL Evaluated Neutron Activation Cross-Section Library and was developed for use with existing computer codes that calculate induced activation by convoluting the cross-section data with neutron scalar flux distributions. The activation cross sections extend over the energy range from thermal to MeV and are useful for fusion and fission reactor nuclear design studies as well as other applications.

34952 **(PPPL—2112) Application of toroidal multipoles to facilitate tokamak reactor studies.** Ehrhardt, A.B. (Princeton Univ., NJ (USA). Plasma Physics Lab.). May 1984. Contract AC02-76CH03073. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013080.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A method of calculating the vacuum magnetic flux for plasma equilibrium over a range of aspect ratio A and major radius R is presented. Toroidal multipoles are used to fit the vacuum flux for a set of reference equilibria and the fitted moments are then used to parametrize the flux over the design space in A and R. An example is given in which the equilibrium flux for a D-shaped tokamak plasma is predicted and compared with the actual equilibrium code vacuum flux.

34953 **(SAND—83-2629C) Measurement of retained hydrogen by laser thermal desorption for carbon exposed to sub-eV atomic deuterium.** Davis, J.W.; Haasz, A.A.; Auciello, O.; Stangeby, P.C.; Doyle, B.L. (Toronto Univ., Ontario (Canada). Inst. for Aerospace Studies; Sandia National Labs., Albuquerque, NM (USA)). 1984. Contract AC04-76DP00789. 16p. (CONF-840520—7). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012277.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Portions are illegible in microfiche products.

Retention levels for sub-eV D^0 atoms in single crystal and pyrolytic graphite were measured using a newly-developed Laser Thermal Desorption (LTD) technique. Retention levels for single crystals were ~ 3 x 10^{13} D^0/cm^2 for incident fluences of ~ $10^{19}D^0/cm^2$. This is about two orders of magnitude lower than D^0 retention in pyrolytic graphite, and correlates very well with the differences in effective surface areas. The D(^{3}He,p)^{4}H/sub e/ Nuclear Reaction Analysis (NRA) was used to confirm retention levels as measured by the LTD technique. A further finding was the influence of a small layer of evaporated tungsten on the sample surface. Such W impurity resulted in an increase of D^0 retention of up to a factor of ten.

34954 **(SAND—84-0508C) Comet-II, a two-stage, magnetically switched pulsed-power module.** Neau, E.L.; Woolston, T.L.; Penn, K.J. (Sandia National Labs., Albuquerque, NM (USA)). 1984. Contract AC04-76DP00789. 4p. (CONF-8406137—3). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013063.

From 16. power modulator symposium; Arlington, VA, USA (17 Jun 1984).

Portions are illegible in microfiche products.

Fast-switching saturable-core reactors, based on the use of Metglas amorphous metallic alloys, have been developed for use in a 370 kJ coaxial magnetic switching experiment, called Comet-II. Magnetic switches offer a low-loss mechanism for achieving multiterrawatt pulse compression, for super-power accelerators, coupled with the possibility of repetitive mode operation as would be required for an operational inertial confinement fusion application. Two separate series of experiments have been performed using two stages of magnetic pulse compression.

34955 **(SAND—84-0641C) Technical assessment of three thermal-hydraulic techniques for high heat flux fusion applications. Chapter IV.** Boyd, R.D.; Wong, C.P.C.; Cha, Y.S. (Sandia National Labs., Albuquerque, NM (USA); GA Technologies, Inc., San Diego, CA (USA); Argonne National Lab., IL (USA)). 1984. Contract AC04-76DP00789. 16p. (CONF-840816—9). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010143.

From 22. national heat transfer conference; Niagara Falls, NY, USA (5 Aug 1984).

This chapter is a technical assessment of three possible thermal-hydraulic, high heat flux removal techniques which will result in adequate heat removal with minimum penalty from components in fusion reactors. The heat removal alternatives discussed are: (1) subcooled flow boiling (SFB) with water, (2) high velocity helium gas convection, and (3) liquid metal heat transfer in the presence of a magnetic field. The assessment emphasizes advantages, disadvantages, available data base, and applicability of fusion component requirements.

34956 **(UCRL—15578) Primary heat transfer loop design for the Cascade inertial confinement fusion reactor.** Murray, K.A.; McDowell, M.W. (Rockwell International Corp., Golden, CO (USA). Energy Technology Engineering Center). May 1984. Contract W-7405-ENG-48. 17p. (SANL—322-006). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012687.

This study investigates a heat exchanger and balance of plant design to accompany the Cascade inertial confinement fusion reaction chamber concept. The concept uses solid Li_2O or other lithium-ceramic granules, held to the wall of a rotating reaction chamber by centrifugal action, as a tritium breeding blanket and first wall protection. The Li_2O granules enter the chamber at 800 K and exit at 1200 K after absorbing the thermal energy produced by the fusion process.

34957 **(UCRL—15600) Wide spectrum antireflective coating for laser fusion systems. Final report.** Yoldas, B.E; Partlow, D.P.; Smith, H.D.; Mattox, D.M. (Westinghouse Research and Development Center, Pittsburgh, PA (USA)). 13 Jan 1984. Contract W-7405-ENG-48. 65p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84013211.

A method of depositing a laser damage resistant, wide-spectrum antireflective coating on fused silica has been developed. This work was sponsored under a subcontract with the University of California, with technical direction from the Lawrence Livermore

National Laboratory. The coating is applied from a specific silanol polymer solution and converted to a porous SiO_2 film. The pore size of the film is first reduced by a heat treatment to prevent uv scattering. Then gradation of the pore volume is achieved by a mild etching to a sufficient depth to prevent a smoother index transition from air to the substrate glass. The resulting antireflectivity covers the entire transmission range of silica and may be extended to a wavelength as short as 250 nm. Laser damage thresholds as high as 9 j/cm² have been demonstrated on processed samples.

34958 **(UCRL—53541-83) Index of Laser Program publications and related reports, 1983.** (Lawrence Livermore National Lab., CA (USA)). May 1984. Contract W-7405-ENG-48. 41p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84013207.

This document provides a listing of titles and authors of publications from the LLNL Laser Program during calendar year 1983. It is presented as an aid for researchers in the field who may not otherwise have access to a full listing of laser-related work done at LLNL. The intent is to provide a brief and concise listing. Publications are classified by subject, but cross references are not supplied and those documents which logically fall in more than one category may not appear to be in the obvious location. We recognize that gaining access to the publications may be difficult, and have appended a listing of libraries that have microfiche copies of one or more years of LLNL Laser Program publications.

34959 **(UCRL—89546) Nova power systems: status and operating experience.** Whitham, K.; Merritt, B.T.; Gritton, D.G.; Smart, A.J.; Holloway, R.W.; Oicles, J.A. (Lawrence Livermore National Lab., CA (USA)). 28 Nov 1983. Contract W-7405-ENG-48. 6p. (CONF-831203—162). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013070.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

This paper describes the pulse power systems that are used in these lasers; the status and the operating experiences. The pulsed power system for the Nova Laser is comprised of several distinct technology areas. The large capacitor banks for driving flashlamps that excite the laser glass is one area, the fast pulsers that drive pockels cell shutters is another area, and the contol system for the pulsed power is a third. This paper discusses the capacitor banks and control systems.

34960 **(UCRL—90200) LLNL nuclear data libraries used for fusion calculations.** Howerton, R.J. (Lawrence Livermore National Lab., CA (USA)). 21 May 1984. Contract W-7405-ENG-48. 17p. (CONF-840614—58). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012955.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

The Physical Data Group of the Computational Physics Division of the Lawrence Livermore National Laboratory has as its principal responsibility the development and maintenance of those data that are related to nuclear reaction processes and are needed for Laboratory programs. Among these are the Magnetic Fusion Energy and the Inertial Confinement Fusion programs. To this end, we have developed and maintain a collection of data files or libraries. These include: files of experimental data of neutron induced reactions; an annotated bibliography of literature related to charged particle induced reactions with light nuclei; and four main libraries of evaluated data. We also maintain files of calculational constants developed from the evaluated libraries for use by Laboratory computer codes. The data used for fusion calculations are usually these calculational constants, but since they are derived by prescribed manipulation of evaluated data this discussion will describe the evaluated libraries.

34961 **Modular low aspect ratio-high beta torsatron.** Sheffield, G.V.; Furth, H.P. (to Dept. of Energy). US Patent 4,430,600. 7 Feb 1984. Filed date 1 Apr 1982. vp.

PAT-APPL-364276.

A fusion reactor device in which the toroidal magnetic field and at least a portion of the poloidal magnetic field are provided by a single set of modular coils. The coils are arranged on the surface of a low aspect ratio toroid in planes having the cylindrical coordinate relationship O=O /SUB i/ +kz where k is a constant equal to each coil's pitch and O /SUB i/ is the toroidal angle at which the i'th coil intersects the z=0 plane. The device may be described as a modular, high beta torsation whose screw symmetry is pointed along the systems major (z) axis. The toroid defined by the modular coils preferably has a racetrack minor cross section. When vertical field coils and preferably a toroidal plasma current are provided for magnetic field surface closure within the toroid, a vacuum magnetic field of racetrack shaped minor cross section with improved stability and beta valves is obtained.

34962 **Low density, microcellular foams, preparation, and articles.** Young, A.T.; Marsters, R.G.; Moreno, D.K. (to Dept. of Energy). US Patent 4,430,451. 7 Feb 1984. Filed date 3 Mar 1982. vp.

PAT-APPL-354553.

A microcellular low density foam of poly(4-methyl-1-pentene) which is particularly useful for forming targets for inertial confinement fusion has been developed. Articles made from the foam have been machined to tolerances of 0.0001 inch, although the densities of the fragile foam are low (about 10 to about 100mg/cc) and the cell sizes are small (about 10 to about 30 μm). Methods for forming the foam and articles are given; and the yield strength of the foam of the invention is higher than was obtained in other structures of this same material.

34963 **Design for a repetitive superconducting opening switch.** Gray, K.E.; Kampwirth, R.T. (Argonne National Lab., IL (USA)). *Cryogenics;* **24**: No. 1, 21-26(Jan 1984).

The paper details a design study of a superconducting opening switch suitable for discharging the stored energy of a superconducting inductor into a load at room temperature in a short time (approx. 1 μ s). In order to achieve a reasonable repetition rate of approx. 10 Hz, the superconducting element must be a thin film and consideration is given to the presently attainable properties of such films. The design is made specific to 10 000 V and 10 000 A.

34964 **Development of a facility for fatigue and fracture testing of stainless steels at liquid helium temperature.** Juhas, M.C.; Duncan, D.B.; Streit, R.D. (Lawrence Livermore National Lab., CA). *Cryogenics;* **23**: No. 11, 603-607(Nov 1983).

A facility for fracture toughness testing of stainless steel base metal and welds in liquid helium has been developed at Lawrence Livermore National Laboratory (LLNL) to qualify material selected for the mirror fusion programme. The purpose of the test facility is to perform fracture toughness tests (Jsub(Ic)) on candidate materials in an environment simulating the superconducting 'mirror' magnet. This paper discusses the design, development and implementation of the cryogenic test system as well as a brief interpretation of the data.

34965 **Inertial fusion with low energy heavy ions.** Maschke, A.W. (Accelerator Dept., Brookhaven Nat.'l Lab., Assoc. Univ.'s Inc., Upton, NY 11973). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-30**: No. 4, 3055-3056(Aug 1983). (CONF-830311—).

From Particle accelerator conference; Santa Fe, NM, USA (21 Mar 1983).

High energy heavy ions have been under study for inertial fusion applications for some time. This paper explores the possibility of using heavy ions with energies less than 1 MeV as compared to the usual heavy ion fusion approach of using multi-GeV beams. The author's proposed approach is to produce such a lowenergy heavy ion beam in a spherically focused array using time-of-flight bunching and to achieve high power density at the target by accelerating a sufficiently bright beam to the required energies. The MEQALAC (Multipole Electrostatic Array Linear Accelerator) concept is mentioned as a suitable facility for these acceleration requirements. Various beam parameters and conditions are discussed, such as transverse temperature, current density, convergence density, profile, momentum transfer, ion source requirements, brightness and compression, which are necessary to the achievement of inertial fusion using a low-energy ion beam. Zeolites, thallium halides, xenon and hydrogen are mentioned as candidate ion source materi-

als. A feature of low energy heavy ion beams as compared with conventional heavy ion fusion is that the ion velocity is slow compared with either background plasma electron velocities or orbital electron velocities. The usefulness of these distinctions is stated and the need is stressed for more computerized simulation in order to uncover more completely the detail work required in low-energy heavy ion fusion.

34966 **An isochronous stacking ring approach to the HTE.** Selph, F.; Grunder, H.; Leemann, B. (Lawrence Berkeley Lab., Univ. of California, Berkeley, CA 94720). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-30**: No. 4, 3073-3075(Aug 1983). (CONF-830311—).

From Particle accelerator conference; Santa Fe, NM, USA (21 Mar 1983).

The problem of finding a suitable apparatus for demonstrating heavy ion fusion is a difficult one to approach in moderate steps. Ideally, such apparatus would be useful for testing beam transport, focusing and targeting concepts, and target behavior in the plasma regime, and the technology used in this "high temperature experiment" (HTE) would also be extended to construct a prototype fusion facility. A meaningful test of many of these concepts could be achieved with a device capable of heating a disk of material to plasma temperatures in the neighborhood of 100 eV or 1 million degrees K. Target heating for the HTE requires a short beam burst on the order of tens of nanoseconds with a total beam energy of a kilojoule or more. The RF linac falls far short of this capacity. A number of studies have looked at the use of storage rings for accumulating beam current. This paper looks at an alternative means: the use of a RF linac followed by an isochronous storage ring (ISR) producing rapidly the high multiplication of beam current required. This method avoids the necessity for beam manipulations such as splitting and bunching. Also, because of the fast transit time in the ISR, storage ring instabilities pose no problem. The paper discusses beam stacking with an isochronous ring and then addresses the use of an ISR for the HTE and the design and performance of an apparatus--consisting of an ion source, a RF linac, a stacking ring, and a number of beam lines to transfer beam bunches to the target--for such an application.

34967 **Stabilization of toroidal plasma devices.** Ohkawa, T. (to General Atomic Co., San Diego, CA (USA)). Australian Patent 80/54,555/B/. 23 Jun 1983. vp.

US PAT-APPL-007503.

The plasma device comprises a confinement vessel, means for producing plasma current within the vessel in the axial direction and first and second helical windings with the same sense of twist and at the same pitch. The first and second windings are disposed alternately and are equally spaced around the axis. A direct current is passed through the first windings and a second direct current through the second windings in the direction counter to the first current to generate a helical magnetic field acting in combination with the magnetic field produced by the plasma current. This produces a variation in a safety factor q with distance from the center of the plasma current in any direction transverse to the current. The polarity of q reverses near the boundary of the plasma current. Q is defined as the average over a flux surface of the number of transits of the length of the plasma current by a magnetic flux line in making a single transit around the plasma current. The absolute magnitude of q is less than 1 within the plasma current.

34968 **Conceptual design of a Moving-Ring Reactor.** Smith, A.C. Jr.; Ashworth, C.P.; Abreu, K.E. (Pacific Gas and Electric Co., San Francisco, CA (USA)). *Nuclear Fusion;* **2**: 447-458(1983). (CONF-820930—).

From 9. international conference on plasma physics and controlled nuclear fusion research (IAEA); Baltimore, MD, USA (1 Sep 1982).

A design of a prototype Moving-Ring Reactor has been completed. The fusion fuel is confined in current-carrying rings of magnetically field-reversed plasma ("compact toroids"). The plasma rings, formed by a coaxial plasma gun, undergo adiabatic magnetic compression to ignition temperature while they are being injected into the reactor's burner section. The cylindrical burner chamber is divided into three "burn stations". Separator coils and a slight axial guide-field gradient are used to shuttle the ignited toroids rapidly from one burn station to the next, pausing for one third of the total burn time at each station. D-T-^{3}He ice pellets refuel the rings at a rate which maintains constant radiated power. The first wall and tritium breeding blanket designs make credible use of helium cooling, SiC and Li_2O to minimize structural radioactivity. "Hands-on" maintenance is possible on all reactor components outside the blanket. The first wall and blanket are designed to shut the reactor down passively in the event of a loss-of-coolant or loss-of-flow accident. Helium removes heat from the first wall, blanket and shield, and is used in a closed-cycle gas turbine to produce electricity. Energy residing in the plasma ring at the end of the burn is recovered via magnetic expansion. Electrostatic direct conversion is not used in this design. The reactor produces a constant net power of 99 MW(e).

34969 **The development of high energy heavy ions for inertial confinement fusion. A phase approach.** Martin, R.L. (Argonne National Laboratory, Argonne, IL 60439). pp 43-54 of Energy storage, compression, and switching. Nardi, V.; Bostick, W.H.; Sahlin, H. New York, NY; Plenum Publishing Corp. (1983). (CONF-751247—).

From Colloquium on thermal insulators at high temperature; Paris, France (3 Dec 1975).

This chapter describes the Argonne National Laboratory's design of a minimal facility capable of both demonstrating all of the accelerator techniques required in a power plant size facility and also of performing several physics experiments of interest to heavy ion fusion. The proposed Phase I facility would make optimal use of existing facilities made available by the termination of operation of the Zero Gradient Synchrotron (ZGS), a 12 Ge V proton synchrotron for high energy physics, in 1979. Phase I would produce xenon beams of 6.4 Ge V containing up to 10kJ of beam energy at 4 TW suitable for focusing onto foils for energy deposition experiments and studies of various beam-plasma instability experiments.

34970 **(ORNL-tr—5130) Electromagnetic theory of an antenna for ICR heating of a plasma in tokamaks.** Vdovin, V.L.; Kurchatov, I.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. Contract AC05-84OR21400. C; IAE-3728/8. 25p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012988.

Portions are illegible in microfiche products.

The present paper develops the electomagnetic theory of an antenna for ICR heating of a plasma in tokamaks. The basic numerical calculations for the INTOR reactor are given. The dependences of antenna impedance on its geometry and the plasma parameters were obtained. The substantial portion of the power transfered by the unretarded waves was discovered. This distortion of the spectrum is apparently substantial also with lower-hybrid heating if a grill is introduced into the tokamak chamber in a special extension of the connecting piece or is projected toward the plasma beyond the first wall of the tokamak. Measures for eliminating these slightly retarded waves are evaluated (the effects of the influence of short radial conductors are considered suppressed by the antiphase feeding of the adjacent feeders. The theory that was developed facilities calculating the antenna for the ion-cyclotron heating of the plasma of large-scale tokamaks.

99 GENERAL AND MISCELLANEOUS

34971 **(MLM—3150) Mound activities in chemical and physical research: July-December 1983.** (Monsanto Research Corp., Miamisburg, OH (USA). Mound). 15 Jun 1984. Contract AC04-76DP00053. 19p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013629.

The following are reported: calculation of properties of ortho and para hydrogen; helium-4 second virials applied to gas thermometry; reaction rates in $D_2 + T_2$ mixtures; liquid phase thermal diffusion; zinc isotope separation; and removal of ruthenium from aqueous solution using freshly precipitated metals as scavengers.

34972 (ORNL/PPA—84/2) Summary report on responses to a questionnaire on DOE's materials research facilities. Modine, F.A. (Oak Ridge National Lab., TN (USA)). Jun 1984. Contract AC05-84OR21400. 40p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84013549.

A survey was carried out by DOE staff of the following DOE facilities: HFIR, IPNS, RTNS, FMIT, FFTF, NCEM, HVEM, SSRL, NSLS, NCAM, and HTML. The survey questions covered the rationale of each facility, the cost, plans for expansion or termination, capabilities, and accomplishments. (DLC)

34973 (ANL/TM—418) Specifications for the PBX-based digital telecommunications system. Amiot, L.W.; Davison, G.W.; Winter, A.N. (Argonne National Lab., IL (USA)). Jun 1984. Contract W-31-109-ENG-38. 97p. NTIS, PC A05/MF A01; GPO Dep. Order Number DE84013915.

This technical memorandum contains the requirements of Argonne National Laboratory for a PBX-based digital telecommunications system, DTS. The Technical Specification was incorporated as part of the solicitations for proposals for a new DTS which was sent to prospective vendors on June 15, 1984. Argonne National Laboratory has issued a Request for Proposals for the acquisition and installation of a PBX-Based Digital Telecommunications System (DTS). The system will serve Argonne National Laboratory and the Department of Energy at the Argonne, Illinois, site, where it will replace the present Centrex telephone service that Illinois Bell Telephone Company now provides. The new system will provide cost-effective telephone service and will greatly improve voice and data communications. Argonne is asking potential vendors to propose the replacement of the current telephone system, as well as the installation of an entirely new inside and outside wire and cable plant. The combination of the two will allow a substantial increase in the quality and control of voice and data communications at the Laboratory.

34974 (DOE/ER—0179) Guide to energy R and D programs for universities and other research groups. (USDOE Office of Energy Research, Washington, DC). Jun 1984. 89p. NTIS, PC A05/MF A01; GPO Dep. Order Number DE84013079.

The purpose of this guide to provide researchers in universities and other research institutions with summary-level information on the various research and development programs supported by the Department. Collectively, DOE programs support a wide range of research activities - from studies on the fundamental nature of matter and energy to exploratory and advanced research on the development of new technical approaches leading to new energy technologies. The guide summarizes, in one source, basic information on DOE's energy research and development and related programs, interests and needs. It supplies information on current Federal and DOE grant and contract policies and procedures and lists the names of DOE staff, by program area, from whom additional information may be obtained.

34975 (DOE/EV/10662—T1) US Department of Energy (DOE) Guidelines for the development of metrication program plans. (Sterling Systems, Inc., Rockville, MD (USA)). 1984. Contract AC01-81EV10662. 51p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84013275.

Portions are illegible in microfiche products.

The objective of these Guidelines is to assist Departmental elements in pursuing an orderly and coordinated transition to the use of the metric system in all activities in a manner consistent with DOE policy. These Guidelines provide the means for a systematic and efficient approach to the planning process, taking into consideration economic, technical, quality, health and safety, and long-range planning factors when addressing each conversion action. These Guidelines will assist Departmental elements in developing a metrication program plan in their areas of responsibility. The scope and format of these individual metrication program plans shall conform to these Guidelines. Upon completion, these metrication program plans will be submitted by the heads of Headquarters elements and Field organizations, and the Chairman of the Federal Energy Regulatory Commission to the Assistant Secretary for Environmental Protection, Safety and Emergency Preparedness (ASEP). The ASEP will review and incorporate these metrication program plans into the Department's overall metrication program plan.

34976 (DOE/MA—0155) Cost and Schedule Control Systems Criteria for contract performance measurement. Information pamphlet. (USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Project and Facilities Management). May 1984. 54p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84012576.

The purpose of this pamphlet is to inform interested DOE and industry personnel about the basic concepts and general requirements of the Cost and Schedule Control Systems Criteria (CSCSC) of DOE Order 2250.1A. the CSCSC do not represent a management system nor do they prescribe specific methods of organization or operation. The criteria are intended to serve as standards of measuring adequacy of management control systems. Objectives in using the criteria are: (1) to provide an accurate status of contract progress; (2) to provide early visibility to problems - prevent surprises; (3) to improve estimated final cost projections; (4) to improve on shortcomings of prior requirements; and (5) to minimize proliferation of systems and data problems. The CSCSC contain thirty-five criteria which are grouped into five categories: organization; planning and budgeting; accounting; analysis; and revisions and access to data.

34977 (DOE/NBB—0024/1) Report on 1984 national survey of compensation paid scientists and engineers engaged in research and development activities. (Battelle Columbus Labs., OH (USA)). Jun 1984. Contract W-7405-ENG-92. 355p. NTIS, PC A16/MF A01; 1; GPO Dep. Order Number DE84013105.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

In November 1966, the United States Department of Energy awarded a contract to the Columbus Laboratories of Battelle to design a survey of compensation paid to scientific and engineering personnel engaged in research and development in the United States. The contract provided that such a survey would utilize the maturity of age-wage approach, under which salary data would be related to years since receipt of degree or chronological age. This document reports the results of the sixteenth annual survey, conducted in 1984.

34978 (ORNL/TM—9136) Conceptual design: Subtask 1.B of the Major Item System Mapping project. Bengtson, P.Y.; Hadder, G.R.; Stevens, M.M.; Loffman, R.S.; Holcomb, B.D.; Thomas, B.; Zuschneid, P.B.; Guy, M.S. (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 143p. NTIS, PC A07/MF A01; 1; GPO Dep. Order Number DE84013623.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This Conceptual Design document, which reflects the completion of the systems design stage, is a requirement of an Oak Ridge National Laboratory project to develop a Major Item System Mapping (MISM) software system. This document will be followed in implementing the project for data collection, programming, documentation, and user training. The purpose of the MISM project is to collect a variety of data on items of equipment managed by the Army and to map the items into systems. This information will be used for a variety of budgeting and managing purposes. The mapping of items into systems is necessary because funding and analyses are based on an equipment system concept.

34979 (CONF-8403128—1) Role of personal desktop computers in the Argonne integrated heterogeneous file transfer network. Schofield, J. (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 10p. NTIS, PC A02; 3; GPO Dep. Order Number DE84010508.

From Association for Computing Machinery North Central Region conference on making the micro to mainframe connection; Chicago, IL, USA (23 Mar 1984).

Paper copy only, copy does not permit microfiche production.

This presentation described the computing environment at Argonne National Laboratory and the actions underway to integrate personal desktop computers into a coherent hierarchy of computing systems connected through a heterogeneous file transfer network. We regard the arrival of personal desktop computers as both inevitable and benign, and we are pursuing policies to ensure that they are compatible with and complementary to the rest of the Laboratory's computer resources.

34980 (DOE/RA/50420—1) Frequency response design methods for large scale systems. (Maryland Univ., College Park (USA)). May 1984. Contract AC01-80RA50420. 80p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84013111.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The basic idea behind this project was to extend the existing techniques for the design of multivariable control systems in two ways. For linear systems, where the computer aided design of multivariable control systems is relatively well established, the emphasis was on techniques to extend these methods so they could be applied to the decentralized control of large scale systems. For nonlinear systems, where the design of control systems is still very poorly understood, the emphasis has been on both specially structured large nonlinear systems where design results can be obtained and on extensions of techniques from the design of controllers for linear systems. A design method was produced that extends all of the techniques for computer aided design of linear multivariable control systems to large scale systems. Lie algebraic methods were used to develop observers and canonical forms for classes of nonlinear systems. Procedures were also developed for avoiding transmission zeroes of multivariable plants by means of modulating the controller signals. All of these results, and others, are briefly described in this report. 42 references.

34981 (LA—9917-MS) Numerical methods for tracking interfaces. Hyman, J.M. (Los Alamos National Lab., NM (USA)). Mar 1984. Contract W-7405-ENG-36. 21p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013852.

An overview is given of special numerical methods for tracking discontinuous fronts and interfaces. These methods include surface tracking methods based on connected marker points along the interface, volume tracking methods that track the volume occupied by the solution regions bounded by the interfaces, and moving-mesh methods where the underlying mesh is aligned and moved with the interface. The pros and cons of the current methods are discussed, and a new method is proposed that overcomes some of the difficulties encountered in approximating equations with multiple interacting interfaces. 29 references, 7 figures.

34982 (LA—10005) MECA: a supercomputer for Monte Carlo. Solem, J.C. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 6p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84014129.

I compare discrete-ordinates and Monte Carlo techniques for solving integrodifferential equations and compare their relative adaptability to vector processors. I discuss the utility of multiprocessors for Monte Carlo calculations and describe a simple architecture (the monodirectional edge-coupled array of MECA) that seems ideally suited to Monte Carlo and overcomes many of the packaging problems associated with more general multiprocessors.

From Annual meeting of the American Statistical Association (ASA); Philadelphia, PA, USA (12 Aug 1984).

Portions are illegible in microfiche products.

Foutz (1980) derived a goodness of fit test for a hypothesis specifying a continuous, p-variate distribution. The test statistic is both distribution-free and independent of p. In adapting the Foutz test for multivariate normality, we consider using chi^2 and rescaled beta variates in constructing statistically equivalent blocks. The Foutz test is compared to other multivariate normality tests developed by Hawkins (1981) and Malkovich and Afifi (1973). The set of alternative distributions tested include Pearson type II and type VII, Johnson translations, Plackett, and distributions arising from Khintchine's theorem. Univariate alternatives from the general class developed by Johnson et al. (1980) were also used. An empirical study confirms the independence of the test statistic on p even when parameters are estimated. In general, the Foutz test is less conservative under the null hypothesis but has poorer power under most alternatives than the other tests.

34984 (LA-UR—84-1561) Effect of queueing disciplines on response times in distributed systems. Williams, E. (Texas Univ., Austin (USA). Dept. of Computer Sciences). 1984. Contract W-7405-ENG-36. 4p. (CONF-840869—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012639.

From International conference on parallel processing; Bellaire, MI, USA (21 Aug 1984).

Portions are illegible in microfiche products.

A distributed program consists of processes, many of which can execute concurrently on different processors in a distributed system of processors. When several processes from the same or different distributed programs have been assigned to a processor in a distributed system, the processor must select the next process to run. The question investigated is: What is an appropriate method for selecting the next process to run. Standard processor queueing disciplines, such as first-come-first-serve and round-robin-fixed-quantum, are studied. The results for four classes of queueing disciplines tested on three problems are presented. These problems were run on a testbed, consisting of a compiler and simulator used to run distributed programs on user-specified architectures.

34985 (LA-UR—84-1583) Monte Carlo estimation under different distributions using the same simulation. Beckman, R.J.; McKay, M.D. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 24p. (CONF-840849—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012438.

From Annual meeting of the American Statistical Association (ASA); Philadelphia, PA, USA (12 Aug 1984).

Portions are illegible in microfiche products.

Two methods for reducing the computer time necessary to investigate changes in distribution of random inputs of large simulation computer codes are presented. The first method produces unbiased estimators of functions of the output variable under the new distribution of the inputs. The second method generates a subset of the original outputs which has a distribution corresponding to the new distribution of inputs. Efficiencies of the two methods are examined.

34986 (LA-UR—84-1676) Linear algebra programs for use on a vector computer with a secondary solid state storage device. Bucher, I.Y.; Jordan, T.L. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 6p. (CONF-8406113—4). NTIS, PC A02; 3; GPO Dep. Order Number DE84012445.

From 5. IMACS international symposium; Bethlehem, PA, USA (19 Jun 1984).

Paper copy only, copy does not permit microfiche production.

A portable set of linear algebra subprograms for use on a vector computer with an attached fast secondary storage device has been developed. The set currently contains routines for matrix multiplication and for the solution of block tridiagonal, symmetric and positive definite, and general systems of linear equations. Main matrices are stored on the external device in blocked form, and block matrix techniques are used throughout. Performance data are presented which demonstrate that the speed of the routines approaches that of routines with all data in main memory and is close to the maximum speed of the processor.

Topics covered at the conference include: OPMODEL - the security aspects of Phase II; security of distributed ADP systems, problems and some solutions; acquiring a commercial turnkey local area network; networking at Lawrence Livermore National Laboratory; risk analysis, a realistic automated tool; decision analytic methods for security and safeguards risk assessment; Sandia National Laboratories Albuquerque Security Testing; using the Trusted Computer System Evaluation Criteria; DOE applications of the Trusted Computer System Evaluation Criteria; authentication, discretionary and nondiscretionary access control in computer networks; Link ACE, a data link access control and encryption system; ADP security education at Bendix Kansas City; computer assisted instruction and its role in the DOE headquarters computer protection program; the impact of security controls on computing productivity; Colorado and computer crime law, potential applications; and General Accounting Office views on management of microcomputers. (GHT)

34990 **(LALP—84-14) Engineering sciences research highlights. Fiscal year 1983.** Tucker, E.F.; Dobratz, B. (comp.). (Los Alamos National Lab., NM (USA)). May 1984. Contract W-7405-ENG-36. 45p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84014135.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The Laboratory's overall mission is sixfold. We are charged with developing nuclear warheads for defense, technology for arms control, and new concepts for defense against nuclear attack; with supporting programs for both nonnuclear defense and energy research and development; and with advancing our knowledge of science and technology so that we can respond to other national needs. Major programs in support of this mission involve nuclear weapons, energy, environmental science, and basic research. Specific areas of investigation include the design, development, and testing of nuclear weapons; nuclear safeguards and security; inertial and magnetic fusion and nuclear, solar, fossil, and geothermal energy; and basic research in physics, chemistry, mathematics, engineering, and the computer and life sciences. With the staff and facilities maintained for these and other programs, the Laboratory can respond to specific national needs in virtually all areas of the physical and life sciences. Within the Laboratory's organization, most technical research activities are carried out in three directorates: Engineering Sciences; Physics and Mathematics; and Chemistry, Earth and Life Sciences. The activities highlighted here are examples of unclassified work carried out in the seven divisions that made up the Engineering Sciences Directorate at the end of fiscal year 1983. Brief descriptions of these divisions' goals and capabilities and summaries of selected projects illustrate the diversity of talent, expertise, and facilities maintained within the Engineering Sciences Directorate.

34991 **(LBL—17709) Raw QIO interface to Eunice TCP circuits.** Sventek, J.S. (Lawrence Berkeley Lab., CA (USA)). Apr 1984. Contract AC03-76SF00098. 29p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84013880.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This document describes the raw QIO interface to TCP circuits provided by the Eunice TCP/IP networking code. Example sections of code (in FORTRAN) are also provided to aid others writing network applications.

34992 **(NUREG/CR—3686-Vol.1) WIPS: computer code for Whip and Impact Analysis of Piping Systems. Summary report and Part A: User's manual. Volume 1.** Powell, G.H.; Hollings, J.P.; Row, D.G.; Chen, P.; Hu, F.C.; Mahasuverachai, M.; Mosaddad, B.; Nicklin, P.; Nour-Omid, S.; Oughourlian, C.; Riahi, A. (California Univ., Berkeley (USA). Dept. of Civil Engineering). Mar 1983. Contract W-7405-ENG-48. 273p. (UCRL—15597-Summ.andVol.1). NTIS, PC A12/MF A01; 1 - GPO; GPO Dep. Order Number DE84007415.

Portions are illegible in microfiche products.

WIPS consists of a series of sixteen computational modules, executed under the control of the WIPS-EXEC executive program. Twelve of the modules are used for specification of piping system properties and analysis control information. These modules constitute the WIPS-INPT package. They are executed interactively, in an appropriate sequence, in order to produce an input data file for the WIPS-ANAL structural analysis module. WIPS-ANAL is typically executed in batch mode, and produces certain output files. The remaining three modules can then be executed interactively to produce tabular and graphical results from the WIPS-ANAL output. Sections A1 through A10 of this manual present instructions and examples on the use of the WIPS modules. In addition, it is possible to prepare an input data file for WIPS-ANAL without using the WIPS-INPT package, and to run WIPS-ANAL as a stand-alone code. Instructions for direct preparation of WIPS-ANAL input data are presented in Section A11.

34993 **(NUREG/CR—3686-Vol.2) WIPS - computer code for whip and impact analysis of piping systems. Part B. Theory manual. Vol. 2.** Powell, G.H.; Hollings, J.P.; Row, D.G.; Chen, P.; Hu, F.C.; Mahasuverachai, M.; Mosaddad, B.; Nicklin, P.; Nour-Omid, S.; Oughourlian, C. (California Univ., Berkeley (USA)). Mar 1983. Contract W-7405-ENG-48. 204p. (UCRL—15597-Vol.2). NTIS, PC A10/MF A01; GPO Dep. Order Number DE84007416.

WIPS-ANAL is the structural analysis module of the WIPS code. WIPS-ANAL incorporates a sophisticated solution strategy

for nonlinear dynamic analysis, and currently has a library of five structural elements (PIPE, BEAM, UBAR, SHELL, and GAPF). This manual describes the solution strategy, and presents the assumptions and theory for each of the structural elements. Two of the sections (B2 on material theory and B5 on large displacements theory) present theoretical material which is common to two or more elements. A typical WIPS user will generally not be concerned with the theoretical details of the elements. Nevertheless, a basic understanding of the assumptions and procedures is desirable. A sufficient understanding for most applications can be obtained by studying the first one or two chapters for each element type.

34994 **(PNL-SA—12161) Basic geometric algorithms for use with graphic input.** Littlefield, R.J. (Pacific Northwest Lab., Richland, WA (USA)). May 1984. Contract AC06-76RL01830. 11p. (CONF-8405194—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013256.

From 5. annual conference and exposition of the National Computer Graphics Association; Anaheim, CA, USA (13 May 1984).

Portions are illegible in microfiche products.

When a user positions the cursor on the screen of a graphics terminal, it is usually easy for a program to obtain the coordinates. Translating those into useful action is harder. Often, the program must find the data point or line nearest to the cursor, or determine whether a point is inside some polygon. These geometric relationships seem simple, but algorithms for evaluating them often are not obvious. This paper presents a collection of useful techniques, and discusses how they can be used to graphically control functions like identifying points, picking subsets, and zooming a plot.

34995 **(SAND—83-2496C) Solving low density knapsacks.** Brickell, E.F. (Sandia National Labs., Albuquerque, NM (USA)). 1984. Contract AC04-76DP00789. 14p. (CONF-840830—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84006964.

From Crypto '83 conference; Santa Barbara, CA, USA (22 Aug 1984).

In this paper, we describe two methods for solving knapsacks of low density. Method 1 is a technique for solving knapsack problems that appears to work for almost all knapsacks of density less than $1/\log_2 n$. Method 2 is a slightly different technique that works on almost all knapsacks of density less than d(n), where d(n) is a function of n that is significantly larger than $1/\log_2 n$. However, our estimates of d(n) come from empirical studies.

34996 **(SAND—84-0479C) Asymptotic relative efficiencies of the rank transformation procedure in randomized complete block designs.** Hora, S.C.; Iman, R.L. (Texas Tech Univ., Lubbock (USA); Sandia National Labs., Albuquerque, NM (USA)). 1984. Contract AC04-76DP00789. 24p. (CONF-840849—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010600.

From Annual meeting of the American Statistical Association (ASA); Philadelphia, PA, USA (12 Aug 1984).

Portions are illegible in microfiche products.

Rank tests provide an alternative to the usual normal theory F-test for the analysis of data from randomized complete blocks experiments. Two such rank tests are the Friedman test which employs the method of n-rankings and the rank transformation procedure which employs an overall ranking of the data. In this paper the asymptotic efficiency of the rank transformation procedure is developed and compared to the asymptotic efficiencies of Friedman's test and the usual F-test. These efficiencies are developed using contiguous alternatives that are shifts in location. Comparisons among the three tests are made using normal, Student, and double exponential within block distributions. Block effects are introduced by drawing location shifts from normal and uniform distributions and, also, by drawing scale changes from an inverted gamma densities. The asymptotic relative efficiencies were evaluated using numerical procedures.

34997 **(SOL—84-3) Duality in inexact fractional programming with set-inclusive constraints.** Kaul, R.N.; Kaur, S.; Lyall, V. (Stanford Univ., CA (USA). Systems Optimization Lab.). Jun 1984. Contract AT03-76ER72018. 18p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013584.

This paper extends the fractional programming problem with set-inclusive constraints studied earlier by replacing every coefficient vector in the objective function with a convex set. A dual is formulated and well known duality results are established. A numerical example illustrates the dual strategy to obtain the value of the initial problem.

34998 **(UCRL—15586) Hierarchical log design for large-scale systems. Final report.** Hodzic, M.; Siljak, D.D. (LSS Consulting, Saratoga, CA (USA)). 27 Jan 1984. Contract W-7405-ENG-48. 63p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84013072.

Portions are illegible in microfiche products.

The objective of this report is to present a piece-by-piece LQG design for large-scale systems. The proposed design procedure is developed for a hierarchical (block-triangular) representation of the system, which is obtained via a graph-theoretic decomposition algorithm. The estimator is built as a union of low-order optimal estimators attached to each individual subsystem sequentially going from the top to the bottom of the hierarchy. As the subsystem state estimates become available, optimal controllers can be designed for each subsystem separately resulting in an overall closed-loop system which is stable and suboptimal. This design process offers a considerable reduction of both off-line and on-line computations, which is especially effective in large sparse systems.

34999 **(UCRL—15606) Operating system and memory switch for the S-1 computer.** Rubin, J.; Panofsky, T.; Frost, M.; LeBrun, M. (Lawrence Livermore National Lab., CA (USA)). Feb 1984. Contract W-7405-ENG-48. 2p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013094.

During this period the Stanford Artificial Intelligence Laboratory worked on many aspects of the S-1 project. These included: (1) the first architectural manual and various features of the architecture, (2) simulator for PDP-10 on S-1, simulator for YUK-7 on S-1, (3) design and debugging of Pascal compilers and intermediate languages on the S-1, and (4) memory switch for S-1.

35000 **(UCRL—15607) S-1 software development and maintenance. Final report, October 1, 1981-September 30, 1982.** Wiederhold, G.C.M. (Stanford Univ., CA (USA). Dept. of Computer Science). 29 Sep 1983. Contract W-7405-ENG-48. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84013071.

Portions are illegible in microfiche products.

Under the 11th amendment to contract LLL PO No. 9083403 we have continued the development and maintenance of FORTRAN language facilities and related projects for the LLNL S-1 Multiprocessor System. This system is being implemented within the Physics Special Studies Program at the Lawrence Livermore National Laboratory and represents potentially one of the most powerful computer complexes available. This is the final report covering this contract, earlier reports have been delivered to the Lawrenc Livermore National laboratory as previous funding periods came to a close. A suite of significant software products have been developed under this contract, the technical section of this report will elaborate on the recent achievements. We have also provided computer services to students and staff associated with the project, who were located both at Stanford University and at the Livermore itself. Eventually Livermore brought its own system into operation, so that the level of these services could diminish.

35001 **(UCRL—19392-Rev.1) TAURUS: an interactive post-processor for the analysis codes NIKE3D, DYNA3D, TACO3D, and GEMINI. Revision 1.** Brown, B.E.; Hallquist, J.O. (Lawrence Livermore National Lab., CA (USA)). May 1984. Contract W-7405-ENG-48. 97p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84013863.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report provides a user's manual for the post-processor, TAURUS. TAURUS reads the binary plot files generated by the two and three dimensional finite element codes currently used at LLNL and plots contours, time histories, and deformed shapes. Contours of a large number of quantities may be plotted on meshes consisting of plate, shell, and solid type elements. TAURUS can compute a variety of strain measures, reaction forces along constrained boundaries, and momentum. TAURUS is operational on the CRAY-1, 7600, and VAX computers.

35002 **(UCRL—53548) Graphs in sound: a numerical data analysis method for the blind.** Mansur, D.L. (Lawrence Livermore National Lab., CA (USA)). 15 Jun 1984. Contract W-7405-ENG-48. 74p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84013322.

Portions are illegible in microfiche products. Original copy available until stock is exhausted; Thesis.

In this study computer-generated sound patterns were shown to provide the blind with the ability to analyze 2-dimensional graphical data. A continuously-varying pitch was used to represent the amplitude of a curve in the y-direction, and time was used to represent motion in the x-direction. Human factors experiments were performed on 14 subjects to compare the tactile-graph methods normally used by the blind, to these new sound-graphs. It was discovered that mathematical concepts such as symmetry, monotonicity and the slopes of lines could be determined more quickly using sound. The relative accuracy of the subjects on five sets of test questions was virtually the same (sound = 84.6%, tactile = 88.9%, p = 0.05), and even better performance could be expected with greater training. The flexibility, speed, cost effectiveness and greater measure of independence provided the blind or sight-impaired using these sound methods was demonstrated. 23 references, 4 figures, 2 tables.

35003 **(UCRL—89165) S-1 Mark IIA supercomputer.** Farmwald, P.M. (Lawrence Livermore National Lab., CA (USA)). 20 Jun 1983. Contract W-7405-ENG-48. 12p. (CONF-830685—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012374.

From NATO Advanced Research Institute workshop on high speed computation; Juelich, F.R. Germany (20 Jun 1983).

Portions are illegible in microfiche products.

This paper describes the S-1 Mark IIA Multiprocessor System. It is composed of up to 16 supercomputer class uniprocessors with multiple local caches, an extremely large, medium-latency high-bandwidth shared memory, and a low-latency synchronization mechanism for passing short messages. The system is applicable to a wide variety of applications, including large-scale physical simulation, real-time command and control and program development in a time-sharing environment. The hardware organization, its implications, and software supporting the efficient utilization of the multiprocessor are discussed.

35004 **Determination of the polarization resistance with AC impedance measurements.** Mansfeld, F.; Lorenz, W.J. (Rockwell International Science Center, Thousand Oaks, CA). *Proceedings - Electrochemical Society;* **81-82**: 333-335(1981). (CONF-811013—Vol.81-82-Absts).

From Electrochemical Society conference; Denver, CO, USA (11 Oct 1981).

9903 Information Handling

35005 **(DOE/OR/21400—T21) Project plan to enhance the accessibility and availability of the LIF for the LCA (PAAL).** Loebl, A.S.; Barnes, R.W.; Stevens, S.S. (Oak Ridge National Lab., TN (USA)). 1983. Contract AC05-84OR21400. 125p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84012348.

Portions are illegible in microfiche products.

The US Army Logistics Control Activity (LCA) maintains a data base containing information on the worldwide supply and distribution flows of Army materials. This data base exists to provide information both for management of the logistics system and to help the users track their requisitioned material as it moves through the pipeline. The data base has grown very large, currently encompassing more than 30 million records in more than 30 different individual data sets. These records are kept on magnetic disk storage units for access and processing. The primary record is a representation of the individual requisition for material, augmented by shipping information as first the requisition and then the material proceeds through the actual logistics system. Collectively, this information is known as the Logistics Intelligence File (LIF). In this document, we present our perception of the demand for information products from the LIF and the developmental activities needed to meet those demands. We also provide preliminary schedules for tasks and activities associated with this plan. For those tasks which have already been initiated, we give a summary of our progress to date. Finally, we present our estimates of the cost and resources required to implement this plan, together with an estimate of the special assistance needed from LCA.

35006 **(ORNL/TM—8621) ORNL ALPHA MIS user's manual.** Lovin, J.K.; Haese, R.L.; Lambdin, H.D.; Bowen, P.L. (Oak Ridge National Lab., TN (USA)). Jun 1984. Contract AC05-84OR21400. 55p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84013771.

ALPHA is the most powerful and versatile of the Management Information Systems (MISs) sponsored and developed by the Finance and Materials Division of the Oak Ridge National Laboratory (ORNL). A general-purpose MIS, ALPHA can perform at least 75% of the common tasks required of MISs; it allows users to access any System 1022 data base on ORNL's PDP-10 computer to obtain information for use in the management process. This user's manual contains a description of the function of each ALPHA command and option. Besides the explanation of ALPHA's commands and options, this manual also contains a description of the ALPHA system, pointers on using ALPHA, an explanation of ALPHA's design in terms of its working vocabulary, and a sample problem.

35007 **(ORNL/TM—9232) Evaluation of the System 2000 data base management system for use in major item system mapping.** Duncan, L.D.; Taylor, B.S.; Tomlinson, J.P. (Oak Ridge National Lab., TN (USA)). Jun 1984. Contract AC05-84OR21400. 69p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84013130.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This document reports the results of a study performed by Oak Ridge National Laboratory (ORNL) for the US Army Material Development and Readiness Command (DARCOM) under an Interagency Agreement, Department of Energy (DOE) No. 40-1307-82. The purpose of the study was to compare the short- and long-term requirements of the Major Item System Mapping (MISM) computer software system with the capabilities of the System 2000 data base management system. MISM is intended to provide a system oriented approach for budgeting and managing major items of equipment. Both the hardware resource requirements and software features of System 2000 were evaluated.

35008 **(UCRL—90276) Online directory of databases for material properties.** Hampel, V.E.; Bollinger, W.A.; Gaynor, C.A.; Oldani, J.J. (Lawrence Livermore National Lab., CA (USA)). May 1984. Contract W-7405-ENG-48. 122p. (CONF-8406139—1). NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84013210.

From 9. international CODATA conference; Jerusalem, Israel (24 Jun 1984).

Portions are illegible in microfiche products.

We have created an online directory of databases of material properties on the Technology Information System at Lawrence Livermore National Laboratory (LLNL/TIS). This directory is intended to provide interactive access to scientific and technical databases available to the public that contain information pertaining to nuclear, atomic, molecular, physical, chemical, and mechanical properties of substances. The directory is based on work done earlier by Joseph Hilsenrath of the National Bureau of Standards (NBS/OSRD) and Jack H. Westbrook of General Electric Corporation. In addition to the 101 data files previously reported, we have up-

dated the information and identified more than 38 new numeric databases and predictive systems in these fields. We have included, where applicable, entries contained in the directories published by Cuadra Associates, CODATA, and UNESCO. In addition to describing the contents of the databases, we have provided updated information on the availability of the databases and their online access over public telephone and data networks. The online directory is prepared for use by scientists and engineers and should enhance the sharing of S & T resources over communication networks. This directory is expected to become particularly important to the national and international magnetic- and laser-energy fusion projects, nuclear criticality safety, and computer aided engineering programs. Some of the numeric databases are directly accessible by authorized users via the TIS Intelligent Gateway Processor at LLNL (TIS/IGP), with self-guiding procedures for the downloading, merging, post-processing, and graphical/statistical analysis of data.

9905 Civilian Defense

35009 (OEVS-Mitteilung—1/83, pp 65-79) **Recommendations for radiation shelters.** Karacson, P. (Amt der Niederoesterreichischen Landesregierung, Vienna (Austria)). 1983. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number TI84780298. (CONF-8206244—).

From Annual meeting of the Austrian Association for Radiation Protection on protection of the population against radiation of nuclear weapons; Vienna, Austria (29 Jun 1982).

Among other things shelters are meant to offer a sufficient protection against radiation after explosions of nuclear weapons. The precautions and measures that are necessary for this purpose are described. (Author).

35010 (OEVS-Mitteilung—1/83, pp 81-84) **Radiation shelters in Austria.** Schultz, R. (Bundesministerium fuer Bauten und Technik, Vienna (Austria)). 1983. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number TI84780298. (CONF-8206244—).

From Annual meeting of the Austrian Association for Radiation Protection on protection of the population against radiation of nuclear weapons; Vienna, Austria (29 Jun 1982).

Although building shelters in Austria has been advanced in the last few years there are still to be induced several studies. Ways to supply the Austrian population with shelters are discussed. (Author).

35011 (OEVS-Mitteilung—1/83, pp 85-95) **Alarm organization for the case of increased radioactivity in Switzerland.** Jeschki, W. (Hauptabteilung fuer die Sicherheit von Kernanlagen, Wuerenlingen (Switzerland)). 1983. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number TI84780298. (CONF-8206244—).

From Annual meeting of the Austrian Association for Radiation Protection on protection of the population against radiation of nuclear weapons; Vienna, Austria (29 Jun 1982).

Provision has been made for occurrence of dangerously increased radioactivity within Switzerland, irrespective of its origin, military or civilian. Organizations created to recognize, measure evaluate the radioactive danger to decide on and implement protective measures to inform the population etc. are described. Finally the communication and alarm devices, shelters, measuring instruments etc. at the disposal of the alarming organization are given in detail. (G.Q.).

35012 (UCRL—15605) **Do-It-Yourself fallout/blast shelter evaluation.** Nash, P.T.; Baker, W.E.; Esparza, E.D.; Westine, P.S.; Blaylock, N.W. Jr. (Southwest Research Inst., San Antonio, TX (USA)). Mar 1984. Contract W-7405-ENG-48. 172p. NTIS, PC A08/MF A01; 1; GPO Dep. Order Number DE84013220.

Portions are illegible in microfiche products.

Expedient fallout shelters recommended to the general public were evaluated for their potential to provide safety to occupants during nuclear blast. The blast threat was in the 2 to 50 psi overpressure range from a 1 megaton (MT) yield weapon. Research included a literature search for expedient shelter designs and evaluations of the designs to certify their ability to protect occupants. Shelters were evaluated systematically by first analyzing each design for expected failure loads. Next, scale model tests were planned and conducted in the Fort Cronkhite shock tunnel. Structural responses and blast pressures were recorded in a series of twelve experiments involving 96 structural response models. Two rigid models were included in each test to measure internal blast pressure leakage. Probabilities of survival were determined for each of the shelters tested. 47 references, 71 figures, 24 tables.

CORPORATE AUTHOR INDEX

In the Corporate Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Information Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

American Science and Engineering, Inc., Arlington, MA. Space Systems Div.
Study of coronal precursors of solar flares. Final report 26 Jan 82-25 Jul 83, 9:34522 (R;US)

American Univ., Washington, DC
Clarifiction of environmental effects in stress corrosion cracking. Final report 1 Jun 75-31 Dec 83, 9:33619 (R;US)

Ames Lab., IA (USA)
Application of elastic wave scattering theory to the detection and characterization of flaws in structural materials, 9:33915 (R;US)
Comparison of the ozonolysis products of the methylnaphthalenes and dimethylnapthalenes in hexane, methanol, and water, 9:33822 (R;US)
Conduction electron density of states and proton spin-lattice relaxation in the dihydrides of Sc, Y, La, and Lu, 9:33671 (R;US)
Granulation of nomagnetic fly ash-coke mixtures, 9:32562 (R;US)
New materials from high temperature synthesis, 9:33816 (R;US)
Probabilistic seismic resistance of a Mark III steel containment, 9:33290 (R;US)
Reduced molybdenum states in hydrodesulfurization: investigations using Chevrel phase catalysts, 9:33821 (R;US)
Relation of vertical intensity profiles for neutral atom lines to analyte atomization behavior in inductively coupled plasmas, 9:33804 (R;US)
Reliability of steel containments with internal pressure, 9:33288 (R;US)
Superconductivity in ternary rare earth palladium Heusler compounds, 9:33672 (R;US)
Uncertainties associated with containment analysis, 9:33289 (R;US)

Analytic and Computational Research, Inc., Los Angeles, CA (USA)
Disruption scenario analysis for a nuclear waste repository in Hanford Site basalts, Washington State, 9:32738 (R;US)

Analytic Sciences Corp., Reading, MA (USA)
Research progress in dynamic security assessment, 9:33018 (R;US)

AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.
Physical experiment technique, 9:33962 (R;UA;RU)
Physical experiment technique, 9:33964 (R;UA;RU)
Physics of radiation damage and radiation material science, 9:33670 (R;UA;RU)

Arbeitsgemeinschaft der Grossforschungseinrichtungen (AGF), Bonn (Germany, F.R.)
Technical and economic aspects of design and use of electric passenger vehicles, 9:33600 (R;DE;In German)
Argonne National Lab., IL (USA)
Absence of magnetic field dependence of the cyclotron effective masses in Pd, 9:33627 (R;US)
Biofouling control for marine heat exchangers using intermittent chlorination, 9:32929 (R;US)
Calculation of sample problems related to two-phase flow blowdown transients in pressure relief piping of a PWR pressurizer, 9:33255 (R;US)
Characterization of voltage losses during high-intensity current pulses in reactive, porous electrodes of molten salt cells, 9:33377 (R;US)
Chemical stability of beta-alumina, 9:33375 (R;US)
CO_2 forecasting and control: a mathematical approach, 9:34223 (R;US)
Computerized system for establishing electric-vehicle battery requirements, 9:33599 (R;US)
Coupling of Rayleigh-like waves with zero sound modes in normal ^3He, 9:34577 (R;US)
Crystalline rocks of the northeastern United States, 9:34506 (R;US)
Crystalline rocks of the northeastern United States, 9:34507 (R;US)
Dry scrubbing at Argonne's 20MW boiler, 9:32553 (R;US)
Effects of standtime on the available capacity of lead-acid and nickel/iron electric vehicle batteries, 9:33374 (R;US)
Electrochemical performance of porous nickel sulfide electrodes, 9:33376 (R;US)
Experimental study of natural convection melting of ice in salt solutions, 9:33884 (R;US)
Factors influencing trace element variation in U.S. coals, 9:32541 (R;US)
Flashing and jet impinging condensation during a postulated sodium blowdown accident of an experiment loop in a test reactor cavity, 9:33254 (R;US)
Freight Network Modeling System. Volume II. Freight Network Equilibrium Model: Version 4.1 User's Guide and Programmer's Guide, 9:32605 (R;US)
Freight Network Modeling System. Volume V. Flexible Network Definition Software User's Guide, 9:32606 (R;US)
Glass electrolytes, 9:33370 (R;US)
Half-life of ^{60}Fe, 9:34680 (R;US)
Heat transfer with phase change in plate-fin heat exchangers, 9:33882 (R;US)
Hydrodynamic sweepout thresholds in BWR Mark III reactor cavity interactions, 9:33247 (R;US)
Impact of O_3 and SO_2 on soybean yield (CSRCLAP), 9:34475 (R;US)
Impact of O_3 on winter wheat yield (CSRCLAP), 9:34476 (R;US)
Impact of O_3 on yield of four soybean cultivars (CSRCLAP), 9:34474 (R;US)
Inelastic neutron scattering study of β-PbO_2: recent results, 9:33379 (R;US)
Intramolecular dynamics of highly excited OCS, 9:33812 (R;US)
Investigation of thermal stability of fluorinol-85 and 2-methylpyridine/water as Rankine Cycle Power Systems working fluids, 9:33552 (R;US)
Lattice vibrational behavior of $SnMo_6S_8$ and oxygen defected $SnMo_6S_{7.8}O_{0.2}$, 9:33628 (R;US)
Lattice vibrational behavior of the exchange enhanced superconductor U_6Fe, 9:33629 (R;US)
Lithium-alloy/metal sulfide battery research, 9:33371 (R;US)
Mass spectrometric study of the release of volatile fission products from irradiated LWR fuel, 9:33253 (R;US)
Modeling of concrete response at high temperature, 9:33151 (R;US)
Molten carbonate fuel cell cathode development, 9:33493 (R;US)
Monte Carlo calculation of correlation and vacancy wind effects in diffusion, 9:34762 (R;US)
Multiconfiguration wavefunctions for molecules: current approaches, 9:34558 (R;US)
Nonequilibrium segregation and phase instability in alloy films during elevated-temperature irradiation in a high-voltage electron microscope, 9:33626 (R;US)
Overview of design of advanced fossil fuel systems (DAFFS) study, 9:33023 (R;US)
Potential of nuclear methods for development of novel on-line sensors for coal analysis, 9:32540 (R;US)
PRECP: PRocessing of Emissions by Clouds and Precipitation. The Department of Energy's program on the nonlinearity of acid precipitation processes. Summary of FY 1984-1985 Operational Plan, 9:34222 (R;US)
Premium coal sample program at the Argonne National Laboratory, 9:32542 (R;US)
Radioactive waste isolation in salt: peer review of the Office of Nuclear Waste Isolation's plans for repository performance assessment, 9:32713 (R;US)
Rare particles, 9:34014 (R;US)
Recent results from the National Battery Test Laboratory, 9:33378 (R;US)
Role of personal desktop computers in the Argonne integrated heterogeneous file transfer network, 9:34979 (R;US)
SEAMOPT - Stirling engine optimization code, 9:33593 (R;US)
Selective monitoring of hazardous chemicals in emergency situations, 9:34144 (R;US)
Shellside waterflow pressure drop distribution measurements in an industrial-sized test heat exchanger, 9:33883 (R;US)
Sloshing response of a reactor tank with internals, 9:33256 (R;US)
Specific heat-measurement of an $ErRh_4B_4$ single crystal, 9:33701 (R;US)
Specifications for the PBX-based digital telecommunications system, 9:34973 (R;US)
Sputtering properties of copper-lithium alloys at reactor-level temperatures and surface erosion rates, 9:33625 (R;US)
Technical assessment of three thermal-hydraulic techniques for high heat flux fusion applications. Chapter IV, 9:34955 (R;US)
Testing activities at the National Battery Test Laboratory, 9:33369 (R;US)
Theory of fine particle formation in coal combustion, 9:32617 (R;US)
Thermal management of a lithium/iron-sulfide battery, 9:33373 (R;US)
Toxicologic responses to a complex coal conversion by-product: mammalian cell mutagenicity and dermal carcinogenicity, 9:32643 (R;US)
Uncertainty covariances in robotics applications, 9:33053 (R;US)
Viscosity of synthetic coal ash slags, 9:32618 (R;US)
Weak coupling tests of lattice QCD, 9:34629 (R;US)
Arizona State Univ., Tempe (USA). Dept. of Chemical Engineering
Conversion of cellulosic wastes to liquid hydrocarbon fuels. Technical progress report, May 1-31, 1984, 9:32783 (R;US)
Arizona Univ., Tucson (USA)
Absence of magnetic field dependence of the cyclotron effective masses in Pd, 9:33627 (R;US)
Armed Forces Radiobiology Research Inst., Bethesda, MD (USA)
AFRRI (Armed Forces Radiobiology Research Institute) annual research report 1 October 1980-30 September 1981, 9:34443 (R;US)
Kerma factors for use in 37-group neutron spectrum calculations. Technical report, 9:34758 (R;US)
Radiation survey for installation of the cobalt-60 theratron-80 at Armed Forces Radiobiology Research Institute. Technical report, 9:34395 (R;US)
Army Armament Research and Development Command, Watervliet, NY (USA). Large Caliber Weapon Systems Lab.
Fracture behavior of a uranium and a tungsten alloy in a notched component with inertia loading. Final report, 9:33621 (R;US)
Army Construction Engineering Research Lab., Champaign, IL (USA)
Wind power generation design considerations. Final report, 9:32996 (R;US)
Army Engineer Waterways Experiment Station, Vicksburg, MS (USA)
Geotechnical quality assurance of construction of disposal facilities. Final report Apr-Dec 82, 9:33565 (R;US)
Army Engineer Waterways Experiment Station, Vicksburg, MS (USA). Geotechnical Lab.
Fuel-resistant coating and binders for porous friction surface pavements: tests and analyses. Final report May 80-Nov 83, 9:33612 (R;US)
Army Medical Research Inst. of Chemical Defense, Aberdeen Proving Ground, MD (USA)
Chemical pretreatment. Effects on acetylcholine, behavior, and agent incapacitation. Final report 1 Oct 79-30 Sep 82, 9:34467 (R;US)

Army Tank-Automotive Command, Warren, MI (USA)
Testing and evaluation of jet electric vehicle models: 600, 1000, and 1000p. Final report FY 80-FY 83, 9:33598 (R;US)
Army War Coll., Carlisle Barracks, PA (USA). Strategic Studies Inst.
Soviet theater nuclear capabilities: the European nuclear balance in transition, 9:34167 (R;US)
Aspen Technology, Inc., Cambridge, MA (USA)
Development of a reference data system for the liquefaction technology data base. Final technical report, 22 September 1982-3 August 1983, 9:32518 (R;US)
Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee
Calculations of stationary solutions for the non linear viscous resistive MHD equations in slab geometry, 9:34793 (R;FR)
Atmospheric Physics, Inc., Peralta, NM (USA)
Effects on consequences of the high steam content in LWR accident releases: physics and preliminary results, 9:33334 (R;US)
Atomic Energy Control Board, Ottawa, Ontario (Canada)
Radiation protection as part of occupational health and safety in the regulation of uranium mines in Canada, 9:32694 (R;CA)
ATResearch Associates, Glen Ellyn, IL (USA)
Calculation of sample problems related to two-phase flow blowdown transients in pressure relief piping of a PWR pressurizer, 9:33255 (R;US)
Auburn Univ., AL (USA)
Combined processing of coal and heavy resids. Progress report, January 16, 1984-April 15, 1984, 9:32520 (R;US)
Australian Coal Industry Research Labs. Ltd., North Ryde
Experience from initial longwalling at West Cliff Colliery, 9:32589 (R;AU)
Experience with initial longwalling at John Darling Colliery, 9:32590 (R;AU)
Australian Radiation Lab., Melbourne
Quality control procedure for dental x-ray film processing, 9:34396 (R;AU)

B

Babcock and Wilcox Co., Lynchburg, VA (USA). Lynchburg Research Center
Effects of shutdown/cooldown techniques on radiation fields in PWR primary coolant loops, 9:33075 (R;US)
Battelle Columbus Labs., OH (USA)
Advanced atmospheric fluidized-bed combustion design-spouted bed. Final report, 9:33930 (R;US)
Chemical vapor deposition of erosion resistant TiB_2 coatings, 9:33702 (R;US)
Comparative evaluation of new low-cost array field designs for grid-connected photovoltaic systems, 9:32863 (R;US)
Project summaries: sixth DOE electrochemical contractor's review. Supplement, 9:33372 (R;US)
Report on 1984 national survey of compensation paid scientists and engineers engaged in research and development activities, 9:34977 (R;US)
Study of bipolar batteries, 9:33387 (R;US)
Battelle Pacific Northwest Labs., Richland, WA (USA)
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)
White sturgeon research needs: workshop results, 9:34351 (R;US)
Battelle Toxicology Program Office, Vienna, VA (USA)
Intravenous elimination and percutaneous absorption of topically applied Methotrexate-^{14}C (NSC 740) in Yorkshire White pigs. Report for Oct-Dec 78, 9:34392 (R;US)
Intravenous elimination and percutaneous absorption of topically applied CCNU-^{14}C (NSC-79037) in Yorkshire White pigs. Final report May-Oct 79, 9:34393 (R;US)
Preclinical toxicologic evaluation of 5-isoxazoleacetic acid, alpha-amino-3-chloro-4,5-dihydro-(nsc 163501), in dogs, monkeys, and cdf1 mice. Final report 24 Apr-13 Sep 78, 9:34485 (R;US)
Bayerische Landesanstalt fuer Landtechnik, Freising (Germany, F.R.)
Further development and practical use of plants for energy generation from wood and straw in agriculture (rural area), 9:32845 (R;DE;In German)
BDM Corp., Albuquerque, NM (USA)
Thermal conductivity and interface resistance of particle-filled silicone resin, 9:32862 (R;US)
Bechtel Group, Inc., San Francisco, CA (USA)
Overview of design of advanced fossil fuel systems (DAFFS) study, 9:33023 (R;US)
Bechtel National, Inc., Oak Ridge, TN (USA). Advanced Technology Div.
Weldon Spring Site environmental monitoring report, calendar year 1983, 9:34298 (R;US)
Bechtel Power Corp., Los Angeles, CA (USA)
Photovoltaic system overview, 9:32908 (R;US)
Bedford Research Associates, MA (USA)
Application of methods of numerical and software engineering analysis to physical and engineering data collected in a variety of laboratory and field measurement programs. Final report Sep 80-Sep 83, 9:34177 (R;US)
Bell Labs., Murray Hill, NJ (USA)
New fluctuation phenomena in the H-mode regime of PDX tokamak plasmas, 9:34828 (R;US)
Bendix Field Engineering Corp., Grand Junction, CO (USA)
Calibration and performance of a high-resolution gamma-spectroscopy system, 9:32693 (R;US)
Ben-Gurion Univ. of the Negev, Sede Boqer (Israel). Desert Research Inst.
Heat storage in unsaturated soils: initial theoretical analysis of storage design and operational methods, 9:32953 (R;US)
Besancon Univ., 25 (France)
About unilateral problems degenerated from the theory of two-phase flow in porous medium. Application to G. Chavent's modelling of techniques of secondary exploitation of petroleum deposits, 9:32653 (R;FR;In French)
Bochum Univ. (Germany, F.R.). Abt. fuer Elektrotechnik
Method to process high signal rates in pulse analysis, illustrated by the example of X-ray spectroscopy, 9:34149 (R;DE;In German)
Boeing Engineering and Construction Co., Seattle, WA (USA)
Cadmium sulfide/copper ternary heterojunction cell research semiannual report, 1 July 1983 - 31 December 1983, 9:32865 (R;US)
Bolt, Beranek and Newman, Inc., Cambridge, MA (USA)
Noise control of rubber-tired front-end loaders used in surface mining. Open file report 13 Apr 79-31 May 83, 9:32601 (R;US)
Bonn Univ. (Germany, F.R.). Physikalisches Inst.
Photonuclear physics at the Bonn synchrotrons. Present status and future plans at the Bonn synchrotron, 9:34647 (R;DE)
Rubakov effect, 9:34630 (R;DE)
Boston Univ., MA (USA)
Infrared absorption spectrum of free carriers in polar semiconductors. Final report, July 1, 1983-June 30, 1984, 9:34763 (R;US)
Boston Univ., MA (USA). Dept. of Chemistry
Neutron structure of the hydrophobic plant protein crambin, 9:34379 (R;US)
Brigham Young Univ., Provo, UT (USA). Combustion Lab.
Fundamental combustion studies of low-rank coal slurries. Quarterly technical progress report. No. 1, March 1-May 31, 1984, 9:32620 (R;US)
British Columbia Univ., Vancouver (Canada). TRIUMF Facility
Interactive radiation dosimetry database, 9:34463 (R;CA)
British Government, London
Energy Act 1983 (Commencement No.1) Order 1983, 9:33453 (R;GB)
Nuclear Material (Offences) Act 1983, 9:32766 (R;GB)
Brookhaven National Lab., Upton, NY (USA)
Absolute calibration technique for spontaneous fission sources, 9:32764 (R;US)
Aerial radiological survey of the Brookhaven National Laboratory and surrounding area, May 1980, 9:34305 (R;US)
Alignment of low dose stem images of unstained macromolecules, 9:34376 (R;US)
Anodic processes and the kinetics of stress-corrosion cracking or corrosion fatigue, 9:33623 (R;US)
Benzene toxicity and how to approach the problem of chemical leukemogenesis, 9:34472 (R;US)
Computer models and district heating and cogeneration feasibility analysis, 9:33577 (R;US)

Development of methods to predict both the dynamic and the pseudo-static response of secondary structures subjected to seismic excitations, 9:33250 (R;US)
Effect of chromosome homology an plasmid transformation and plasmid conjugal transfer in Haemophilus influenzae, 9:34430 (R;US)
Electroweak interaction parameters, 9:34608 (R;US)
Full-scale leaching study of commercial reactor waste forms, 9:32716 (R;US)
Gamma-ray spectroscopy of hypernuclei, 9:34658 (R;US)
H^+ and OH^- electrolytes for the 300° to 600°C range, 9:32777 (R;US)
Half-life of ^{60}Fe, 9:34680 (R;US)
Industrial process models of electricity demand. Volume 1. Summary report. Final report, 9:33461 (R;US)
Industrial process models of electricity demand. Volume 2. The pulp and paper industry. Final report, 9:33462 (R;US)
Kinetics of the absorption of hydrogen by LaNi6H/sub x//n-undecane suspensions. Part I. The H_2/LaNi6H/sub x//n-undecane system, 9:32780 (R;US)
Kinetics of the absorption of hydrogen by LaNi6H/sub x//n-undecane suspensions. Part II. The H_2/n-undecane system, 9:32781 (R;US)
Large animal model for health hazard assessment of environmental pollutants, 9:34470 (R;US)
Leaching of solidified TRU-contaminated incinerator ash, 9:32717 (R;US)
Neutron structure of the hydrophobic plant protein crambin, 9:34379 (R;US)
New ion sources for nuclear structure studies at the TRISTAN facility, 9:34013 (R;US)
New pulser for principal PO power, 9:34099 (TG;US)
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
Pollution and man, environmental pollution and man, the magnitude of the problem, historical aspects and definitions, 9:34471 (R;US)
PRECP: PRocessing of Emissions by Clouds and Precipitation. The Department of Energy's program on the nonlinearity of acid precipitation processes. Summary of FY 1984-1985 Operational Plan, 9:34222 (R;US)
Protein structure is only as good as the data, 9:34378 (R;US)
Recent developments in thermoluminescence kinetics, 9:34112 (R;US)
Software for large scale tracking studies, 9:33974 (R;US)
Solidification of radioactive waste in a cement/lime mixture, 9:32715 (R;US)
Summary status of advanced water electrolysis and hydrogen storage/transport R and D, 9:32776 (R;US)
Toward the biochemistry of individual molecules, 9:34377 (R;US)
Two-fluid instability, 9:33880 (R;US)
Undecagold labelling of glutamine synthetase from E. Coli, 9:34375 (R;US)

Brown and Root Development, Inc., San Francisco, CA (USA)
Power factor improvement study for an electrical power distribution system for University of California, Lawrence Livermore National Laboratory, Livermore, California, 9:33052 (R;US)

Brown Univ., Providence, RI (USA)
Progress report of a research program in experimental high energy physics. Progress report, January 1, 1984-December 31, 1984, 9:34597 (R;US)
Well simulation using Refrigerant 114, 9:32980 (R;US)

Brown Univ., Providence, RI (USA). Dept. of Engineering
Chemical reactions and molecular aggregation in cryogenic whole air sample matrices. Final technical report 1 Oct 81-31 Mar 83, 9:34220 (R;US)

Brown Univ., Providence, RI (USA). Div. of Engineering
Hybrid solar thermal-photovoltaic systems demonstration, Phase I and II. Final technical progress report, July 5, 1979-December 1982, 9:32935 (R;US)
Investigation of single-substance horizontal two-phase flow, 9:33906 (R;US)

Bundesministerium der Verteidigung, Bonn (Germany, F.R.)
Determination of phlegmatizer concentration profiles in nitrocellose propellant grains by means of radioisotope tracer technique, 9:34159 (R;DE;In German)

Bundesministerium des Innern, Bonn (Germany, F.R.)
Comparative study of instrumentation and control engineering systems in nuclear power plants and in the Federal German railway system, 9:33210 (R;DE;In German)
Consideration of loading conditions initiated by thermal transients in PWR pressure vessels, 9:33067 (R;DE;In German)
Expansion of core melt within the concrete foundation - effects on the reactor building structure, 9:33249 (R;DE;In German)
Reaction of the core melt with various rock types, 9:33248 (R;DE;In German)
Studies for improving PWR simulators and the training of PWR operators using simulators. Pt. 2, 9:33066 (R;DE;In German)
Topical report: Forest damage, 9:34479 (R;DE;In German)

Bundesministerium fuer Ernaehrung, Landwirtschaft und Forsten, Bonn (Germany, F.R.)
New kinds of forest damage in the Federal Republic of Germany, 9:34478 (R;DE;In German)

Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.)
Analysis of heaviest crude oils and hydropyrolysis products, 9:32671 (R;DE;In German)
Construction and development of a resource recovery facility for household waste and commercial waste on a sanitary landfill, 9:33926 (R;DE;In German)
Development and testing of a diesel-powered compression heat pump for domestic central heating systems, 9:33509 (R;DE;In German)
Development and testing of a new support-integrated system for heading roads in coal and rock, 9:33934 (R;DE;In German)
Development of high temperature ceramic parts for vehicular gasturbines, 9:33589 (R;DE;In German)
Development of silicon nitride gas turbine components. Phase 2, 9:33700 (R;DE;In German)
Direct detection of hydrocarbons with seismic methods applied to land-data, 9:32649 (R;DE;In German)
Dyes for displays, 9:33917 (R;DE;In German)
Further development and practical use of plants for energy generation from wood and straw in agriculture (rural area), 9:32845 (R;DE;In German)
Ground probing of contaminated sites, 9:33938 (R;DE;In German)
Improved working conditions by air conditioning of underground pits, 9:32642 (R;DE;In German)
Kuwait, phase 3/stage 1 'Application and test program for the Sulaibyah food/water/power system', 9:32912 (R;DE)
Manufacturing and properties of aluminium sheet from mixed scrap materials, 9:33622 (R;DE;In German)
Meteorological measurements in the Northern German coastal area for wind energy prospection, 9:32997 (R;DE;In German)
MoO_3, ex MoS_2 with further processing of the metal-bearing waste sulfuric acid generated in the process, 9:33699 (R;DE;In German)
Optimized He II cooling systems for space application. Behaviour and handling of superfluid helium at g = 0. Phase II, 9:33857 (R;DE;In German)
Quick and complete recovery of the precious metals of low-grade sweeps and scrap, 9:33551 (R;DE;In German)
Recycling of various types of solvents, construction of a pilot plant, daily throughput: 8-10 tons, 9:33925 (R;DE;In German)
Study of sound propagation as a function of roadway shape, cross-section and support, 9:34373 (R;DE;In German)
Study report on a modular photovoltaic power supply system for space application, 9:32901 (R;DE;In German)

Bundesstelle fuer Aussenhandelsinformation, Koeln (Germany, F.R.)
Burma - energy situation 1982/83, 9:33425 (R;DE;In German)
Ireland - energy situation 1982, 9:33424 (R;DE;In German)

Development of a prototype calorimeter for absorbed dose determination. Final report for the period 1 May 1980 - 31 December 1983, 9:34120 (R;AT)
International Coal Refining Co., Allentown, PA (USA)
Effects of accumulated solids and solvent initial boiling point on dissolver performance. Final technical report, 9:32497 (R;US)
Final environmental impact statement/baseline design reconciliation. Final technical report, 9:32493 (R;US)
Full-scale cold-flow modelling of the SRC-I slurry fired heater at Creare, Inc., 9:32506 (R;US)
Hydroprocessing SRC. Final technical report, 9:32499 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 2. Microbial mutagenicity evaluations (Ames test) option IA reports, 9:32502 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix B. Vol. 2, 9:32503 (R;US)
Internal R and D task summary report: large-scale dissolver cold-flow modeling, 9:32494 (R;US)
Liquid product characterization and compatibility studies. Final technical report, 9:32507 (R;US)
Revised integration documentation, 9:32495 (R;US)
RO feed pretreatment and flat cell tests for SRC-I wastewater, 9:32505 (R;US)
Slurry fired heater cold-flow modelling, 9:32500 (R;US)
Steam/fuel system optimization report: 6000-tpd SRC-I Demonstration Plant, 9:32498 (R;US)
Subcontracted R & D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Vol. 3, 9:32511 (R;US)
Subcontracted R and D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Volume 1, 9:32509 (R;US)
Subcontracted R and D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Volume 2, 9:32510 (R;US)
Summary material balances for the 6000-TPD SRC-I Demonstration Plant, 9:32496 (R;US)
Internationale Atomreaktorbau G.m.b.H. (INTERATOM), Bergisch Gladbach (Germany, F.R.)
N-47 postprocessor for high temperature inelastic analyses, 9:33095 (R;US)
Iowa State Univ. of Science and Technology, Ames (USA)
Sulfur species leached from pyrite during oxidative desulfurization of coal in alkaline solutions, 9:32608 (R;US)
Iowa State Univ. of Science and Technology, Ames (USA). Energy and Mineral Resources Research Inst.
Arylations of coal model systems, 9:32519 (R;US)
Israel Health Physics Society
Joint annual meeting 1982. Transactions, Volume 10, 9:34851 (R;IL)

Hydraulic fracturing and propping tests at Yakedake field in Japan, 9:32979 (R;US)

JAYCOR, Alexandria, VA (USA)
Modified betatron accelerator experiment. Final report 12 Jan 81-10 Dec 82, 9:34012 (R;US)
Johns Hopkins Univ., Silver Spring, MD (USA). Applied Physics Lab.
Study of low energy electron precipitations and auroral phenomena by using the USAF polar orbiting satellites. Final scientific report 1 Oct 78-30 Sep 83, 9:34553 (R;US)
Study of low level laser retinal damage. Annual progress report 1 Feb 83-31 Jan 84, 9:34498 (R;US)
Joint Inst. for Nuclear Research, Dubna (USSR)
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
Joint Publications Research Service, Arlington, VA (USA)
USSR report: energy, No. 153, 12 July 1983-No. 169, 20 December 1983, JPRS tables of contents, 9:33443 (R;US)
Jordan, Apostal, Ritter Associates, Inc., Davisville, RI (USA)
Analyzing the dynamic behavior of downhole equipment during drilling, 9:32986 (R;US)
Jordbruksdepartementet, Stockholm (Sweden)
Better environmental protection II. Final report from the Environmental protection commission, 9:33441 (R;SE;In Swedish)
JRB Associates, Inc., McLean, VA (USA)
Development of chemical countermeasures for hazardous waste contaminated soil, 9:34338 (R;US)

K

Kansas Univ., Kansas City (USA). Medical Center
Action of cholinergic poisons on the central nervous system and effectiveness of potential antidotes. Annual report 1 Jul 81-30 Jun 82, 9:34468 (R;US)
Kansas Univ., Lawrence (USA). Dept. of Civil Engineering
Failure prediction of notched pressure vessels using the CTOD approach, 9:33868 (R;US)
Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Chemie
Investigations on the dissociation of high molecular organic compounds in natural water, 9:34355 (R;DE;In German)
Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Wirtschaftswissenschaften
Investment and cost functions for measures serving the reduction of emissions on the sector of energy conversion, 9:34374 (R;DE;In German)
Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.)
Methods to evaluate ecotoxicological effects of chemicals. Vol. 2, 9:34337 (R;DE;In German)
Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik
Annual report 1982 of the Institute of Nuclear Physics at Kernforschungsanlage Juelich, 9:34652 (R;DE)
Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Nuklearchemie
Chemical and biological consequences of the radioactive decay of iodine-125 in plasmid DNA, 9:34457 (R;DE;In German)
Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Projektleitung Energieforschung
Implementing agreement for co-operation in the development of large scale wind energy conversion systems, 9:33000 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.)
Muonic and polarized fusion for inertial confinement fusion, 9:34945 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Abt. fuer Angewandte Systemanalyse
Comparison of the atmospheric dispersion models UFOMOD and MESOS, 9:34310 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Hauptabteilung Sicherheit
Comparison of the atmospheric dispersion models UFOMOD and MESOS, 9:34310 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Angewandte Kernphysik 1
Control program of the neutron four-circle-diffractometer P32 at the SILOE reactor/CEN Grenoble, 9:34132 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Datenverarbeitung in der Technik
Simulation of nuclear fuel reprocessing for safeguards, 9:32706 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Heisse Chemie
Distribution of U(IV), U(VI), Pu(III) and nitric acid between 30 vol.% tributyl phosphate in dodecane and aqueous nitrate solutions, 9:32707 (R;DE)
Investigation of the radiolytic TBP degradation under Purex process conditions, 9:33832 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik
Investigation of the reaction $^{6}Li + {}^{40}Ca$ at 156 MeV in a coincidence experiment, 9:34678 (R;DE)
Karlsruhe code MODINA for model independent analysis of elastic scattering of spinless particles, 9:34646 (R;DE)
Semileptonic decays of c and b quarks, 9:34603 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Material- und Festkoerperforschung
Determination of the distribution of plutonium concentration in uranium- and plutonium dioxide by X-ray analysis, 9:32701 (R;DE;In German)
Exact solutions of rate equations for the calculation of supersaturations of defects and growth rates for voids, 9:33673 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Nukleare Entsorgungstechnik
Mathematical modelling of the corrosion and leaching behaviour of cemented waste forms, 9:32729 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Radiochemie
Investigation of the reaction $^{6}Li + {}^{40}Ca$ at 156 MeV in a coincidence experiment, 9:34678 (R;DE)
Investigations on the dissociation of high molecular organic compounds in natural water, 9:34355 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorbauelemente
FEBA - flooding experiments with blocked arrays. Data report 1, test series 1 through 4, 9:33087 (R;DE)
Pattern selection in single-component systems coupling Benard convection and solidification, 9:33904 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Technische Physik
X-ray investigation of Nb3Ge under high pressure, 9:33674 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Lab. fuer Aerosolphysik und Filtertechnik 1
Direct measurement of aerosol shape factors, 9:33294 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Kernmaterialueberwachung
Simulation of nuclear fuel reprocessing for safeguards, 9:32706 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Nukleare Sicherheit
Comparison of the atmospheric dispersion models UFOMOD and MESOS, 9:34310 (R;DE;In German)
FEBA - flooding experiments with blocked arrays. Data report 1, test series 1 through 4, 9:33087 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Schneller Brueter
Direct measurement of aerosol shape factors, 9:33294 (R;DE;In German)
Exact solutions of rate equations for the calculation of supersaturations of defects and growth rates for voids, 9:33673 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Wiederaufarbeitung und Abfallbehandlung
Distribution of U(IV), U(VI), Pu(III) and nitric acid between 30 vol.% tributyl phosphate in dodecane and aqueous nitrate solutions, 9:32707 (R;DE)
Investigation of the radiolytic TBP degradation under Purex process conditions, 9:33832 (R;DE;In German)
Kraftwerk Union A.G., Erlangen (Germany, F.R.)
Expansion of core melt within the concrete foundation - effects on the reactor building structure, 9:33249 (R;DE;In German)
Reaction of the core melt with various rock types, 9:33248 (R;DE;In German)

Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst.
Flow test for the full scale core mock-up to the KUHFR, (2). Flow-induced vibrations of the core, 9:33244 (R;JP;In Japanese)
Report on material tests and mock-up tests for fabrication of the KUHFR reflector tank, 9:33245 (R;JP;In Japanese)
Kyushu Univ., Fukuoka (Japan). Faculty of Engineering
Long-term dipole-dipole resistivity monitoring at the Cerro Prieto geothermal field, 9:32963 (R;US)

L

Landesamt fuer Datenverarbeitung und Statistik Nordrhein-Westfalen, Duesseldorf (Germany, F.R.)
Public electric power industry in North-Rhine Westfalia, 1970-1981, 9:33482 (R;DE;In German)

Annual environmental monitoring report of the Lawrence Berkeley Laboratory, 1983, 9:34313 (R;US)
C_4 photosynthesis in Euphorbia degeneri and E. remyi: a comparison of photosynthetic carbon metabolism in leaves, callus cultures and regenerated plants, 9:34382 (R;US)
Cell proliferation kinetics and radiation response in 9L tumor spheroids, 9:34459 (R;US)
Characterization of biophysical properties of baboon lipoproteins: modulation by dietary fat and cholesterol, 9:34440 (R;US)
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 9:32532 (R;US)
Conditional velocity statistics in premixed CH_4-air and C_2H_4-air turbulent flames, 9:33845 (R;US)
Control of respirable particles and radon progeny with portable air cleaners, 9:34230 (R;US)
CONTROLITE 1.0: program documentation, 9:33518 (R;US)
Dynamic resonances in the reaction of fluorine atoms with hydrogen molecules, 9:34567 (R;US)
Effect of surface doping on the oxidation of chromia former alloys, 9:33680 (R;US)
Energy redistribution in diatomic molecules on surfaces, 9:34566 (R;US)
Field determination of the hydrologic properties and parameters that control the vertical component of groundwater movement, 9:32755 (R;US)
General energy balance for battery systems, 9:33381 (R;US)
Geochemistry research planning for the underground storage of high-level nuclear waste, 9:32730 (R;US)
Hadron production in e^+e^- annihilation at PEP, 9:34605 (R;US)
Heat storage in unsaturated soils: initial theoretical analysis of storage design and operational methods, 9:32953 (R;US)
High-intensity discharge (HID) solid-state ballast program: engineering development report. Phase II, 9:33517 (R;US)
Long-term dipole-dipole resistivity monitoring at the Cerro Prieto geothermal field, 9:32963 (R;US)
Macroscopic treatment of nuclear dynamics, 9:34743 (R;US)
Measurement of sulfur dioxide in the post-combustion environment, 9:34231 (R;US)
Molecular beam mass spectrometer sampling of flash ignited combustion, 9:33846 (R;US)
Numerical studies of enthalpy and CO_2 transients in two-phase wells, 9:32982 (R;US)
Progress on the LBL ECR heavy ion source, 9:34095 (R;US)
Radial distribution function as an analysis technique, 9:33806 (R;US)
Raw QIO interface to Eunice TCP circuits, 9:34991 (R;US)
Recent results from the PEP-4 TPC, 9:34604 (R;US)
Skylight energy performance and design optimization, 9:33519 (R;US)
Solar irradiance: the effect of dimensionality on solar spectrum curves, 9:32842 (R;US)
Spot heating calculation for a heavy ion driven high temperature experiment, 9:34946 (R;US)
Study of contaminant plume control in fractured-porous media, 9:34356 (R;US)
Study of hot phonons and hot carriers in GaAs under picosecond optical pulse excitation, 9:33759 (R;US)
Supercollider physics, 9:33965 (R;US)
Technology Base Research Project for electrochemical energy storage. Annual report for 1983, 9:33380 (R;US)
Topics in statistical mechanics, 9:34782 (R;US)
Unsteady heat transfer during laminar flame quenching, 9:33909 (R;US)
Well test data analysis from a naturally fractured liquid-dominated hydrothermal system, 9:32981 (R;US)
Lawrence Livermore National Lab., CA (USA)
Chemicals in effluent waters from nuclear power stations: the distribution, fate, and effects of copper, 9:34357 (R;US)
Comprehensive chemical kinetic reaction mechanism for the oxidation of n-butane, 9:33849 (R;US)
Cure reactions, network structure and mechanical response of diaminodiphenyl sulfone cured tetraglycidyl 4,4'diaminodiphenyl methane epoxies, 9:33723 (R;US)
d/dt[B^2] detector: method of operation, 9:34155 (R;US)
Design of a high-performance slide and drive system for a small precision machining research lathe, 9:33869 (R;US)
Development and capabilities of the LLNL Focused-Beam Reflection-Mode Acoustic Microscope, 9:34156 (R;US)
Development of a multidetector deflection measurement system. Final report, September 1982-August 1983, 9:34158 (R;US)
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
Dynamic overstresses in fibrous polymeric materials, 9:33732 (R;US)
Experimental and model transport and diffusion studies in complex terrain with emphasis on tracer studies, 9:34183 (R;US)
Experimental and modeling study of engine knock, 9:33543 (R;US)
Graphs in sound: a numerical data analysis method for the blind, 9:35002 (R;US)
H Division. Materials Physics quarterly report, October-December 1983, 9:33615 (R;US)
Historical controversies in the geological sciences, 9:34509 (R;US)
Hydrothermal interaction studies of Bullfrog Member tuff core wafers in J-13 water at 150°C: quantitative analyses of aqueous and solid phases, 9:32741 (R;US)
Index of Laser Program publications and related reports, 1983, 9:34958 (R;US)
Influence of diluents and inhibitors on detonations, 9:34163 (R;US)
Influence of the finite Larmor radius effect on plasma equilibrium, 9:34833 (TG;US)
Large aperture electro-optical switch, 9:33923 (R;US)
LLNL nuclear data libraries used for fusion calculations, 9:34960 (R;US)
Matrix-dominated time-dependent deformation and damage of graphite/epoxy composite experimental data under creep and recovery, 9:33722 (R;US)
Measurement of shock induced reaction in rocket propellants by nanosecond infrared radiometry and photography, 9:34164 (R;US)
Mechanical properties of multiwell MWX-1 sandstone and siltstone at high pressures, 9:32676 (R;US)
Mechanisms of electrical conductivity in olivine, 9:33756 (R;US)
Modelling the hydrofracture process as a coupled double free boundary problem, 9:33855 (R;US)
Neutron and gamma dose and spectra measurements on the Little Boy replica, 9:34174 (R;US)
Nova power systems: status and operating experience, 9:34959 (R;US)
Online directory of databases for material properties, 9:35008 (R;US)
Operating experience with the 50 MeV 10kA ATA power conditioning system, 9:33968 (R;US)
Operating system and memory switch for the S-1 computer, 9:34999 (R;US)
Optical loop framing, 9:34004 (R;US)
Overview of geochemical modeling needs for nuclear waste management, 9:32742 (R;US)
Probing a plasma with high-energy beams of atoms using threshold detectors, 9:34830 (TG;US)
Protective plasma envelope, 9:34831 (TG;US)
Review of ultraviolet damage threshold measurements at Lawrence Livermore National Laboratory, 9:33763 (R;US)
Risk of dust-induced lung disease in oil shale workers, 9:32692 (R;US)

S-1 Mark IIA supercomputer, 9:35003 (R;US)
Seismic design of low-level nuclear waste repositories and toxic waste management facilities, 9:32762 (R;US)
TAURUS: an interactive post-processor for the analysis codes NIKE3D, DYNA3D, TACO3D, and GEMINI. Revision 1, 9:35001 (R;US)
Transverse ion losses through the outer plugs of an ambipolar trap under conditions of few collisions, 9:34832 (TG;US)
TV-acquired optical diagnostics systems on ATA, 9:34005 (R;US)
Unsteady heat transfer during laminar flame quenching, 9:33909 (R;US)
Viscoelastic and aging characteristics of polymers, 9:33733 (R;US)
Wafer-scale laser pantography. VI. Direct-write interconnection of VLSI gate arrays, 9:33924 (R;US)

Lea (N.D.) and Associates, Inc., Washington, DC (USA)
Assessment of the San Diego light rail system. Technical report (final), 9:33548 (R;US)

Lehigh Univ., Bethlehem, PA (USA). Center for Surface and Coatings Research
Corrosion control through a better understanding of the metallic substrate/organic coating/interface. Annual report No. 4, 1 Sep 82-30 Sep 83, 9:33620 (R;US)

Lewin and Associates, Inc., Washington, DC (USA)
Analysis of the potential for gas demand strategies. Report on evaluation of existing gas models and plan for creating a model appropriate to the needs of DOE/RA, 9:33426 (R;US)

Little (Arthur D.), Inc., Cambridge, MA (USA)
Evaluation of the disposal of flue gas cleaning wastes in coal mines and at sea: refined assessment. Final report Jun 75-Sep 83, 9:34236 (R;US)

Lockheed Palo Alto Research Labs., CA (USA). Applied Physics Lab.
Response of multilayer films and mirrors to intense x-irradiation, 9:34143 (R;US)

Los Alamos National Lab., NM (USA)
Anomalous surface impedance in reentrant ferromagnetic superconductors, 9:33710 (R;US)
Antiproton-nucleus interaction, 9:34740 (R;US)
Beneficial uses of ^{241}Am, 9:32775 (R;US)
Center for computer security: Computer Security Group conference. Summary, 9:34987 (R;US)
Center for Computer Security newsletter. Volume 2, Number 3, 9:34988 (R;US)
Center for Computer Security newsletter. Volume 3, Number 3, 9:34989 (R;US)
Coincidence measurements of FFTF breeder fuel subassemblies, 9:32768 (R;US)
Compilation of interim technical research memoranda. Volume I, 9:34820 (R;US)
Compton scattering of photons from electrons in thermal (Maxwellian) motion: electron heating, 9:34819 (R;US)
Copper smelters and atmospheric visibility in national parks and wilderness areas in the southwest, 9:34229 (R;US)
Double beta decay: theory, 9:34739 (R;US)
Downhole seismic monitoring of an acid treatment in the Beowawe Geothermal Field, 9:32978 (R;US)
Dynamical scaling in ^3He-^4He liquid mixtures, 9:34581 (R;US)
Dynamics of normal-zone propagation in Ta at small currents, 9:33677 (R;US)
Elastic and inelastic scattering of polarized protons from carbon-12 at 400, 600, and 700 MeV, 9:34665 (R;US)
Electrical resistivity of rare earth iron phosphides, 9:33758 (R;US)
Electronics manual for the FAST facility delayed neutron interrogator assay system, 9:32767 (R;US)
Engineering sciences research highlights. Fiscal year 1983, 9:34990 (R;US)
Environmental surveillance at Los Alamos during 1983, 9:34312 (R;US)
Estimating the risks of cancer mortality and genetic defects resulting from exposures to low levels of ionizing radiation, 9:34458 (R;US)
Estimation methods for special nuclear materials holdup, 9:32769 (R;US)
Examination of fast reactor fuels and FBR analytical quality-assurance standards and methods. Progress report, October 1-December 31, 1983, 9:33112 (R;US)
Fast numerical methods in 3-D, 9:33297 (R;US)
General-Purpose Heat Source Development: safety test program. Postimpact evaluation, Design Iteration Test 1, 9:32774 (R;US)
Geometry, contact, surface, and optical developments for photoconductive power switches, 9:33919 (R;US)
Heat pipe development status, 9:33907 (R;US)
High-efficiency particulate air filter behavior at high-speed flows, 9:34501 (R;US)
High-order sparse factorization methods for elliptic boundary value problems, 9:34784 (R;US)
Inelastic neutron scattering study of β-PbO_2: recent results, 9:33379 (R;US)
Initial slope of the upper critical field of the heavy fermion superconductor UPt_3, 9:33676 (R;US)
Investigation of an empirical probability measure based test for multivariate normality, 9:34983 (R;US)
Investigation of single-substance horizontal two-phase flow, 9:33906 (R;US)
K^+-nucleus interaction, 9:34657 (R;US)
Lambda N-ΣN coupling in S-shell Lambda-hypernuclei, 9:34738 (R;US)
LIDAR measurements in the vicinity of the Kingston Steam Plant, Tennessee, during March 18-22, 1981, 9:34228 (R;US)
Linear algebra programs for use on a vector computer with a secondary solid state storage device, 9:34986 (R;US)
Linear characteristic-nodal transport method for the two-dimensional (x,y)-geometry multigroup discrete ordinates equations over an arbitrary triangle mesh, 9:34748 (R;US)
Logging technology for high-temperature geothermal boreholes, 9:32962 (R;US)
Los Alamos Science, Number 10, Spring 1984, 9:34556 (R;US)
Low power unattended defense reactor, 9:33114 (R;US)
Low temperature properties of $CeO_{2-\delta}$, 9:33679 (R;US)
Low-temperature geothermal potential of the Ojo Caliente warm springs area, northern New Mexico, 9:32961 (R;US)
Magnetic susceptibility, electrical resistivity, and specific heat of single crystal $LaFe_4P_{12}$, 9:33757 (R;US)
Magnetic switches and circuits. Rev. 2, 9:33918 (R;US)
Materials Science and Technology (MST) Division, Nuclear Materials Process Technology Group (MST-12), chemical process research and development report, 9:33805 (R;US)
Maximum supercoolign in liquid ^3He-^4He mixtures near the tricritical point, 9:34580 (R;US)
MECA: a supercomputer for Monte Carlo, 9:34982 (R;US)
Mechanisms of electrical conductivity in olivine, 9:33756 (R;US)
Metastable complexes of helium-hydrogen isotopes, 9:34565 (R;US)
Model for antibody mediated cell aggregation: rosette formation, 9:34385 (R;US)
Model for GCR-particle fluxes in stony meteorites and production rates of cosmogenic nuclides, 9:34549 (R;US)
Monte Carlo estimation under different distributions using the same simulation, 9:34985 (R;US)
Need for an intense polarized source at LAMPF. Report on a workshop held at Los Alamos, November 9, 1983, 9:34094 (R;US)
Numerical creep analysis, 9:34519 (R;US)
Numerical fluid dynamics calculations of nonequilibrium steam-water flows with entrained droplets, 9:33296 (R;US)
Numerical methods for tracking interfaces, 9:34981 (R;US)
Onset of oscillations in symmetric convective states in a superfluid ^3He-^4He mixture, 9:34583 (R;US)
Optical detection of alkali compounds, 9:32531 (R;US)
Optical effects of the gravitationally induced concentration gradient in tricritical ^3He-^4He, 9:34582 (R;US)
Period-doubling two-torus state in a convecting ^3He-superfluid ^4He solution, 9:34584 (R;US)
Preliminary model for heat transport within a tongue-and-reservoir liquid diode for passive solar heating, 9:32939 (R;US)
Pressure-dependent resistive behavior of $YbBe_{13}$, 9:33675 (R;US)
Quark tunneling in hypernuclei, 9:34741 (R;US)
Rapid microbial identification by circular intensity differential scattering, 9:34431 (R;US)
Refueling considerations for liquid-hydrogen fueled vehicles, 9:33546 (R;US)

Energy Division annual progress report for period ending September 30, 1983, 9:33429 (R;US)
Evaluation of isotope dilution mass spectrometry for bioassay measurement of uranium, plutonium, and thorium in urine, 9:34460 (R;US)
Evaluation of the System 2000 data base management system for use in major item system mapping, 9:35007 (R;US)
Feasible modifications for the low-level waste treatment plant at Oak Ridge National Laboratory, 9:32733 (R;US)
Fuel system and structural alloy considerations for space nuclear reactor systems, 9:33113 (R;US)
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
High Flux Isotope Reactor. Quarterly report, January-March 1984, 9:33246 (R;US)
Hydrogeologic assessment of zone-of-saturation landfill design, 9:33935 (R;US)
Initial feasibility report on decentralized small cogeneration for Navy shore bases. Final report 1 Oct 82-30 Sep 83, 9:33575 (R;US)
INTERMD: a computer program to predict intermodulation product generation on two-way FM radio frequencies, 9:33920 (R;US)
Invention of a tunable damper for use with an acoustic waveguide in hostile environments, 9:34152 (R;US)
Inventory of numeric data for carbon dioxide research. Revision 1, 9:34234 (R;US)
Investigation of the concentration, distribution, and inventory of radionuclides in the sediment of Process Waste System Basin 3524, 9:34363 (R;US)
Lead in vegetation, forest floor material, and soils of the spruce-fir zone, Great Smoky Mountains National Park, 9:34335 (R;US)
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)
Neutronic evaluation of fissile fuel breeding blankets for the fission-suppressed Tandem-Mirror Hybrid Reactor, 9:34950 (R;US)
Nonlinear analysis of Stirling engine thermodynamics, 9:33596 (R;US)
Nutritional requirements and contaminant analysis of laboratory animal feeds, 9:34481 (R;US)
Oak Ridge Research Reactor quarterly report, October, November, and December 1983, 9:33235 (R;US)
OCA-P, a deterministic and probabilistic fracture-mechanics code for application to pressure vessels, 9:33326 (R;US)
Operating policy of DOE filter test program, 9:34502 (R;US)
ORACT: a 174-neutron-group activation cross-section library for fusion and fission reactor design studies, 9:34951 (R;US)
ORELA flight path 1: determinations of its effective length vs energy, experimental energies, and energy resolution function and their uncertainties, 9:34003 (R;US)
ORNL ALPHA MIS user's manual, 9:35006 (R;US)
Performance test results of a lithium bromide-water absorption heat pump that uses low-temperature [60°C (140°F)] waste heat. Final report, 9:33554 (R;US)
Preanalysis calculations of the US/UK joint experiment in the Dounreay prototype fast reactor, 9:33234 (R;US)
Preliminary study of possible ORELA replacement options, 9:33966 (R;US)
PRESTO-PREP: a data preprocessor for the PRESTO-II code, 9:34461 (R;US)
Project plan to enhance the accessibility and availability of the LIF for the LCA (PAAL), 9:35005 (R;US)
Propagation and absorption of electromagnetic waves in fully relativistic plasmas, 9:34822 (R;US)
Protective actions as a factor in power reactor siting, 9:33455 (R;US)
Quality assurance testing of HEPA filters and respirator canisters, 9:34503 (R;US)

Radiative decay of plasma oscillations on nonplanar metal surfaces, 9:34571 (R;US)
Ranking scheme for making decisions on the relative training importance of potential nuclear power plant malfunctions, 9:33063 (R;US)
Regarding overrelaxation for accelerating an iteration process, 9:33090 (R;US)
Reliability of initial-value MHD calculations of tokamak disruptions, 9:34823 (R;US)
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
Sixth annual progress report on special purpose materials for magnetically confined fusion reactors, 9:34842 (R;US)
Sodium carbonate, low-chloride fire extinguishing agent, 9:34505 (R;US)
Solvent cleanup using base-treated silica gel solid adsorbent, 9:32708 (R;US)
Summary of multiterminal high-voltage direct current transmission technology, 9:33051 (R;US)
Summary report on responses to a questionnaire on DOE's materials research facilities, 9:34972 (R;US)
Surface Gasification Materials Program. Semiannual progress report for the period ending March 31, 1984, 9:32535 (R;US)
Synergistic effects in plasma surface interactions, 9:34841 (R;US)
Systems guide to MCNP (Monte Carlo Neutron and Photon Transport Code), 9:34749 (R;US)
Thermal conductivities of Wilsonville solvent and Wilsonville solvent/Illinois No. 6 coal slurry, 9:32543 (R;US)
Transportation Energy Data Book: Edition 7, 9:33487 (R;US)
Urban applications of HVDC power transmission, 9:33044 (R;US)
User's manual for TOX-SCREEN: a multimedia screening-level program for assessing the potential fate of chemicals released to the environment, 9:34179 (R;US)

Oak Ridge Y-12 Plant, TN (USA)
Design and use of a constant geometry system to measure activated indium foil in personnel security badges, 9:34137 (R;US)
Environmental monitoring report, United States Department of Energy, Oak Ridge Facilities, calendar year 1983, 9:34318 (R;US)

Oberbergamt Clausthal-Zellerfeld (Germany, F.R.)
Annual report of the Clausthal-Zellerfeld Board of Mines 1982, 9:33936 (R;DE;In German)

Oesterreichische Gesellschaft fuer Innere Medizin, Vienna
Joint annual meeting of the Austrian Society for Internal Medicine, the Austrian Rheumatologic League and the Austrian Society for Nuclear Medicine, 9:34415 (R;AU;In German)

Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H., Vienna
How to increase the efficiency of thermal power stations, 9:33041 (R;AT;In German)

Office of Technology Assessment (U.S. Congress), Washington, DC
Nuclear power in an age of uncertainty, 9:33456 (R;US)

Ohio State Univ., Columbus (USA)
Full scale field demonstration of unheated anaerobic contact stabilization, 9:32782 (R;US)

Ohio State Univ. Research Foundation, Columbus (USA)
Chemical carcinogen-induced changes in TRNA metabolism in human cells. Interim technical report 1 Oct 82-30 Sep 83, 9:34469 (R;US)

Oregon State Univ., Corvallis (USA). Dept. of Mechanical Engineering
Analysis of wind turbines in yaw, 9:33011 (R;US)
Calculation of the pressure distribution on a pitching airfoil with application to the Darrieus Rotor, 9:33013 (R;US)

Oregon State Univ., Corvallis (USA). Dept. of Physics
Theoretical studies of multistep processes and isospin effects in nuclear scattering. Progress report, May 1, 1983-April 30, 1984, 9:34722 (R;US)

Oregon Univ., Eugene (USA)
Parton description of the nucleus fragmentation region in heavy-ion collisions, 9:34724 (R;US)
Quadratic constraints in amplitude analysis, 9:34645 (R;US)

Oregon Univ., Eugene (USA). Inst. of Theoretical Science
Relation of parton distribution functions in Drell-Yan process to deeply inelastic scattering, 9:34610 (R;US)

P

Pacific Northwest Lab., Richland, WA (USA)
Aircraft, ships, spacecraft, nuclear plants and quality, 9:33853 (R;US)
Basic geometric algorithms for use with graphic input, 9:34994 (R;US)
Basic principles and recent observations of rotationally sampled wind, 9:33008 (R;US)
Buildings innovative concepts, 9:33540 (R;US)
Comparison of radiation protection programs at US power reactors, uranium mills, and low-level waste disposal sites, 9:32761 (R;US)
Development of an advanced water-gas shift conversion system, 9:32536 (R;US)
Development of an advanced water-gas shift conversion system. Quarterly progress report, February 1-April 30, 1984, 9:32527 (R;US)
Evaluation and acceptance of welded and repair-welded stainless steel for LWR service. Annual report for 1983, 9:33065 (R;US)
Features of a radioactive liquid-fed ceramic melter system, 9:32737 (R;US)
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
Graphical interaction tools for multiple 2- and 3-dimensional scatterplots, 9:34785 (R;US)
Hanford Dose Overview Program: standardized methods and data for Hanford environmental dose calculations. Rev. 1, 9:34317 (R;US)
Health effects estimation for contaminated properties, 9:34462 (R;US)
Large HAWT wake measurement and analysis, 9:33009 (R;US)
Liquid fuels from biomass: an overview of research activities funded by DOE's thermochemical conversion program, 9:32789 (R;US)
Mathematical simulation of sediment and radionuclide transport in coastal waters. Volume 1. Testing of the sediment/radionuclide transport model, FETRA, 9:34361 (R;US)
Mathematical simulation of sediment and radionuclide transport in coastal waters. Volume 2. User's manual and computer program listing for FETRA, 9:34362 (R;US)
Modeling wet-removal processes in the atmosphere, 9:34244 (R;US)
PRECP: PRocessing of Emissions by Clouds and Precipitation. The Department of Energy's program on the nonlinearity of acid precipitation processes. Summary of FY 1984-1985 Operational Plan, 9:34222 (R;US)
Progress in studies on catalyzed gasification of biomass, 9:32797 (R;US)
Project summaries: sixth DOE electrochemical contractor's review. Supplement, 9:33372 (R;US)
Results of testing and evaluating a health physics instrument performance standard, 9:34136 (R;US)
Seasonal thermal energy storage, 9:33366 (R;US)
Separation of gas mixtures with coordination complexes, 9:33809 (R;US)
Shoot production and mineral nutrient assimilation in cheatgrass communities on the Arid Lands Ecology Site, 9:34334 (R;US)
Socioeconomic consequences of nuclear reactor accidents, 9:33324 (R;US)
Some statistical and sampling needs for detecting spills or migration at commercial low-level radioactive waste disposal sites, 9:32759 (R;US)
TACI: a code for interactive analysis of neutron data produced by a tissue equivalent proportional counter, 9:34135 (R;US)
Underground Energy Storage Program. 1983 annual summary, 9:33367 (R;US)
Uranium mill tailings remedial action technology, 9:32736 (R;US)
Wet storage integrity update, 9:32711 (R;US)

Pacific Sierra Research Corp., Santa Monica, CA (USA)
Initial human response to nuclear radiation. Technical report, 9:34442 (R;US)

Paducah Gaseous Diffusion Plant, KY (USA)
Environmental monitoring report: United States Department of Energy, Paducah Gaseous Diffusion Plant, calendar year 1983, 9:34311 (R;US)

Paris-7 Univ., 75 (France)
Contribution to the study of heavy-ion induced quasi-elastic processes in the 2s-1d shell, 9:34667 (R;FR;In French)
Contribution to the study of velocity fields of chromosphere and solar transition zone, 9:34526 (R;FR;In French)
Experimental and theoretical study of a two-phase flow in vertical and near-horizontal pipes. Application to petroleum engineering, 9:32667 (R;FR;In French)
First results obtained from the Cello liquid argon end cap calorimeters, 9:34116 (R;FR;In French)
Ground state of charged Bose and Fermi fluids in strong coupling, 9:34780 (R;FR;In French)
Separation of a multicomponent mixture by gaseous diffusion: modelization of the enrichment in a capillary; application to a pilot cascade, 9:32697 (R;FR;In French)
Study of neutron-deficient Sn isotopes, 9:34688 (R;FR;In French)
Paris-11 Univ., 91 - Orsay (France)
Electron density interferometry measurement in laser-matter interaction, 9:34844 (R;FR;In French)
Study of elastic and inelastic scattering of ^{12}C on ^{40}Ca and ^{48}Ca, 9:34672 (R;FR;In French)
Study of hyperfine interactions in neptunium chalcogenides: NpS_3, $NpSe_3$, Np_2Se_5, Np_3S_5 and Np_3Se_5 by neptunium 237 Moessbauer resonance, 9:33833 (R;FR;In French)
Study of ^{231}Th fission barrier by (d,pf) reaction. Observation of a third minimum in the fission barrier associated to the fissioning nucleus configurations, 9:34709 (R;FR;In French)
Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire
Electron-positron scattering and gauge theories, 9:34620 (R;FR)
Vertex detector of the UA2 experiment (a low mass self sustaining system of cylindrical multiwire proportional chambers), 9:34133 (R;FR)
Pennsylvania State Univ., University Park (USA)
Data base for the analysis of compositional characteristics of coal seams and macerals. Final report, Part 9. Interaction of gases, vapors and liquids with coals and macerals at ambient temperatures: their use to characterize porosity, 9:32545 (R;US)
Laser micropyrolysis of coal macerals. Annual report Nov 82-Oct 83, 9:33807 (R;US)
Pennsylvania Univ., Philadelphia (USA). Dept. of Physics
Experimental studies of the geometric and electronic structure of chemisorption bonding. Annual report Jan-Dec 83, 9:33818 (R;US)
Forward-backward asymmetries in W and Z decays, 9:34628 (R;US)
Pernambuco Univ., Recife (Brazil). Dept. de Energia Nuclear
Determination of boron in water solution by an indirect neutron activation technique from a $^{241}Am/Be$ source, 9:33776 (R;BR;In Portuguese)
Physical Sciences, Inc., Andover, MA (USA)
Molten carbonate fuel cell performance model update. Quarterly report, October 1983-December 1983, 9:33494 (R;US)
Pickard-Lowe and Garrick, Inc., Irvine, CA (USA)
Seabrook Station probabilistic safety assessment. Summary report, 9:33330 (R;US)
Seabrook Station probabilistic safety assessment. Main report, volumes 1-6 and summary report, 9:33331 (R;US)
Pittsburgh Univ., PA (USA). Dept. of Chemical and Petroleum Engineering
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
Plymouth Composite Materials Research Group (England)
Fibre reinforced plastics at cryogenic temperatures: a listing containing 315 references, 9:33721 (R;GB)
Politecnico di Milano (Italy). Dipartimento di Chimica Industriale e Ingegneria Chimica
H^+ and OH^- electrolytes for the 300° to 600°C range, 9:32777 (R;US)
Polysystems Analysis Corp., Huntington, NY (USA)
Industry functional modeling, 9:33427 (R;US)
Polytechnic of the South Bank, London (UK). Inst. of Environmental Science and Technology
Dynamic analysis of an experimental rig incorporating a domestic gas fired boiler. Technical memo, 9:33526 (R;GB)
Dynamic behaviour of domestic boilers and their domestic hot water and central heating systems. Technical memo, 9:33528 (R;GB)
Investigation into the control of a domestic gas fired boiler using mathematical models. Technical memo, 9:33525 (R;IE)
Pontificia Univ. Catolica do Rio de Janeiro (Brazil). Dept. de Engenharia Mecanica
Stress analysis for shells with double curvature by finite element method, 9:33851 (R;BR;In Portuguese)
Prakla-Seismos G.m.b.H., Hannover (Germany, F.R.)
Direct detection of hydrocarbons with seismic methods applied to land-data, 9:32649 (R;DE;In German)
Pratt and Whitney Canada, Mississauga, Ontario
Alternate fuels combustion research. Interim report 19 May 80-20 Feb 83 on phase 2, 9:32688 (R;CA)
Princeton Univ., NJ (USA)
Comprehensive chemical kinetic reaction mechanism for the oxidation of n-butane, 9:33849 (R;US)
Princeton Univ., NJ (USA). Plasma Physics Lab.
Application of toroidal multipoles to facilitate tokamak reactor studies, 9:34952 (R;US)
Conductivity of rf-heated plasma, 9:34827 (R;US)
High-n ideal and resistive shear Alfven waves in tokamaks, 9:34826 (R;US)
New fluctuation phenomena in the H-mode regime of PDX tokamak plasmas, 9:34828 (R;US)
Recent results from TFTR, 9:34825 (R;US)
Purdue Univ., Lafayette, IN (USA)
Emergency state control methods. Executive Summary, 9:33024 (R;US)
Purdue Univ., Lafayette, IN (USA). Joint Highway Research Project
Energy conservation and cost saving related to highway routine maintenance: data collection and analysis of fuel consumption. Report for Jan-Dec 82, 9:33547 (R;US)
Purdue Univ., Lafayette, IN (USA). School of Civil Engineering
Beneficial use of sludge in building components, 9:33762 (R;US)
Purdue Univ., Lafayette, IN (USA). School of Electrical Engineering
Dynamic simulation of dispersed grid-connected photovoltaic power systems: Task 1 - modelling and control, 9:32907 (R;US)
Purdue Univ., Lafayette, IN (USA). School of Materials Engineering
Multicomponent diffusion under general chemical potential gradients. Final report, July 1, 1981-June 30, 1984, 9:34764 (R;US)

R

Radian Corp., Austin, TX (USA)
Gasifier wastewater treatment: Phase I cooling tower assessment, 9:32554 (R;US)
Radian solar heating and cooling demonstration project. Final report, 9:32937 (R;US)
Radiation Research Society of Israel
Joint annual meeting 1982. Transactions, Volume 10, 9:34851 (R;IL)
Ransom and Casazza, Inc., Washington, DC (USA)
Electric utility coordination in the VACAR region: potential for savings 1983-2000, 9:33476 (R;US)
Raytheon Co., Wayland, MA (USA)
Solid state SPS microwave generation and transmission study. Volume I. Phase II final report, 9:32903 (R;US)
Regional Planning Council, Baltimore, MD (USA)
Scenario planning: energy considerations in the long range urban transportation planning process, 9:33545 (R;US)
Research Triangle Inst., Research Triangle Park, NC (USA)
Characterization of emissions from a fluidized-bed wood chip home heating furnace. Final report Apr 82-May 83, 9:33539 (R;US)
Performance test results and comparative data for designated equilvalent methods for sulfur dioxide, 9:34238 (R;US)
RE/SPEC, Inc., Rapid City, SD (USA)
Unit evaluation at Yucca Mountain, Nevada Test Site: summary report and recommendation, 9:32740 (R;US)
Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (USA)
Operation Phalanx onsite radiological safety report, October 1982-September 1983, 9:34169 (R;US)
Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (USA). Occupational Safety and Fire Protection Services
Cross-index to DOE-prescribed occupational safety codes and standards, 9:34499 (R;US)

Rhode Island Univ., Kingston (USA)
Gordon Conference on Nuclear Research, 9:34648 (R;US)
Rice Univ., Houston, TX (USA)
Supersonic metal cluster beams. Technical progress report, March 16, 1983-March 15, 1984, 9:33632 (R;US)
Rijksverdedigingsorganisatie TNO, Rijswijk (Netherlands). Medisch Biologisch Lab. TNO
Radioprotective capacity of phenylalanyl-cysteamine derivatives on cells in vitro, 9:34427 (R;NL;In Dutch)
Rio Grande do Sul Univ., Porto Alegre (Brazil). Inst. de Fisica
Progress report 1981-1982 - Instituto de Fisica - Universidada Federal do Rio Grande do Sul, 9:34521 (R;BR)

Technical assessment of three thermal-hydraulic techniques for high heat flux fusion applications. Chapter IV, 9:34955 (R;US)
Testing of modular industrial solar retrofit industrial process steam systems, 9:32944 (R;US)
Testing of the CONTAIN code, 9:33322 (R;US)
Thermal conductivity and interface resistance of particle-filled silicone resin, 9:32862 (R;US)
Thermal limitations on the use of PDC bits in geothermal drilling, 9:32985 (R;US)
Thermal modeling of line focus photovoltaic systems, 9:32914 (R;US)
Unit evaluation at Yucca Mountain, Nevada Test Site: summary report and recommendation, 9:32740 (R;US)
Use of a tandem accelerator for light element analysis, 9:34573 (R;US)
Verification and field comparison of the Sandia Waste-Isolation Flow and Transport Model (SWIFT), 9:32756 (R;US)
Verification of the network flow and transport/distributed velocity (NWFT/DVM) computer code, 9:32757 (R;US)

Sandia National Labs., Livermore, CA (USA)
Analysis of combustion in closed or vented rooms and vessels, 9:33332 (R;US)
Evaluation of the effects of current impulses in a side bonding resistance forge weld, 9:33681 (R;US)
Experimental and modeling study of engine knock, 9:33543 (R;US)
Simultaneous in situ measurement of the size, temperature and velocity of particles in a combustion environment, 9:32633 (R;US)
Two-dimensional measurements of the [OH] in a constant volume combustion chamber, 9:33848 (R;US)

Santa Catarina Univ., Florianopolis (Brazil). Programa de Posgraduacao em Engenharia Mecanica
Numerical calculation of the main variables of the laminar flow around a circumferential square obstacle at the wall of a circular pipe, 9:33886 (R;BR;In Portuguese)

Sargent and Lundy, Chicago, IL (USA)
Postaccident liquid sampling systems. Final report, 9:33264 (R;US)

Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.
Finite poloidal gyroradii effects on tokamak transport, 9:34829 (R;US)

Science Applications, Inc., La Jolla, CA (USA)
Airborne emission control technology for the elemental phosphorus industry. Final report, 9:34314 (R;US)

Science Applications, Inc., McLean, VA (USA)
Intermediate Photovoltaic System Application Experiment. Oklahoma Center for Science and Arts. Phase II. Final report, 9:32902 (R;US)

Scottish Universities Research and Reactor Centre, Glasgow (UK)
Measurement of ^{15}N in biological samples with particular reference to whole body protein turnover studies, 9:34394 (R;GB)

S-Cubed, Albuquerque, NM (USA)
Calculations to assist in a new Hiroshima yield estimate. Final report, August 19-December 31, 1983, 9:34173 (R;US)

Seattle Univ., WA (USA). Dept. of Physics
Identification of γ-ray lines observed from SS433, 9:34524 (R;US)

Service Central de Protection contre les Rayonnements Ionisants, 78 - Le Vesinet (France)
1. Quarterly progress report 1983, 9:34365 (R;FR;In French)
2. Quarterly progress report, 1983, 9:34366 (R;FR;In French)
4. Quarterly progress report, 1982, 9:34367 (R;FR;In French)

Sheinbaum (I.) Co., Inc., Monrovia, CA (USA)
Direct chlorination process for geothermal power plant off-gas - hydrogen sulfide abatement, 9:32965 (R;US)

Sherbrooke Univ., Quebec (Canada). Dept. of Chemical Engineering
Dynamics of heat, mass and momentum transfer in an inductively coupled plasma. Final report, 9:33774 (R;CA)

Siegen Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 13 - Elektrotechnik 1
Computer-aided radiometric densitometry, 9:34403 (R;DE;In German)

SINTEF, Trondheim (Norway)
Effect of stimulation by surfactants on the pressure gradient around an injection well, 9:32657 (R;NO)
Equipment for incinerating oily mass. PFO-project No. 2302, 9:32666 (R;NO;In Norwegian)
Final administrative report, the BIOSIS-project/. Canada 1980-1982, 9:34432 (R;NO;In Norwegian,English)
Fractional distillation of North Sea oil. Final report for NTNF-KS, 9:32673 (R;NO;In Norwegian)
Interaction between airguns, 9:34514 (R;NO)
Internal corrosion offshore pipelines. Hydrogen induced cracking, 9:32669 (R;NO)
Seismic migration using the WKB approximation, 9:34513 (R;NO)
Studies of flames from various accidental release geometries. Flame size and radiation measurements, 9:32659 (R;NO)

SKF Industries, Inc., King of Prussia, PA (USA)
Mechanical interactions of rough surfaces. Progress report, April 1-June 30, 1984, 9:33850 (R;US)

Solar Energy Research Inst., Golden, CO (USA)
CdS/$CuInSe_2$ heterojunction cell research, 9:32866 (R;US)
Direct-contact condensers for solar pond power production, 9:32915 (R;US)
Fuel from microalgae lipid products, 9:32790 (R;US)
Photovoltaic systems for residential applications: a survey of recent literature, 9:32911 (R;US)
Wind energy systems for electric utilities: a synthesis of value studies, 9:32993 (R;US)

Solarex Corp., Rockville, MD (USA)
Process research of polycrystalline silicon material (PROPSM). Quarterly report No. 2, January 1, 1984-March 31, 1984, 9:32850 (R;US)

Solar Greenhouse Association, Webster Groves, MO (USA)
Code complying solar greenhouse designs for Region VII environments. Final report, 9:32938 (R;US)

Solar Option One Co., Lyndonville, VT (USA)
Technical evaluation of a solar heating system having conventional hydronic solar collectors and a radiant panel slab. Final report, 9:32933 (R;US)

Southern Illinois Univ., Carbondale (USA)
Coupling of Rayleigh-like waves with zero sound modes in normal ^3He, 9:34577 (R;US)
Metallic glasses as new catalyst systems for energy conversion. Annual progress report and final technical report, 9:33633 (R;US)
Photoacoustic microscopy of coal macerals. Annual report Jan-Dec 83, 9:32550 (R;US)

Southwest Research Inst., San Antonio, TX (USA)
Design and fabrication of steam turbine disc NDE test-bed facilities. Final report, 9:33026 (R;US)
Do-It-Yourself fallout/blast shelter evaluation, 9:35012 (R;US)

Southwest Research Inst., San Antonio, TX (USA). Army Fuels and Lubricants Research Lab.
After-test engine inspection of U.S. Army administrative and light-tactical vehicles operated on gasohol and unleaded gasoline. Interim report Oct 81-Feb 83, 9:33611 (R;US)

Spectrolab, Inc., Sylmar, CA (USA)
Development of metallization process FSA Project, cell and module formation research area. Quarterly technical progress report for the period ending September 30, 1983, 9:32848 (R;US)

Spire Corp., Bedford, MA (USA)
Development and fabrication of a solar cell junction processing system. Draft final report, 9:32847 (R;US)
Evaluation of the ion implantation process for production of solar cells from silicon sheet materials. Final report, 15 December 1982-1 December 1983, 9:32849 (R;US)

SRI International, Menlo Park, CA (USA)
Comparative toxicity of SRC-I wastewater to aquatic organisms. Final technical report, 9:32508 (R;US)
Elementary processes in the catalytic combustion of methane (mechanism, intermediates and controlling reactions). Annual report Oct 82-Sep 83, 9:33847 (R;US)
Mechanism of catalytic gasification of coal char. Quarterly technical progress report No. 13, 1 January-31 March 1984, 9:32455 (R;US)
Staatliches Forschungsinstitut fuer Geochemie, Bamberg (Germany, F.R.)
Determination of phlegmatizer concentration profiles in nitrocellose propellant grains by means of radioisotope tracer technique, 9:34159 (R;DE;In German)
Stanford Linear Accelerator Center, CA (USA)
Coating of the SLAC klystron windows, 9:34096 (R;US)
Future of high energy physics, 9:33941 (R;US)
Implicit function method for the Liouville equation, 9:34787 (R;US)
SLC intergirder quad vibrations, 9:34097 (R;US)
Stanford Linear Accelerator Center monthly report for May 1984, 9:34017 (R;US)
Trends in accelerator control systems, 9:34098 (R;US)
Stanford Univ., CA (USA). Dept. of Computer Science
S-1 software development and maintenance. Final report, October 1, 1981-September 30, 1982, 9:35000 (R;US)
Stanford Univ., CA (USA). Systems Optimization Lab.
Duality in inexact fractional programming with set-inclusive constraints, 9:34997 (R;US)
Will planned electric capacity limit economic growth, 9:33485 (R;US)
Statens Byggeforskningsinstitut, Hoersholm (Denmark)
Collective heat inspection of groups of owner-occupied houses, 9:33541 (R;DK;In Danish)
Laboratory testing of joints between windows and highly insulated cavity walls. Investigations of tightness against rain and wind, 9:33542 (R;DK;In Danish)
Statens Provningsanstalt, Boraes (Sweden)
Solar heating plant for hot running water, 9:32941 (R;SE;In Swedish)
Statens Raad foer Byggnadsforskning, Stockholm (Sweden)
Solar collectors and heat store in a system using air as the energy carrier, 9:32932 (R;SE;In Swedish)
State Univ. of New York, Albany (USA). Dept. of Physics
Particle scattering studies on foreign ions in superionic conductors. Technical report, 9:33736 (R;US)
State Univ. of New York, Stony Brook (USA). Health Science Center
Large animal model for health hazard assessment of environmental pollutants, 9:34470 (R;US)
State Univ. of New York, Stony Brook (USA). Inst. for Theoretical Physics
Relation of parton distribution functions in Drell-Yan process to deeply inelastic scattering, 9:34610 (R;US)
Sterling Systems, Inc., Rockville, MD (USA)
US Department of Energy (DOE) Guidelines for the development of metrication program plans, 9:34975 (R;US)
Stevens Inst. of Tech., Hoboken, NJ (USA). Dept. of Materials and Metallurgical Engineering
Studies of magnetism and exchange scattering in solids using synchrotron radiation and spin polarized photoemission. Final technical report, June 1, 1981-May 31, 1984, 9:33739 (R;US)
Stichting Energieonderzoek Centrum Nederland, Petten
Assembly and test of the SULTAN facility, 9:33860 (R;NL)
Combustion properties of oxidized and weathered coals in a fluidized bed, 9:32548 (R;NL)
Comparison of the calculations of the computer program WEPP with actual measurements of the 25 m HAT and Polenko WPS-16-A60, 9:32998 (R;NL;In Dutch)
Fast reactor programme. Annual progress report 1981, 9:33225 (R;NL)
Fossil fuel fired closed cycle MHD power generating experiments, 9:33490 (R;NL)
On the systematic errors in the measurement of the aerodynamic performance of a WECS by the method of bins, 9:32999 (R;NL)
Trace elements in imported coal, 9:32547 (R;NL;In Dutch)
Stichting Energieonderzoek Centrum Nederland, Petten. Energie Studie Centrum
Calculations with the energy model SELPE: investments in four energy scenarios, 9:33428 (R;NL;In Dutch)
IEA R and D program for Wind Energy Conversion Systems. Paper presented at the National Wind Energy Conference 1983, 9:32990 (R;NL;In Dutch)
Improvement of the energy efficiency: opportunities for industry, 9:33486 (R;NL;In Dutch)
Investment in energy conservation. A review of possibilities, 9:33507 (R;NL;In Dutch)
Stichting Energieonderzoek Centrum Nederland, The Hague
Annual report 1982, 9:33233 (R;NL;In Dutch)
Stone and Webster Engineering Corp., Boston, MA (USA)
Symposium on condenser macrofouling control technologies: the state of the art, 9:34354 (R;US)
Well completion report - J. Friemel No. 1 (PD-9) well, Palo Duro Basin, Texas: unanalyzed data, 9:32714 (R;US)
Stuttgart Univ. (Germany, F.R.). Inst. fuer Kernenergetik und Energiesysteme
Theoretical and experimental investigation of the thermal behaviour of a high-temperature latent heat storage system with sodium nitrate as heat storage medium, 9:33365 (R;DE;In German)
Stuttgart Univ. (Germany, F.R.). Inst. fuer Thermodynamik und Waermetechnik
Contribution to the optimum design of a solar heating system for a residential building, 9:32940 (R;DE;In German)
Suffolk County Community Coll., Selden, NY (USA)
Absolute calibration technique for spontaneous fission sources, 9:32764 (R;US)
Sunpower, Inc., Athens, OH (USA)
Gas-fired duplex free-piston Stirling refrigerator. Annual report Nov 82-Oct 83, 9:33533 (R;US)
Suoseura, Helsinki (Finland)
Peatlands as an energy source in Finland, 9:32640 (R;FI)
Svejsecentralen, Glostrup (Denmark)
Cr(VI) and other metallic mutagens in fly ash and welding fumes, 9:34246 (R;DK)
Systems Applications, Inc., San Rafael, CA (USA)
User's manual for the Plume Visibility Model (PLUVUE II). Final report 23 Feb-29 Aug 83, 9:34182 (R;US)
Systems Control Technology, Inc., Palo Alto, CA (USA)
Systems economics for industry functional modeling. Second annual technical report, 9:33433 (R;US)
Systems economics for industry functional modeling, 9:33434 (R;US)

T

Technion-Israel Inst. of Tech., Haifa. Dept. of Nuclear Engineering
Validation of resonance-shielding procedures for reactor cell analysis, 9:33120 (R;US)
Technische Hochschule Aachen (Germany, F.R.). Fakultaet fuer Bergbau und Huettenwesen
Investigations on crack formation in fatigue slip bands, 9:33652 (R;DE;In German)
Technische Hochschule Aachen (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet
Homogenous high pressure hydrogenation of carbon monoxide using cobalt, ruthenium and iridium catalyst, 9:32796 (R;DE;In German)
Technische Hochschule Aachen (Germany, F.R.). Medizinische Fakultaet
Metabolic alterations of the lungs of rats after intratracheal application of genuine pit-extracted fine dusts, 9:34480 (R;DE;In German)
Technische Hogeschool Delft (Netherlands). Afdeling der Werktuigbouwkunde
Heat recovery with a condensor and a direct contact heat exchanger, 9:33568 (R;NL;In Dutch)
Technische Hogeschool Delft (Netherlands). Afdeling Elektrotechniek
Argument principle in stability analysis: application to a single-mode laser with optical feedback, 9:33878 (R;US)
Technische Univ. Braunschweig (Germany, F.R.). Naturwissenschaftliche Fakultaet
Beta spectroscopy on neutron-rich nuclei of mass $93 <= A <= 100$, 9:34682 (R;DE;In German)

Technische Univ. Clausthal, Clausthal-Zellerfeld (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet
Investigations on kind and quantity of water contained in permian rock salt and its release and migration in the temperature field of deposited radioactive wastes, 9:32727 (R;DE;In German)

Technische Univ., Graz (Austria)
Boltzmann collision term and energy transfer in a stationary two-component plasma, 9:34805 (R;AT;In German)
Integration theory of the inhomogenous Fokker-Planck equation using certain orthogonal systems, 9:34806 (R;AT;In German)

Technische Univ., Graz (Austria). Inst. fuer Theoretische Physik und Reaktorphysik
Laser induced fluorescence measurements on atoms with low energies, 9:33665 (R;AT;In German)

Technische Univ. Muenchen, Freising (Germany, F.R.). Fakultaet fuer Landwirtschaft und Gartenbau
Radioisotope studies for quantitative measurement of manganese absorption, 9:34446 (R;DE;In German)

Technische Univ. Muenchen (Germany, F.R.). Fakultaet fuer Medizin
Axial CT of the brain compared with other clinical methods of examination in neuropaediatry, 9:34414 (R;DE;In German)

Technische Univ., Vienna (Austria)
Fast transport facility for activation analysis with high-energy neutrons, 9:33799 (R;AT;In German)
Labelled radioactive adenosine nucleotides for the determination of toxic action, 9:34477 (R;AT;In German)
Quantization of secondary ion mass spectrometry (SIMS) data using external and internal standards, 9:33800 (R;AT;In German)
Study of the ^{23}Na EFG (Electrostatic Field Gradient) tensor on single crystals of $Na_2S.9H_2O$ by wideline NMR, 9:33750 (R;AT;In German)

Technology Futures, Inc., Austin, TX (USA)
Principles for electric power policy: appendices, 9:33483 (R;US)

Tennessee Technological Univ., Cookeville (USA). Dept. of Chemistry
Cleavage of aromatic carbon-carbon bonds, 9:32450 (R;US)

Tennessee Univ., Knoxville (USA)
Current assessment of the potential of dielectric gas mixtures for industrial applications, 9:33045 (R;US)

Tennessee Univ., Knoxville (USA). Dept. of Chemical, Metallurgical and Polymer Engineering
Combined thermodynamic study of nickel-base alloys. Final report, 9:33631 (R;US)

Tetra Tech, Inc., Pasadena, CA (USA)
Development of an analytic model to determine pump performance under two-phase flow conditions. Final report, 9:33265 (R;US)

Texaco, Inc., Montebello, CA (USA). Montebello Research Lab.
Gasification of residual materials from coal liquefaction. Type III extended pilot plant evaluation of a pelletized and ground Kerr McGee mineral ash residue from SRC-I coal liquefaction process, 9:32444 (R;US)
Gasification of residual materials from coal liquefaction: Type II preliminary pilot plant evaluation of SRC-I extruded Kerr McGee mineral ash residue-water slurry, 9:32445 (R;US)

Texas A and M Univ., College Station (USA). Dept. of Geology
Effect of porosity and NaCl concentration on the osmotic efficiency of a sodium bentonite membrane, 9:34515 (R;US)

Texas A and M Univ., College Station (USA). Dept. of Physics
Intermediate-energy nuclear theory. Progress report, March 1, 1982-February 29, 1984, 9:34649 (R;US)

Texas Tech Univ., Lubbock (USA)
Asymptotic relative efficiencies of the rank transformation procedure in randomized complete block designs, 9:34996 (R;US)

Texas Univ., Austin (USA). Bureau of Economic Geology
Integration of geothermal data along the Balcones/Ouachita trend, central Texas. Final report, 9:32956 (R;US)

Texas Univ., Austin (USA). Dept. of Chemical Engineering
Buffer additives for lime/limestone slurry scrubbing synthesis, mass transfer, and degradation. Final report Oct 80-Oct 83, 9:34243 (R;US)

Texas Univ., Austin (USA). Dept. of Computer Sciences
Effect of queueing disciplines on response times in distributed systems, 9:34984 (R;US)

Texas Univ., Austin (USA). Dept. of Mechanical Engineering
Least-squares smoothing of direct-exchange areas in zonal analysis, 9:33908 (R;US)

Thermo Electron Corp., Waltham, MA (USA)
3 kw closed Rankine-cycle powerplant. Final report 19 May 66-31 Mar 73, 9:33588 (R;US)

Tokyo Univ. (Japan). Research Center for Nuclear Science and Technology
Report of progress of research by common use of facilities in JAERI, 1981, 9:33142 (R;JP;In Japanese)

Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study
New source exchange equipment of the INS iron-free β-ray spectrometer, 9:34131 (R;JP;In Japanese)

Toronto Univ., Ontario (Canada). Inst. for Aerospace Studies
Measurement of retained hydrogen by laser thermal desorption for carbon exposed to sub-eV atomic deuterium, 9:34953 (R;US)

Toulouse-3 Univ., 31 (France)
Contribution to the development of a primary standard for high energy neutron beams, 9:34117 (R;FR;In French)
Study of post-collision effect on autoionisation electron spectra in He^+-He collision, 9:34562 (R;FR;In French)

Energy research in the mechanical forest industry 1980-1982. Energy consumption in the particle board industry, 9:33574 (R;FI;In Finnish)
Energy research in the mechanical forest industry 1980-1982. Energy saving in the manufacture of fibreboard, 9:33571 (R;FI;In Finnish)
Energy research in the mechanical forest industry 1980-1982. The energy service of integrates, 9:33572 (R;FI;In Finnish)
Flame control of the fire-grate by digital technigues. Preliminary study, 9:32806 (R;FI;In Finnish)
Fractographic evaluation of specimens of A533B pressure vessel steel. Final report, 9:33634 (R;US)
Gasification of indigenous fuels and the use of gas in commercial greenhouses, 9:32538 (R;FI;In Finnish)
Valtion Teknillinen Tutkimuskeskus, Espoo (Finland). Reaktorilab.
Storage stability of bituminized reactor wastes, 9:32735 (R;FI)
Vanderbilt Univ., Nashville, TN (USA). Dept. of Physics
Competing nuclear structures in $^{182-188}Hg$, 9:34702 (R;US)
Varian Associates, Palo Alto, CA (USA). Solid State Lab.
Low-cost GaAs solar cell development. Final report Sep 81-Sep 83, 9:32844 (R;US)
Varigas Research, Inc., Timonium, MD (USA)
Factory demonstration energy efficiency of powered hand tools. Final report, 9:33553 (R;US)
Vereinigte Aluminium-Werke A.G., Bonn (Germany, F.R.). Leichtmetall-Forschungsinstitut
Manufacturing and properties of aluminium sheet from mixed scrap materials, 9:33622 (R;DE;In German)
Vermont Univ., Burlington (USA)
Influence of the interfacial layer on electrooptical properties of heterojunction solar cells. Final report, 9:32846 (R;US)
Victoria Univ., British Columbia (Canada)
Influence of diluents and inhibitors on detonations, 9:34163 (R;US)

Vienna Univ. (Austria)
Raman scattering in piezoelectric crystals with particular respect to orthorhombic $LiGaO_2$, 9:33749 (R;AT;In German)
Vienna Univ. (Austria). Formal- und Naturwissenschaftliche Fakultaet
Applications of EHD-ion sources in SIMS, 9:33801 (R;AT;In German)
Virginia Polytechnic Inst. and State Univ., Blacksburg (USA)
Microbiological and biochemical studies towards optimization of substrate utilization by methanogenic bacteria. Annual report Dec 82-Dec 83, 9:32788 (R;US)
Surface and bulk phase separations in block copolymers and their blends. Interim report 30 Sep 82-30 Dec 83, 9:33724 (R;US)
Virginia Polytechnic Inst. and State Univ., Blacksburg (USA). Dept. of Mechanical Engineering
Solar collector test procedures: development of a method to refer measured efficiencies to standardized test conditions. Final report 1977-80, 9:32950 (R;US)
Volkswagenwerk A.G., Wolfsburg (Germany, F.R.). Abt. Forschung und Entwicklung
Development of probes for measuring fuel and air flow as well as fuel remaining in production automobiles, 9:33592 (R;DE;In German)

W

Wapora, Inc., Washington, DC (USA)
Survey of environmental regulations applying to geothermal exploration, development, and use. Final report, 9:32966 (R;US)
Warwick Univ., Coventry (UK). Dept. of Physics
Conduction electron density of states and proton spin-lattice relaxation in the dihydrides of Sc, Y, La, and Lu, 9:33671 (R;US)
Washington State Energy Office, Olympia (USA)
Current energy research and development in Washington State, 1982, 9:33447 (R;US)
Washington State Univ., Pullman (USA). Dept. of Electrical and Computer Engineering
Revenue-metering device for HVDC systems. Final report, 9:33022 (R;US)
Washington Univ., Seattle (USA)
Resonance in weakly nonlinear systems. Progress report, August 1, 1983-March 31, 1984, 9:34783 (R;US)
Washington Univ., Seattle (USA). Dept. of Chemistry
Rubber elasticity. Progress report, April 1, 1983-March 15, 1984, 9:33727 (R;US)
Washington Univ., Seattle (USA). Dept. of Electrical Engineering
Analysis of small disturbance stability regions of power system models with real and reactive power flows, 9:33017 (R;US)
Nuclear magnetic resonance studies of ion motion in solid electrolytes. Annual report, April 1, 1983-March 31, 1984, 9:33738 (R;US)
Washington Univ., Seattle (USA). Dept. of Physics
Quark effects in nuclear physics, 9:34723 (R;US)
X-ray spectroscopy of solids under pressure. Annual progress report, August 1983-July 1984, 9:33740 (R;US)
Washington Univ., Seattle (USA). Nuclear Physics Lab.
Conceptual design report: superconducting booster, 9:33942 (R;US)
Giant dipole resonances built on highly excited states of light nuclei, 9:34666 (R;US)
Identification of γ-ray lines observed from SS433, 9:34524 (R;US)
Non-equilibrium excitation energy division in deeply-inelastic collisions, 9:34708 (R;US)
Photon detectors, E/sub γ/ = several MeV to 1 GeV, 9:34113 (R;US)
Washington Univ., St. Louis, MO (USA). School of Engineering and Applied Science
Operation of the large interconnected power system by decision and control in emergencies, 9:33474 (R;US)
Water and Power Resources Service, Denver, CO (USA)
Mccallum study area: resource and potential reclamation evaluation. Final report, 9:32563 (R;US)
Westinghouse Electric Corp., Mercury, NV (USA). Waste Technology Services Div.
Commercial nuclear waste research and development program. Quarterly report, January-March 1984, 9:32720 (R;US)
Westinghouse Electric Corp., Pittsburgh, PA (USA). Nuclear Technology Div.
Causes of denting. Volume 2. Laboratory test results. Final report, 9:33072 (R;US)
Causes of denting. Volume 1. Summary report. Final report, 9:33071 (R;US)
Westinghouse Hanford Co., Richland, WA (USA)
Testing of wet scrap recovery equipment for mixed oxide scrap reprocessing, 9:32700 (R;US)
Westinghouse Research and Development Center, Pittsburgh, PA (USA)
Experimental and engineering support for the CAFB (Chemically Active Fluid-bed) demonstration: residue disposal/utilization. Final report 1979-82, 9:32565 (R;US)
Wide spectrum antireflective coating for laser fusion systems. Final report, 9:34957 (R;US)
West Virginia Univ., Morgantown (USA). Dept. of Electrical Engineering
Methodology development for mine life safety system evaluation. Open file report 1 Jan 80-28 Feb 82, 9:32646 (R;US)
West Virginia Univ., Morgantown (USA). Dept. of Physics
Electron hybridization effects and the crystal structure of plutonium. Progress report as of January 31, 1984, 9:34560 (R;US)
Wisconsin Univ., Madison (USA)
Source for intense collimated beams of fast Cs^+ and Cs^0, 9:34559 (R;US)
Woodward-Clyde Consultants, Walnut Creek, CA (USA)
Influence of rock discontinuities on coal mine subsidence. Open file report 29 Sep 80-10 Sep 83, 9:32602 (R;US)
Wuerzburg Univ. (Germany, F.R.). Medizinische Fakultaet
Comparison of CT and angiographic findings about tumors of the posterior cranial fossa, 9:34406 (R;DE;In German)
Testicular tumors - clinical aspects and therapy. Results of the Clinic and Policlinic for Radiotherapy of Wuerzburg, 9:34399 (R;DE;In German)
Wuppertal Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 8 - Naturwissenschaften 1 - Physik
Semi-inclusive hadron production in the deep inelastic μp scattering. Results of experiments of the European Muon Collaboration, 9:34601 (R;DE;In German)
Wyoming Univ., Laramie (USA). Dept. of Geology and Geophysics
Thermopolis hydrothermal system with an analysis of Hot Springs State Park, 9:32955 (R;US)

Y

Yale Univ., New Haven, CT (USA)
CO_2 forecasting and control: a mathematical approach, 9:34223 (R;US)
Yale Univ., New Haven, CT (USA). Dept. of Chemistry
Solid state NMR methods for coal science. Progress report, January 1-March 31, 1984, 9:32546 (R;US)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R:US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept. (e.g. Pipeline Quality Gas see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, VA 22161.

Attack of stainless steel by molten aluminium in a solar concentrator, 9:32922 (J;US)
Deformation
Microstructure and mechanical properties of precipitation hardened aluminum under high rate deformation, 9:33688 (BA;US)
Deposition
Dry deposition of trace elements in Olympic National Park, 9:34271 (BA;US)
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Dissolution
Anodic dissolution of aluminum and aluminum alloys: effects of temperature and stannate concentration, 9:33411 (J;US)
Electronic Structure
H Division. Materials Physics quarterly report, October-December 1983, 9:33615 (R;US)
Environmental Transport
Estimates of dry and wet deposition and resuspension fluxes of several trace metals in the Southern Bight of the North Sea, 9:34283 (BA;US)
Equations of State
H Division. Materials Physics quarterly report, October-December 1983, 9:33615 (R;US)
Mechanical Properties
Microstructure and mechanical properties of precipitation hardened aluminum under high rate deformation, 9:33688 (BA;US)
Melting
Pulverized coal firing of aluminum melting furnaces. Final report, 9:32619 (R;US)
Microstructure
Microstructure and mechanical properties of precipitation hardened aluminum under high rate deformation, 9:33688 (BA;US)
Monitoring
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Physical Radiation Effects
Positron annihilation technique applied to the study of inhomogeneous solids: aluminium alloys, layered compound 1T-TaS_2, 9:33624 (R;FR;In French)
Theory of small clusters of helium in metals, 9:33684 (J;GB)
Precipitation Scavenging
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Recovery
Manufacturing and properties of aluminium sheet from mixed scrap materials, 9:33622 (R;DE;In German)
Scrap
Manufacturing and properties of aluminium sheet from mixed scrap materials, 9:33622 (R;DE;In German)
ALUMINIUM 28
Energy-Level Density
Analysis of level densities of the ^{28}Al and ^{32}P nuclei, 9:34670 (RA;SU;In Russian)
ALUMINIUM ALLOYS
See also ALUMINIUM BASE ALLOYS
INCONEL 738
Dissolution
Anodic dissolution of aluminum and aluminum alloys: effects of temperature and stannate concentration, 9:33411 (J;US)
Physical Radiation Effects
Nonequilibrium segregation and phase instability in alloy films during elevated-temperature irradiation in a high-voltage electron microscope, 9:33626 (R;US)
Sorptive Properties
Analysis of the hydrogen absorption in the U(Alsub(x)Nisub(1-x))$_2$ system, 9:33653 (RA;IL)
Experimental studies of the geometric and electronic structure of chemisorption bonding. Annual report Jan-Dec 83, 9:33818 (R;US)
Stress Corrosion
Clarifiction of environmental effects in stress corrosion cracking. Final report 1 Jun 75-31 Dec 83, 9:33619 (R;US)
ALUMINIUM BASE ALLOYS
Physical Radiation Effects
Positron annihilation technique applied to the study of inhomogeneous solids: aluminium alloys, layered compound 1T-TaS_2, 9:33624 (R;FR;In French)
ALUMINIUM CHLORIDES
Chemical Properties
Dehydration of aluminum chloride hexahydrate: a technical assessment, 9:33814 (R;US)
Fundamentals and applications of aluminum chloride containing melts, 9:33771 (J;US)
Dehydration
Dehydration of aluminum chloride hexahydrate: a technical assessment, 9:33814 (R;US)
Physical Properties
Dehydration of aluminum chloride hexahydrate: a technical assessment, 9:33814 (R;US)
Uses
Fundamentals and applications of aluminum chloride containing melts, 9:33771 (J;US)
ALUMINIUM NITRIDES
Explosive Forming
Investigation of shock activated sintering and shock wave consolidation of selected powder materials. Final report, 9:33712 (R;US)
ALUMINIUM OXIDES
See also CORUNDUM
Explosive Forming
Investigation of shock activated sintering and shock wave consolidation of selected powder materials. Final report, 9:33712 (R;US)
Heat Transfer
TRIO-01 experiment, 9:33704 (RA;US)
Ionic Conductivity
Multicomponent diffusion under general chemical potential gradients. Final report, July 1, 1981-June 30, 1984, 9:34764 (R;US)

Nuclear magnetic resonance studies of ion motion in solid electrolytes. Annual report, April 1, 1983-March 31, 1984, 9:33738 (R;US)
Nuclear Magnetic Resonance
Nuclear magnetic resonance studies of ion motion in solid electrolytes. Annual report, April 1, 1983-March 31, 1984, 9:33738 (R;US)
Phase Studies
X-ray energy dispersive spectroscopy of intergranular phases in βll sialons, 9:33716 (BA;US)
Physical Radiation Effects
Structural performance of low-activation ceramics after high-dose neutron irradiation, 9:33706 (RA;US)
Stability
Chemical stability of beta-alumina, 9:33375 (R;US)
Tritium Recovery
TRIO-01 experiment, 9:33704 (RA;US)
X-Ray Spectroscopy
X-ray energy dispersive spectroscopy of intergranular phases in βll sialons, 9:33716 (BA;US)

ALUMINIUM-AIR BATTERIES
Design
Development of the alkaline aluminum-air fuel cell for automotive applications, 9:33392 (J;US)
Mechanically-refuelable aluminum-air battery, 9:33606 (J;US)
Performance
Parametric study of an alkaline-electrolyte aluminium-air flow cell, 9:33399 (J;US)
Research Programs
Development of the alkaline aluminum-air fuel cell for automotive applications, 9:33392 (J;US)
Mechanically-refuelable aluminum-air battery, 9:33606 (J;US)

ANTIGEN-ANTIBODY REACTIONS
Biochemical Reaction Kinetics
Model for antibody mediated cell aggregation: rosette formation, 9:34385 (R;US)
ANTIMONY
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
ANTIMONY 125
Radioecological Concentration
4. Quarterly progress report, 1982, 9:34367 (R;FR;In French)
Washout
Scavenging ratios and dry deposition velocities of radioactive particles in the tropical regions of India, 9:34324 (BA;US)
ANTIMONY ALLOYS
Physical Radiation Effects
Non-equilibrium segregation in irradiated alloys, 9:33694 (BA;GB)
ANTIMONY COMPOUNDS
Crystal Structure
Electron hybridization effects and the crystal structure of plutonium. Progress report as of January 31, 1984, 9:34560 (R;US)
ANTINEOPLASTIC DRUGS
Excretion
Intravenous elimination and percutaneous absorption of topically applied CCNU-^{14}C (NSC-79037) in Yorkshire White pigs. Final report May-Oct 79, 9:34393 (R;US)
Tissue Distribution
Intravenous elimination and percutaneous absorption of topically applied CCNU-^{14}C (NSC-79037) in Yorkshire White pigs. Final report May-Oct 79, 9:34393 (R;US)
Toxicity
Preclinical toxicologic evaluation of 5-isoxazoleacetic acid, alpha-amino-3-chloro-4,5-dihydro-(nsc 163501), in dogs, monkeys, and cdf1 mice. Final report 24 Apr-13 Sep 78, 9:34485 (R;US)
ANTINEUTRINO-ELECTRON INTERACTIONS
Research Programs
Progress report of a research program in experimental high energy physics. Progress report, January 1, 1984-December 31, 1984, 9:34597 (R;US)
ANTINEUTRINO-PROTON INTERACTIONS
Research Programs
Progress report of a research program in experimental high energy physics. Progress report, January 1, 1984-December 31, 1984, 9:34597 (R;US)
ANTINEUTRINOS
Energy Spectra
Restoration of neutrino spectra from ^{235}U and ^{239}Pu fission products on the base of beta spectra, 9:34692 (RA;SU;In Russian)
ANTIPROTON REACTIONS
Annihilation
Antiproton-nucleus interaction, 9:34740 (R;US)
Nuclear Reaction Kinetics
Antiproton-nucleus interaction, 9:34740 (R;US)
ANTIREFLECTION COATINGS
Wide spectrum antireflective coating for laser fusion systems. Final report, 9:34957 (R;US)
Physical Radiation Effects
Review of ultraviolet damage threshold measurements at Lawrence Livermore National Laboratory, 9:33763 (R;US)
APARTMENT BUILDINGS
Heating Systems
Follow-up of an air heating system functioning by air circulation in the rooms of a block of flats, 9:33516 (R;FI;In Finnish)
Indoor Air Pollution
Factors controlling indoor radon levels. Annual report, June 1983-May 1984, 9:34297 (R;US)
Solar Water Heating
Solar heating plant for hot running water, 9:32941 (R;SE;In Swedish)
APATITES
Age Estimation
Annealing of vacancies induced by nuclear radiation in natural apatite by annealing at high temperatures, 9:34517 (R;AT;In German)
Application of the fission track method to determination of temperature aging and of uranium concentrations. Absorption spectroscopy in apatite for investigation of the healing mechanism of radiation defects, 9:34518 (R;AT;In German)
Annealing
Annealing of vacancies induced by nuclear radiation in natural apatite by annealing at high temperatures, 9:34517 (R;AT;In German)
Chemical Analysis
Application of the fission track method to determination of temperature aging and of uranium concentrations. Absorption spectroscopy in apatite for investigation of the healing mechanism of radiation defects, 9:34518 (R;AT;In German)
Fission Tracks
Application of the fission track method to determination of temperature aging and of uranium concentrations. Absorption spectroscopy in apatite for investigation of the healing mechanism of radiation defects, 9:34518 (R;AT;In German)

BEAM BUNCHING
Dynamics of single bunch radiation fields in accelerating structures, 9:33987 (RA;UA;In Russian)
Calculation Methods
Calculating a particle beam radiation in a periodic structure, 9:33990 (RA;UA;In Russian)
BEAM DUMPS
Neutron Flux
Secondary radiation field measurements in a steel block absorbing 69 GeV/c proton beams, 9:34015 (R;DE)
Radiation Protection
Secondary radiation field measurements in a steel block absorbing 69 GeV/c proton beams, 9:34015 (R;DE)
BEAM FOCUSING MAGNETS
Magnetic Fields
Adjustable strength REC quadrupoles, 9:34009 (J;US)
Mechanical Vibrations
SLC intergirder quad vibrations, 9:34097 (R;US)
Permanent Magnets
Adjustable strength REC quadrupoles, 9:34009 (J;US)
Quadrupoles
Adjustable strength REC quadrupoles, 9:34009 (J;US)
BEAM MONITORING
Charge-Coupled Devices
Application of a charge-coupled matrice for determination of a charged particle beam profile, 9:34072 (RA;UA;In Russian)
Ionization Chambers
Use of very small BCS-ionization chambers as beam monitors, 9:34019 (RA;DE;In German)
Nuclear Emulsions
Measuring the low intensities of multicharged ion beams, 9:34002 (RA;UA;In Russian)
BEAM MONITORS
Magnetostriction monitor of current density distribuition in a pulsed accelerated particle beam, 9:34067 (RA;UA;In Russian)
Measuring an electron beam profile and centre of gravity coordinates by an acoustic monitor, 9:34069 (RA;UA;In Russian)
System for measuring beam position on the base of resonator transducers, 9:34065 (RA;UA;In Russian)
BEAM POSITION
Measuring Methods
System for measuring beam position on the base of resonator transducers, 9:34065 (RA;UA;In Russian)
BEAM-PLASMA SYSTEMS
Energy Losses
Experimental study of heavy ion beam interaction with a CO_2 laser produced plasma, 9:34840 (R;FR;In French)
BEAMS (STRUCTURAL)
See STRUCTURAL BEAMS
BEAUTY PARTICLES
Particle Production
Production and muonic decay of heavy quarks in e^+e^- annihilation at 34.5 GeV, 9:34594 (R;DE)
Semileptonic Decay
Production and muonic decay of heavy quarks in e^+e^- annihilation at 34.5 GeV, 9:34594 (R;DE)
BEES
Biological Indicators
Suitability of bees as an indicator for environmental problems, 9:34296 (TJ;US)
BELGIUM
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
BENTHOS
Species Diversity
Interim report of the Savannah River macroinvertebrate and periphyton studies, 9:34370 (R;US)
BENTONITE
Osmosis
Effect of porosity and NaCl concentration on the osmotic efficiency of a sodium bentonite membrane, 9:34515 (R;US)
Radionuclide Migration
Measurement of radionuclide diffusion in ocean floor sediment and clay, 9:34368 (J;US)
BENZENE
Biological Effects
Benzene toxicity and how to approach the problem of chemical leukemogenesis, 9:34472 (R;US)
Chromosomal Aberrations
Cytogenetic effects of inhaled benzene in murine bone marrow, 9:34495 (BA;US)

Genetic Effects
Genotoxic effects of airborne agents, 9:34494 (B;US)
Inhalation
Benzene toxicity and how to approach the problem of chemical leukemogenesis, 9:34472 (R;US)
Phase Diagrams
Acid gas removal process, 9:32484 (RA;US)
Sister Chromatid Exchanges
Cytogenetic effects of inhaled benzene in murine bone marrow, 9:34495 (BA;US)
Steam Reformer Processes
Steam reforming of aromatic hydrocarbons, 9:32490 (RA;US)
Toxicity
Benzene toxicity and how to approach the problem of chemical leukemogenesis, 9:34472 (R;US)

BERYLLIA
See BERYLLIUM OXIDES

BERYLLIUM
Fluorescence Spectroscopy
Beryllium fluorimetric determination, 9:33782 (RA;BR;In Portuguese)
Solvent Extraction
Beryllium fluorimetric determination, 9:33782 (RA;BR;In Portuguese)

BERYLLIUM 7
Radiation Monitoring
1. Quarterly progress report 1983, 9:34365 (R;FR;In French)
Radioecological Concentration
1. Quarterly progress report 1983, 9:34365 (R;FR;In French)
2. Quarterly progress report, 1983, 9:34366 (R;FR;In French)
4. Quarterly progress report, 1982, 9:34367 (R;FR;In French)

BERYLLIUM 9
Hypernuclei
Gamma-ray spectroscopy of hypernuclei, 9:34658 (R;US)

BERYLLIUM ALLOYS
Electric Conductivity
Pressure-dependent resistive behavior of $YbBe_{13}$, 9:33675 (R;US)

BERYLLIUM MODERATORS
See BERYLLIUM

BERYLLIUM OXIDES
Physical Properties
High-temperature electrical insulators for electrophysical devices, 9:34919 (RA;SU;In Russian)
Radiation Effects
Kinetics of radioluminescence of beryllium oxide (Roentgen or electron irradiation), 9:33829 (RA;UA;In Russian)

BESSEL DIFFERENTIAL EQUATION
See FOKKER-PLANCK EQUATION

BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS

BETA DECAY
For neutron and nuclear decay.
Neutrinos
Restoration of neutrino spectra from ^{235}U and ^{239}Pu fission products on the base of beta spectra, 9:34692 (RA;SU;In Russian)

BETA SPECTROMETERS
Sample Changers
New source exchange equipment of the INS iron-free β-ray spectrometer, 9:34131 (R;JP;In Japanese)

BETATRONS
Beam Dynamics
Modified betatron accelerator studies. Final report 1 Sep 81-31 Oct 83, 9:33973 (R;US)
Beam Injection
Modified betatron accelerator experiment. Final report 12 Jan 81-10 Dec 82, 9:34012 (R;US)

BETA-W LATTICES
Crystal Structure
Particle scattering studies on foreign ions in superionic conductors. Technical report, 9:33736 (R;US)
Ion Implantation
Particle scattering studies on foreign ions in superionic conductors. Technical report, 9:33736 (R;US)

BHWR TYPE REACTORS
Void Fraction
ATHOS and FLOW3 simulation of the FRIGG heated rod bundle experiment. Final report, 9:33171 (R;US)

BILE DUCTS
See BILIARY TRACT

BILIARY TRACT
Congenital Malformations
Scintillographic visualization of inborn gallbladder duality, 9:34424 (RA;IL)
Scintiscanning
Scintillographic visualization of inborn gallbladder duality, 9:34424 (RA;IL)

BILLITONITES
See TEKTITES

BINARY MIXTURES
Thermodynamic Properties
Development of a reference data system for the liquefaction technology data base. Final technical report, 22 September 1982-3 August 1983, 9:32518 (R;US)

BINARY STARS
X Radiation
X-ray observations of a large sample of cataclysmic variable stars using the Einstein Observatory, 9:34550 (J;GB)

BIOCHEMICAL OXYGEN DEMAND
Removal
Treatment of coal gasification wastewater using rotating biological contactors, 9:32555 (R;US)

BIOCONVERSION
Meetings
Fifth symposium on biotechnology for fuels and chemicals, 9:32798 (B;US)

BIOFOULING
See BIOLOGICAL FOULING

BIOGAS
See METHANE

BIOLOGICAL DOSEMETERS
Evaluation
Genetic effects of ethylene dibromide in drosophila melanogaster, 9:34295 (BA;US)

BIOLOGICAL FOULING
Control
Symposium on condenser macrofouling control technologies: the state of the art, 9:34354 (R;US)
Meetings
Symposium on condenser macrofouling control technologies: the state of the art, 9:34354 (R;US)

BIOLOGICAL OXYGEN DEMAND
See BIOCHEMICAL OXYGEN DEMAND

BIOLOGICAL REACTORS
See BIOREACTORS

BIOLOGICAL REPAIR
Correlations
Degree of correlation between cancer proneness, metastaic potential, and DNA repair capacity, 9:34452 (RA;IL)
Measuring Methods
Measurement of DNA strand break repair and survival rate after X-irradiation of synchronized CHO cells, 9:34387 (R;DE;In German)

BIOLOGY
See also RADIOBIOLOGY
Research Programs
1982. Progress report (no.19), 9:33445 (R;FR;In French)

BIOMASS
Appropriate technology: results of studies by the Mechanical Engineering Department of the University of the Andes, 9:32861 (R;CO;In Spanish)
Anaerobic Digestion
Methane from biomass and waste. Annual technical progress report, 9:32787 (R;US)
Liquefaction
Liquid fuels from biomass: an overview of research activities funded by DOE's thermochemical conversion program, 9:32789 (R;US)
Oil from peat and biomass. Final report from the fifth stage, 9:32534 (R;SE;In Swedish and English)

Research Programs
Liquid fuels from biomass: an overview of research activities funded by DOE's thermochemical conversion program, 9:32789 (R;US)

BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Economic Analysis
Fuel from microalgae lipid products, 9:32790 (R;US)
Planning
Terminals for raw products of wood. Present situation and future development, 9:32853 (R;SE;In Swedish)
Site Preparation
Conversion of cellulosic wastes to liquid hydrocarbon fuels. Technical progress report, May 1-31, 1984, 9:32783 (R;US)

BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Genetic Radiation Effects
Genetic risk from irradiation of the Bulgarian population for medical purposes, 9:34447 (RA;BG;In Bulgarian)
Health Hazards
Determination of organ doses during radiological examinations and calculation of somatically significant dose, 9:34449 (R;DE;In German)
Photographic Films
Quality control procedure for dental x-ray film processing, 9:34396 (R;AU)
Quality Control
Quality control procedure for dental x-ray film processing, 9:34396 (R;AU)
Radiation Doses
Determination of organ doses during radiological examinations and calculation of somatically significant dose, 9:34449 (R;DE;In German)

BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Design
Ethanol production in a fluidized-bed bioreactor utilizing flocculating Zymomonas mobilis with biomass recycle, 9:32802 (J;US)
Fixed-film fluidized-bed bioreactors for biooxidation of coal converison wastewaters, 9:32558 (RA;US)
Kinetics
Biokinetic study for SRC-I wastewater, 9:32514 (R;US)
Mathematical Models
Biokinetic study for SRC-I wastewater, 9:32514 (R;US)
Operation
Ethanol production in a fluidized-bed bioreactor utilizing flocculating Zymomonas mobilis with biomass recycle, 9:32802 (J;US)
Evaluation of effects of phenol recovery on biooxidation and tertiary treatment of SRC-I wastewater. Final technical report, 9:32501 (R;US)
Performance
Adsorption-enhanced biogasification of coal conversion wastewater, 9:32566 (J;US)
Performance Testing
Biokinetic study for SRC-I wastewater, 9:32514 (R;US)
Fixed-film fluidized-bed bioreactors for biooxidation of coal converison wastewaters, 9:32558 (RA;US)

BIPHENYL
Chemical Reaction Yield
Cleavage of aromatic carbon-carbon bonds, 9:32450 (R;US)

BIRCHES
Lead
Lead in vegetation, forest floor material, and soils of the spruce-fir zone, Great Smoky Mountains National Park, 9:34335 (R;US)

BIRDS
Death
Birds and wind power. Technical report 1977-1982, 9:32994 (R;SE;In Swedish)
Hazards
Birds and wind power. Result report 1977-1982, 9:32995 (R;SE;In Swedish)

BISMUTH
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)

BISMUTH 208 TARGET
Photonuclear Reactions
Nonequilibrium photoneutrons and statistical characteristics of heavy nuclei in a photonuclear experiment, 9:34707 (RA;SU;In Russian)

BISMUTH 212
Radioecological Concentration
Aerial radiological survey of the Palo Verde Nuclear Generating Station and surrounding area, Wintersburg, Arizona. Date of survey: November 1982, 9:34307 (R;US)

BISMUTH 214
Radioecological Concentration
Aerial radiological survey of the Palo Verde Nuclear Generating Station and surrounding area, Wintersburg, Arizona. Date of survey: November 1982, 9:34307 (R;US)

BITTER SPAR
See DOLOMITE

BITUMENS
Chemical Analysis
Analysis of heaviest crude oils and hydropyrolysis products, 9:32671 (R;DE;In German)
Combustion
Alternate fuels combustion research. Interim report 19 May 80-20 Feb 83 on phase 2, 9:32688 (R;CA)
Embrittlement
Storage stability of bituminized reactor wastes, 9:32735 (R;FI)

BITUMINOUS COAL
Briquetting
Simplex coal and biomass gasification process. Phase II-C. Demonstration of Bepex briquetting process properties of commercial Simplex briquettes, 9:32607 (R;US)
Fluidized-Bed Combustion
Combustion properties of oxidized and weathered coals in a fluidized bed, 9:32548 (R;NL)

BLACK COATINGS
Optical Properties
Optical properties, thermal stability, and characterization of black cobalt oxide films, 9:32927 (J;US)
Stability
Optical properties, thermal stability, and characterization of black cobalt oxide films, 9:32927 (J;US)

BLADES (TURBINES)
See TURBINE BLADES

BLANKETS (BREEDING)
See BREEDING BLANKETS

BLOOD CELLS
See also ERYTHROCYTES
Extracorporeal Irradiation
Extracorporeal radiotherapy of blood using conventional radiation sources for treatment of CLL, 9:34410 (R;DE;In German)

BLOOD SERUM
Activation Analysis
Determination of iodine in blood serum by epithermal neutron activation followed by gamma ray spectrometry, 9:33797 (RA;IL)
Chemical Analysis
Determination of iodine in blood serum by epithermal neutron activation followed by gamma ray spectrometry, 9:33797 (RA;IL)

BLOOD VESSELS
Biomedical Radiography
Axial CT of the brain compared with other clinical methods of examination in neuropaediatry, 9:34414 (R;DE;In German)
Comparison of CT and angiographic findings about tumors of the posterior cranial fossa, 9:34406 (R;DE;In German)
sup(195m)Au a short-lived nuclide suitable for vascular imaging. Development of a new mercury-195m → gold-195m generator, 9:34426 (RA;IL)

Comparative Evaluations
Comparison of CT and angiographic findings about tumors of the posterior cranial fossa, 9:34406 (R;DE;In German)
Diagnosis
Comparison of CT and angiographic findings about tumors of the posterior cranial fossa, 9:34406 (R;DE;In German)
BLOWDOWN
Pressure Release
Installation of an infrared measuring device in pressure release phenomena, 9:33268 (R;DE;In German)
Test Facilities
Installation of an infrared measuring device in pressure release phenomena, 9:33268 (R;DE;In German)
BLOWERS
Design
Design and testing of a prototype forced-draft, low temperature fan convector, 9:32989 (R;XE;In French)
BNL
Mass Spectrometers
New ion sources for nuclear structure studies at the TRISTAN facility, 9:34013 (R;US)
Radiation Monitoring
Aerial radiological survey of the Brookhaven National Laboratory and surrounding area, May 1980, 9:34305 (R;US)
BOD
See BIOCHEMICAL OXYGEN DEMAND
BODY BURDEN
Biological Indicators
Evaluation of biological indicators of body burden of cadmium in humans, 9:34492 (J;US)
BOILERS
Control
Investigation into the control of a domestic gas fired boiler using mathematical models. Technical memo, 9:33525 (R;IE)
Economic Analysis
Electric boilers, 9:33566 (R;CH;In Swedish)
Energy Consumption
Electric boilers, 9:33566 (R;CH;In Swedish)
Gas Burners
Firetube boiler fiber burner demonstration program. Annual report Sep 82-Oct 83, 9:33932 (R;US)
Mathematical Models
Dynamic analysis of an experimental rig incorporating a domestic gas fired boiler. Technical memo, 9:33526 (R;GB)
Performance
Study of existing RDF-cofiring experience. Volume 2. Appendixes to Phase I final report, 9:32805 (R;US)
Performance Testing
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Retrofitting
Status of tangential firing low NO/sub x/ technology, 9:32625 (RA;US)
BOILING HEAVY WATER COOLED AND MODERATED
See BHWR TYPE REACTORS
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BOLTZMANN COLLISION INTEGRAL
See BOLTZMANN EQUATION
BOLTZMANN EQUATION
Numerical Analysis
Numerical analysis of the Boltzmann equation including Fokker-Planck terms, 9:34839 (J;US)
BOLTZMANN TRANSPORT EQUATION
See BOLTZMANN EQUATION
BOLTZMANN-VLASOV EQUATION
Analytical Solution
Implicit function method for the Liouville equation, 9:34787 (R;US)
BONE DISEASES
See SKELETAL DISEASES
BONE JOINTS
Biomedical Radiography
Informative value of radionative diagnostics in cases of patellar chondropathy, 9:34401 (R;DE;In German)
Normal anatomy and pathological changes of the infrapatellar pad of fat in double contrast arthrography, 9:34411 (R;DE;In German)
Pathological Changes
Informative value of radionative diagnostics in cases of patellar chondropathy, 9:34401 (R;DE;In German)
Scintiscanning
Dynamic joint scintigraphy in diagnosis of rheumatic diseases., 9:34416 (RA;AT;In German)
BONE MARROW CELLS
Cell Proliferation
Cytogenetic effects of inhaled benzene in murine bone marrow, 9:34495 (BA;US)
Chromosomal Aberrations
Cytogenetic effects of inhaled benzene in murine bone marrow, 9:34495 (BA;US)
Sister Chromatid Exchanges
Cytogenetic effects of inhaled benzene in murine bone marrow, 9:34495 (BA;US)
BONN SYNCHROTRON
Research Programs
Photonuclear physics at the Bonn synchrotrons. Present status and future plans at the Bonn synchrotron, 9:34647 (R;DE)
BONNEVILLE POWER ADMINISTRATION
Nuclear Power Plants
Imposing specific directives on the Bonneville Power Administration. Hearings before the Committee on Energy and Natural Resources, United States Senate, Ninety-Eighth Congress, First Session, on S. 1701, August 3, 1983, 9:33116 (B;US)
BOOSTERS (PARTICLE)
See PARTICLE BOOSTERS
BOREHOLES
Directional Drilling
CSIRO horizontal borehole inclinometer - description and operation, 9:32586 (R;AU)
Inclination
CSIRO horizontal borehole inclinometer - description and operation, 9:32586 (R;AU)
BORN-GREEN-YVON EQUATION
See BOLTZMANN EQUATION
BORON
Activation Analysis
Determination of boron in water solution by an indirect neutron activation technique from a ^{241}Am/Be source, 9:33776 (R;BR;In Portuguese)
BORON 10
Hypernuclei
Gamma-ray spectroscopy of hypernuclei, 9:34658 (R;US)
Neutron Reactions
Relative biological effectiveness in V79 Chinese hamster cells of the neutron capture reactions in boron and nitrogen, 9:34464 (J;US)
BORON 11 TARGET
Alpha Reactions
^{11}B(^{4}He,^{7}Li)^{8}Be reaction at Esub(sup(4)He)27.2 MeV, 9:34661 (RA;SU;In Russian)
BORON ALLOYS
Splat Cooling
Metallic glasses as new catalyst systems for energy conversion. Annual progress report and final technical report, 9:33633 (R;US)
BORON NITRIDES
Physical Properties
High-temperature electrical insulators for electrophysical devices, 9:34919 (RA;SU;In Russian)
BOROPHOSPHATE GLASS
Ionic Conductivity
Nuclear magnetic resonance studies of ion motion in solid electrolytes. Annual report, April 1, 1983-March 31, 1984, 9:33738 (R;US)
Nuclear Magnetic Resonance
Nuclear magnetic resonance studies of ion motion in solid electrolytes. Annual report, April 1, 1983-March 31, 1984, 9:33738 (R;US)

BOROPHOSPHATES
See BOROPHOSPHATE GLASS
BOSE-EINSTEIN CONDENSATION
Statistical Mechanics
Topics in statistical mechanics, 9:34782 (R;US)
BOSE-EINSTEIN GAS
Excited States
Ground state of charged Bose and Fermi fluids in strong coupling, 9:34780 (R;FR;In French)
Ground States
Ground state of charged Bose and Fermi fluids in strong coupling, 9:34780 (R;FR;In French)
BOUNDARY LAYERS
Fluid Flow
Experimental and model transport and diffusion studies in complex terrain with emphasis on tracer studies, 9:34183 (R;US)
Mathematical Models
Experimental and model transport and diffusion studies in complex terrain with emphasis on tracer studies, 9:34183 (R;US)
BPA
See BONNEVILLE POWER ADMINISTRATION
BRACKISH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS
BRAIN
CAT Scanning
Axial CT of the brain compared with other clinical methods of examination in neuropaediatry, 9:34414 (R;DE;In German)
Metabolism
Action of cholinergic poisons on the central nervous system and effectiveness of potential antidotes. Annual report 1 Jul 81-30 Jun 82, 9:34468 (R;US)
Scintiscanning
Axial CT of the brain compared with other clinical methods of examination in neuropaediatry, 9:34414 (R;DE;In German)
BRAKING RADIATION
See BREMSSTRAHLUNG
BRASIMONE PEC REACTOR
See PEC BRASIMONE REACTOR
BRAWLEY GEOTHERMAL FIELD
Well Logging
Well log interpretation of certain geothermal fields in the Imperial Valley, California, 9:32960 (R;US)
BRAZED JOINTS
Metallography
Effect of the joint clearance in the welding properties of austenitic stainless steel brazed at high temperature, 9:33645 (R;BR;In Portuguese)
Microhardness
Effect of the joint clearance in the welding properties of austenitic stainless steel brazed at high temperature, 9:33645 (R;BR;In Portuguese)
BRAZIL
Geologic Deposits
Brazil-Angola alkaline - carbonatite province and its main economic aspects, 9:34510 (R;BR;In Portuguese)
Research Programs
Progress report 1981-1982 - Instituto de Fisica - Universidada Federal do Rio Grande do Sul, 9:34521 (R;BR)
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
BRAZILIAN CNEN
Comissao Nacional de Energia Nuclear de Brasil.
Quality Assurance
Qualification of organizations for independent technical supervision, 9:33449 (R;BR;In Portuguese)
Regulatory Guides
Qualification of organizations for independent technical supervision, 9:33449 (R;BR;In Portuguese)
Research Programs
Annual Progress Report of 1982, 9:33140 (R;BR;In Portuguese)
BRAZILIAN ORGANIZATIONS
See also BRAZILIAN CNEN
Research Programs
Annual progress report of 1981 (Instituto de Engenharia Nuclear, Rio de Janeiro), 9:34650 (R;BR)
BREEDING BLANKETS
Design
A liquid-metal fast breeder reactor core design with seed blanket modular assemblies, 9:33348 (J;US)
BREMSSTRAHLUNG
See also SYNCHROTRON RADIATION
Dose Rates
Bremsstrahlung dose rate during electron scattering in a beam transport channel, 9:33993 (RA;UA;In Russian)
BREMSSTRAHLUNG (MAGNETIC)
See SYNCHROTRON RADIATION
BRICKS
Manufacturing
Beneficial use of sludge in building components, 9:33762 (R;US)
BRIQUETS
Chemical Composition
Simplex coal and biomass gasification process. Phase II-C. Demonstration of Bepex briquetting process properties of commercial Simplex briquettes, 9:32607 (R;US)
Mechanical Properties
Simplex coal and biomass gasification process. Phase II-C. Demonstration of Bepex briquetting process properties of commercial Simplex briquettes, 9:32607 (R;US)
Production
Simplex coal and biomass gasification process. Phase II-C. Demonstration of Bepex briquetting process properties of commercial Simplex briquettes, 9:32607 (R;US)
BROMINATED ALIPHATIC HYDROCARBONS
See also METHYL BROMIDE
Aerosol Monitoring
Genetic effects of ethylene dibromide in drosophila melanogaster, 9:34295 (BA;US)
Genetic Effects
Genetic effects of ethylene dibromide in drosophila melanogaster, 9:34295 (BA;US)
Mutagen Screening
Genetic effects of ethylene dibromide in drosophila melanogaster, 9:34295 (BA;US)
BROMINE 77
Isotope Production
Production of ^{77}Br, 9:33837 (RA;BR;In Portuguese)
BROOKHAVEN AGS
Polarized Beams
Polarization preservation in the AGS, 9:34007 (J;US)
BROOKHAVEN INTERSECTING STORAGE ACCELERAT
See ISABELLE STORAGE RINGS
BROOKHAVEN NATIONAL LABORATORY
See BNL
BSF REACTOR
See BSR-1 REACTOR
BSR-1 REACTOR
Reactor Operation

BURMA
Energy Policy
Burma - energy situation 1982/83, 9:33425 (R;DE;In German)
Energy Supplies
Burma - energy situation 1982/83, 9:33425 (R;DE;In German)

BURNERS
See also GAS BURNERS
OIL BURNERS
Design
Commercial cooking equipment improvement. Annual report Jul 82-Jun 83, 9:33536 (R;US)
Efficiency
Development of criteria for extension of applicability of low emission, high efficiency coal burners. Annual report Sep 77-Sep 78, 9:32564 (R;US)
Performance
Refinery heater fiber burner demonstration program. Final report Oct 81-Dec 83, 9:32684 (R;US)
Performance Testing
NO/sub x/ emissions control with the distributed mixing burner. Part I. Field evaluation on an industrial size boiler, 9:32626 (RA;US)
Temperature Effects
LIMB testing: the use of dry sorbents to reduce sulfur oxide emissions from pulverized-coal flames under low-NO/sub x/ conditions, 9:32632 (RA;US)

BURNUP
Computer Calculations
1DXB and GENERATOR computer codes, 9:33108 (RA;BR;In Portuguese)
LEOPARD and SPOTS computer codes, 9:33130 (RA;BR;In Portuguese)

BUTANE
Combustion Kinetics
Comprehensive chemical kinetic reaction mechanism for the oxidation of n-butane, 9:33849 (R;US)
Production
Naval Petroleum and Oil Shale Reserves. Annual report of operations, fiscal year 1983, 9:32661 (R;US)

BWR TYPE REACTORS
See also CLINTON-1 REACTOR
PEACH BOTTOM-2 REACTOR
SUSQUEHANNA-1 REACTOR
SUSQUEHANNA-2 REACTOR
Containment Buildings
Capabilities of HECTR Version 1.0, 9:33335 (R;US)
Containment release modes, rainout, and risk, 9:33336 (R;US)
Experimental and analytical results of steel containment tests, 9:33337 (R;US)
Procedures and objectives for testing a 1/8 scale model of a steel containment, 9:33339 (R;US)
Control Rooms
Nuclear power plant control room crew task analysis database: SEEK system. Users manual, 9:33212 (R;US)
Corrosion
In-plant measurements of electrochemical potentials in BWR water. Final report, 9:33057 (R;US)
Design
Fundamentals of boiling water reactor (BWR), 9:33058 (RA;AT)
Design Basis Accidents
View of industry on the impact of pipe break criteria, 9:33306 (RA;US)
ECCS
An assessment of TRAC-PD2 refill calculations based on Creare countercurrent flow tests, 9:33350 (J;US)
Electric Cables
Effect of LOCA simulation procedures on cross-linked polyolefin cable's performance, 9:33325 (R;US)
Progress on qualification testing methodology study of electric cables, 9:33319 (RA;US)
Electrical Equipment
Survey of equipment qualification research activities with respect to LOCA environments, 9:33320 (RA;US)
Fuel Element Clusters
FEBA - flooding experiments with blocked arrays. Data report 1, test series 1 through 4, 9:33087 (R;DE)
Fuel Element Failure
Mass spectrometric study of the release of volatile fission products from irradiated LWR fuel, 9:33253 (R;US)
The prediction of transient fission-gas release and fuel microcracking under severe core-accident conditions, 9:33356 (J;US)
Fuel Management
In-core fuel management for the course on operational physics of power reactors, 9:33060 (RA;AT)
Fuel Rods
User input manual for single fuel rod behaviour analysis code FEMAXI-III, 9:33061 (R;JP;In Japanese)
Fuel-Cladding Interactions
PCI-related cladding failures during off-normal events - draft, 9:33328 (R;US)
Fuel-Coolant Interactions
Fuel-coolant interaction in a shock tube with initially-established film boiling, 9:33252 (R;US)
Loss of Coolant
An assessment of TRAC-PD2 refill calculations based on Creare countercurrent flow tests, 9:33350 (J;US)
Effect of LOCA simulation procedures on cross-linked polyolefin cable's performance, 9:33325 (R;US)
Fast numerical methods in 3-D, 9:33297 (R;US)
ROSA-III base test series for a large break loss-of-coolant accident in a boiling water reactor, 9:33347 (J;US)

Mechanical Structures
Eleventh water reactor safety research information meeting. Volume 5, 9:33303 (R;US)
Meltdown
Containment release modes, rainout, and risk, 9:33336 (R;US)
Demonstrations and verification of debris bed models in the MEDICI reactor cavity code, 9:33333 (R;US)
Fuel-coolant interaction in a shock tube with initially-established film boiling, 9:33252 (R;US)
High temperature melt attack on steel and urania-coated steel, 9:33323 (R;US)
Hydrodynamic sweepout thresholds in BWR Mark III reactor cavity interactions, 9:33247 (R;US)
Pipes
Backlay clad inspection, 9:33054 (RA;US)
Continuous ultrasonic sampling of in-service nuclear plant piping, 9:33056 (RA;US)
Evaluation and acceptance of welded and repair-welded stainless steel for LWR service. Annual report for 1983, 9:33065 (R;US)
Experimental surveillance of intergranular stress corrosion crack growth in large pipes, 9:33055 (RA;US)
Multiple independent pipe support motions, 9:33312 (RA;US)
Overview of pipe breaks from the perspective of operating experience, 9:33304 (RA;US)
Power Distribution
Power operation, measurement and methods of calculation of power distribution, 9:33059 (RA;AT)
Pressure Vessels
High temperature melt attack on steel and urania-coated steel, 9:33323 (R;US)
Primary Coolant Circuits
Elimination of the double-ended guillotine break in primary pipe loops, 9:33305 (RA;US)
Non-invasive water level measurements at LOFT using a neutron detection system, 9:33318 (RA;US)
Torsional ultrasonic technique for reactor vessel liquid level measurement, 9:33317 (RA;US)
View of industry on the impact of pipe break criteria, 9:33306 (RA;US)
Radioactive Effluents
Environmental radiation monitoring system development for atmospheric plumes from light water reactor nuclear power plants, 9:34329 (J;US)
Reactor Accidents
Experimental and analytical results of steel containment tests, 9:33337 (R;US)
Postaccident liquid sampling systems. Final report, 9:33264 (R;US)
Procedures and objectives for testing a 1/8 scale model of a steel containment, 9:33339 (R;US)
Reactor Control Systems
Eleventh water reactor safety research information meeting. Volume 5, 9:33303 (R;US)
Safety implications of control systems, 9:33316 (RA;US)
The development of the reactor management system, 9:33214 (J;US)
Reactor Cooling Systems
Dynamic tests of three-dimensional piping systems: a NRC/EPRI joint test program, 9:33314 (RA;US)
Pipe-to-pipe impact tests, 9:33307 (RA;US)
Reactor Core Disruption
The prediction of transient fission-gas release and fuel microcracking under severe core-accident conditions, 9:33356 (J;US)
Reactor Cores
Load follow simulation of three-dimensional boiling water reactor core by PACS-32 parallel microprocessor system, 9:33216 (J;US)
ROSA-III base test series for a large break loss-of-coolant accident in a boiling water reactor, 9:33347 (J;US)
Reactor Instrumentation
The development of the reactor management system, 9:33214 (J;US)
Reactor Operation
Fundamentals of boiling water reactor (BWR), 9:33058 (RA;AT)
Licensed operating reactors. Status summary report data as of March 31, 1984. Vol. 8, No. 4, 9:33062 (R;US)
Power operation, measurement and methods of calculation of power distribution, 9:33059 (RA;AT)
Reactor Operators
Nuclear power plant control room crew task analysis database: SEEK system. Users manual, 9:33212 (R;US)
Ranking scheme for making decisions on the relative training importance of potential nuclear power plant malfunctions, 9:33063 (R;US)
Reactor Physics
Fundamentals of boiling water reactor (BWR), 9:33058 (RA;AT)
In-core fuel management for the course on operational physics of power reactors, 9:33060 (RA;AT)
Reactor Safety
Dynamic tests of three-dimensional piping systems: a NRC/EPRI joint test program, 9:33314 (RA;US)
Eleventh water reactor safety research information meeting. Volume 5, 9:33303 (R;US)
Elimination of the double-ended guillotine break in primary pipe loops, 9:33305 (RA;US)
Multiple independent pipe support motions, 9:33312 (RA;US)
Non-invasive water level measurements at LOFT using a neutron detection system, 9:33318 (RA;US)
Overview of pipe breaks from the perspective of operating experience, 9:33304 (RA;US)
Pipe-to-pipe impact tests, 9:33307 (RA;US)
Progress on qualification testing methodology study of electric cables, 9:33319 (RA;US)
Safety implications of control systems, 9:33316 (RA;US)
Survey of equipment qualification research activities with respect to LOCA environments, 9:33320 (RA;US)
Torsional ultrasonic technique for reactor vessel liquid level measurement, 9:33317 (RA;US)
View of industry on the impact of pipe break criteria, 9:33306 (RA;US)
Reactor Simulators
Load follow simulation of three-dimensional boiling water reactor core by PACS-32 parallel microprocessor system, 9:33216 (J;US)
ROSA-III base test series for a large break loss-of-coolant accident in a boiling water reactor, 9:33347 (J;US)
Rod Drop Accidents
Analyzing the rod drop accident in a boiling water reactor, 9:33358 (J;US)
BY-PRODUCTS
Uses
Nuclear waste management: issues and progress, 9:32744 (J;US)

C

C CODES
Evaluation
Evaluation of mechanistic models for coal gasification (CHEMFLUB, FLAG, and FLAME), 9:32475 (RA;US)
Gasification modeling support (CHEMFLUB, FLAG, FLAME and PCGC-2), 9:32476 (RA;US)
Testing evaluation and validation of detailed mechanistic computer codes for fluidized-bed gasifiers (FLAG and CHEMFLUB), 9:32471 (RA;US)
Testing
Testing evaluation and validation of detailed mechanistic computer codes for fluidized-bed gasifiers (FLAG and CHEMFLUB), 9:32471 (RA;US)
Validation
Testing evaluation and validation of detailed mechanistic computer codes for fluidized-bed gasifiers (FLAG and CHEMFLUB), 9:32471 (RA;US)
C REACTOR
Neutron Flux
Neutron fluence in P,K reactor tank walls, 9:33243 (R;US)

Reactor Materials
Neutron fluence in P,K reactor tank walls, 9:33243 (R;US)
Reactor Vessels
Neutron fluence in P,K reactor tank walls, 9:33243 (R;US)
CABLES
See also ELECTRIC CABLES
Anchors
Load transfer behaviour between steel reinforcement and cement based grout, 9:32593 (R;AU)
CABLES (ELECTRIC)
See ELECTRIC CABLES
CACTACEAE
See CACTI
CACTI
Drying
Water relations of cacti during desiccation: distribution of water in tissues (Carnegiea gigantea; Ferocactus acanthodes; Opuntia basilaris), 9:34386 (J;US)
CADMIUM
Biological Effects
Evaluation of biological indicators of body burden of cadmium in humans, 9:34492 (J;US)
Deposition
Deposition of atmospheric trace constituents onto different natural surfaces, 9:34269 (BA;US)
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Environmental Transport
Estimates of dry and wet deposition and resuspension fluxes of several trace metals in the Southern Bight of the North Sea, 9:34283 (BA;US)
Precipitation Scavenging
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Scavenging rates of sulfur and trace metals from a smelter plume, 9:34260 (BA;US)
CADMIUM COMPOUNDS
See also CADMIUM SELENIDES
CADMIUM SULFIDES
Ecological Concentration
Methods to evaluate ecotoxicological effects of chemicals. Vol. 2, 9:34337 (R;DE;In German)
Environmental Transport
Methods to evaluate ecotoxicological effects of chemicals. Vol. 2, 9:34337 (R;DE;In German)
CADMIUM SELENIDE SOLAR CELLS
Performance
Solar to thermal + electrical energy conversion by polycrystalline liquid junction solar cells, 9:32881 (J;US)
CADMIUM SELENIDES
Order-Disorder Transformations
Order and disorder in electrodeposited polycrystalline CdSe liquid junction solar cells, 9:32887 (J;US)
CADMIUM SULFIDE SOLAR CELLS
Electrical Properties
Cadmium sulfide/copper ternary heterojunction cell research semiannual report, 1 July 1983 - 31 December 1983, 9:32865 (R;US)
Heterojunctions
Cadmium sulfide/copper ternary heterojunction cell research semiannual report, 1 July 1983 - 31 December 1983, 9:32865 (R;US)
$CdS/CuInSe_2$ heterojunction cell research, 9:32866 (R;US)
CADMIUM SULFIDES
Photochemistry
Characterization of semiconductor powders by electrochemical techniques, 9:32884 (J;US)
CAES
See COMPRESSED AIR ENERGY STORAGE
CALCITE
Injection
LIMB testing: the use of dry sorbents to reduce sulfur oxide emissions from pulverized-coal flames under low-NO/sub x/ conditions, 9:32632 (RA;US)
CALCIUM
Deposition
Comparison of surrogate surfaces for dry deposition collection, 9:34272 (BA;US)
Dry deposition of trace elements in Olympic National Park, 9:34271 (BA;US)
Diffusion
Radiation-enhanced diffusion as a coating method for protection against corrosion and wear, 9:33640 (RA;BR)
Ecological Concentration
Effects of acid precipitation on forest soils and watershed biogeochemistry in New England. A technical progress report, 9:34336 (R;US)
Monitoring
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
CALCIUM 40 TARGET
Carbon 12 Reactions
Study of elastic and inelastic scattering of ^{12}C on ^{40}Ca and ^{48}Ca, 9:34672 (R;FR;In French)
Lithium 6 Reactions
Investigation of the reaction $^{6}Li + {}^{40}Ca$ at 156 MeV in a coincidence experiment, 9:34678 (R;DE)
Proton Reactions
Spin and isospin dependence on (p,pN) quasi-free reactions, 9:34673 (RA;BR)
CALCIUM 48 TARGET
Carbon 12 Reactions
Study of elastic and inelastic scattering of ^{12}C on ^{40}Ca and ^{48}Ca, 9:34672 (R;FR;In French)
CALCIUM FLUORIDES
Thermoluminescence
Recent developments in thermoluminescence kinetics, 9:34112 (R;US)
CALCIUM HYDROXIDES
Calcination
Thermal reactions of aromatics with CO, 9:32486 (RA;US)
CALCIUM OXIDES
See also ZIRCONOLITE
Chemical Radiation Effects
Role of admixed hydroxyl groups in the processes of formation of radiation defects in oxides of alkaline earth elements (Gamma radiation), 9:33830 (RA;UA;In Russian)
Comparative Evaluations
Thermal reactions of aromatics with CO, 9:32486 (RA;US)
CALCIUM SILICATES
Catalytic Effects
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)
Sorptive Properties
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)
CALCULATIONS (COMPUTER)
See COMPUTER CALCULATIONS
CALIBRATION STANDARDS
Progress report for the period October 1982-September 1983, 9:32770 (R;US)
Neutron Dosimetry
Contribution to the development of a primary standard for high energy neutron beams, 9:34117 (R;FR;In French)
CALIFORNIA
See also BRAWLEY GEOTHERMAL FIELD
Naval Petroleum Reserve
Naval Petroleum and Oil Shale Reserves. Annual report of operations, fiscal year 1983, 9:32661 (R;US)
CALIFORNIUM 252
Fission Fragments
Generation of fission-fragment range data, 9:34711 (RA;IL)
Multiplicity
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
Neutron Spectra
LWR pressure vessel surveillance dosimetry improvement program. Quarterly progress report, October 1983-December 1983 (Benchmark neutron fields (^{252}Cf, ^{235}U)), 9:33178 (R;US)

Spontaneous Fission
Note on the prompt-fission-neutron spectra of uranium-233 and -235 and plutonium-239 and -240 relative to that of californium-252, 9:34716 (J;US)
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)

CALORIMETERS (PARTICLE)
See SHOWER COUNTERS

CALORIMETRIC DOSEMETERS
Graphite
Development of a prototype calorimeter for absorbed dose determination. Final report for the period 1 May 1980 - 31 December 1983, 9:34120 (R;AT)
Performance Testing
Development of a prototype calorimeter for absorbed dose determination. Final report for the period 1 May 1980 - 31 December 1983, 9:34120 (R;AT)
Tissue-Equivalent Detectors
Contribution to the development of a primary standard for high energy neutron beams, 9:34117 (R;FR;In French)

CANADA
Environmental Policy
Proceedings: environmental government affairs seminar, 9:33436 (R;CA)
Nuclear Power Plants
Limit lines for risk, 9:33344 (J;US)
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)

CANCER
See NEOPLASMS

CANDU TYPE REACTORS
Fuel Management
CANDU-PHW fuel management, 9:33093 (RA;AT)
Reactor Cores
Fundamentals of CANDU reactor nuclear design, 9:33092 (RA;AT)
Reactor Fueling
Fundamentals of CANDU reactor nuclear design, 9:33092 (RA;AT)
Reactor Physics
Fundamentals of CANDU reactor nuclear design, 9:33092 (RA;AT)

CANONICAL EQUATIONS
See DIFFERENTIAL EQUATIONS

CAPACITIVE ENERGY STORAGE EQUIPMENT
Design
50 kJ repetitively pulsed capacitor bank, 9:33362 (R;US)

CARBINOL
See METHANOL

CARBON
See also ACTIVATED CARBON
GRAPHITE
PYROLYTIC CARBON
Corrosion
Development of corrosion resistant phosphoric acid fuel cell components, 9:33500 (J;US)
Diffusion
Influence of changing particle structure on the rate of gas-solid gasification reactions, 9:32462 (RA;US)
Electrochemistry
Selection of carbon as electrode material, 9:33501 (J;US)

CARBON 12
Energy Levels
Elastic and inelastic scattering of polarized protons from carbon-12 at 400, 600, and 700 MeV, 9:34665 (R;US)

CARBON 12 REACTIONS
Compound-Nucleus Reactions
Contribution to the study of heavy-ion induced quasi-elastic processes in the 2s-1d shell, 9:34667 (R;FR;In French)
Elastic Scattering
Study of elastic and inelastic scattering of ^{12}C on ^{40}Ca and ^{48}Ca, 9:34672 (R;FR;In French)
Inelastic Scattering
Study of elastic and inelastic scattering of ^{12}C on ^{40}Ca and ^{48}Ca, 9:34672 (R;FR;In French)

CARBON 12 TARGET
Kaon Plus Reactions
K^+-nucleus interaction, 9:34657 (R;US)
Neutron Reactions
Analyzing power Asub(y)(THETA) for ^{12}C(n vector,nsub(0,1))^{12}C in the neutron energy range from 6.8 to 17.3 MeV, 9:34660 (R;DE;In German)
Nitrogen 14 Reactions
Detection of a direct process in the ^{12}C(^{14}N,d)^{24}Mg reaction, 9:34663 (RA;SU;In Russian)
Proton Reactions
Elastic and inelastic scattering of polarized protons from carbon-12 at 400, 600, and 700 MeV, 9:34665 (R;US)

CARBON 14 COMPOUNDS
Quantitative Chemical Analysis
Analytical chemistry, 9:33842 (RA;CS;In Russian)

CARBON CYCLE
Global Aspects
Inventory of numeric data for carbon dioxide research. Revision 1, 9:34234 (R;US)
Mathematical Models
Global cycle of particulate elemental carbon: a theoretical assessment, 9:34289 (BA;US)

CARBON DIOXIDE
Adsorption
Separation of gas mixtures with coordination complexes, 9:33809 (R;US)
Chemical Reaction Yield
Coal gasification reactions with on-line, in situ FT-IR analysis, 9:32479 (RA;US)
Diffusion
Influence of changing particle structure on the rate of gas-solid gasification reactions, 9:32462 (RA;US)
Ecological Concentration
CO_2 forecasting and control: a mathematical approach, 9:34223 (R;US)
Forecasting
CO_2 forecasting and control: a mathematical approach, 9:34223 (R;US)
Metabolites
C_4 photosynthesis in Euphorbia degeneri and E. remyi: a comparison of photosynthetic carbon metabolism in leaves, callus cultures and regenerated plants, 9:34382 (R;US)
Monitoring
Analysis of long-term NO emission data from pulverized coal-fired utility boilers, 9:32571 (RA;US)
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Phase Diagrams
Acid gas removal process, 9:32484 (RA;US)
Carbon dioxide for the recovery of (residual) crude oil. Final report, 9:32652 (R;US)
Displacement of oil by carbon dioxide. Final report, 9:32650 (R;US)
Phase Studies
Displacement of oil by carbon dioxide. Final report, 9:32650 (R;US)
Production
Naval Petroleum and Oil Shale Reserves. Annual report of operations, fiscal year 1983, 9:32661 (R;US)
Removal
Acid gas removal process, 9:32484 (RA;US)
Research Programs
Inventory of numeric data for carbon dioxide research. Revision 1, 9:34234 (R;US)
Sorption
Separation of gas mixtures by supported complexes, 9:33775 (RA;US)

CARBON DIOXIDE INJECTION
Bench-Scale Experiments
Carbon dioxide for the recovery of (residual) crude oil. Final report, 9:32652 (R;US)
Displacement of oil by carbon dioxide. Final report, 9:32650 (R;US)

CARBON MONOXIDE
Adsorption
Separation of gas mixtures with coordination complexes, 9:33809 (R;US)
Chemical Reaction Yield
Coal gasification reactions with on-line, in situ FT-IR analysis, 9:32479 (RA;US)
Chemisorption
Coadsorption studies on transition metals. Annual report 1 Jan-31 Dec 83, 9:33808 (R;US)
Metal-support interaction studies on clean metal surfaces (On platinum in the presence of silicon oxides), 9:32785 (RA;US)
Comparative Evaluations
Evaluation of NO/sub x/ and NO/sub x//SO/sub x/ flue gas treatment technology for coal-fired sources, 9:32582 (RA;US)
Desorption
Separation of gas mixtures by supported complexes, 9:33775 (RA;US)
Emission
Total emission of CO, Hydrocarbons and NOsub(x) from the Danish carpark. Prognosis from year 1980 until 2000, 9:34224 (R;DK;In Danish)
Hydrogenation
Homogenous high pressure hydrogenation of carbon monoxide using cobalt, ruthenium and iridium catalyst, 9:32796 (R;DE;In German)
Proceedings of the fifth meeting on basic heterogeneous catalysis surface science research, 9:32442 (R;US)
Promoter modifications of catalytic activity and selectivity. Final report, April 1, 1982-March 31, 1984, 9:32784 (R;US)
Surface electronic properties and CO hydrogenation activity of nickel deposited on rutile TiO_2(100) as a model supported catalyst, 9:32793 (J;US)
Monitoring
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Radiolysis
Radiation chemistry of hydrocarbon and alkyl halide systems. Annual progress report, August 1, 1983-May 31, 1984 (CF_3I - CH_3I mixture; pure CH_3I and CF_3I; H_2 - CO systems), 9:33826 (R;US)
Reduction
Stoichiometric CO reduction by supported metal carbonyls. Annual report Dec 82-Jan 83, 9:33823 (R;US)
Sorption
Separation of gas mixtures by supported complexes, 9:33775 (RA;US)
CARBON OXIDE SULFIDE
See CARBON OXYSULFIDE
CARBON OXYSULFIDE
Dynamics
Intramolecular dynamics of highly excited OCS, 9:33812 (R;US)
Removal
Acid gas removal process, 9:32484 (RA;US)
CARBON STEELS
See also STEEL-ASTM-A533-B
Corrosion
Corrosion of fractionation towers in coal liquefaction plants, 9:32504 (R;US)
Ion Implantation
Composition and thermal evolution fo nitrogen implanted steels: A systematic study, 9:33644 (RA;BR)
Iron nitride and carbonitride phases in a nitrogen implanted carbon steel, 9:33643 (RA;BR)
Nitridation
Composition and thermal evolution fo nitrogen implanted steels: A systematic study, 9:33644 (RA;BR)
Iron nitride and carbonitride phases in a nitrogen implanted carbon steel, 9:33643 (RA;BR)
CARBONYL SULFIDE
See CARBON OXYSULFIDE
CARCINOGENESIS
Dose-Response Relationships
Impact of energy and industrial pollution on public health, 9:34497 (BA;US)
Is radiation an appropriate model for chemical mutagenesis and carcinogenesis, 9:34466 (BA;US)
Radiobiology
Is radiation an appropriate model for chemical mutagenesis and carcinogenesis, 9:34466 (BA;US)
Risk Assessment
Impact of energy and industrial pollution on public health, 9:34497 (BA;US)
CARCINOGENS
Metabolism
Chemical carcinogen-induced changes in TRNA metabolism in human cells. Interim technical report 1 Oct 82-30 Sep 83, 9:34469 (R;US)
CARDIOVASCULAR DISEASES
See also ARTERIOSCLEROSIS
Diagnostic Techniques
New nuclear medical method for testing the function of the left ventricle, 9:34418 (RA;AT;In German)
Use of myocardscintigraphy with 99M-Tc-pyrophosphate at dilatative cardiomyopathy, 9:34420 (RA;AT;In German)
CARLSON METHOD
See DISCRETE ORDINATE METHOD
CARS SPECTROSCOPY
See RAMAN SPECTROSCOPY
CASCADE REACTORS
Cooling Systems
Primary heat transfer loop design for the Cascade inertial confinement fusion reactor, 9:34956 (R;US)
CATALYSIS
Meetings
Proceedings of the fifth meeting on basic heterogeneous catalysis surface science research, 9:32442 (R;US)
CATALYSTS
Catalytic Effects
Thermal and catalytic cracking of tars and tar constituents from coal gasification processes, 9:32488 (RA;US)
Chemical Preparation
Catalysts possessing augmented C-O and C-N hydrogenolysis activity. Preliminary progress report, August-September 1983, 9:33813 (R;US)
Development of BEACON technology, 9:32465 (RA;US)
New iron oxide catalyst reduction activities with hydrogen sulfide and hydrogen, 9:32452 (R;US)
Comparative Evaluations
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 9:32532 (R;US)
Homogenous high pressure hydrogenation of carbon monoxide using cobalt, ruthenium and iridium catalyst, 9:32796 (R;DE;In German)
Mechanism of catalytic gasification of coal char. Quarterly technical progress report No. 13, 1 January-31 March 1984, 9:32455 (R;US)
Deactivation
Determination of the intrinsic activity and effective diffusivity of aged coal liquefaction catalysts (Includes discussion of Thiele modulus), 9:32537 (R;US)
Performance Testing
Determination of the intrinsic activity and effective diffusivity of aged coal liquefaction catalysts (Includes discussion of Thiele modulus), 9:32537 (R;US)
Liquid Phase Methanol Process Development Unit: installation, operation, and support studies. Technical progress report No. 10, 1 January-31 March 1984, 9:32794 (R;US)
New iron oxide catalyst reduction activities with hydrogen sulfide and hydrogen, 9:32452 (R;US)
Slurry Fischer-Tropsch/Mobil two stage process of converting SYNGAS to high octane gasoline. Final report, 9:32786 (R;US)

Regeneration
Determination of the intrinsic activity and effective diffusivity of aged coal liquefaction catalysts (Includes discussion of Thiele modulus), 9:32537 (R;US)
Screening
Development of BEACON technology, 9:32465 (RA;US)
Specificity
Development of BEACON technology, 9:32465 (RA;US)
CATHODES
Ion source cathodes of melted and sintered lanthanum hexaboride, 9:34884 (RA;SU;In Russian)
Binders
Elastomeric binder for TiS_2 cathodes in secondary lithium cells, 9:33404 (J;US)
Materials
Molten carbonate fuel cell cathode development, 9:33493 (R;US)
Oxygen electrode in metal air batteries, 9:33406 (J;US)
Semi-solid mixed cathodes for lithium/chalcogen cells, 9:33418 (J;US)
Performance Testing
Performance of nickel cathodes as free standing electrodes in the Ni-Zn vibrocel, 9:33402 (J;US)
CAVITIES
See also BOREHOLES
SALT CAVERNS
Radiation Streaming
Measurements of neutron and gamma-ray streaming in a cavity-duct system and an analysis by an albedo Monte Carlo method, 9:34751 (J;US)
CAVITY RESONATORS
See also SUPERCONDUCTING CAVITY RESONATORS
Coatings
To the choice of heat-exchange surfaces of accelerating structure elements with a high-level of HF losses in a metal, 9:34036 (RA;UA;In Russian)
Configuration
Two-sided algorithms for calculating electric and magnetic fields in resonators of complex shape, 9:33992 (RA;UA;In Russian)
Dimensions
Calculation of tolerances in accelerating structures, 9:34088 (RA;UA;In Russian)
Electrical Insulation
Electric strength of the accelerating structures of small-sized standing wave electron linacs, 9:34040 (RA;UA;In Russian)
Energy Transfer
Power capacitive connection in HF linear accelerators on the base of self-excited oscillators, 9:34048 (RA;UA;In Russian)
Frequency Analysis
Accelerating resonator calculation by the series method, 9:34060 (RA;UA;In Russian)
Dispersion properties of a cylindrical H-resonator loaded with a ferrite sphere, 9:34061 (RA;UA;In Russian)
Heat Transfer
To the choice of heat-exchange surfaces of accelerating structure elements with a high-level of HF losses in a metal, 9:34036 (RA;UA;In Russian)
Mathematical Models
Rigorous mathematical models of accelerating structure resonance cells, 9:34063 (RA;UA;In Russian)
On-Line Control Systems
On-line control of multisection accelerating cell parameters, 9:34078 (RA;UA;In Russian)
Optimization
Optimization of the electrodynamic characteristics of axially symmetric resonators and waveguides for linacs, 9:34057 (RA;UA;In Russian)
Oscillation Modes
Coaxial type resonator current load, 9:34054 (RA;UA;In Russian)
Standing wave accelerating systems on the base of multibeam structures, 9:34041 (RA;UA;In Russian)
Performance
Axial-symmetric resonator synthesis according to a given accelerating electric field axial distribution, 9:34049 (RA;UA;In Russian)
Specifications
Current loaded resonator with supplying waveguide, 9:34062 (RA;UA;In Russian)
Small-sized electron and ion linear resonator accelerators on the base of self-excited oscillators, 9:34047 (RA;UA;In Russian)
Transients
Methods for the analysis of transients in the accelerating system of induction linacs, 9:34058 (RA;UA;In Russian)
CBA (BROOKHAVEN COLLIDING BEAM ACCELERATO
See ISABELLE STORAGE RINGS
CEA GRENOBLE
Research Programs
1982. Progress report (no.19), 9:33445 (R;FR;In French)
CELL CULTURES
Oncogenic Transformations
Multifractionation of ^{60}Co gamma-rays reduces neoplastic transformation in vitro, 9:34465 (J;US)
CELL CYCLE
Biological Radiation Effects
Effect of ionizing radiation with different ionizing density on the uni-cellular Alga Micrasterias denticulate Breb, 9:34455 (R;AT;In German)
CELL GROWTH (PLANT)
See PLANT CELLS
CELL KILLING
Radioinduction
Relative biological effectiveness in V79 Chinese hamster cells of the neutron capture reactions in boron and nitrogen, 9:34464 (J;US)
CELL PROLIFERATION
Autoradiography
^{3}H-thymidine autoradiographic study of cell proliferation and the influence of isoproterenol and kallikrein in various cell populations of the gastrointestinal tract in animal experiments, 9:34384 (R;DE;In German)
CELLOBIOSE
Fermentation
Production of ethanol from biopolymers by anaerobic, thermophilic, and extreme thermophilic bacteria. I. Regulation of carbohydrate utilization in mutants of Thermoanaerobacter ethanolicus, 9:32799 (J;US)
CELLS (BACTERIAL)
See BACTERIA
CELLS (PLANT)
See PLANT CELLS
CELLS (REACTOR)
See REACTOR CELLS
CELLULOSE
Gasification
Conversion of cellulosic wastes to liquid hydrocarbon fuels. Technical progress report, May 1-31, 1984, 9:32783 (R;US)
Liquefaction
Conversion of cellulosic wastes to liquid hydrocarbon fuels. Technical progress report, May 1-31, 1984, 9:32783 (R;US)
CELTIC SEA
See IRISH SEA
CEMENTS
See also PORTLAND CEMENT
Aging
Development of quality assurance and performance testing for the Process Experimental Pilot Plant, 9:32732 (R;US)
Catalytic Effects
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)
Compression Strength
Solidification of radioactive waste in a cement/lime mixture, 9:32715 (R;US)
Leaching
Development of quality assurance and performance testing for the Process Experimental Pilot Plant, 9:32732 (R;US)
Full-scale leaching study of commercial reactor waste forms, 9:32716 (R;US)
Radiolysis
Development of quality assurance and performance testing for the Process Experimental Pilot Plant, 9:32732 (R;US)

Sorptive Properties
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)

CENTRIFUGE ENRICHMENT PLANTS
Safeguards
Results from the study of UF_6 consumption on centrifuge process piping and its influence on gamma ray measurements, 9:32699 (R;US)

CERAMIC MELTERS
Remote Control
Features of a radioactive liquid-fed ceramic melter system, 9:32737 (R;US)
Remote Handling
Features of a radioactive liquid-fed ceramic melter system, 9:32737 (R;US)

CERAMICS
Evaluation
High nuclear waste loadings in tailored ceramics waste forms, 9:32747 (J;US)
Evaporation
High-temperature vaporization of simulated radioactive waste forms, 9:32751 (J;US)
Physical Radiation Effects
Ion bombardment of some glass and glass-ceramic materials, 9:33745 (RA;IL)

CERIUM
Absorption Spectroscopy
Calorimetric determination of cerium and rare earths, 9:33783 (RA;BR;In Portuguese)

CERIUM 144
Decay
Educational laboratory experiments on chemistry in a nuclear engineering school, 9:33844 (J;US)
Solvent Extraction
Educational laboratory experiments on chemistry in a nuclear engineering school, 9:33844 (J;US)
Washout
Scavenging ratios and dry deposition velocities of radioactive particles in the tropical regions of India, 9:34324 (BA;US)

CERIUM ALLOYS
Superconductivity
Low temperature properties of CeO_{82}, 9:33679 (R;US)

CERIUM PHOSPHIDES
Superconductivity
Electrical resistivity of rare earth iron phosphides, 9:33758 (R;US)

CERRO PRIETO GEOTHERMAL FIELD
Resistivity Surveys
Long-term dipole-dipole resistivity monitoring at the Cerro Prieto geothermal field, 9:32963 (R;US)

CESIUM
Adsorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Atomic Beam Sources
Source for intense collimated beams of fast Cs^+ and Cs^0, 9:34559 (R;US)
Desorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Ion Exchange
Phenolic cation exchange resin material for recovery of cesium and strontium, 9:32745 (P;US)
Leaching
Mathematical modelling of the corrosion and leaching behaviour of cemented waste forms, 9:32729 (R;DE;In German)
Solubility
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)

CESIUM 134
Leaching
Full-scale leaching study of commercial reactor waste forms, 9:32716 (R;US)
Radioecological Concentration
1. Quarterly progress report 1983, 9:34365 (R;FR;In French)
2. Quarterly progress report, 1983, 9:34366 (R;FR;In French)
4. Quarterly progress report, 1982, 9:34367 (R;FR;In French)

CESIUM 137
Distribution Functions
The migration of ^{137}Cs and ^{90}Sr in multilayered soils: Results from batch, column, and fallout investigations, 9:34347 (J;US)
Leaching
Full-scale leaching study of commercial reactor waste forms, 9:32716 (R;US)
Radioecological Concentration
1. Quarterly progress report 1983, 9:34365 (R;FR;In French)
2. Quarterly progress report, 1983, 9:34366 (R;FR;In French)
4. Quarterly progress report, 1982, 9:34367 (R;FR;In French)
Aerial radiological survey of the Waterford Generating Station and surrounding area, Taft, Louisiana. Date of survey: March-April 1982, 9:34306 (R;US)
Aerial radiological survey of the Palo Verde Nuclear Generating Station and surrounding area, Wintersburg, Arizona. Date of survey: November 1982, 9:34307 (R;US)
Aerial radiological survey of the Brookhaven National Laboratory and surrounding area, May 1980, 9:34305 (R;US)
Washout
Scavenging ratios and dry deposition velocities of radioactive particles in the tropical regions of India, 9:34324 (BA;US)

CESIUM IONS
Ion Sources
Source for intense collimated beams of fast Cs^+ and Cs^0, 9:34559 (R;US)

CFRMF REACTOR
Neutron Flux
Sensitivity and uncertainty analysis of the Coupled Fast Reactivity Measurements Facility central flux spectrum, 9:33238 (J;US)
Neutron Spectra
Sensitivity and uncertainty analysis of the Coupled Fast Reactivity Measurements Facility central flux spectrum, 9:33238 (J;US)

CHALCOGENIDES
Electric Conductivity
Electrical resistivity of Sm Monochalcogenides, 9:33743 (RA;BR)
Synthesis
New materials from high temperature synthesis, 9:33816 (R;US)

CHALKS
See LIMESTONE

CHANNELS (REACTOR)
See REACTOR CHANNELS

CHARCOAL
Energy Demand
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)
Performance
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)
Radiation Effects
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)
Sorptive Properties
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)
Thermal Degradation
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)

CHARGED PARTICLES
In addition to the specific charged particles listed below, see also the list under ELEMENTARY PARTICLES.
See also ALPHA PARTICLES
DEUTERONS
IONS
TRITONS
Energy Losses
Conserving average rate of energy loss in transport calculations for light charged particles, 9:34752 (J;US)

Particle Production
Recent results from the PEP-4 TPC, 9:34604 (R;US)
Precipitation Scavenging
Effect of electric charges on the efficiency with which columnar ice crystal scavenge aerosol particles, 9:34208 (BA;US)
Laboratory study of the scavenging of sub-micron aerosol by charged raindrops, 9:34207 (BA;US)

CHARGED-PARTICLE ACTIVATION
See ACTIVATION ANALYSIS
CHARGED PARTICLES

CHARGED-PARTICLE TRANSPORT
Monte Carlo Method
A point detector scoring method compatible with Monte Carlo transport calculations of specularly reflected particles, 9:34754 (J;US)
Multigroup Theory
Conserving average rate of energy loss in transport calculations for light charged particles, 9:34752 (J;US)

CHARM PARTICLES
See also B MESONS
Particle Production
Production and muonic decay of heavy quarks in e^+e^- annihilation at 34.5 GeV, 9:34594 (R;DE)
Semileptonic Decay
Production and muonic decay of heavy quarks in e^+e^- annihilation at 34.5 GeV, 9:34594 (R;DE)
Weak Hadronic Decay
Why most flavor dependence predictions for non-leptonic charm decays are wrong, 9:34623 (BA;US)

CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS

CHARS
Chemical Reaction Kinetics
CSIRO flash pyrolysis project: compendium of data, 9:32443 (R;AU)
Chemical Reaction Yield
Coal gasification reactions with on-line, in situ FT-IR analysis, 9:32479 (RA;US)
Combustion
CSIRO flash pyrolysis project: compendium of data, 9:32443 (R;AU)
Devolatilization
Entrained-flow pyrolysis and gasification in the METC advanced gasification facility, 9:32464 (RA;US)
Gasification
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)
Effects of inorganics and pore structure on char gasification, 9:32460 (RA;US)
Heterogeneous kinetics of coal gasification, 9:32461 (RA;US)
Mechanism of catalytic gasification of coal char, 9:32463 (RA;US)
Mechanism of catalytic gasification of coal char. Quarterly technical progress report No. 13, 1 January-31 March 1984, 9:32455 (R;US)
Infrared Spectra
Investigation of vaporization and devolatilization of coal/water mixtures. Seventh quarterly report, November 1, 1983-January 31, 1984, 9:32622 (R;US)
Oxidation
Effects of inorganics and pore structure on char gasification, 9:32460 (RA;US)
Particle Size
Investigation of vaporization and devolatilization of coal/water mixtures. Seventh quarterly report, November 1, 1983-January 31, 1984, 9:32622 (R;US)
Porosity
Effects of inorganics and pore structure on char gasification, 9:32460 (RA;US)
Separation Processes
Coal gasification research studies, 9:32459 (RA;US)
Sorptive Properties
Low-energy process for separating hydrogen and methane in advanced coal gasification, 9:32482 (RA;US)
Surface Area
Influence of changing particle structure on the rate of gas-solid gasification reactions, 9:32462 (RA;US)

CHEMICAL EXPLOSIVES
See also NITROCELLULOSE
PETN
Detonations
Measurement of shock induced reaction in rocket propellants by nanosecond infrared radiometry and photography, 9:34164 (R;US)
Electrochemistry
Electrochemical properties of CP, HMX, RDX, and PETN, 9:34160 (R;US)

CHEMICAL FEEDSTOCKS
Production
Fifth symposium on biotechnology for fuels and chemicals, 9:32798 (B;US)

CHEMICAL INDUSTRY
Radioactive Effluents
Airborne emission control technology for the elemental phosphorus industry. Final report, 9:34314 (R;US)

CHEMICAL OXYGEN DEMAND
Removal
Treatment of coal gasification wastewater using rotating biological contactors, 9:32555 (R;US)

CHEMICAL REACTIONS
See also CORROSION
DENITRIFICATION
DESULFURIZATION
FISCHER-TROPSCH SYNTHESIS
HYDROGENATION
METHANATION
REDUCTION
Catalysts
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 9:32532 (R;US)

CHEMICAL REACTORS
Construction
Theoretical and experimental studies of fixed-bed coal gasification reactors, 9:32480 (RA;US)
Control
Method of vibrational control in the problem of stabilization of chemical reactors. Final report, July 1, 1980-February 29, 1984, 9:33916 (R;US)
Deposits
Effects of accumulated solids and solvent initial boiling point on dissolver performance. Final technical report, 9:32497 (R;US)
Design
Entrained-flow pyrolysis and gasification in the METC advanced gasification facility, 9:32464 (RA;US)
Microwave-heated continuous denitrification apparatus, 9:32695 (TG;US)
Fluid Mechanics
Full-scale cold-flow modelling of the SRC-I slurry fired heater at Creare, Inc., 9:32506 (R;US)
Internal R and D task summary report: large-scale dissolver cold-flow modeling, 9:32494 (R;US)
Functional Models
Slurry fired heater cold-flow modelling, 9:32500 (R;US)
Heat Transfer
Slurry fired heater cold-flow modelling, 9:32500 (R;US)
Installation
Development of an advanced water-gas shift conversion system. Quarterly progress report, February 1-April 30, 1984, 9:32527 (R;US)
Liners
Application of a cold metal reactor wall to the entrained-bed gasification of coal (Water-cooled metal liner), 9:32470 (RA;US)
Microwave Heating
Microwave-heated continuous denitrification apparatus, 9:32695 (TG;US)
Multiphase Flow
Internal R and D task summary report: large-scale dissolver cold-flow modeling, 9:32494 (R;US)
Slurry fired heater cold-flow modelling, 9:32500 (R;US)
Operation
Theoretical and experimental studies of fixed-bed coal gasification reactors, 9:32480 (RA;US)

Performance
Effects of accumulated solids and solvent initial boiling point on dissolver performance. Final technical report, 9:32497 (R;US)
Scaling Laws
Slurry fired heater cold-flow modelling, 9:32500 (R;US)
Stability
Method of vibrational control in the problem of stabilization of chemical reactors. Final report, July 1, 1980-February 29, 1984, 9:33916 (R;US)
Testing
Theoretical and experimental studies of fixed-bed coal gasification reactors, 9:32480 (RA;US)

Activation Analysis
Determination of uranium and thorium in coal by epithermal neutrons, 9:33779 (RA;BR;In Portuguese)
Non destructive analysis of trace elements in coal by activation with resonance neutrons, 9:33780 (RA;BR;In Portuguese)
Chemical Analysis
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Distribution of pyrite and its liberation by crushing in the washed coal at Kellingley Colliery, North Yorkshire Area, 9:32610 (R;GB)
Laser micropyrolysis of coal macerals. Annual report Nov 82-Oct 83, 9:33807 (R;US)
Potential of nuclear methods for development of novel on-line sensors for coal analysis, 9:32540 (R;US)
Trace elements in imported coal (Netherlands), 9:32547 (R;NL;In Dutch)
Chemical Composition
Combined processing of coal and heavy resids. Progress report, January 16, 1984-April 15, 1984, 9:32520 (R;US)
Factors influencing trace element variation in U.S. coals, 9:32541 (R;US)
Investigation of pyrite as a contributor to slagging in Eastern Bituminous coals. Quarterly progress report 10, January 1-March 30, 1984, 9:32621 (R;US)
Trace elements in imported coal (Netherlands), 9:32547 (R;NL;In Dutch)
Chemical Reactions
Changes in asphaltenes and preasphaltenes with reaction conditions and effects on coal structure, 9:32451 (R;US)
Cocombustion
Study of existing RDF-cofiring experience. Volume 2. Appendixes to Phase I final report, 9:32805 (R;US)
Combustion
Investigation of pyrite as a contributor to slagging in Eastern Bituminous coals. Quarterly progress report 10, January 1-March 30, 1984, 9:32621 (R;US)
Combustion Products
Emission inventory of coal, peat and oil-fired power plants, 9:32585 (R;FI;In Finnish)
Theory of fine particle formation in coal combustion, 9:32617 (R;US)
Viscosity of synthetic coal ash slags, 9:32618 (R;US)
Combustion Properties
Combustion properties of oxidized and weathered coals in a fluidized bed, 9:32548 (R;NL)
Computerized Tomography
X-ray computerized tomography of coal, 9:32544 (RA;US)
Crushing
Distribution of pyrite and its liberation by crushing in the washed coal at Kellingley Colliery, North Yorkshire Area, 9:32610 (R;GB)
Density
Data base for the analysis of compositional characteristics of coal seams and macerals. Final report, Part 9. Interaction of gases, vapors and liquids with coals and macerals at ambient temperatures: their use to characterize porosity, 9:32545 (R;US)
Desulfurization
Potential for sulphur reduction by coal preparation of the R.O.M. coal at Prince of Wales Colliery, North Yorkshire Area, 9:32609 (R;GB)
Potential for sulphur reduction by coal preparation of the R.O.M. coal at Manton Colliery, South Yorkshire Area, 9:32611 (R;GB)
Devolatilization
Entrained-flow pyrolysis and gasification in the METC advanced gasification facility, 9:32464 (RA;US)
Influence of changing particle structure on the rate of gas-solid gasification reactions, 9:32462 (RA;US)
Dissolution
Arylations of coal model systems, 9:32519 (R;US)
Energy Consumption
Synopsis of the Annual Energy Review and Outlook 1983, 9:33459 (R;US)
Energy Models
National coal model: description and documentation. Final report, 9:32636 (R;US)
Energy Source Development
Energy independence through increased utilization of American coal: goal of the 98th Congress, 9:32647 (J;US)
Expansion
Data base for the analysis of compositional characteristics of coal seams and macerals. Final report, Part 9. Interaction of gases, vapors and liquids with coals and macerals at ambient temperatures: their use to characterize porosity, 9:32545 (R;US)
Flash Heating
CSIRO flash pyrolysis project: compendium of data, 9:32443 (R;AU)
Flotation
Potential for sulphur reduction by coal preparation of the R.O.M. coal at Prince of Wales Colliery, North Yorkshire Area, 9:32609 (R;GB)
Potential for sulphur reduction by coal preparation of the R.O.M. coal at Manton Colliery, South Yorkshire Area, 9:32611 (R;GB)
Fluidized-Bed Combustion
Corrosion behavior of materials in coal-combustion systems, 9:32635 (J;US)
Fuel Slurries
Coal-water slurry combustion in industrial gas turbines, 9:32634 (J;GB)
Hydraulic Transport
Development and analysis of slurry transport systems in longwall mining of coal. Open file report 30 Sep 81-21 Sep 82, 9:32603 (R;US)
Hydrocracking
Process development studies in coal gasification, 9:32489 (RA;US)
Hydrogenation
Combined processing of coal and heavy resids. Progress report, January 16, 1984-April 15, 1984, 9:32520 (R;US)
Process development studies in coal gasification, 9:32489 (RA;US)
Imports
Trace elements in imported coal (Netherlands), 9:32547 (R;NL;In Dutch)
Legislation
Energy independence through increased utilization of American coal: goal of the 98th Congress, 9:32647 (J;US)
Market
Organisation and structure of the Pacific steam coal trade, 9:32639 (R;GB)
Materials Handling Equipment
Transport and distribution systems for coal. Pt. 1. Summary, 9:32612 (R;DK;In Danish)
Transport and distribution systems for coal. Pt. 2. Main report, 9:32613 (R;DK;In Danish)
Molecular Structure
Laser micropyrolysis of coal macerals. Annual report Nov 82-Oct 83, 9:33807 (R;US)
Natural Radioactivity
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
NMR Spectra
Solid state NMR methods for coal science. Progress report, January 1-March 31, 1984, 9:32546 (R;US)
On-Line Measurement Systems
Potential of nuclear methods for development of novel on-line sensors for coal analysis, 9:32540 (R;US)

Oxidation
Combustion properties of oxidized and weathered coals in a fluidized bed, 9:32548 (R;NL)
Photo-assisted electrolysis applied to coal gasification, 9:32466 (RA;US)
Petrography
Investigation of pyrite as a contributor to slagging in Eastern Bituminous coals. Quarterly progress report 10, January 1-March 30, 1984, 9:32621 (R;US)
Photoacoustic microscopy of coal macerals. Annual report Jan-Dec 83, 9:32550 (R;US)
X-ray computerized tomography of coal, 9:32544 (RA;US)
Photoelectrolysis
Photo-assisted electrolysis applied to coal gasification, 9:32466 (RA;US)
Planning
Transport and distribution systems for coal. Pt. 2. Main report, 9:32613 (R;DK;In Danish)
Plasticity
Plasticity, agglomeration, and volatiles secondary reactions during gasification, 9:32458 (RA;US)
Porosity
Data base for the analysis of compositional characteristics of coal seams and macerals. Final report, Part 9. Interaction of gases, vapors and liquids with coals and macerals at ambient temperatures: their use to characterize porosity, 9:32545 (R;US)
Influence of changing particle structure on the rate of gas-solid gasification reactions, 9:32462 (RA;US)
X-ray computerized tomography of coal, 9:32544 (RA;US)
Prices
Transport and distribution systems for coal. Pt. 1. Summary, 9:32612 (R;DK;In Danish)
Transport and distribution systems for coal. Pt. 3. Catalogue, 9:32614 (R;DK;In Danish)
Pyrolysis
Coal gasification reactions with on-line, in situ FT-IR analysis, 9:32479 (RA;US)
Coal gasification and tar conversion reactions over calcium oxide, 9:32487 (RA;US)
CSIRO flash pyrolysis project: compendium of data, 9:32443 (R;AU)
Effects of inorganics and pore structure on char gasification, 9:32460 (RA;US)
Laser micropyrolysis of coal macerals. Annual report Nov 82-Oct 83, 9:33807 (R;US)
Plasticity, agglomeration, and volatiles secondary reactions during gasification, 9:32458 (RA;US)
Steam pyrolysis of coal for two-stage gasification, 9:32467 (RA;US)
Studies of initial reaction steps in the gasification of coal and selected model compounds, 9:32457 (RA;US)
Studies toward improved techniques for gasifying coals, 9:32468 (RA;US)
Reduction
Changes in asphaltenes and preasphaltenes with reaction conditions and effects on coal structure, 9:32451 (R;US)
Research Programs
Annual report 1982, 9:33233 (R;NL;In Dutch)
Sample Preparation
Premium coal sample program at the Argonne National Laboratory, 9:32542 (R;US)
Sampling
Premium coal sample program at the Argonne National Laboratory, 9:32542 (R;US)
Staged Combustion
Pulverized coal firing of aluminum melting furnaces. Final report, 9:32619 (R;US)
Stockpiles
Characterization and treatability of drainage samples from coal piles at steam electric power stations, 9:32559 (R;CA)
Storage
Transport and distribution systems for coal. Pt. 1. Summary, 9:32612 (R;DK;In Danish)
Transport and distribution systems for coal. Pt. 2. Main report, 9:32613 (R;DK;In Danish)
Supercritical Gas Extraction
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
Surface Area
Data base for the analysis of compositional characteristics of coal seams and macerals. Final report, Part 9. Interaction of gases, vapors and liquids with coals and macerals at ambient temperatures: their use to characterize porosity, 9:32545 (R;US)
Influence of changing particle structure on the rate of gas-solid gasification reactions, 9:32462 (RA;US)
Swelling
Coal gasification reactions with on-line, in situ FT-IR analysis, 9:32479 (RA;US)
Data base for the analysis of compositional characteristics of coal seams and macerals. Final report, Part 9. Interaction of gases, vapors and liquids with coals and macerals at ambient temperatures: their use to characterize porosity, 9:32545 (R;US)
Temperature Effects
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
Trade
Organisation and structure of the Pacific steam coal trade, 9:32639 (R;GB)
Transport
Freight Network Modeling System. Volume II. Freight Network Equilibrium Model: Version 4.1 User's Guide and Programmer's Guide, 9:32605 (R;US)
Transport and distribution systems for coal. Pt. 1. Summary, 9:32612 (R;DK;In Danish)
Transport and distribution systems for coal. Pt. 2. Main report, 9:32613 (R;DK;In Danish)
Transport and distribution systems for coal. Pt. 3. Catalogue, 9:32614 (R;DK;In Danish)
Viscosity
Plasticity, agglomeration, and volatiles secondary reactions during gasification, 9:32458 (RA;US)
Washing
Distribution of pyrite and its liberation by crushing in the washed coal at Kellingley Colliery, North Yorkshire Area, 9:32610 (R;GB)
Weathering
Combustion properties of oxidized and weathered coals in a fluidized bed, 9:32548 (R;NL)

COAL DEPOSITS
See also COAL SEAMS
Clays
Clay-mineral assemblages in Upper Cretaceous shales in the Torreon Wash and Star Lake coal areas, southeastern San Juan Basin, New Mexico. Open file report (final), 9:32588 (R;US)
Degassing
Development of coal-gas production simulators and mathematical models for well test strategies (computer models for single- or two-phase flow of methane and water in heterogeneous coal seams to a single, vertical production well connected to a finite conductivity vertical fracture). Topical report Aug 81-Oct 82, 9:32596 (R;US)
Exploration
Geophysical techniques for coalbed evaluation. Final report Apr 82-Dec 83, 9:32587 (R;US)

COAL GASIFICATION
See also BEACON PROCESS
FISCHER-TROPSCH/MOBIL PROCESS
FLASH HYDROPYROLYSIS PROCESS
TEXACO GASIFICATION PROCESS
Development of a process for the simultaneous high-temperature removal of alkali and particulates in pressurized gasification systems, 9:32481 (RA;US)
Low-energy process for separating hydrogen and methane in advanced coal gasification, 9:32482 (RA;US)
Studies in tar formation and separation in coal gasification systems, 9:32485 (RA;US)
Bench-Scale Experiments
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)

Prediction and measurement of entrained coal gasification processes, 9:32477 (RA;US)

Catalysis
Mechanism of catalytic gasification of coal char, 9:32463 (RA;US)

Catalysts
Mechanism of catalytic gasification of coal char. Quarterly technical progress report No. 13, 1 January-31 March 1984, 9:32455 (R;US)
Photo-assisted electrolysis applied to coal gasification, 9:32466 (RA;US)
Single stage catalytic gasification of coal to high-Btu gas, 9:32491 (RA;US)

Chemical Reaction Kinetics
Coal gasification reactions with on-line, in situ FT-IR analysis, 9:32479 (RA;US)
Heterogeneous kinetics of coal gasification, 9:32461 (RA;US)
Influence of changing particle structure on the rate of gas-solid gasification reactions, 9:32462 (RA;US)
Kinetics of coal gasification reactions at process conditions. Final technical report, 9:32454 (R;US)
Mechanism of catalytic gasification of coal char, 9:32463 (RA;US)
Studies of initial reaction steps in the gasification of coal and selected model compounds, 9:32457 (RA;US)

Chemical Reactors
Application of a cold metal reactor wall to the entrained-bed gasification of coal, 9:32470 (RA;US)
Hydrodynamical basis for scaling fluidization data on jet penetration and mixing relevant to fluidized-bed coal gasifiers, 9:32474 (RA;US)
Testing evaluation and validation of detailed mechanistic computer codes for fluidized-bed gasifiers, 9:32471 (RA;US)
Theoretical and experimental studies of fixed-bed coal gasification reactors, 9:32480 (RA;US)

Computerized Simulation
Evaluation of mechanistic models for coal gasification, 9:32475 (RA;US)
Gasification modeling support, 9:32476 (RA;US)
Prediction and measurement of entrained coal gasification processes, 9:32477 (RA;US)
Testing evaluation and validation of detailed mechanistic computer codes for fluidized-bed gasifiers, 9:32471 (RA;US)
Utilization of the EPRI/S^3 entrained flow coal gasification model, 9:32478 (RA;US)

Diagnostic Techniques
Optical detection of alkali compounds, 9:32531 (R;US)

Fluidized Bed
Evaluation of mechanistic models for coal gasification, 9:32475 (RA;US)
Gasification modeling support, 9:32476 (RA;US)
Testing evaluation and validation of detailed mechanistic computer codes for fluidized-bed gasifiers, 9:32471 (RA;US)

Mathematical Models
Theoretical and experimental studies of fixed-bed coal gasification reactors, 9:32480 (RA;US)

Process Development Units
Advancement of flash hydrogasification. Quarterly technical progress report, January-March 1984, 9:32446 (R;US)

Research Programs
Coal gasification research studies, 9:32459 (RA;US)
Coal gasification research studies, 9:32472 (RA;US)
Studies toward improved techniques for gasifying coals, 9:32468 (RA;US)

Waste Water
Fixed-film fluidized-bed bioreactors for biooxidation of coal converison wastewaters, 9:32558 (RA;US)
Gasifier wastewater treatment: Phase I cooling tower assessment, 9:32554 (R;US)
Treatment of coal gasification process wastewater, 9:32556 (RA;US)

Water Treatment
Gasifier wastewater treatment: Phase I cooling tower assessment, 9:32554 (R;US)

COAL GASIFICATION PLANTS

Design
Industrial fuel gas plant project. Phase II. Memphis industrial fuel gas plant. Final report (U-GAS process), 9:32448 (R;US)

Failure Mode Analysis
Surface Gasification Materials Program. Semiannual progress report for the period ending March 31, 1984, 9:32535 (R;US)

Materials Testing
Surface Gasification Materials Program. Semiannual progress report for the period ending March 31, 1984, 9:32535 (R;US)

Pressure Vessels
Surface Gasification Materials Program. Semiannual progress report for the period ending March 31, 1984, 9:32535 (R;US)

Waste Water
Adsorption-enhanced biogasification of coal conversion wastewater, 9:32566 (J;US)
Environmental studies - fixed-bed gasification, 9:32557 (RA;US)
Treatment of coal gasification wastewater using rotating biological contactors, 9:32555 (R;US)

COAL INDUSTRY

Competition
Energy independence through increased utilization of American coal: goal of the 98th Congress, 9:32647 (J;US)

Energy Models
National coal model: description and documentation. Final report, 9:32636 (R;US)

Regulations
Energy independence through increased utilization of American coal: goal of the 98th Congress, 9:32647 (J;US)

Statistics
Coal in New South Wales, 9:32637 (R;AU)

COAL LIQUEFACTION

See also FISCHER-TROPSCH/MOBIL PROCESS
FLASH HYDROPYROLYSIS PROCESS
H-COAL PROCESS
LIQUID PHASE METHANOL PROCESS
SRC-II PROCESS
SUPERCRITICAL GAS EXTRACTION
TSL PROCESS

Catalysts
Determination of the intrinsic activity and effective diffusivity of aged coal liquefaction catalysts, 9:32537 (R;US)
New iron oxide catalyst reduction activities with hydrogen sulfide and hydrogen, 9:32452 (R;US)

Chemical Reaction Yield
Changes in asphaltenes and preasphaltenes with reaction conditions and effects on coal structure, 9:32451 (R;US)

Chemical Reactions
Changes in asphaltenes and preasphaltenes with reaction conditions and effects on coal structure, 9:32451 (R;US)

Chemistry
Arylations of coal model systems, 9:32519 (R;US)

Data Base Management
Development of a reference data system for the liquefaction technology data base. Final technical report, 22 September 1982-3 August 1983, 9:32518 (R;US)

Organic Solvents
Combined processing of coal and heavy resids. Progress report, January 16, 1984-April 15, 1984 (Use of crude and residual petroleum products as solvents), 9:32520 (R;US)
Effects of start-up solvent on composition of recycle liquefaction product slurry from low-rank coal, 9:32449 (R;US)
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)

Parametric Analysis
Changes in asphaltenes and preasphaltenes with reaction conditions and effects on coal structure, 9:32451 (R;US)

Research Programs
Advanced coal liquefaction research. Quarterly technical progress report, January 1-March 31, 1983, 9:32516 (R;US)

Structural Chemical Analysis
Changes in asphaltenes and preasphaltenes with reaction conditions and effects on coal structure, 9:32451 (R;US)

Temperature Dependence
Changes in asphaltenes and preasphaltenes with reaction conditions and effects on coal structure, 9:32451 (R;US)

COAL LIQUEFACTION PLANTS
Flowmeters
Mass flow measurement at Wilsonville Advanced Coal Liquefaction Pilot Plant using micro motion mass flow meters, 9:32533 (R;US)
Residues
Compaction and granulation of coal liquefaction residue. Final report, 9:32529 (R;US)
Gasification of residual materials from coal liquefaction. Type III extended pilot plant evaluation of a pelletized and ground Kerr McGee mineral ash residue from SRC-I coal liquefaction process, 9:32444 (R;US)
Gasification of residual materials from coal liquefaction: Type II preliminary pilot plant evaluation of SRC-I extruded Kerr McGee mineral ash residue-water slurry, 9:32445 (R;US)
Waste Water
Extension of the evaluation of reverse osmosis for SRC-I wastewater. Final technical report, 9:32512 (R;US)

COAL LIQUIDS
Acetylation
Evaluation of intermolecular attractive forces in coal derived liquids. Quarterly report, February 1984-April 1984, 9:32524 (R;US)
Additives
Studies of the stabilization of coal liquids. Quarterly report of progress II, 9:32523 (R;US)
Chemical Composition
Effects of start-up solvent on composition of recycle liquefaction product slurry from low-rank coal, 9:32449 (R;US)
Chemical Properties
Liquid product characterization and compatibility studies. Final technical report, 9:32507 (R;US)
Chemical Reactions
Cleavage of aromatic carbon-carbon bonds (Cleavage reactions with o-terphenyl), 9:32450 (R;US)
Correlations
Development of a reference data system for the liquefaction technology data base. Final technical report, 22 September 1982-3 August 1983, 9:32518 (R;US)
Derivatization
Evaluation of intermolecular attractive forces in coal derived liquids. Quarterly report, February 1984-April 1984, 9:32524 (R;US)
Distillates
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix B. Vol. 2, 9:32503 (R;US)
Liquid product characterization and compatibility studies. Final technical report, 9:32507 (R;US)
Enthalpy
Subcontracted R & D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Vol. 3, 9:32511 (R;US)
Equations of State
Development of a reference data system for the liquefaction technology data base. Final technical report, 22 September 1982-3 August 1983, 9:32518 (R;US)
Fractionation
Corrosion of fractionation towers in coal liquefaction plants, 9:32504 (R;US)
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)
Gas Chromatography
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)
Gums
Studies of the stabilization of coal liquids. Quarterly report of progress II, 9:32523 (R;US)
Infrared Spectra
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)
Liquid Column Chromatography
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)
Mass Spectroscopy
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)
Mathematical Models
Development of a reference data system for the liquefaction technology data base. Final technical report, 22 September 1982-3 August 1983, 9:32518 (R;US)
Mutagen Screening
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix B. Vol. 2, 9:32503 (R;US)
Physical Properties
Liquid product characterization and compatibility studies. Final technical report, 9:32507 (R;US)
Solubility
Evaluation of intermolecular attractive forces in coal derived liquids. Quarterly report, February 1984-April 1984, 9:32524 (R;US)
Stability
Liquid product characterization and compatibility studies. Final technical report, 9:32507 (R;US)
Stabilization
Studies of the stabilization of coal liquids. Quarterly report of progress II, 9:32523 (R;US)
Steam Reformer Processes
Steam reforming of aromatic hydrocarbons, 9:32490 (RA;US)
Structural Chemical Analysis
Effects of start-up solvent on composition of recycle liquefaction product slurry from low-rank coal, 9:32449 (R;US)
Supercritical Fluid Chromatography
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)
Thermodynamic Properties
Development of a reference data system for the liquefaction technology data base. Final technical report, 22 September 1982-3 August 1983, 9:32518 (R;US)
Subcontracted R and D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Volume 1 (Mostly gases and light hydocarbons with aromatics and coal liquid fractions), 9:32509 (R;US)
Subcontracted R and D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Volume 2, 9:32510 (R;US)
Viscosity
Studies of the stabilization of coal liquids. Quarterly report of progress II, 9:32523 (R;US)

COAL MINERS
Protective Clothing
Active man-cooling: a feasibility study. Final report, 9:32644 (R;GB)
Working Conditions
Active man-cooling: a feasibility study. Final report, 9:32644 (R;GB)

COAL MINES
Air Conditioning
Improved working conditions by air conditioning of underground pits, 9:32642 (R;DE;In German)
Control Rooms
Ergonomic principles of colliery control room design and layout, 9:32600 (R;GB)
Electrical Equipment
Performance criteria guideline for three explosion protection methods of electrical equipment rated up to 15,000 volts AC. Open file report 15 Aug 81-1 Dec 82, 9:32645 (R;US)
Safety
Methodology development for mine life safety system evaluation. Open file report 1 Jan 80-28 Feb 82, 9:32646 (R;US)
Ventilation Systems
Methodology development for mine life safety system evaluation. Open file report 1 Jan 80-28 Feb 82, 9:32646 (R;US)

COAL MINING
Dusts
Risk of dust-induced lung disease in oil shale workers, 9:32692 (R;US)
Land Leasing
Federal coal-leasing policy; and the Bisti Badlands Wilderness proposal. Oversight hearings before the Subcommittee on Mining, Forest Management, and Bonneville Power Administration and the Subcommittee on Public Lands and National Parks, House of Representatives, Ninety-Eighth Congress, First Session, 9:32648 (B;US)
COAL PREPARATION
Desulfurization
Sulfur species leached from pyrite during oxidative desulfurization of coal in alkaline solutions, 9:32608 (R;US)
Economic Analysis
Feasibility study of in-mine coal preparation facilities. Open file report 23 Sep 81-30 Sep 82, 9:32616 (R;US)
Feasibility Studies
Feasibility study of in-mine coal preparation facilities. Open file report 23 Sep 81-30 Sep 82, 9:32616 (R;US)
COAL PREPARATION PLANTS
Design
Noise control techniques for the design of coal preparation plants. Open file report Jun 80-Sep 82, 9:32615 (R;US)
Noise Pollution Abatement
Noise control techniques for the design of coal preparation plants. Open file report Jun 80-Sep 82, 9:32615 (R;US)
COAL RESERVES
Values
Fair market value of federal coal, 9:32641 (J;US)
COAL SEAMS
Degassing
Multi-stage probe for monitoring coal seam gas pressures and flows, 9:32592 (R;AU)
Pressure Measurement
Multi-stage probe for monitoring coal seam gas pressures and flows, 9:32592 (R;AU)
COAL TAR
Carcinogen Screening
Toxicologic responses to a complex coal conversion by-product: mammalian cell mutagenicity and dermal carcinogenicity, 9:32643 (R;US)
Chemical Reaction Yield
Coal gasification reactions with on-line, in situ FT-IR analysis, 9:32479 (RA;US)
Coal gasification and tar conversion reactions over calcium oxide, 9:32487 (RA;US)
Control
Studies in tar formation and separation in coal gasification systems, 9:32485 (RA;US)
Cracking
Coal gasification and tar conversion reactions over calcium oxide, 9:32487 (RA;US)
Hydrogenation
CSIRO flash pyrolysis project: compendium of data, 9:32443 (R;AU)
Infrared Spectra
Investigation of vaporization and devolatilization of coal/water mixtures. Seventh quarterly report, November 1, 1983-January 31, 1984, 9:32622 (R;US)
Inhibition
Coal gasification and tar conversion reactions over calcium oxide, 9:32487 (RA;US)
Molecular Weight
Plasticity, agglomeration, and volatiles secondary reactions during gasification, 9:32458 (RA;US)
Studies in tar formation and separation in coal gasification systems, 9:32485 (RA;US)
Mutagen Screening
Toxicologic responses to a complex coal conversion by-product: mammalian cell mutagenicity and dermal carcinogenicity, 9:32643 (R;US)
Pyrolysis
Plasticity, agglomeration, and volatiles secondary reactions during gasification, 9:32458 (RA;US)
Thermal and catalytic cracking of tars and tar constituents from coal gasification processes, 9:32488 (RA;US)
Separation Processes
Environmental studies - fixed-bed gasification, 9:32557 (RA;US)
Studies in tar formation and separation in coal gasification systems, 9:32485 (RA;US)
COAL-DERIVED LIQUIDS
See COAL LIQUIDS
COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES
COARSE MESH METHOD

COASTAL WATERS
Microorganisms
Microbiology: II. Biodegradation of oil - 1980 study results, 9:34433 (RA;NO)
Oil Spills
Microbiology II. Biodegradation of oil - 1981. Study results, 9:34490 (RA;NO)
COATED FUEL PARTICLES
Fission Product Release
Cesium release from coated fuel particles with failed coatings, 9:33195 (J;US)
Irradiation performance of coated fuel particles with fission product retaining kernel additives, 9:33203 (J;US)
Fuel Element Failure
Cesium release from coated fuel particles with failed coatings, 9:33195 (J;US)
COBALT
Activation Analysis
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
Adsorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Biological Accumulation
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
Desorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
COBALT 58
Radioecological Concentration
1. Quarterly progress report 1983, 9:34365 (R;FR;In French)
2. Quarterly progress report, 1983, 9:34366 (R;FR;In French)
4. Quarterly progress report, 1982, 9:34367 (R;FR;In French)
COBALT 59 TARGET
Lithium 6 Reactions
^{6}Li fragmentation on ^{59}Co target at 41 MeV, 9:34684 (RA;SU;In Russian)
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
COBALT 60
Leaching
Full-scale leaching study of commercial reactor waste forms, 9:32716 (R;US)
Radioecological Concentration
1. Quarterly progress report 1983, 9:34365 (R;FR;In French)
2. Quarterly progress report, 1983, 9:34366 (R;FR;In French)
4. Quarterly progress report, 1982, 9:34367 (R;FR;In French)
Aerial radiological survey of the Brookhaven National Laboratory and surrounding area, May 1980, 9:34305 (R;US)
COBALT COMPOUNDS
See also COBALT OXIDES
Catalytic Effects
Homogenous high pressure hydrogenation of carbon monoxide using cobalt, ruthenium and iridium catalyst, 9:32796 (R;DE;In German)

Sorptive Properties
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)

COBALT OXIDES
Optical Properties
Optical properties, thermal stability, and characterization of black cobalt oxide films, 9:32927 (J;US)
Sorptive Properties
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
Stability
Optical properties, thermal stability, and characterization of black cobalt oxide films, 9:32927 (J;US)

COCKCROFT-WALTON ACCELERATORS
Mass Spectroscopy
Rare particles, 9:34014 (R;US)

COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Environmental Impacts
Cogeneration: status and environmental issues. Final report Jun 79-Jul 81, 9:33581 (R;US)
Feasibility Studies
Computer models and district heating and cogeneration feasibility analysis, 9:33577 (R;US)
Mathematical Models
Computer models and district heating and cogeneration feasibility analysis, 9:33577 (R;US)
On-Line Control Systems
Planning experience with a modern on-line control concept, 9:33035 (RA;DE;In German)

COGENERATION PLANTS
See DUAL-PURPOSE POWER PLANTS

COHERENT ANTI-STOKES RAMAN SPECTROSCOPY
See RAMAN SPECTROSCOPY

COILS (MAGNETIC)
See MAGNET COILS

COKE
Agglomeration
Granulation of nomagnetic fly ash-coke mixtures, 9:32562 (R;US)
Heat Treatments
Granulation of nomagnetic fly ash-coke mixtures, 9:32562 (R;US)
Stockpiles
Characterization and treatability of drainage samples from coal piles at steam electric power stations, 9:32559 (R;CA)

COLD TRAPS
Coolant Loops
Project of a cold trap for CTS-1 sodium thermal loop, 9:33894 (RA;BR;In Portuguese)

COLLECTIVE ACCELERATORS
Research Programs
LLL experiments in collective field acceleration, 9:33972 (BA;US)

COLLECTOR PROPERTIES
See POROSITY

COLLECTOR PROPERTIES (ROCKS)
See POROSITY

COLLEGES
See EDUCATIONAL FACILITIES

COLLIERIES
See COAL MINES

COLLISIONLESS PLASMA
Ambipolar Diffusion
Transverse ion losses through the outer plugs of an ambipolar trap under conditions of few collisions, 9:34832 (TG;US)

COLLODION
See NITROCELLULOSE

COLOGNE SPIRITS
See ETHANOL

COLOMBIA
Energy Consumption
Rationalization of energy use in future Colombian buildings, 9:33582 (R;CO;In Spanish)
Energy Supplies
Rural energy balance of Colombia and its socioeconomic context 1981, 9:33430 (R;CO;In Spanish)

COLORADO
Mineral Industry
Colorado permit directory for energy and mineral resource development, 9:33442 (R;US)
Naval Oil Shale Reserves
Naval Petroleum and Oil Shale Reserves. Annual report of operations, fiscal year 1983, 9:32661 (R;US)

COLUMBIA RIVER BASIN
Fishes
White sturgeon research needs: workshop results (Acipenser transmontanus), 9:34351 (R;US)

COLUMBIUM
See NIOBIUM

COLUMNS (MECHANICAL)
See MECHANICAL STRUCTURES

COMBINED COLLECTORS
Computerized Simulation
Hybrid solar thermal-photovoltaic systems demonstration, Phase I and II. Final technical progress report, July 5, 1979-December 1982, 9:32935 (R;US)
Mathematical Models
Thermal modeling of line focus photovoltaic systems, 9:32914 (R;US)
Performance
Hybrid solar thermal-photovoltaic systems demonstration, Phase I and II. Final technical progress report, July 5, 1979-December 1982, 9:32935 (R;US)
Thermal Analysis
Thermal modeling of line focus photovoltaic systems, 9:32914 (R;US)

COMBINED STEAM-POWER GENERATION
See COGENERATION

COMBUSTION
See also STAGED COMBUSTION
Mass Spectroscopy
Molecular beam mass spectrometer sampling of flash ignited combustion, 9:33846 (R;US)
Process Control
Development of MACT in-furnace NO/sub x/ removal process for steam generators, 9:32573 (RA;US)
Reaction Intermediates
Elementary processes in the catalytic combustion of methane (mechanism, intermediates and controlling reactions). Annual report Oct 82-Sep 83, 9:33847 (R;US)
Reaction Kinetics
Elementary processes in the catalytic combustion of methane (mechanism, intermediates and controlling reactions). Annual report Oct 82-Sep 83, 9:33847 (R;US)

COMBUSTION PRODUCTS
Chemical Analysis
Characterization of effluents from coal and oil heating. 3. Oil heated installations, 9:34245 (R;NO;In Norwegian)
Gas Analysis
Comprehensive assessment of the specific compounds present in combustion processes. Volume 3. National survey of organic emissions from coal fired utility boiler plants. Final report, task 52, 9:34237 (R;US)
Oil Burners
Characterization of effluents from coal and oil heating. 3. Oil heated installations, 9:34245 (R;NO;In Norwegian)

COMMERCIAL BUILDINGS
Energy Audits
Energy cost reduction for retail florists, 9:33513 (R;US)

COMMERCIAL SECTOR
Energy Conservation
Long-range conservation projection, 9:33506 (R;US)

COMMUNICATIONS
See also TELEPHONES
Decentralized system theory, 9:33020 (R;US)
Specifications
Specifications for the PBX-based digital telecommunications system, 9:34973 (R;US)

COMMUNITIES
Appropriate Technology
North Carolina energy conservation plan. Final program report, 9:32934 (R;US)
Energy Conservation
North Carolina energy conservation plan. Final program report, 9:32934 (R;US)
COMPACT TORUS
Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.
Reactor considerations for the "compart torus" thermonuclear facility with an autonomous ignition chamber, 9:34860 (RA;SU;In Russian)
COMPOSITE MATERIALS
Corrosion
Development of corrosion resistant phosphoric acid fuel cell components, 9:33500 (J;US)
Creep
Matrix-dominated time-dependent deformation and damage of graphite/epoxy composite experimental data under creep and recovery, 9:33722 (R;US)
Critical Current
Self-duality and the critical properties of the low field Hall effect in two-dimensional and three-dimensional metal-insulator composites, 9:33720 (RA;IL)
Electric Conductivity
Self-duality and the critical properties of the low field Hall effect in two-dimensional and three-dimensional metal-insulator composites, 9:33720 (RA;IL)
Failures
Probabilistic models of the stress-rupture of composite materials: summary. Final report, June 15, 1976-June 14, 1984, 9:33719 (R;US)
Heat Flux
Temperature and heat-flux distributions in a strip-heated composite slab, 9:33905 (R;US)
Temperature Distribution
Temperature and heat-flux distributions in a strip-heated composite slab, 9:33905 (R;US)
COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS
COMPRESSED AIR ENERGY STORAGE
Research Programs
Underground Energy Storage Program. 1983 annual summary, 9:33367 (R;US)
COMPRESSORS
Noise
Improved method for the prediction of centrifugal compressor rotational-tone noise, 9:33861 (R;US)
COMPTON EFFECT
Compton scattering of photons from electrons in thermal (Maxwellian) motion: electron heating, 9:34819 (R;US)
COMPTON SCATTERING
See COMPTON EFFECT
COMPUTED TOMOGRAPHY
See COMPUTERIZED TOMOGRAPHY
COMPUTER CALCULATIONS
Methods, not results.
Optimization
Hierarchical log design for large-scale systems. Final report, 9:34998 (R;US)
COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
See also C CODES
F CODES
N CODES
P CODES
S CODES
T CODES
A Codes
ALVIN computer code, 9:33134 (RA;BR;In Portuguese)
ANISN - Presentation and user's manual, 9:33139 (RA;BR;In Portuguese)
ORNL ALPHA MIS user's manual, 9:35006 (R;US)
C Codes
CONTROLITE 1.0: program documentation, 9:33518 (R;US)
D Codes
DYNASHELL computer code, 9:33172 (RA;BR;In Portuguese)
Mathematical modelling of the corrosion and leaching behaviour of cemented waste forms, 9:32729 (R;DE;In German)
E Codes
EROS: an Experimental Breeder Reactor II operational safety code, 9:33351 (J;US)
EXTERMINATOR - 2 computer code, 9:33132 (RA;BR;In Portuguese)
F Codes
FEBA - flooding experiments with blocked arrays. Data report 1, test series 1 through 4, 9:33087 (R;DE)
Mathematical simulation of sediment and radionuclide transport in coastal waters. Volume 2. User's manual and computer program listing for FETRA, 9:34362 (R;US)
G Codes
1DXB and GENERATOR computer codes, 9:33108 (RA;BR;In Portuguese)
Implantation of GMALHA computer code, 9:33176 (RA;BR;In Portuguese)
Presentation and user's manual of GAMTEC-II computer code, 9:33138 (RA;BR;In Portuguese)
H Codes
HAMMER, LITHE and HELP computer codes, 9:33131 (RA;BR;In Portuguese)
I Codes
INTERMD: a computer program to predict intermodulation product generation on two-way FM radio frequencies, 9:33920 (R;US)
K Codes
KERNELBUT computer code, 9:33133 (RA;BR;In Portuguese)
L Codes
HAMMER, LITHE and HELP computer codes, 9:33131 (RA;BR;In Portuguese)
LEOPARD and SPOTS computer codes, 9:33130 (RA;BR;In Portuguese)
LIZA, fit program for particle spectra, 9:34127 (RA;DE;In German)
M Codes
Implantation in MEF computer code, a finite element method for shell calculations, 9:33174 (RA;BR;In Portuguese)
Systems guide to MCNP (Monte Carlo Neutron and Photon Transport Code), 9:34749 (R;US)
N Codes
Verification of the network flow and transport/distributed velocity (NWFT/DVM) computer code, 9:32757 (R;US)
Number Codes
1DXB and GENERATOR computer codes, 9:33108 (RA;BR;In Portuguese)
O Codes
OCA-P, a deterministic and probabilistic fracture-mechanics code for application to pressure vessels, 9:33326 (R;US)
Presentation and user's manual of ONED computer code, 9:33136 (RA;BR;In Portuguese)
P Codes
Implantation of PLAST computer codes, 9:33175 (RA;BR;In Portuguese)
PIPEDYN computer code, 9:33173 (RA;BR;In Portuguese)
PRESTO-PREP: a data preprocessor for the PRESTO-II code, 9:34461 (R;US)
Potential Scattering
Karlsruhe code MODINA for model independent analysis of elastic scattering of spinless particles, 9:34646 (R;DE)
Q Codes
Continued development of the QUANDRY code. Final report, 9:33141 (R;US)
R Codes
Estimating the risks of cancer mortality and genetic defects resulting from exposures to low levels of ionizing radiation, 9:34458 (R;US)
RMAT 1D computer code. Implantation and user's code, 9:33137 (RA;BR;In Portuguese)

S Codes
LEOPARD and SPOTS computer codes, 9:33130 (RA;BR;In Portuguese)
Verification and field comparison of the Sandia Waste-Isolation Flow and Transport Model (SWIFT), 9:32756 (R;US)
T Codes
An assessment of TRAC-PD2 refill calculations based on Creare countercurrent flow tests, 9:33350 (J;US)
Program TRANS for calculation of transients in light water reactor fuel assembly, 9:33286 (RA;CS;In Czech)
TACI: a code for interactive analysis of neutron data produced by a tissue equivalent proportional counter, 9:34135 (R;US)
TAURUS: an interactive post-processor for the analysis codes NIKE3D, DYNA3D, TACO3D, and GEMINI. Revision 1, 9:35001 (R;US)
V Codes
VOR programe package for calculating hydraulic shock in generally branched coolant circuit, 9:33085 (RA;CS;In Czech)
Validation
Radioactive waste isolation in salt: peer review of the Office of Nuclear Waste Isolation's plans for repository performance assessment, 9:32713 (R;US)
W Codes
WIPS - computer code for whip and impact analysis of piping systems. Part B. Theory manual. Vol. 2, 9:34993 (R;US)
WIPS: computer code for whip and impact analysis of piping systems. Part D. Verification manual, 9:33852 (R;US)
WIPS: computer code for Whip and Impact Analysis of Piping Systems. Summary report and Part A: User's manual. Volume 1, 9:34992 (R;US)
COMPUTER GRAPHICS
Algorithms
Basic geometric algorithms for use with graphic input, 9:34994 (R;US)
COMPUTER NETWORKS
Equipment Interfaces
Raw QIO interface to Eunice TCP circuits, 9:34991 (R;US)
Meetings
Center for computer security: Computer Security Group conference. Summary, 9:34987 (R;US)
Microprocessors
Role of personal desktop computers in the Argonne integrated heterogeneous file transfer network, 9:34979 (R;US)
Security
Center for Computer Security newsletter. Volume 2, Number 3, 9:34988 (R;US)
Center for Computer Security newsletter. Volume 3, Number 3, 9:34989 (R;US)
Center for computer security: Computer Security Group conference. Summary, 9:34987 (R;US)
COMPUTER OUTPUT DEVICES
Human Factors Engineering
Graphs in sound: a numerical data analysis method for the blind, 9:35002 (R;US)
COMPUTER PROGRAMS
See COMPUTER CODES
COMPUTERIZED CONTROL SYSTEMS
Computer Codes
Software for the injector on-line control system, 9:34076 (RA;UA;In Russian)
COMPUTERIZED SIMULATION
Efficiency
Monte Carlo estimation under different distributions using the same simulation, 9:34985 (R;US)
COMPUTERIZED TOMOGRAPHY
An imaging technique in which transmission measurements of a narrow beam of rays, photons, or particles made at several different angles around an object may be used with a computer program to obtain a clear image of one plane
Comparative Evaluations
Comparison of CT and angiographic findings about tumors of the posterior cranial fossa, 9:34406 (R;DE;In German)
CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Technology Assessment
Concentrating photovoltaic technology, 9:32864 (R;US)
CONCRETES
See also PRESTRESSED CONCRETE
REINFORCED CONCRETE
Creep
Modeling of concrete response at high temperature, 9:33151 (R;US)
Photon Transport
Gamma-ray buildup factors for concrete slab shields under slant incidence conditions, 9:34755 (J;US)
CONDENSATION NUCLEI
Kinetics
Preliminary measurements of the size distribution of cloud interstitial aerosol, 9:34250 (BA;US)
Precipitation Scavenging
Solubility measurements of aerosols in the Greenfield gap to determine efficiency of in-cloud scavenging by nucleation, 9:34201 (BA;US)
CONDENSER COOLING SYSTEMS
Biological Fouling
Symposium on condenser macrofouling control technologies: the state of the art, 9:34354 (R;US)
CONDUCTIVITY (ELECTRIC)
See ELECTRIC CONDUCTIVITY
CONDUCTIVITY (THERMAL)
See THERMAL CONDUCTIVITY
CONIFERS
Lead
Lead in vegetation, forest floor material, and soils of the spruce-fir zone, Great Smoky Mountains National Park, 9:34335 (R;US)
CONJUNCTIVITIS
Radiotherapy
Beta therapy for conjunctivitis vernalis, 9:34409 (RA;BG;In Bulgarian)
CONNECTICUT
Igneous Rocks
Crystalline rocks of the northeastern United States, 9:34506 (R;US)
Crystalline rocks of the northeastern United States, 9:34507 (R;US)
CONNECTICUT YANKEE REACTOR
Fuel Element Failure
Fuel failures in the Connecticut Yankee reactor (Haddam Neck). Addendum to NP-2119, 9:33076 (R;US)
CONNECTORS
Remote Handling
Remotely replaceable jumpers and embedded wiring for the DWPF, 9:32723 (R;US)
CONSERVATION (ENERGY)
See ENERGY CONSERVATION
CONTACT RADIOTHERAPY
See RADIOTHERAPY
CONTACTORS
See SWITCHES
CONTAINERS
See also PRESSURE VESSELS
REACTOR VESSELS
Combustion
Analysis of combustion in closed or vented rooms and vessels, 9:33332 (R;US)
Decontamination
Decontamination of canister and overpack, 9:32726 (R;US)
Performance Testing
Safety analysis report for packages: packaging of fissile and other radioactive materials. Final report, 9:32710 (R;US)
CONTAINMENT
See also CONTAINMENT BUILDINGS
CONTAINMENT SYSTEMS
Failures
Uncertainties associated with containment analysis, 9:33289 (R;US)
Reliability
Reliability of steel containments with internal pressure, 9:33288 (R;US)

Seismic Effects
Probabilistic seismic resistance of a Mark III steel containment, 9:33290 (R;US)

CONTAINMENT BUILDINGS
Dynamic Loads
Expansion of core melt within the concrete foundation - effects on the reactor building structure, 9:33249 (R;DE;In German)
Experimental and analytical results of steel containment tests, 9:33337 (R;US)
Procedures and objectives for testing a 1/8 scale model of a steel containment (PWR; BWR), 9:33339 (R;US)
Electric Cables
Investigation of cable deterioration inside reactor containment, 9:33184 (J;US)
Fission Product Release
Containment release modes, rainout, and risk, 9:33336 (R;US)
Hydrogen
Analysis of combustion in closed or vented rooms and vessels, 9:33332 (R;US)
Leak Testing
Pressure and leak testing of containments and sealed spaces, 9:33083 (RA;CS;In Slovak)
Pressure Gradients
Capabilities of HECTR. Version 1.0, 9:33335 (R;US)
CONTAIN calculations of containment loading of dry PWR's, 9:33340 (R;US)
HECTR results for Ice-Condenser Containment Standard Problem (PWR), 9:33338 (R;US)
Radioactive Effluents
Containment release modes, rainout, and risk, 9:33336 (R;US)
Stress Analysis
Experimental and analytical results of steel containment tests, 9:33337 (R;US)
Procedures and objectives for testing a 1/8 scale model of a steel containment (PWR; BWR), 9:33339 (R;US)
Temperature Gradients
CONTAIN calculations of containment loading of dry PWR's, 9:33340 (R;US)
HECTR results for Ice-Condenser Containment Standard Problem (PWR), 9:33338 (R;US)
Test Facilities
Experimental and analytical results of steel containment tests, 9:33337 (R;US)
Procedures and objectives for testing a 1/8 scale model of a steel containment (PWR; BWR), 9:33339 (R;US)
Thermal Stresses
Modeling of concrete response at high temperature, 9:33151 (R;US)

CONTAINMENT SYSTEMS
Granular Bed Filters
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)

CONTRACTS
Management
Cost and Schedule Control Systems Criteria for contract performance measurement. Information pamphlet, 9:34976 (R;US)

CONTRAST MEDIA
Side Effects
Alterations of serum potassium, serum magnesium and adenosine diphosphate due to various contrast media containing iodine, 9:34400 (R;DE;In German)

CONTROL ELEMENTS
Damaging Neutron Fluence
Radiation damage by high-energy neutrons, 9:33219 (J;US)
Design
Development of hafnium and comparison with other pressurized water reactor control rod materials, 9:33213 (J;US)

CONTROL (RADIOACTIVITY)
See RADIATION MONITORING

CONTROL RODS
See CONTROL ELEMENTS

CONTROL ROOMS
Nuclear power plant control room crew task analysis database: SEEK system. Users manual, 9:33212 (R;US)
Design
Ergonomic principles of colliery control room design and layout, 9:32600 (R;GB)
Human Factors Engineering
Conception of control room design from the view of the user, 9:33034 (RA;DE;In German)

CONTROL SYSTEMS
For automated processes including feedback.

ON-LINE CONTROL SYSTEMS
REACTOR CONTROL SYSTEMS
Control Theory
Frequency response design methods for large scale systems, 9:34980 (R;US)
Feedback
Frequency response design methods for large scale systems, 9:34980 (R;US)
Plasma Filament
Design problems on development of the system for plasma filament position fast control in the T-15 device, 9:34916 (RA;SU;In Russian)
Superconducting Magnets
Device for normal phase detection in a toroidal-field superconducting coil of the "Tokamak-15" device, 9:34927 (RA;SU;In Russian)

CONTROL THEORY
Decentralized system theory, 9:33020 (R;US)
Stochastic Processes
Quantization of dynamical systems and stochastic control theory, 9:34779 (R;FR)

CONTROL THEORY (REACTOR)
See REACTOR KINETICS

CONVERTERS (PULSE)
See PULSE CONVERTERS

COOLANT LOOPS
For reactors use REACTOR COOLING SYSTEMS or IN PILE LOOPS.
Cold Traps
Project of a cold trap for CTS-1 sodium thermal loop, 9:33894 (RA;BR;In Portuguese)
Project of diffusion cold trap for CTS-1, 9:33099 (RA;BR;In Portuguese)
Corrosion
Study of the components taken from sodium loop, 9:33647 (RA;BR;In Portuguese)
Heat Transfer
Calculation of a thermal field in the heater cover of CTS-1 sodium loop, 9:33893 (RA;BR;In Portuguese)
Installation
Installation and operation of water loop. Loop installation, 9:33897 (RA;BR;In Portuguese)
Modifications
Modifications in the CTS-1 sodium thermal loop, 9:33892 (RA;BR;In Portuguese)
Natural Convection
Natural convection in sodium thermal circuit, 9:33889 (RA;BR;In Portuguese)
Operation
Installation and operation of water loop. Loop operation, 9:33898 (RA;BR;In Portuguese)
Pipelines
Stress analysis in the pipeline of the loop plugging-meter, 9:33901 (RA;BR;In Portuguese)
Safety
Determination of CTS-1 parameters in emergency cases, 9:33271 (RA;BR;In Portuguese)
Simulation
Possibilities evaluation of sodium simulation with the water loop, 9:33100 (RA;BR;In Portuguese)
Springs
Project of the new sustenance springs for CTS-1 pipelines, 9:33895 (RA;BR;In Portuguese)
Stress Analysis
Stress analysis in a sodium loop at IEN (Institute of Nuclear Engineering), 9:33900 (RA;BR;In Portuguese)

Temperature Measurement
Temperature measurement of fusion range of sodium stored in drain tank, 9:33890 (RA;BR;In Portuguese)
Test Facilities
Loop for tests with sodium fire - CTS-2, 9:33272 (RA;BR;In Portuguese)
Operation, maintenance and modifications in the sodium thermal loop - CTS-1, 9:33098 (RA;BR;In Portuguese)
Possibilities evaluation of sodium simulation with the water loop, 9:33100 (RA;BR;In Portuguese)
Program for pressure drop calculation in water loop, 9:33273 (RA;BR;In Portuguese)
Project of diffusion cold trap for CTS-1, 9:33099 (RA;BR;In Portuguese)

COOLANT-FUEL INTERACTIONS
See FUEL-COOLANT INTERACTIONS

COOLANTS
See also specific coolant materials.
Chemical Analysis
Postaccident liquid sampling systems. Final report, 9:33264 (R;US)

COOLERS
See HEAT EXCHANGERS

COOLING SYSTEM (REACTOR)
See REACTOR COOLING SYSTEMS

COORDINATED RESEARCH PROGRAMS
Research based on a common plan but carried out in various locations. To be used in coordination with institutions or countries involved.
International Energy Agency
IEA R and D program for Wind Energy Conversion Systems. Paper presented at the National Wind Energy Conference 1983, 9:32990 (R;NL;In Dutch)
Wind Power
IEA R and D program for Wind Energy Conversion Systems. Paper presented at the National Wind Energy Conference 1983, 9:32990 (R;NL;In Dutch)

COPOLYMERS
Structural Chemical Analysis
Surface and bulk phase separations in block copolymers and their blends. Interim report 30 Sep 82-30 Dec 83, 9:33724 (R;US)

COPPER
Corrosion
Electrochemistry and corrosion of Cu in aqueous HCl, 9:33698 (J;US)
Deposition
Dry deposition of trace elements in Olympic National Park, 9:34271 (BA;US)
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Electrochemistry
Electrochemistry and corrosion of Cu in aqueous HCl, 9:33698 (J;US)
Electronic Structure
Supersonic metal cluster beams. Technical progress report, March 16, 1983-March 15, 1984, 9:33632 (R;US)
Environmental Transport
Chemicals in effluent waters from nuclear power stations: the distribution, fate, and effects of copper, 9:34357 (R;US)
Estimates of dry and wet deposition and resuspension fluxes of several trace metals in the Southern Bight of the North Sea, 9:34283 (BA;US)
Ion Implantation
Release of ion-implanted and transmutation-produced helium from nickel (Thermal neutrons), 9:33686 (J;GB)
Magnetoresistance
Magnetoresistivity of copper irradiated at 4.4 K by spallation neutrons, 9:33630 (RA;US)
Physical Radiation Effects
Release of ion-implanted and transmutation-produced helium from nickel (Thermal neutrons), 9:33686 (J;GB)
Polymerization
Supersonic metal cluster beams. Technical progress report, March 16, 1983-March 15, 1984, 9:33632 (R;US)
Precipitation Scavenging
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Scavenging rates of sulfur and trace metals from a smelter plume, 9:34260 (BA;US)
Radiation Effects
Magnetoresistivity of copper irradiated at 4.4 K by spallation neutrons, 9:33630 (RA;US)
Toxicity
Chemicals in effluent waters from nuclear power stations: the distribution, fate, and effects of copper, 9:34357 (R;US)
X-Ray Diffraction
Radial distribution function as an analysis technique, 9:33806 (R;US)

COPPER 63 TARGET
Neutron Reactions
Measurement of cross sections for the $^{63}Cu(n,\alpha)^{60}Co$ reaction from threshold to 10 MeV, 9:34686 (J;US)
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)

COPPER ALLOYS
See also COPPER BASE ALLOYS
Physical Radiation Effects
Non-equilibrium segregation in irradiated alloys, 9:33694 (BA;GB)

COPPER BASE ALLOYS
Oxidation
Selective solar absorptance of some oxide and sulfide films grown in-situ on binary metal alloys. Final report, 9:32947 (R;US)
Sputtering
Sputtering properties of copper-lithium alloys at reactor-level temperatures and surface erosion rates, 9:33625 (R;US)
Sulfidation
Selective solar absorptance of some oxide and sulfide films grown in-situ on binary metal alloys. Final report, 9:32947 (R;US)

COPPER BROMIDES
X-Ray Spectra
X-ray spectroscopy of solids under pressure. Annual progress report, August 1983-July 1984, 9:33740 (R;US)

COPPER SULFIDES
Chemical Preparation
Preparation, characterization and reaction in oxygen of Cu_2S films, 9:32875 (J;US)
Electrical Properties
Preparation, characterization and reaction in oxygen of Cu_2S films, 9:32875 (J;US)
Optical Properties
Preparation, characterization and reaction in oxygen of Cu_2S films, 9:32875 (J;US)

CORE FLOODING SYSTEMS
Film Boiling
Transition boiling heat transfer in the Semiscale MOD-3 core during reflood, 9:33353 (J;US)
Heat Transfer
Transition boiling heat transfer in the Semiscale MOD-3 core during reflood, 9:33353 (J;US)
Transition Boiling
Transition boiling heat transfer in the Semiscale MOD-3 core during reflood, 9:33353 (J;US)

CORES (REACTOR)
See REACTOR CORES

CORROSION
See also STRESS CORROSION
Data Processing
Software development as an integral part of an AC impedance system for corrosion studies, 9:32919 (J;US)
Measuring Methods
Determination of the polarization resistance with AC impedance measurements, 9:35004 (J;US)
Digital faradaic impedance measurements (DPIM) on an array processor-enhanced system, 9:33697 (J;US)

CORROSION DENTING
Causes of denting. Volume 1. Summary report. Final report, 9:33071 (R;US)
Causes of denting. Volume 2. Laboratory test results. Final report, 9:33072 (R;US)
CORROSION FATIGUE
Reviews
Anodic processes and the kinetics of stress-corrosion cracking or corrosion fatigue, 9:33623 (R;US)
CORROSION INHIBITION
See CORROSION PROTECTION
CORROSION PROTECTION
Radiation-enhanced diffusion as a coating method for protection against corrosion and wear, 9:33640 (RA;BR)
CORTEX (ADRENAL)
See ADRENAL GLANDS
CORUNDUM
Physical Properties
High-temperature electrical insulators for electrophysical devices, 9:34919 (RA;SU;In Russian)
COSMIC GAMMA SOURCES
Gamma Spectra
Identification of γ-ray lines observed from SS433, 9:34524 (R;US)
COSMIC GASES
Ion-Molecule Collisions
Role of $HC(OH)_2^+$ in interstellar molecular synthesis, 9:34548 (RA;AT)
COSMIC PARTICLES
See COSMIC RADIATION
COSMIC RADIATION
From sources other than the sun; not for SOLAR RADIATION.
Cosmic Ray Propagation
Possible cosmological origin of the ultra high energy cosmic rays, 9:34525 (R;US)
Cosmological Models
Possible cosmological origin of the ultra high energy cosmic rays, 9:34525 (R;US)
COSMOGONY
See COSMOLOGY
COSMOLOGY
Field Theories
Monopoles and bubbles in the early universe, 9:34551 (BA;US)
COSMOS

CP INVARIANCE
Instantons
Analysis of instanton contribution for the periodic CP_1-model, 9:34627 (R;FR)
CRACKS
Ultrasonic Testing
Ultrasonic scattering from intergranular stress corrosion cracks: derivation and application of theory, 9:33156 (RA;US)
CRAY COMPUTERS
Semiconductor Storage Devices
Linear algebra programs for use on a vector computer with a secondary solid state storage device, 9:34986 (R;US)
CREEKS
See STREAMS
CREEP
Algorithms
Numerical creep analysis, 9:34519 (R;US)
CRESOLS
Pyrolysis
Thermal reactions of aromatics with CO, 9:32486 (RA;US)
CRESYLIC ACID
See CRESOLS
CRNL MP TANDEM ACCELERATOR
Beam Transport
Status of the heavy-ion post accelerator, 9:33977 (RA;DE;In German)
CRNL SUPERCONDUCTING CYCLOTRON
Superconducting sector cyclotron SuSe, 9:33945 (RA;DE;In German)
Beam Extraction
Extraction system for SuSe, 9:34022 (RA;DE;In German)
Beam Transport
Beam transport between SuSe and the experimental areas, 9:33979 (RA;DE;In German)
Magnetic Fields
Calculations of the magnetic field and beam dynamics for SuSe, 9:33978 (RA;DE;In German)
RF Systems
RF-accelerating system for SuSe, 9:33947 (RA;DE;In German)
Superconducting Magnets
SuSe test coil, 9:33946 (RA;DE;In German)
CROSS SECTIONS
Multigroup Theory
Modular system for sensitivity calculations and cross sections adjustments, 9:33127 (RA;BR;In Portuguese)
CRUDE OIL
See PETROLEUM
CRYPTOGRAPHY
Solving low density knapsacks, 9:34995 (R;US)
CRYSTAL COUNTERS
Performance
Environmental gamma-ray measurement methods for French nuclear installation impact studies, 9:33222 (J;US)
Sensitivity
Environmental gamma-ray measurement methods for French nuclear installation impact studies, 9:33222 (J;US)
CRYSTAL MODELS
For theories only.
See also HEISENBERG MODEL
ISING MODEL
Phase Transformations
First-order phase transitions in the Potts model with trilinear symmetry breaking, 9:34770 (RA;BR)
Symmetry Breaking
First-order phase transitions in the Potts model with trilinear symmetry breaking, 9:34770 (RA;BR)
CRYSTALLIZATION
Physical Chemistry
Effect of diborane and phosphine on the deposition rate of silicon grown from $SiCl_4$ by R.F. plasma, 9:33815 (RA;IL)
CRYSTALLOGRAPHY
Debye-Scherrer Method
Radiocrystallographic study of rare minerals Leadhillita and Susannita, 9:33613 (RA;BR;In Portuguese)
X-Ray Diffraction
Radiocrystallographic study of rare minerals Leadhillita and Susannita, 9:33613 (RA;BR;In Portuguese)
CRYSTALS
See also LIQUID CRYSTALS
Surface Properties
Topics in statistical mechanics, 9:34782 (R;US)
CULM
Fluidized-Bed Combustion
Design, construction, operation and evaluation of a prototype culm combustion boiler/heater unit. Quarterly technical progress report, April 1-June 30, 1982, 9:33929 (R;US)
CULTURES (CELLS)
See CELL CULTURES
CURIUM
Solubility
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
CURRENT DENSITY
Acoustic Monitoring
Magnetostriction monitor of current density distribuition in a pulsed accelerated particle beam, 9:34067 (RA;UA;In Russian)

CURRENTS (ELECTRIC)
See ELECTRIC CURRENTS
CURRENTS (WATER)

DEEP INELASTIC HEAVY ION REACTIONS
Nuclear Potential
Diabatic two-center shell model, 9:34726 (R;DE)
Shell Models
Diabatic two-center shell model, 9:34726 (R;DE)
Thermal Expansion
Expansion and disassembly phase of energetic nuclear reactions: A problem of dynamical instabilities, 9:34725 (R;DE)
DEEP INELASTIC SCATTERING
Parton Model
Relation of parton distribution functions in Drell-Yan process to deeply inelastic scattering, 9:34610 (R;US)
Quantum Chromodynamics
Deep inelastic phenomena, 9:34625 (BA;US)
DEFECTS
Not for CRYSTAL DEFECTS.
Detection
Application of elastic wave scattering theory to the detection and characterization of flaws in structural materials, 9:33915 (R;US)
DEFENSE
See NATIONAL DEFENSE
DEFORMED NUCLEI
Moment of Inertia
Behavior of nuclei at high angular momentum, 9:34653 (BA;JP)
DEGASSING
Time Dependence
Development of coal-gas production simulators and mathematical models for well test strategies (computer models for single- or two-phase flow of methane and water in heterogeneous coal seams to a single, vertical production well connected to a finite conductivity vertical fracture). Topical report Aug 81-Oct 82, 9:32596 (R;US)
DELAYED NEUTRON ANALYSIS
Control Systems
Electronics manual for the FAST facility delayed neutron interrogator assay system, 9:32767 (R;US)
Manuals
Electronics manual for the FAST facility delayed neutron interrogator assay system, 9:32767 (R;US)
DELAYED NEUTRONS
Energy Spectra
Near-equilibrium measurements of delayed neutron spectra from fast fission of plutonium-240, 9:34718 (J;US)
Fission Yield
A simple formula for calculation of prompt neutron yield from spontaneous fission of transuranics, 9:34715 (J;US)
Experimental determination of photofission neutron multiplicities for ^{235}U, ^{236}U, ^{238}U, and ^{232}Th using monoenergetic photons, 9:34719 (J;US)
Statistical Models
A simple formula for calculation of prompt neutron yield from spontaneous fission of transuranics, 9:34715 (J;US)
DELAYED RADIATION INJURIES
See RADIATION INJURIES
DELTA-1236 RESONANCES
L-S Coupling
Nonlocality of the isobar propagation and the effective Δ-nucleus spin-orbit interaction, 9:34731 (RA;BR)
DENITRIFICATION
Chemical Reactors
Microwave-heated continuous denitrification apparatus, 9:32695 (TG;US)
DENMARK
Energy Policy
Transport and distribution systems for coal. Pt. 1. Summary, 9:32612 (R;DK;In Danish)
Transport and distribution systems for coal. Pt. 2. Main report, 9:32613 (R;DK;In Danish)
Transport and distribution systems for coal. Pt. 3. Catalogue, 9:32614 (R;DK;In Danish)
Planning
Transport and distribution systems for coal. Pt. 1. Summary, 9:32612 (R;DK;In Danish)

METAL-GAS BATTERIES
METAL-METAL BATTERIES
THERMAL BATTERIES
Capacity
Battery capacity measuring device for electric vehicles, 9:33602 (J;US)
Cathodes
Elastomeric binder for TiS_2 cathodes in secondary lithium cells, 9:33404 (J;US)
Semi-solid mixed cathodes for lithium/chalcogen cells, 9:33418 (J;US)

Charge State
Continuous overcharge accelerated positive grid corrosion test on lead antimony pasted flat plate cells, 9:33393 (J;US)
Corrosion
Continuous overcharge accelerated positive grid corrosion test on lead antimony pasted flat plate cells, 9:33393 (J;US)
Design
Multicell Li/$SOCl_2$ reserve battery, 9:33385 (R;US)
Self regenerating storage battery, 9:33419 (P;GB)
Electrochemistry
Electrochemistry determines the future of electric vehicles, 9:33607 (J;US)
Electrodes
Electrochemical domain of the components of ambient temperature secondary lithium batteries, 9:33405 (J;US)
First generation of bubbles on gas-evolving electrodes, 9:33413 (J;US)
High temperature emf measurements on the Li-Al/Ni_3S_2 couple, 9:33415 (J;US)
Metal sulfide and metal sulfide-lithium sulfide mixtures as positive electrode materials for high energy density batteries, 9:33417 (J;US)
Morphological comparison of Li-Al and Li-Si electrodes in LiCl-KCl eutectic electrolyte, 9:33414 (J;US)
Structural studies of alkaline nickel electrode powders, 9:33401 (J;US)
Use of on-line digital signal analysis approach to characterize corroding electrodes, 9:33412 (J;US)
Electrolytes
Lithium-selenium secondary cells with paste electrolytes, 9:33420 (BA;US)
Energy Balance
General energy balance for battery systems, 9:33381 (R;US)
Monitoring
Board discharge limiting device and bad module detector for electric vehicles. Final report, 9:33601 (R;US)
Performance
Computerized system for establishing electric-vehicle battery requirements, 9:33599 (R;US)
Performance Testing
Battery capacity measuring device for electric vehicles, 9:33602 (J;US)
Continuous overcharge accelerated positive grid corrosion test on lead antimony pasted flat plate cells, 9:33393 (J;US)
Multicell Li/$SOCl_2$ reserve battery, 9:33385 (R;US)
Review of flow battery testing at Sandia, 9:33386 (R;US)
Testing activities at the National Battery Test Laboratory, 9:33369 (R;US)
Recycling
Recycle of battery components, 9:33400 (J;US)
Research Programs
Project summaries: sixth DOE electrochemical contractor's review. Supplement, 9:33372 (R;US)
Technology Base Research Project for electrochemical energy storage. Annual report for 1983, 9:33380 (R;US)
Safety
Multicell Li/$SOCl_2$ reserve battery, 9:33385 (R;US)
Technology Assessment
Speculations on battery systems of the future, 9:33608 (J;US)
Temperature Control
Thermal management of a lithium/iron-sulfide battery, 9:33373 (R;US)
Temperature Effects
Evaluation of a 96v globe ev 1000 battery pact at temperature extremes. Final report, 9:33382 (R;US)
Evaluation of an 96v ALCO 2200 battery pack at temperature extremes. Final report, 9:33383 (R;US)
Evaluation of an 96v Exide XPV23-3 battery pack at temperature extremes. Final report, 9:33384 (R;US)
Test Facilities
Recent results from the National Battery Test Laboratory, 9:33378 (R;US)
Testing activities at the National Battery Test Laboratory, 9:33369 (R;US)
Thermal Analysis
Generation of thermal energy in high-temperature lithium/iron sulfide cells, 9:33395 (J;US)

ELECTRIC CABLES
See also GAS-INSULATED CABLES
SUPERCONDUCTING CABLES
Certification
Progress on qualification testing methodology study of electric cables, 9:33319 (RA;US)
Electrical Insulation
Effect of LOCA simulation procedures on cross-linked polyolefin cable's performance, 9:33325 (R;US)
Investigation of cable deterioration inside reactor containment, 9:33184 (J;US)
Physical Radiation Effects
Progress on qualification testing methodology study of electric cables, 9:33319 (RA;US)
ELECTRIC CONDUCTIVITY
Anisotropy
Anisotropic percolation in systems of stick-like conducting particles, 9:34781 (RA;IL)
Measuring Methods
Computeraided measurement of electric resistances of metals irradiated with electrons, 9:33637 (R;DE;In German)
Perturbation Theory
Second quantized theory of Anderson localization in d=2+ epsilon, 9:34769 (RA;BR)
Second Quantization
Second quantized theory of Anderson localization in d=2+ epsilon, 9:34769 (RA;BR)
ELECTRIC CONTACTORS
See SWITCHES
ELECTRIC CURRENTS
Wave Forms
Measurement and use of the plasma current waveform in an RF silane discharge, 9:32873 (J;US)
ELECTRIC FIELDS
Calculation Methods
Two-sided algorithms for calculating electric and magnetic fields in resonators of complex shape, 9:33992 (RA;UA;In Russian)
ELECTRIC GENERATORS
Rotating generators only; excludes DIRECT ENERGY CONVERTERS.
See also SUPERCONDUCTING GENERATORS
TURBOGENERATORS
Closed-Cycle Systems
3 kw closed Rankine-cycle powerplant. Final report 19 May 66-31 Mar 73, 9:33588 (R;US)
Cost
Effects of technological change, experience and environmental regulation on the construction costs of coal-burning generating units, 9:33038 (R;US)
Fire Extinguishers
CO_2 (carbon dioxide) fire protection study for hydrogenerators: report of findings, 9:32839 (R;US)
Technology Impacts
Effects of technological change, experience and environmental regulation on the construction costs of coal-burning generating units, 9:33038 (R;US)
ELECTRIC MOTORS
Control Systems
Optimum control of electric motor drives for industrial robots, 9:33858 (R;US)
Field Tests
Field demonstration of three-phase Wanlass motors. Final report Aug 81-Apr 83, 9:33550 (R;US)

ELECTRON CYCLOTRON-RESONANCE HEATING
See ECR HEATING

ELECTRON DETECTION
Position Sensitive Detectors
Electron/positron detector for the orange-β-spectrometer, 9:34129 (RA;DE;In German)

ELECTRON DONOR
See ELECTRONS

ELECTRON GUNS
Design
PHERMEX electron gun development, 9:34100 (J;US)
Modulation
Development of the modulator of an electron linac three-electrode gun, 9:34046 (RA;UA;In Russian)
Performance
PHERMEX electron gun development, 9:34100 (J;US)

ELECTRON MICROSCOPY
See also SCANNING ELECTRON MICROSCOPY
Planning
Summary report on responses to a questionnaire on DOE's materials research facilities, 9:34972 (R;US)

ELECTRON REACTIONS
Elastic Scattering
Piece-wise analytic evaluation of the radiative tail from elastic and inelastic electron scattering, 9:34721 (R;FR;In French and English)
Inelastic Scattering
Nuclear studies with high energy electrons, 9:34687 (R;FR)
Piece-wise analytic evaluation of the radiative tail from elastic and inelastic electron scattering, 9:34721 (R;FR;In French and English)
Nuclear Structure
Nuclear studies with high energy electrons, 9:34687 (R;FR)

ELECTRON RINGS
Instability
Theory of cross instability of relativistic electron rings, 9:33980 (RA;SU;In Russian)

ELECTRON SOURCES
Polarized Beams
Parity violating weak neutral current effects in elastic e-^{13}C scattering. Progress report, January 1, 1983-April 15, 1984, 9:34016 (R;US)

ELECTRON TEMPERATURE
Calculation Methods
Comment on the calculation of Tsub(e) from Thomson scattering data, 9:34835 (J;GB)

ELECTRONIC CIRCUITS
Radiation Hardening
GfW-handbook for irradiation test guidelines for radiation hardness of electronic components, 9:34142 (R;DE)

ELECTRONIC EQUIPMENT
See also POWER SUPPLIES
PULSE CONVERTERS
RESONATORS
Radiation Hardening
GfW-handbook for irradiation test guidelines for radiation hardness of electronic components, 9:34142 (R;DE)
Reliability
Reliability prediction of different on-line control systems, 9:33027 (RA;DE;In German)

ELECTRONIC STRUCTURE
For electron configuration in atoms and molecules, and electron band structure in solids.
Wave Functions
Multiconfiguration wavefunctions for molecules: current approaches, 9:34558 (R;US)

ELECTRON-POSITRON INTERACTIONS
Multiparticle hadronic systems produced in high-energy (pp) interactions, and comparison with (e+e-), 9:34606 (BA;US)
Annihilation
Hadron production in e^+e^- annihilation at PEP, 9:34605 (R;US)
Observation of F meson production in high energy e^+e^- annihilation, 9:34593 (R;DE)
Perturbative corrections to sigma sub(tot) (e^+e^- -> hadrons) in supersymmetric QCD, 9:34596 (R;DE)
Production and muonic decay of heavy quarks in e^+e^- annihilation at 34.5 GeV, 9:34594 (R;DE)

Properties of charm jets produced in e^+e^- annihilation near 34 GeV, 9:34590 (R;DE)
Recent results on e^+e^- annihilation from PETRA, 9:34592 (R;DE)
Bhabha Scattering
First results obtained from the Cello liquid argon end cap calorimeters, 9:34116 (R;FR;In French)
Inelastic Scattering
High energy photon-photon scattering in 2-photon processes and test of quantum electrodynamics, 9:34600 (R;GB;In German)
Jet Model
Experiments on multiparton final states in e^+e^- annihilation at $\sqrt{s}$=30 GeV (MARK-J/PETRA), 9:34611 (R;FR;In French)
Properties of charm jets produced in e^+e^- annihilation near 34 GeV, 9:34590 (R;DE)
Multiple Production
Perturbative corrections to sigma sub(tot) (e^+e^- -> hadrons) in supersymmetric QCD, 9:34596 (R;DE)
Particle Production
Hadron production in e^+e^- annihilation at PEP, 9:34605 (R;US)
Observation of F meson production in high energy e^+e^- annihilation, 9:34593 (R;DE)
Production and muonic decay of heavy quarks in e^+e^- annihilation at 34.5 GeV, 9:34594 (R;DE)
Properties of charm jets produced in e^+e^- annihilation near 34 GeV, 9:34590 (R;DE)
Recent results on e^+e^- annihilation from PETRA, 9:34592 (R;DE)
Recent results from the PEP-4 TPC, 9:34604 (R;US)
Photon-Photon Interactions
First results obtained from the Cello liquid argon end cap calorimeters, 9:34116 (R;FR;In French)
Reviews
Recent results on e^+e^- annihilation from PETRA, 9:34592 (R;DE)
Unified Gauge Models
Electron-positron scattering and gauge theories, 9:34620 (R;FR)

ELECTRONS
Acceleration
Statistical acceleration of electrons by lower-hybrid turbulence, 9:34794 (RA;BR)
MeV Range 10-100
Improved radioprotection of cells afforded by activated radioprotective compounds WR-2721 and MPG, 9:34451 (RA;IL)

ELECTROSLAG CASTING
Cost
Surface Gasification Materials Program. Semiannual progress report for the period ending March 31, 1984, 9:32535 (R;US)
Evaluation
Surface Gasification Materials Program. Semiannual progress report for the period ending March 31, 1984, 9:32535 (R;US)

ELECTROSTATIC ACCELERATORS
See also COCKCROFT-WALTON ACCELERATORS
TANDEM ELECTROSTATIC ACCELERATORS
Beam Production
Problems of intensive multicharged ion beam generation in pulse electrostatic accelerators, 9:33961 (RA;UA;In Russian)
Deuteron Beams
High-current ion beam production in a plasma-filled triode, 9:34812 (RA;SU;In Russian)
Duoplasmatrons
Plasma-filled double diode, 9:34090 (RA;UA;In Russian)
Electric Fields
Calculation and optimization of electrostatic fields in relativistic electron beam generators, 9:34895 (RA;SU;In Russian)
Ion Beams
Intense ion beam production in a ballistic focusing diode, 9:34896 (RA;SU;In Russian)
Proton Beams
High-current ion beam production in a plasma-filled triode, 9:34812 (RA;SU;In Russian)
Specifications
MSKUI-450 small-sized combined cascade ion accelerator, 9:34092 (RA;UA;In Russian)

ELECTROSTATIC WAVES
See PLASMA WAVES

ELMO BUMPY TORUS
Neoclassical Transport Theory
Electron transport in EBT in the low collision frequency limit, 9:34821 (R;US)

EMANOMETERS
Design
RADEX: an active monitor for continuous measurement of ^{222}Rn flux in soil, 9:34115 (R;US)

EMERGENCY CORE COOLING SYSTEM
See ECCS

EMISSION SPECTROSCOPY
Relation of vertical intensity profiles for neutral atom lines to analyte atomization behavior in inductively coupled plasmas, 9:33804 (R;US)
Plasma
Dynamics of heat, mass and momentum transfer in an inductively coupled plasma. Final report, 9:33774 (R;CA)
Dynamics of heat, mass and momentum transfer in an inductively coupled plasma. Final report, August 2, 1982-November 30, 1983, 9:33773 (R;US)

Gauge Invariance
Behavior of the Wilson parameter in U(1) lattice gauge theory with long range gauge invariant interactions, 9:34632 (R;FR)
FERRATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Grain Boundaries
EM study of the structure and composition of grain boundaries in (Mn,Zn) Fe_2O_4, 9:33766 (BA;US)
FERRIMAGNETIC MATERIALS
See also FERRITES
Crystal Lattices
Reaction field approximation for two non-equivalent interacting sub-lattices of atomic spins, 9:33638 (RA;BR)
Heisenberg Model
Reaction field approximation for two non-equivalent interacting sub-lattices of atomic spins, 9:33638 (RA;BR)
FERRITE GARNETS
Physical Radiation Effects
Radiation transformation in aluminium yttrium garnet crystals irradiated in nuclear reactor, 9:33754 (RA;SU;In Russian)
FERRITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Moessbauer Effect
^{57}Fe- and ^{121}Sb-Moessbauer spectroscopy for studying the effects of diamagnetic substitutions in selected ferrites, 9:33709 (RA;CH)
FERROMAGNETIC MATERIALS
Quantum Field Theory
Crossover in anisotropic Potts phi^3 field theory with quadratic symmetry breaking, 9:34773 (RA;BR)
Symmetry breaking in Potts phi^3 field theory. Crossover in random ferromagnets, 9:34772 (RA;BR)

FFTF REACTOR
Planning
Summary report on responses to a questionnaire on DOE's materials research facilities, 9:34972 (R;US)
Reactor Instrumentation
Developments in electrochemical oxygen meter probes for use in liquid sodium, 9:33237 (J;US)
FIELD EMISSION MICROSCOPY
See ION MICROSCOPY
FIELD ION MICROSCOPY
See ION MICROSCOPY
FIELD THEORIES
See also QUANTUM FIELD THEORY
Phase Transformations
Monopoles and bubbles in the early universe, 9:34551 (BA;US)
FIELDS (ELECTRIC)
See ELECTRIC FIELDS
FIELDS (ELECTROMAGNETIC)
See ELECTROMAGNETIC FIELDS
FIELDS (MAGNETIC)
See MAGNETIC FIELDS
FILLER METALS
Fracture Properties
Assessing susceptibility to liquation and annealing cracks in weld metals used in power engineering, 9:33656 (RA;CS;In Slovak)
FILMS
Not for PHOTOGRAPHIC FILMS or NUCLEAR EMULSIONS.
See also THIN FILMS
Heisenberg Model
Reaction field approximation for Heisenberg paramagnetic thin film, 9:34766 (RA;BR)
FILTERS
See also AIR FILTERS
Spectroscopy
Gaussian filter for nuclear spectroscopy using the dislocated form, 9:34121 (RA;BR;In Portuguese)
FINGERPRINTING (OIL SPILLS)
See OIL SPILLS
FINITE DIFFERENCE METHOD
Numerical Solution
High-order sparse factorization methods for elliptic boundary value problems, 9:34784 (R;US)
FINITE ELEMENT METHOD
Numerical Solution
High-order sparse factorization methods for elliptic boundary value problems, 9:34784 (R;US)
FINLAND
Energy Sources
Peatlands as an energy source in Finland, 9:32640 (R;FI)
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
FIRE EXTINGUISHERS
Standards
Sodium carbonate, low-chloride fire extinguishing agent, 9:34505 (R;US)
FIRE STATIONS
See PUBLIC BUILDINGS
FIREDAMP
See METHANE
FIREPLACES
Air Pollution
Environmental effects of multi-fuel stoves and fireplaces. Where there's smoke there's fire, 9:33489 (R;NL;In Dutch)
FIREWOOD
See WOOD FUELS
FISCHER-TROPSCH SYNTHESIS
Catalysts
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 9:32532 (R;US)
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
Chemical Reactors
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
FISCHER-TROPSCH
MOBIL PROCESS/Bench-Scale Experiments
Slurry Fischer-Tropsch/Mobil two stage process of converting SYNGAS to high octane gasoline. Final report, 9:32786 (R;US)
MOBIL PROCESS/Catalysts
Slurry Fischer-Tropsch/Mobil two stage process of converting SYNGAS to high octane gasoline. Final report, 9:32786 (R;US)
MOBIL PROCESS/Mathematical Models
Slurry Fischer-Tropsch/Mobil two stage process of converting SYNGAS to high octane gasoline. Final report, 9:32786 (R;US)
FISHES
Meetings
White sturgeon research needs: workshop results (Acipenser transmontanus), 9:34351 (R;US)
Research Programs
White sturgeon research needs: workshop results (Acipenser transmontanus), 9:34351 (R;US)
FISSILE MATERIALS
Fabrication
The accelerator breeder, a viable option for the production of nuclear fuels, 9:32696 (J;US)
FISSION FRAGMENT DETECTION
Position Sensitive Detectors
Simultaneous position determination of α-particles and fission products with parallel plate counters, 9:34126 (RA;DE;In German)
FISSION FRAGMENTS
Fission Yield
A simple formula for calculation of prompt neutron yield from spontaneous fission of transuranics, 9:34715 (J;US)
Statistical Models
A simple formula for calculation of prompt neutron yield from spontaneous fission of transuranics, 9:34715 (J;US)
FISSION PRODUCT RELEASE
Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.
Chemical Composition
Mass spectrometric study of the release of volatile fission products from irradiated LWR fuel, 9:33253 (R;US)
Mass Spectroscopy
Mass spectrometric study of the release of volatile fission products from irradiated LWR fuel, 9:33253 (R;US)
FISSION PRODUCTS
Beta Decay
Restoration of neutrino spectra from ^{235}U and ^{239}Pu fission products on the base of beta spectra, 9:34692 (RA;SU;In Russian)
Decay
Fission product analytic impulse source functions, 9:34714 (J;US)
Fission Yield
Fission product yields for thermal-neutron fission of plutonium-239, 9:34720 (J;US)
FISSIONABLE MATERIALS MANAGEMENT
See NUCLEAR MATERIALS MANAGEMENT
FLAME PROPAGATION
Conditional velocity statistics in premixed CH_4-air and C_2H_4-air turbulent flames, 9:33845 (R;US)
FLAME SPECTROMETRY
See EMISSION SPECTROSCOPY
FLAMES
Two-dimensional measurements of the [OH] in a constant volume combustion chamber, 9:33848 (R;US)
Dimensions
Studies of flames from various accidental release geometries. Flame size and radiation measurements, 9:32659 (R;NO)
Froude Number
Studies of flames from various accidental release geometries. Flame size and radiation measurements, 9:32659 (R;NO)
Heat Flux
Studies of flames from various accidental release geometries. Flame size and radiation measurements, 9:32659 (R;NO)

Quenching
Unsteady heat transfer during laminar flame quenching, 9:33909 (R;US)

FLASH HYDROPYROLYSIS PROCESS
Process Development Units
Advancement of flash hydrogasification. Quarterly technical progress report, January-March 1984, 9:32446 (R;US)

FLAT MAGNETIC SPECTROMETERS
Position Sensitive Detectors
Electron/positron detector for the orange-β-spectrometer, 9:34129 (RA;DE;In German)

FLAT PLATE COLLECTORS
Standards
Solar collector test procedures: development of a method to refer measured efficiencies to standardized test conditions. Final report 1977-80, 9:32950 (R;US)
Testing
Solar collector test procedures: development of a method to refer measured efficiencies to standardized test conditions. Final report 1977-80, 9:32950 (R;US)

FLAWS
See DEFECTS

FLIES
Toxicity
Labelled radioactive adenosine nucleotides for the determination of toxic action, 9:34477 (R;AT;In German)

FLOW (FLUID)
See FLUID FLOW

FLOW MODELS
Computerized Simulation
Simulation of water flow in the unsaturated zone including the root zone, 9:34508 (R;DK)
Instability
Two-fluid instability, 9:33880 (R;US)

FLOWMETERS
Calibration
On-site calibration of flow metering systems installed in buildings. Building science series, 9:34153 (R;US)
Experimental Data
Mass flow measurement at Wilsonville Advanced Coal Liquefaction Pilot Plant using micro motion mass flow meters, 9:32533 (R;US)
Pressure Regulators
Experience with differential pressure devices for flow metering in acceptance and control testing, 9:33028 (RA;DE;In German)

FLUE GAS
Desulfurization
Buffer additives for lime/limestone slurry scrubbing synthesis, mass transfer, and degradation. Final report Oct 80-Oct 83, 9:34243 (R;US)
Dry additive process for the reduction of SO_2 emission in brown coal fired boilers, 9:32577 (RA;US)
Dry scrubbing at Argonne's 20MW boiler, 9:32553 (R;US)
LIMB testing: the use of dry sorbents to reduce sulfur oxide emissions from pulverized-coal flames under low-NO/sub x/ conditions, 9:32632 (RA;US)
Measuring methods in a flue gas desulfurization plant, 9:32561 (RA;DE;In German)
Operation and performance report of the Steinmueller low NO/sub x/ SM-burner and its potential towards utility boiler SO/sub x/-control via sorbent injection, 9:32578 (RA;US)
Pulverized coal firing of aluminum melting furnaces. Final report, 9:32619 (R;US)
Oxygen Meters
Experiences with zirconium dioxide measuring cells for oxygen concentrations in flue gases, 9:32560 (RA;DE;In German)
Purification
Review and evaluation of novel flue gas purification technology for advanced flue gas purification, 9:33939 (R;SE;In Swedish)

FLUID FLOW
See also INCOMPRESSIBLE FLOW
LAMINAR FLOW
TURBULENT FLOW
TWO-PHASE FLOW
Disturbances
Perturbations in flows and some other effects as consequences of uncertainty relations, 9:34578 (RA;IL)
Instability
H Division. Materials Physics quarterly report, October-December 1983, 9:33615 (R;US)

FLUID MECHANICS
Two-Phase Flow
Experimental and theoretical study of a two-phase flow in vertical and near-horizontal pipes. Application to petroleum engineering, 9:32667 (R;FR;In French)

FLUIDIZATION
Hydrodynamics
Hydrodynamical basis for scaling fluidization data on jet penetration and mixing relevant to fluidized-bed coal gasifiers, 9:32474 (RA;US)
Medium Pressure
High-pressure fluidization cold model, 9:32473 (RA;US)
Reynolds Number
Hydrodynamical basis for scaling fluidization data on jet penetration and mixing relevant to fluidized-bed coal gasifiers, 9:32474 (RA;US)

FLUIDIZED BED
Bubbles
Coal gasification research studies, 9:32472 (RA;US)
Pressure Effects
Coal gasification research studies, 9:32472 (RA;US)
Temperature Effects
Coal gasification research studies, 9:32472 (RA;US)

FLUIDIZED-BED COMBUSTORS
Chemical Effluents
Experimental and engineering support for the CAFB (Chemically Active Fluid-bed) demonstration: residue disposal/utilization. Final report 1979-82, 9:32565 (R;US)
Corrosion
Corrosion behavior of materials in coal-combustion systems, 9:32635 (J;US)
Design
Advanced atmospheric fluidized-bed combustion design-spouted bed. Final report, 9:33930 (R;US)
Operation
Design, construction, operation and evaluation of a prototype culm combustion boiler/heater unit. Quarterly technical progress report, April 1-June 30, 1982, 9:33929 (R;US)
Testing
Design, construction, operation and evaluation of a prototype culm combustion boiler/heater unit. Quarterly technical progress report, April 1-June 30, 1982, 9:33929 (R;US)

FLUIDS
Not for BODY FLUIDS.
See also GASES
GEOTHERMAL FLUIDS
HEAT TRANSFER FLUIDS
WORKING FLUIDS
Integral Equations
H Division. Materials Physics quarterly report, October-December 1983, 9:33615 (R;US)

FLUID-STRUCTURE INTERACTIONS
Investigation of sodium concrete interaction and the effect of different by-products, 9:33269 (R;DE)

FLUORENE
Aerosol Monitoring
Distribution of polycyclic aromatic hydrocarbons in precipitation, 9:34262 (BA;US)
Precipitation Scavenging
Distribution of polycyclic aromatic hydrocarbons in precipitation, 9:34262 (BA;US)

FLUORIMETERS
Specifications
Digital fluorimeter (Constructed and installed), 9:34148 (RA;BR;In Portuguese)

FLUORINE
Atom-Molecule Collisions
Dynamic resonances in the reaction of fluorine atoms with hydrogen molecules, 9:34567 (R;US)

Chemical Analysis
Determination of fluorine in UF_4, 9:33786 (RA;BR;In Portuguese)
Fluor determination in uranium oxides, 9:33787 (RA;BR;In Portuguese)
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
FLUORINE FLUORIDES
See FLUORINE
FLUX (NEUTRON)
See NEUTRON FLUX
FLY ASH
Agglomeration
Granulation of nomagnetic fly ash-coke mixtures, 9:32562 (R;US)
Heat Treatments
Granulation of nomagnetic fly ash-coke mixtures, 9:32562 (R;US)
Marine Disposal
Evaluation of the disposal of flue gas cleaning wastes in coal mines and at sea: refined assessment. Final report Jun 75-Sep 83, 9:34236 (R;US)
Underground Disposal
Evaluation of the disposal of flue gas cleaning wastes in coal mines and at sea: refined assessment. Final report Jun 75-Sep 83, 9:34236 (R;US)
Waste Product Utilization
Granulation of nomagnetic fly ash-coke mixtures, 9:32562 (R;US)
FLYWHEELS
Research Programs
Annual report 1982, 9:33233 (R;NL;In Dutch)
FMIT FACILITY
See FMIT LINAC
FMIT LINAC
Linear Accelerator at the Hanford Fusion Materials Irradiation Test Facility.
Planning
Summary report on responses to a questionnaire on DOE's materials research facilities, 9:34972 (R;US)
FOAMS
Chemical Preparation
Low density, microcellular foams, preparation, and articles, 9:34962 (P;US)
Defects
Low density, microcellular foams, preparation, and articles, 9:34962 (P;US)
Machining
Low density, microcellular foams, preparation, and articles, 9:34962 (P;US)
FOG
Water Chemistry
Chemistry of nighttime urban fogs, 9:34191 (BA;US)
Design and calibration of a rotating arm collector for ambient fog sampling, 9:34189 (BA;US)
Fogwater composition in southern California, 9:34190 (BA;US)
FOKKER-PLANCK COEFFICIENTS
See FOKKER-PLANCK EQUATION
FOKKER-PLANCK EQUATION
Numerical Analysis
Numerical analysis of the Boltzmann equation including Fokker-Planck terms, 9:34839 (J;US)
FOLIAGE
See LEAVES
FOREST LITTER
Natural organic debris on the forest floor.
Lead
Lead in vegetation, forest floor material, and soils of the spruce-fir zone, Great Smoky Mountains National Park, 9:34335 (R;US)
FORESTS
Damage
Acid rain and forest decline in West Germany, 9:34383 (R;GB)
New kinds of forest damage in the Federal Republic of Germany, 9:34478 (R;DE;In German)
Topical report: Forest damage, 9:34479 (R;DE;In German)
Environmental Policy
New kinds of forest damage in the Federal Republic of Germany, 9:34478 (R;DE;In German)
Topical report: Forest damage, 9:34479 (R;DE;In German)
FORGE WELDING
Quality Control
Evaluation of the effects of current impulses in a side bonding resistance forge weld, 9:33681 (R;US)
FORMOSA
See TAIWAN
FOSSIL FUEL RESERVES
See FOSSIL FUELS
FOSSIL FUELS

SHALE OIL
Research Programs
Current energy research and development in Washington State, 1982, 9:33447 (R;US)
FOSSIL-FUEL POWER PLANTS
Air Pollution
Comprehensive assessment of the specific compounds present in combustion processes. Volume 3. National survey of organic emissions from coal fired utility boiler plants. Final report, task 52, 9:34237 (R;US)
Air Pollution Abatement
Investment and cost functions for measures serving the reduction of emissions on the sector of energy conversion, 9:34374 (R;DE;In German)
Air Pollution Control
Current status of dry NO/sub x/-SO/sub x/ emission control processes, 9:32584 (RA;US)
Climates
Possibilities of anthropogenic modifications of thunderstorm activity, 9:34330 (R;CH;In German)
Cogeneration
Cogeneration of electric power and heat by small plants. Possible techniques, need of development and conceivable energy supplies in Sweden, 9:33039 (R;SE;In Swedish)
Design
Overview of design of advanced fossil fuel systems (DAFFS) study, 9:33023 (R;US)
Environmental Impacts
Bibliography of the Maryland Power Plant Siting Program, Fifth Edition, 9:33484 (R;US)
Economic analysis of the environmental effects of the coal-fired electric generator at Boardman, Oregon. Final report, 9:32567 (R;US)
Emission inventory of coal, peat and oil-fired power plants, 9:32585 (R;FI;In Finnish)
Fly Ash
Granulation of nomagnetic fly ash-coke mixtures, 9:32562 (R;US)
Health Hazards
Health hazard evaluation report No. HETA 81-062-1211, Hatfield's Ferry Power Station, Masontown, Pennsylvania, 9:34489 (R;US)
Occupational Safety
Health hazard evaluation report No. HETA 81-062-1211, Hatfield's Ferry Power Station, Masontown, Pennsylvania, 9:34489 (R;US)
Planning
Cogeneration of electric power and heat by small plants. Possible techniques, need of development and conceivable energy supplies in Sweden, 9:33039 (R;SE;In Swedish)
Pollution Control Equipment
Evaluation of tangential fired low NO/sub x/ burner, 9:32627 (RA;US)
Status of Japanese technical development for coal combustion NO/sub x/ control (Matsushima Thermal Power Station and Takehara Thermal Power Station), 9:32572 (RA;US)

Retrofitting
Status of NO/sub x/ controls for Riley Stoker wall-fired and turbo-fired boilers, 9:32569 (RA;US)
Site Selection
Bibliography of the Maryland Power Plant Siting Program, Fifth Edition, 9:33484 (R;US)
Thermal Pollution
Possibilities of anthropogenic modifications of thunderstorm activity, 9:34330 (R;CH;In German)

FOURIER HEAT EQUATION
Numerical Solution
Solution of the heat conduction equation, 9:33887 (RA;BR;In Portuguese)

FRACTURE MECHANICS
Mathematical Models
Modelling the hydrofracture process as a coupled double free boundary problem, 9:33855 (R;US)

FRACTURES
Mapping
Feasibility of a borehole VHF radar technique for fracture mapping, 9:32964 (R;US)

FRAGMENTS (FISSION)
See FISSION FRAGMENTS

FRAGMENTS (PARTICLES)
See PARTICLES

FRANCE
Bilateral Agreements
Decree No 82-864 of 4 October 1982 publishing the exchange of letters between France and Belgium dated 10 May 1982 concerning exchange of information on nuclear safety, 9:33452 (R;FR;In French)
International Agreements
Decree 82-784 of 10 September 1982 publishing the Agreement for co-operation in the nuclear field between the Government of the French Republic and the Government of the United Arab Emirates, signed at Abou Dhabi on 6 March 1980, 9:33467 (R;FR;In French)
Marine Disposal
Decree No 82-842 of 29 September 1982 in implementation of Act No 76-599 of 7 July 1976 concerning prevention and repression of marine pollution due to dumping by ships and aircraft and accidental marine pollution, 9:33468 (R;FR;In French)
Nuclear Power Plants
Environmental gamma-ray measurement methods for French nuclear installation impact studies, 9:33222 (J;US)
Pollution Regulations
Decree No 82-842 of 29 September 1982 in implementation of Act No 76-599 of 7 July 1976 concerning prevention and repression of marine pollution due to dumping by ships and aircraft and accidental marine pollution, 9:33468 (R;FR;In French)
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
Technology Transfer
Decree 82-784 of 10 September 1982 publishing the Agreement for co-operation in the nuclear field between the Government of the French Republic and the Government of the United Arab Emirates, signed at Abou Dhabi on 6 March 1980, 9:33467 (R;FR;In French)

FREE CONVECTION
See NATURAL CONVECTION

FREE ELECTRON LASERS
New high power coherent radiation sources. Memorandum report, 9:33873 (R;US)
Beam Dynamics
High frequency free-electron laser results, 9:34006 (J;US)
Beam Extraction
High frequency free-electron laser results, 9:34006 (J;US)
Betatrons
Modified betatron accelerator experiment. Final report 12 Jan 81-10 Dec 82, 9:34012 (R;US)
Electron Beams
Free electron lasers for laser fusions, 9:33879 (BA;US)
Electron Capture
High frequency free-electron laser results, 9:34006 (J;US)
Magnetic Fields
Collective effects on the operation of free-electron lasers with an axial guide field, 9:33875 (RA;BR)
Performance
High frequency free-electron laser results, 9:34006 (J;US)
Wiggler Magnets
Collective effects on the operation of free-electron lasers with an axial guide field, 9:33875 (RA;BR)
Free electron laser for a mildly relativistic electron beam, 9:33871 (J;US)

FREE RADICALS
See RADICALS

FREQUENCY ANALYSIS
Analog Systems
Frequency spectrum analyzer with phase-lock, 9:34157 (P;US)
Measuring Instruments
Frequency spectrum analyzer with phase-lock, 9:34157 (P;US)

FRESH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS

FTR REACTOR (RICHLAND)
See FFTF REACTOR

FUEL ASSEMBLIES
See also FUEL ELEMENT CLUSTERS
Design
A liquid-metal fast breeder reactor core design with seed blanket modular assemblies, 9:33348 (J;US)
Heat Transfer
Program TRANS for calculation of transients in light water reactor fuel assembly, 9:33286 (RA;CS;In Czech)
Hydraulics
Turbulent flow in rod bundles with geometrical disturbances, 9:33194 (J;US)
Performance
Wet storage integrity update, 9:32711 (R;US)
Reactor Kinetics
A modified Wigner rational approximation for neutron collision escape probability from bare homogeneous reactor assemblies, 9:33198 (J;US)
Turbulent Flow
Turbulent flow in rod bundles with geometrical disturbances, 9:33194 (J;US)
Two-Phase Flow
Program TRANS for calculation of transients in light water reactor fuel assembly, 9:33286 (RA;CS;In Czech)

FUEL BUNDLES
See FUEL ELEMENT CLUSTERS

FUEL CANS
Corrosion Resistance
Corrosion of zircaloy fuel pins, 9:33228 (RA;BR;In Portuguese)
Fracture Properties
Influence of surface condition on crack initiation in iodine-induced stress corrosion cracking of zircaloys, 9:33207 (J;US)
The effects of texture and surface condition on the iodine stress corrosion cracking susceptibility of unirradiated Zircaloy-2, 9:33208 (J;US)
Fuel-Cladding Interactions
A model for gap conductance in nuclear fuel rods, 9:33199 (J;US)
Determination of thermal accommodation coefficients of helium, argon, and xenon on a surface of zircaloy-2 at about 25°C, 9:33200 (J;US)
Gap conductance and temperature transients in modified pulse design experiments, 9:33354 (J;US)
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
Heat Transfer
A model for gap conductance in nuclear fuel rods, 9:33199 (J;US)
Impact Tests
Influence of surface condition on crack initiation in iodine-induced stress corrosion cracking of zircaloys, 9:33207 (J;US)

In-Service Inspection
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
Quality Control
Quality control for zircaloy tubes, 9:33080 (RA;BR;In Portuguese)
Reactor Safety Experiments
Gap conductance and temperature transients in modified pulse design experiments, 9:33354 (J;US)
Strains
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
Stress Corrosion
Influence of surface condition on crack initiation in iodine-induced stress corrosion cracking of zircaloys, 9:33207 (J;US)
The effects of texture and surface condition on the iodine stress corrosion cracking susceptibility of unirradiated Zircaloy-2, 9:33208 (J;US)
Temperature Gradients
Gap conductance and temperature transients in modified pulse design experiments, 9:33354 (J;US)
Thermal Conductivity
A model for gap conductance in nuclear fuel rods, 9:33199 (J;US)
Determination of thermal accommodation coefficients of helium, argon, and xenon on a surface of zircaloy-2 at about 25°C, 9:33200 (J;US)
Gap conductance and temperature transients in modified pulse design experiments, 9:33354 (J;US)

FUEL CELLS
See also ACID ELECTROLYTE FUEL CELLS
Electrochemistry
Electrochemistry determines the future of electric vehicles, 9:33607 (J;US)
Fuel cell power plants for electric vehicles: electrochemical aspects, 9:33610 (J;US)
Electrodes
Adsorption of trifluoromethanesulfonate anions on mercury electrodes, 9:33505 (J;US)
Modification of rotating ring-disc electrode kinetics to obtain rate constants of intermediate steps in oxygen reduction, 9:33502 (J;US)
Selection of carbon as electrode material, 9:33501 (J;US)
Performance Testing
Predictive testing for fuel cells, 9:33497 (J;US)
Research Programs
Project summaries: sixth DOE electrochemical contractor's review. Supplement, 9:33372 (R;US)
Technology Base Research Project for electrochemical energy storage. Annual report for 1983, 9:33380 (R;US)
Technology Assessment
Fuel cell power plants for electric vehicles: electrochemical aspects, 9:33610 (J;US)
Fuel cells for transportation, 9:33609 (J;US)

FUEL CONSUMPTION
Measuring Methods
Development of probes for measuring fuel and air flow as well as fuel remaining in production automobiles, 9:33592 (R;DE;In German)

FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE

FUEL ELEMENT CLUSTERS
Film Boiling
Transition boiling heat transfer in the Semiscale MOD-3 core during reflood, 9:33353 (J;US)
Flow Blockage
FEBA - flooding experiments with blocked arrays. Data report 1, test series 1 through 4, 9:33087 (R;DE)
Heat Transfer
Transition boiling heat transfer in the Semiscale MOD-3 core during reflood, 9:33353 (J;US)
Transition Boiling
Transition boiling heat transfer in the Semiscale MOD-3 core during reflood, 9:33353 (J;US)

FUEL ELEMENT FAILURE
Fission Product Release
Mass spectrometric study of the release of volatile fission products from irradiated LWR fuel, 9:33253 (R;US)
The prediction of transient fission-gas release and fuel microcracking under severe core-accident conditions, 9:33356 (J;US)
Fuel-Cladding Interactions
Kernel migration in failed, oxide-based HTGR fuel, 9:33089 (R;US)

FUEL ELEMENTS
See also FUEL PINS
FUEL PLATES
FUEL RODS
SPENT FUEL ELEMENTS
Critical Heat Flux
Critical heat flows in light water reactor fuel elements, 9:33086 (RA;CS;In Czech)
Departure Nucleate Boiling
Critical heat flows in light water reactor fuel elements, 9:33086 (RA;CS;In Czech)
Fuel Densification
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
Fuel Motion Detection
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
Fuel-Cladding Interactions
Gap conductance and temperature transients in modified pulse design experiments, 9:33354 (J;US)
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
Hydrodynamics
Hydrodynamic effects of the gap between the fuel rod longitudinal fins and the tube, 9:33903 (RA;IL)
In-Service Inspection
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
Reactor Safety Experiments
Gap conductance and temperature transients in modified pulse design experiments, 9:33354 (J;US)
Temperature Gradients
Gap conductance and temperature transients in modified pulse design experiments, 9:33354 (J;US)
Thermal Conductivity
Gap conductance and temperature transients in modified pulse design experiments, 9:33354 (J;US)

FUEL FABRICATION PLANTS
See also MIXED OXIDE FUEL FABRICATION PLANTS
Accounting
Estimation methods for special nuclear materials holdup, 9:32769 (R;US)

FUEL GAS
See also NATURAL GAS
Chemical Composition
Gasification of residual materials from coal liquefaction. Type III extended pilot plant evaluation of a pelletized and ground Kerr McGee mineral ash residue from SRC-I coal liquefaction process, 9:32444 (R;US)
Gasification of residual materials from coal liquefaction: Type II preliminary pilot plant evaluation of SRC-I extruded Kerr McGee mineral ash residue-water slurry, 9:32445 (R;US)
Steam/fuel system optimization report: 6000-tpd SRC-I Demonstration Plant, 9:32498 (R;US)
Desulfurization
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
Hot Gas Cleanup
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)
Development of a process for the simultaneous high-temperature removal of alkali and particulates in pressurized gasification systems, 9:32481 (RA;US)

Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)

FUEL INJECTION SYSTEMS
Flame Propagation
Combustion characteristics in the transition region of liquid fuel sprays, 9:33931 (R;US)

FUEL OILS
See also RESIDUAL FUELS
Chemical Composition
Comparative toxicological and chemical properties of fuels developed from coal, shale, or petroleum, 9:32658 (R;US)
Combustion Products
Emission inventory of coal, peat and oil-fired power plants, 9:32585 (R;FI;In Finnish)
Compatibility
Liquid product characterization and compatibility studies. Final technical report, 9:32507 (R;US)
Energy Demand
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)
Toxicity
Comparative toxicological and chemical properties of fuels developed from coal, shale, or petroleum, 9:32658 (R;US)

FUEL PELLETS
Fuel-Cladding Interactions
A model for the effective thermal and mechanical properties of cracked UO_2 pellets, 9:33202 (J;US)
Mechanical Properties
A model for the effective thermal and mechanical properties of cracked UO_2 pellets, 9:33202 (J;US)
Thermal Conductivity
Determination of the thermal conductivity coefficient for uranium oxide pellets, 9:33192 (RA;BR;In Portuguese)
The possible impact of fuel pellet cracking on inferred gap conductance and fuel stored energy, 9:33201 (J;US)
Thermal Degradation
The possible impact of fuel pellet cracking on inferred gap conductance and fuel stored energy, 9:33201 (J;US)
Thermodynamic Properties
A model for the effective thermal and mechanical properties of cracked UO_2 pellets, 9:33202 (J;US)

FUEL PENCILS
See FUEL PINS

FUEL PINS
Eddy Current Testing
Eddy current testing of PWR fuel pencils in the pool of the Osiris reactor, 9:33068 (R;FR;In French)
Fabrication
Testing of wet scrap recovery equipment for mixed oxide scrap reprocessing, 9:32700 (R;US)
Fuel-Cladding Interactions
The effect of time delays in fuel pin failure on LOF-TOP transient calculations for a commercial-sized LMFBR, 9:33357 (J;US)
Heat Flux
Experimental determination of local heat transfer coefficient in a fuel assembly with the tight pins, 9:33193 (RA;BR;In Portuguese)
Heat Transfer
Experimental determination of local heat transfer coefficient in a fuel assembly with the tight pins, 9:33193 (RA;BR;In Portuguese)

FUEL PLATES
Fabrication
Development of high-uranium loaded U_3O_8-Al fuel plates, 9:33239 (J;US)
Performance
Development of high-uranium loaded U_3O_8-Al fuel plates, 9:33239 (J;US)

FUEL POOLS
Performance
Wet storage integrity update, 9:32711 (R;US)

FUEL REPROCESSING
See REPROCESSING

FUEL REPROCESSING PLANTS
Accounting
Estimation methods for special nuclear materials holdup, 9:32769 (R;US)
Radioactive Effluents
Sedimentation studies relevant to low-level radioactive effluent dispersal in the Irish Sea. Part 1. Radionuclides in marine sediments, 9:34364 (R;US)
Safeguards
Simulation of nuclear fuel reprocessing for safeguards, 9:32706 (R;DE)

FUEL RODS
Brazing
Joining techniques for core flow test loop fuel rod simulators, 9:33206 (J;US)
F Codes
User input manual for single fuel rod behaviour analysis code FEMAXI-III, 9:33061 (R;JP;In Japanese)
Fuel-Cladding Interactions
A model for gap conductance in nuclear fuel rods, 9:33199 (J;US)
Determination of thermal accommodation coefficients of helium, argon, and xenon on a surface of zircaloy-2 at about 25°C, 9:33200 (J;US)
Heat Transfer
A model for gap conductance in nuclear fuel rods, 9:33199 (J;US)
Simulation of the thermalhydraulic behavior of a PWR fuel rod during blowdown, 9:33276 (RA;BR;In Portuguese)
Hydraulics
Simulation of the thermalhydraulic behavior of a PWR fuel rod during blowdown, 9:33276 (RA;BR;In Portuguese)
Thermal Conductivity
A model for gap conductance in nuclear fuel rods, 9:33199 (J;US)
Determination of thermal accommodation coefficients of helium, argon, and xenon on a surface of zircaloy-2 at about 25°C, 9:33200 (J;US)
The possible impact of fuel pellet cracking on inferred gap conductance and fuel stored energy, 9:33201 (J;US)
Thermal Degradation
The possible impact of fuel pellet cracking on inferred gap conductance and fuel stored energy, 9:33201 (J;US)
Welded Joints
Technique for radiographic test of pipe/plug welded joints for nuclear reactor fuel rods, 9:33914 (RA;BR;In Portuguese)

FUEL SHEATHS
See FUEL CANS

FUEL SLUGS
See FUEL RODS

FUEL SLURRIES
Chemical Preparation
Compaction and granulation of coal liquefaction residue. Final report, 9:32529 (R;US)
Combustion
Fundamental combustion studies of low-rank coal slurries. Quarterly technical progress report. No. 1, March 1-May 31, 1984, 9:32620 (R;US)
Combustion Properties
Coal-water slurry combustion in industrial gas turbines, 9:32634 (J;GB)
Devolatilization
Investigation of vaporization and devolatilization of coal/water mixtures. Seventh quarterly report, November 1, 1983-January 31, 1984, 9:32622 (R;US)
Evaporation
Investigation of vaporization and devolatilization of coal/water mixtures. Seventh quarterly report, November 1, 1983-January 31, 1984, 9:32622 (R;US)
Oxidation
Photo-assisted electrolysis applied to coal gasification, 9:32466 (RA;US)
Performance Testing
Coal-water slurry combustion in industrial gas turbines, 9:32634 (J;GB)

Thermal Conductivity
Thermal conductivities of Wilsonville solvent and Wilsonville solvent/Illinois No. 6 coal slurry, 9:32543 (R;US)
FUEL SUSPENSIONS
See FUEL SLURRIES
FUEL-CLADDING INTERACTIONS
A model for gap conductance in nuclear fuel rods, 9:33199 (J;US)
PCI-related cladding failures during off-normal events - draft (PWR; BWR), 9:33328 (R;US)
FUEL-COOLANT INTERACTIONS
Fragmentation
Fragmentation of UO_2 and UC drops entering a sodium pool (LMFBR), 9:33251 (R;US)
Heat Transfer
Fuel-coolant interaction in a shock tube with initially-established film boiling (PWR; BWR), 9:33252 (R;US)
Hydraulics
Fuel-coolant interaction in a shock tube with initially-established film boiling (PWR; BWR), 9:33252 (R;US)
Test Facilities
Fuel-coolant interaction in a shock tube with initially-established film boiling (PWR; BWR), 9:33252 (R;US)
FUELS (NUCLEAR)
See NUCLEAR FUELS
FUELWOOD
See WOOD FUELS
FUMES
See AEROSOLS
FURNACES
See also GAS FURNACES
WOOD BURNING FURNACES
Evaluation
Evaluation of a processing technique for immobilization of low-level waste, 9:32718 (R;US)
Thermal Insulation
Ceramic fiber insulated furnace research program. Annual report Jul 81-Sep 82, 9:33569 (R;US)
FUSION REACTORS
See THERMONUCLEAR REACTORS
FUSION (WELDING)
See WELDING

G

GADOLINIUM ALLOYS
Thermomagnetism
Thermomagnetic properties of GdPd, 9:33678 (R;US)
GAGES (STRAIN)
See STRAIN GAGES
GALAXIES
See also MAGELLANIC CLOUDS
MILKY WAY
SEYFERT GALAXIES
Photometry
UBV variations in the nucleus of NGC 3347, 9:34546 (RA;BR)
GALAXY CLUSTERS
Galactic Evolution
DDO integrated photometry of globular clusters and initial chemical evolution of the galaxy, 9:34541 (RA;BR)
Photometry
DDO integrated photometry of globular clusters and initial chemical evolution of the galaxy, 9:34541 (RA;BR)
DDO photometry and metallic abundances of E and SO galaxies and globular clusters of the LMC and SMC, 9:34543 (RA;BR)
GALAXY NUCLEI
Central part of galaxies.
Brightness
UBV variations in the nucleus of NGC 3347, 9:34546 (RA;BR)
Emission Spectroscopy
Study of the nuclei of NGC 3732 and IC 4662, 9:34544 (RA;BR)
Luminosity
UBV variations in the nucleus of NGC 3347, 9:34546 (RA;BR)
GALLBLADDER
See BILIARY TRACT
GALLIUM 67
Isotope Production
Production of ^{67}Ga, 9:33838 (RA;BR;In Portuguese)
GALLIUM ALLOYS
Electric Conductivity
Thermal conductivity and Lorenz number of plutonium and plutonium-gallium alloys, 9:33690 (BA;US)
Thermal Conductivity
Thermal conductivity and Lorenz number of plutonium and plutonium-gallium alloys, 9:33690 (BA;US)
GALLIUM ARSENIDE SOLAR CELLS
Chemical Vapor Deposition
Low-cost GaAs solar cell development. Final report Sep 81-Sep 83, 9:32844 (R;US)
Crystal Growth
Study and promotion of epitaxial growth of compounds III/5 by the mixed pyrolysis of organometallics and hydrides at reducted pressure: application to the study of solar cell structures, 9:32857 (R;XE)
GALLIUM ARSENIDES
Crystal Lattices
Near surface analysis of chromium implanted GaAs using RBS, PIXE, and TEM, 9:33768 (J;US)
Damage
Near surface analysis of chromium implanted GaAs using RBS, PIXE, and TEM, 9:33768 (J;US)
Defects
Near surface analysis of chromium implanted GaAs using RBS, PIXE, and TEM, 9:33768 (J;US)
Electron-Hole Droplets
Study of hot phonons and hot carriers in GaAs under picosecond optical pulse excitation, 9:33759 (R;US)
Radiation Hardening
Low power radiation hard GaAs RAM. Semi-annual technical report 10 Jun 82-9 Dec 83, 9:34141 (R;US)
GALLIUM COMPOUNDS
See also GALLIUM ARSENIDES
GALLIUM PHOSPHIDES
Raman Spectra
Raman scattering in piezoelectric crystals with particular respect to orthorhombic $LiGaO_2$, 9:33749 (R;AT;In German)
GALLIUM PHOSPHIDES
Kinetics
Photoelectrochemical kinetics of p type GaP, 9:32891 (J;US)
Stability
New stability measurements on GaP and WSe_2 photoelectrodes, 9:32886 (J;US)
GALLSTONES
See BILIARY TRACT
GAMETOGENESIS
Biochemistry
RNA synthesis of perinatal female and male gametes. Autoradiographic studies in Wistar rats, 9:34435 (R;DE;In German)
GAMMA DETECTION
Photon detectors, E/sub γ/ = several MeV to 1 GeV, 9:34113 (R;US)
GAMMA DOSIMETRY
Performance Testing
Neutron and gamma personnel dosemeter response in mixed radiation fields, 9:34138 (J;GB)
GAMMA RADIATION
Buildup
Gamma-ray buildup factors for concrete slab shields under slant incidence conditions, 9:34755 (J;US)
Radiation Streaming
Measurements of neutron and gamma-ray streaming in a cavity-duct system and an analysis by an albedo Monte Carlo method, 9:34751 (J;US)
GAMMA SPECTRA
Multi-Channel Analyzers
Application of an ion exchange method for sensitivity improvement of an automated radionuclide analysis system, 9:33185 (J;US)

GAMMA SPECTROMETERS
See also PAIR SPECTROMETERS
Photon detectors, E/sub γ/ = several MeV to 1 GeV, 9:34113 (R;US)
Calibration
Calibration and performance of a high-resolution gamma-spectroscopy system, 9:32693 (R;US)
Performance
Calibration and performance of a high-resolution gamma-spectroscopy system, 9:32693 (R;US)
GAMMA SPECTROSCOPY
Spectra Unfolding
Program for the defolding of two-dimensional gamma-spectra, 9:34128 (RA;DE;In German)
GAS APPLIANCES
Burners
Commercial cooking equipment improvement. Annual report Jul 82-Jun 83, 9:33536 (R;US)
Thermal Efficiency
Commercial cooking equipment improvement. Annual report Jul 82-Jun 83, 9:33536 (R;US)
Vents
Venting requirements for high efficiency gas-fired heating equipment. Final report, 9:32683 (R;US)
GAS BURNERS
Fibers
Firetube boiler fiber burner demonstration program. Annual report Sep 82-Oct 83, 9:33932 (R;US)
GAS BURSTS
See ROCK BURSTS
GAS CENTRIFUGES
Computerized Simulation
Ekman boundary conditions for numerical models of centrifuge flows, 9:33864 (R;US)
Flow Models
Ekman boundary conditions for numerical models of centrifuge flows, 9:33864 (R;US)
Fluid Mechanics
A numerical study of weakly compressible rotating flows in a gas centrifuge, 9:33911 (J;US)
GAS COOLANTS
See GASES
GAS COOLED FAST BREEDER REACTORS
See GCFR TYPE REACTORS
GAS COOLING
Evaluation
Evaluation of gas-cooled pressurized phosphoric acid fuel cells for electric utility power generation. Final technical report, 9:33495 (R;US)
GAS ENGINES
See INTERNAL COMBUSTION ENGINES
GAS FIELDS
See NATURAL GAS FIELDS
GAS FURNACES
Fibers
Advanced furnace concepts - commercial unit heater. Annual report Sep 82-Oct 83, 9:33933 (R;US)
Performance
Advanced furnace concepts - commercial unit heater. Annual report Sep 82-Oct 83, 9:33933 (R;US)
GAS HEAT PUMPS
Absorption Refrigeration Cycle
Test procedures for rating residential heating and cooling absorption equipment, 9:33514 (R;US)
Standards
Test procedures for rating residential heating and cooling absorption equipment, 9:33514 (R;US)
Testing
Test procedures for rating residential heating and cooling absorption equipment, 9:33514 (R;US)
GAS OILS
Boiling point range 204-593°C.
Energy Demand
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)
GAS SCINTILLATION DETECTORS
Efficiency
Comparative measurements between a Li-6 glass and a He-3 high-pressure gas scintillator, 9:34118 (R;DE)
GAS TURBINE ENGINES
Ceramics
Development of high temperature ceramic parts for vehicular gasturbines, 9:33589 (R;DE;In German)
Energy Recovery
Thermal energy recovery in gas turbine engine test cells. Final report Oct 82-Sep 83, 9:33587 (R;US)
Performance
Cold-air performance of compressor-drive turbine of Department of Energy upgraded automobile gas turbine engine. III. Performance of redesigned turbine, 9:33590 (R;US)
GAS TURBINES
Fuel Injection Systems
Electrical spray modification with various fuels in a T-56 combustor. Contractor report, 9:33928 (R;US)
Materials Testing
Development of silicon nitride gas turbine components. Phase 2, 9:33700 (R;DE;In German)
GAS WELLS
See NATURAL GAS WELLS
GASEOUS DIFFUSION PROCESS
Flow Models
Separation of a multicomponent mixture by gaseous diffusion: modelization of the enrichment in a capillary; application to a pilot cascade, 9:32697 (R;FR;In French)
GASES
See also ELECTRON GAS and FERMI GAS.

COSMIC GASES
EXHAUST GASES
FUEL GAS
PYROLYTIC GASES
SYNTHESIS GAS
VAPORS
Absorption
Gas-absorption process, 9:33811 (P;CA)
Compressible Flow
A numerical study of weakly compressible rotating flows in a gas centrifuge, 9:33911 (J;US)
Couette Flow
A numerical study of weakly compressible rotating flows in a gas centrifuge, 9:33911 (J;US)
Forced Convection
A numerical study of weakly compressible rotating flows in a gas centrifuge, 9:33911 (J;US)
Separation Processes
Gas-absorption process, 9:33811 (P;CA)
Vortex Flow
A numerical study of weakly compressible rotating flows in a gas centrifuge, 9:33911 (J;US)
GAS-INSULATED CABLES
Current assessment of the potential of dielectric gas mixtures for industrial applications, 9:33045 (R;US)
GASOLINE
Chemical Composition
Comparative toxicological and chemical properties of fuels developed from coal, shale, or petroleum, 9:32658 (R;US)
Cost
Cost of liquid fuels from coal. Part 3. Methanol and methanol-derived gasoline, 9:32530 (R;GB)
Energy Demand
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)
Lead
Assessment of the energy balances and economic consequences of the reduction and elimination of lead in gasoline, 9:32662 (R;NL)
Production
Slurry Fischer-Tropsch/Mobil two stage process of converting SYNGAS to high octane gasoline. Final report, 9:32786 (R;US)

Toxicity
Comparative toxicological and chemical properties of fuels developed from coal, shale, or petroleum, 9:32658 (R;US)
Yields
Slurry Fischer-Tropsch/Mobil two stage process of converting SYNGAS to high octane gasoline. Final report, 9:32786 (R;US)

GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES

GASOLINE PLANTS
Economic Analysis
Slurry Fischer-Tropsch/Mobil two stage process of converting SYNGAS to high octane gasoline. Final report, 9:32786 (R;US)

GCFR TYPE REACTORS
Reactor Core Disruption
Recriticality considerations in disrupted gas-cooled fast reactor core geometry, 9:33342 (J;US)
Reactor Cores
Recriticality considerations in disrupted gas-cooled fast reactor core geometry, 9:33342 (J;US)

GEIGER-MUELLER COUNTERS
Fabrication
Production of Geiger-Mueller detectors, 9:34124 (RA;BR;In Portuguese)
Feasibility Studies
Production of Geiger-Mueller detectors, 9:34124 (RA;BR;In Portuguese)

GE(LI) DETECTORS
See LI-DRIFTED GE DETECTORS

GENERATORS (ELECTRIC)
See ELECTRIC GENERATORS

GENERATORS (STEAM)
See STEAM GENERATORS

GENETIC RADIATION EFFECTS
Forecasting
Genetic risk from irradiation of the Bulgarian population for medical purposes, 9:34447 (RA;BG;In Bulgarian)
LET
Investigations on the influence of radiation with variable linear energy transfer (LET) on the DNA-content and DNA-repair-mechanisms in Vicia faba, 9:34456 (R;AT;In German)

GEOCHEMISTRY
Information Needs
Overview of geochemical modeling needs for nuclear waste management, 9:32742 (R;US)
Research Programs
Geochemistry research planning for the underground storage of high-level nuclear waste, 9:32730 (R;US)

GEOLOGIC DEPOSITS
See also COAL DEPOSITS
NATURAL GAS DEPOSITS
SALT DEPOSITS
Flow Models
Verification and field comparison of the Sandia Waste-Isolation Flow and Transport Model (SWIFT), 9:32756 (R;US)

GEOPHYSICAL SURVEYS
See also SEISMIC SURVEYS
Acoustic Measurements
Interaction between airguns, 9:34514 (R;NO)

GEOPRESSURED SYSTEMS
Information Systems
Development of a geopressured energy management information and analysis system in support of research planning: third year. Annual report Oct 82-Sep 83, 9:32954 (R;US)

GEOTHERMAL AREAS
See GEOTHERMAL FIELDS

GEOTHERMAL ENERGY
Making the most of geothermal power, 9:32983 (R;GB)
Power Generation
Feasibility of electricity generation from medium enthalpy (100-200°C) geothermal sources, 9:32975 (R;XE)

GEOTHERMAL ENERGY CONVERSION
Feasibility Studies
Feasibility of electricity generation from medium enthalpy (100-200°C) geothermal sources, 9:32975 (R;XE)

GEOTHERMAL EXPLORATION
Exploration for sources of geothermal energy.
Environmental Impacts
Survey of environmental regulations applying to geothermal exploration, development, and use. Final report, 9:32966 (R;US)
Geological Surveys
High and low enthalpy geothermal resources exploration: Models, strategies and reality, 9:32957 (R;XE)
Geophysical Surveys
High and low enthalpy geothermal resources exploration: Models, strategies and reality, 9:32957 (R;XE)
Regulations
Survey of environmental regulations applying to geothermal exploration, development, and use. Final report, 9:32966 (R;US)

GEOTHERMAL FIELDS
See also BRAWLEY GEOTHERMAL FIELD
CERRO PRIETO GEOTHERMAL FIELD
EAST MESA GEOTHERMAL FIELD
HEBER GEOTHERMAL FIELD
Well Stimulation
Downhole seismic monitoring of an acid treatment in the Beowawe Geothermal Field, 9:32978 (R;US)

GEOTHERMAL FLUIDS
Desulfurization
Direct chlorination process for geothermal power plant off-gas - hydrogen sulfide abatement, 9:32965 (R;US)

GEOTHERMAL POWER PLANTS
Health Hazards
Health hazard evaluation report No. HETA 80-197-1215, Pacific Gas and Electric-Geysers facility, San Francisco, California, 9:34488 (R;US)
Occupational Safety
Health hazard evaluation report No. HETA 80-197-1215, Pacific Gas and Electric-Geysers facility, San Francisco, California, 9:34488 (R;US)
Water Requirements
Water for goethermal development in Imperial County. A summarizing report, 9:32967 (R;US)

GEOTHERMAL REGIONS
See GEOTHERMAL FIELDS

GEOTHERMAL RESOURCES
Heat Extraction
Making the most of geothermal power, 9:32983 (R;GB)
Power Generation
Feasibility of electricity generation from medium enthalpy (100-200°C) geothermal sources, 9:32975 (R;XE)
Resource Development
Water for goethermal development in Imperial County. A summarizing report, 9:32967 (R;US)

GEOTHERMAL SPACE HEATING
New Mexico State University Campus geothermal demonstration project, 9:32988 (R;US)

GEOTHERMAL WATER HEATING
Use for domestic water heating; for industrial application use GEOTHERMAL PROCESS HEAT.
New Mexico State University Campus geothermal demonstration project, 9:32988 (R;US)

GEOTHERMAL WELLS
Acidization
Downhole seismic monitoring of an acid treatment in the Beowawe Geothermal Field, 9:32978 (R;US)
Carbon Dioxide
Numerical studies of enthalpy and CO_2 transients in two-phase wells, 9:32982 (R;US)
Data Analysis
Well test data analysis from a naturally fractured liquid-dominated hydrothermal system, 9:32981 (R;US)
Enthalpy
Numerical studies of enthalpy and CO_2 transients in two-phase wells, 9:32982 (R;US)
Evaporation
Study of phase transformation phenomena by auto-evaporation in a porous medium (geothermal well), 9:32977 (R;FR;In French)

Simulation
Well simulation using Refrigerant 114, 9:32980 (R;US)
Temperature Logging
Temperature and pressure measurement in high enthalpy geothermal wells, possibilities for optical fiber application, prefeasibility study, 9:32959 (R;XE;In French)
Testing
Well test data analysis from a naturally fractured liquid-dominated hydrothermal system, 9:32981 (R;US)
Two-Phase Flow
Design, construction and evaluation of a simulated geothermal flow system, 9:32976 (R;US)
Well simulation using Refrigerant 114, 9:32980 (R;US)
Well Drilling
Thermal limitations on the use of PDC bits in geothermal drilling, 9:32985 (R;US)
Well Pressure
Temperature and pressure measurement in high enthalpy geothermal wells, possibilities for optical fiber application, prefeasibility study, 9:32959 (R;XE;In French)

GERM CELLS
Chromosomal Aberrations
Apomictic and sexual pearl millet X Pennisetum squamulatum hybrids, 9:34389 (J;US)
Fertility
Apomictic and sexual pearl millet X Pennisetum squamulatum hybrids, 9:34389 (J;US)

GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY

GERMAN FR ORGANIZATIONS
Research Programs
GSI annual report 1981/82, 9:33446 (R;DE;In German)

GERMANIUM 70 TARGET
Neutron Reactions
Description of the total cross sections for neutron scatteripg on germanium isotopes in the energy range approximately 1 MeV using the generalized optical model, 9:34677 (RA;SU;In Russian)

GERMANIUM 72 TARGET
Neutron Reactions
Description of the total cross sections for neutron scatteripg on germanium isotopes in the energy range approximately 1 MeV using the generalized optical model, 9:34677 (RA;SU;In Russian)

GERMANIUM 74 TARGET
Neutron Reactions
Description of the total cross sections for neutron scatteripg on germanium isotopes in the energy range approximately 1 MeV using the generalized optical model, 9:34677 (RA;SU;In Russian)

GERMANIUM 76 TARGET
Neutron Reactions
Description of the total cross sections for neutron scatteripg on germanium isotopes in the energy range approximately 1 MeV using the generalized optical model, 9:34677 (RA;SU;In Russian)

GERMANIUM ALLOYS
Compression
X-ray investigation of Nb3Ge under high pressure, 9:33674 (R;DE;In German)
Physical Radiation Effects
Non-equilibrium segregation in irradiated alloys, 9:33694 (BA;GB)
Nonequilibrium segregation and phase instability in alloy films during elevated-temperature irradiation in a high-voltage electron microscope, 9:33626 (R;US)

GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY

GERMS (MICROORGANISMS)
See MICROORGANISMS

GLASS
See also BOROPHOSPHATE GLASS
Chemical Composition
Factors affecting the iron oxidation state and foaming in SRP waste glass, 9:32750 (J;US)
Evaluation
Alkoxide derived vitreous waste forms, 9:32749 (J;US)
Evaporation
High-temperature vaporization of simulated radioactive waste forms, 9:32751 (J;US)
Foams
Factors affecting the iron oxidation state and foaming in SRP waste glass, 9:32750 (J;US)
Ionic Conductivity
Multicomponent diffusion under general chemical potential gradients. Final report, July 1, 1981-June 30, 1984, 9:34764 (R;US)
Physical Radiation Effects
Ion bombardment of some glass and glass-ceramic materials, 9:33745 (RA;IL)
Study of thermoradiation effects in alkali-borate, neodymium-phosphate and silicate glasses, 9:33751 (RA;SU;In Russian)
Synthesis
Study of thermoradiation effects in alkali-borate, neodymium-phosphate and silicate glasses, 9:33751 (RA;SU;In Russian)

GLASS MELTERS
See CERAMIC MELTERS

GLASSY METALS
See METALLIC GLASSES

GLIOMAS
Cell Cycle
Cell proliferation kinetics and radiation response in 9L tumor spheroids, 9:34459 (R;US)
Cell Proliferation
Cell proliferation kinetics and radiation response in 9L tumor spheroids, 9:34459 (R;US)
Radiosensitivity
Cell proliferation kinetics and radiation response in 9L tumor spheroids, 9:34459 (R;US)

GLUCOSE
Fermentation
Production of ethanol from biopolymers by anaerobic, thermophilic, and extreme thermophilic bacteria. I. Regulation of carbohydrate utilization in mutants of Thermoanaerobacter ethanolicus, 9:32799 (J;US)
Production of ethanol from biopolymers by anaerobic, thermophilic, and extreme thermophilic bacteria. III. Thermoanaerobacter ethanolicus JW200 and its mutants in batch cultures and resting cell experiments, 9:32800 (J;US)

GLUEBALLS
Hadronic physics of qq^- light quark mesons, quark molecules and glueballs, 9:34622 (BA;US)
Dispersion Relations
Restoration of Lorentz invariance in SU(2) and SU(3) lattice gauge theories, 9:34633 (R;DE)
Rest Mass
Variational determination of the string tension and the glueball mass in (2+1) dimensional U(1) lattice gauge theory for all values of the coupling constant, 9:34635 (R;DE)

GLUONIUM
See GLUEBALLS

GLUONS
Fragmentation
Hadron production in e^+e^- annihilation at PEP, 9:34605 (R;US)

GLYCOLS
Biological Effects
Deposition and fate of inhaled ethylene glycol vapor and condensation aerosol in the rat, 9:34491 (J;US)
Breakdown
Dielectric breakdown distributions of large dielectric constant liquids, 9:33922 (R;US)
Dielectric Properties
Dielectric breakdown distributions of large dielectric constant liquids, 9:33922 (R;US)
Inhalation
Deposition and fate of inhaled ethylene glycol vapor and condensation aerosol in the rat, 9:34491 (J;US)
Toxicity
Deposition and fate of inhaled ethylene glycol vapor and condensation aerosol in the rat, 9:34491 (J;US)

Vapor Condensation
Deposition and fate of inhaled ethylene glycol vapor and condensation aerosol in the rat, 9:34491 (J;US)

GOBAR GAS
See METHANE

GOLD
Diffusion
Radiation-induced diffusion of gold on silicon surface, 9:33752 (RA;SU;In Russian)
Physical Radiation Effects
Radiation-induced diffusion of gold on silicon surface, 9:33752 (RA;SU;In Russian)
Quantitative Chemical Analysis
X-ray fluorescence analysis of low-content impurities of gold, 9:33802 (RA;SU;In Russian)
X-Ray Fluorescence Analysis
X-ray fluorescence analysis of low-content impurities of gold, 9:33802 (RA;SU;In Russian)

GOLD 195
Radioisotope Generators
sup(195m)Au a short-lived nuclide suitable for vascular imaging. Development of a new mercury-195m → gold-195m generator, 9:34426 (RA;IL)

GOLD 197
Photonuclear Reactions
sup(197)Au excitation in annihilation of positrons on bound atomic electrons, 9:34706 (RA;SU;In Russian)
Positron Reactions
sup(197)Au excitation in annihilation of positrons on bound atomic electrons, 9:34706 (RA;SU;In Russian)

GOLD 197 TARGET
Helium 3 Reactions
Excitation function and isomeric ratio of reactions ^{197}Au(^{3}He, Xn) sup(200-x) Tl, where, x = 1, 2, 3 and 4, 9:34705 (RA;BR;In Portuguese)
Photonuclear Reactions
Nonequilibrium photoneutrons and statistical characteristics of heavy nuclei in a photonuclear experiment, 9:34707 (RA;SU;In Russian)

GRAIN ALCOHOL
See ETHANOL

GRAND UNIFIED THEORY
Inelastic strong interactions at high energies. Final report, June 1, 1976-May 31, 1984, 9:34637 (R;US)
Rubakov effect, 9:34630 (R;DE)

GRANULAR BED FILTERS
Performance
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)
Radiation Effects
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)
Sorptive Properties
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)
Thermal Degradation
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)

GRANULAR MATERIALS
For unspecified materials having a granular texture.
Compression Strength
Granulation of nomagnetic fly ash-coke mixtures, 9:32562 (R;US)
Production
Granulation of nomagnetic fly ash-coke mixtures, 9:32562 (R;US)

GRAPHITE
Calcination
Determination of the better composition for Argonaut fuel elements, 9:33227 (RA;BR;In Portuguese)
Chemical Reactions
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 9:32532 (R;US)
Corrosion
Development of corrosion resistant phosphoric acid fuel cell components, 9:33500 (J;US)
Electric Conductivity
Radiation damage by high-energy neutrons, 9:33219 (J;US)
Ion Implantation
Release of ion-implanted and transmutation-produced helium from nickel (Thermal neutrons), 9:33686 (J;GB)
Physical Radiation Effects
Radiation damage by high-energy neutrons, 9:33219 (J;US)
Release of ion-implanted and transmutation-produced helium from nickel (Thermal neutrons), 9:33686 (J;GB)
Sintering
Determination of the better composition for Argonaut fuel elements, 9:33227 (RA;BR;In Portuguese)

GRAPHITE MODERATED REACTORS
See also HTGR TYPE REACTORS
TREAT REACTOR
Specifications
Low power unattended defense reactor, 9:33114 (R;US)

GRAPHITE MODERATOR
See GRAPHITE

GRASS
Hybridization
Apomictic and sexual pearl millet X Pennisetum squamulatum hybrids, 9:34389 (J;US)
Productivity
Shoot production and mineral nutrient assimilation in cheatgrass communities on the Arid Lands Ecology Site, 9:34334 (R;US)

GRAVITATIONAL WAVES
Numerical Analysis
Numerical calculations of gravity waves, 9:34552 (BA;US)

GRAVITY WAVES
See also WATER WAVES
Wave Propagation
Progress report No. 57 [on hydrodynamics and hydraulic engineering], 9:34353 (R;DK)

GREEN RIVER FORMATION
Geology
Western Gas Sands Subprogram, 9:32675 (R;US)

GREENHOUSES
Design
Code complying solar greenhouse designs for Region VII environments. Final report, 9:32938 (R;US)
Energy Audits
Energy cost reduction for retail florists, 9:33513 (R;US)
Heating
Gasification of indigenous fuels and the use of gas in commercial greenhouses, 9:32538 (R;FI;In Finnish)

GREENLAND
Air Quality
Studies of aerosols in the Greenland atmosphere. SAGA I: results 1979-1980. A base report, 9:34232 (R;DK)

GROUND WATER
Contamination
Hydrogeologic assessment of zone-of-saturation landfill design, 9:33935 (R;US)
Technical summary of the A/M Area Groundwater (AMGW) remedial action program, 9:32752 (R;US)
Flow Models
Effective stress principle for partially saturated media, 9:32739 (R;US)
Field determination of the hydrologic properties and parameters that control the vertical component of groundwater movement, 9:32755 (R;US)
Simulation of water flow in the unsaturated zone including the root zone, 9:34508 (R;DK)
Verification of the network flow and transport/distributed velocity (NWFT/DVM) computer code, 9:32757 (R;US)
Radionuclide Migration
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)

The influence of speciation on the geospheric migration of radionuclides, 9:34369 (J;US)
Weldon Spring Site environmental monitoring report, calendar year 1983, 9:34298 (R;US)
Water Quality
SRP groundwater protection implementation plan. Draft, 9:32753 (R;US)
Technical summary of groundwater quality protection program at Savannah River Plant. Volume 1. Site geohydrology, and solid and hazardous wastes, 9:32754 (R;US)
Water Treatment
Technical summary of the A/M Area Groundwater (AMGW) remedial action program, 9:32752 (R;US)
GROUND-WATER RESERVES

HEISENBERG MODEL
Dynamics
Dynamics of the Heisenberg model in the reaction field approximation, 9:34765 (RA;BR)
HELICAL ROTARY SCREW EXPANDER
Closed-Loop Control
Open loop pneumatic control of a Lysholm engine or turbine exhaust pressure, 9:32968 (R;US)
Comparative Evaluations
Comparison between two Lysholm engines, 9:32971 (R;US)
Open-Loop Control
Open loop pneumatic control of a Lysholm engine or turbine exhaust pressure, 9:32968 (R;US)
Performance
Design, construction and evaluation of a simulated geothermal flow system, 9:32976 (R;US)
Performance characteristics of the Lysholm engine, 9:32973 (R;US)
Performance Testing
Comparison between two Lysholm engines, 9:32971 (R;US)
Pneumatic Controllers
Open loop pneumatic control of a Lysholm engine or turbine exhaust pressure, 9:32968 (R;US)
Testing
Altering the volumetric expansion ratio of a Lysholm helical screw expander, 9:32970 (R;US)
Empirical modeling of a Lysholm helical screw expander, 9:32974 (R;US)
Hybrid staging of a Lysholm positive displacement engine with two Westinghouse two stage impulse Curtis turbines, 9:32969 (R;US)
HELIUM
Desorption
Release of ion-implanted and transmutation-produced helium from nickel (Thermal neutrons), 9:33686 (J;GB)
Gas Chromatography
Determination of helium impurities tracks by gas chromatography, 9:33788 (RA;BR;In Portuguese)
Impurities
Determination of helium impurities tracks by gas chromatography, 9:33788 (RA;BR;In Portuguese)
Ion-Atom Collisions
Study of post-collision effect on autoionisation electron spectra in He^+-He collision, 9:34562 (R;FR;In French)
Metals
Experimental studies of helium in metals, 9:33685 (J;GB)
Superfluidity
Topics in statistical mechanics, 9:34782 (R;US)
HELIUM 3
Bound State
Metastable complexes of helium-hydrogen isotopes, 9:34565 (R;US)
Cooling
Maximum supercoolign in liquid ^{3}He-^{4}He mixtures near the tricritical point, 9:34580 (R;US)
Energy Losses
Conserving average rate of energy loss in transport calculations for light charged particles, 9:34752 (J;US)
Light Scattering
Optical effects of the gravitationally induced concentration gradient in tricritical ^{3}He-^{4}He, 9:34582 (R;US)
Rayleigh Waves
Coupling of Rayleigh-like waves with zero sound modes in normal ^{3}He, 9:34577 (R;US)
Structure Factors
Dynamical scaling in ^{3}He-^{4}He liquid mixtures, 9:34581 (R;US)
Superfluidity
Dynamical scaling in ^{3}He-^{4}He liquid mixtures, 9:34581 (R;US)
Optical effects of the gravitationally induced concentration gradient in tricritical ^{3}He-^{4}He, 9:34582 (R;US)
Wave Propagation
Coupling of Rayleigh-like waves with zero sound modes in normal ^{3}He, 9:34577 (R;US)

HELIUM 3 REACTIONS
Stripping
Excitation function and isomeric ratio of the reaction ^{103}Rh(^{3}He, xn) sup(106-x) Ag, where x = 2, 3 and 4, 9:34691 (RA;BR;In Portuguese)
Excitation function and isomeric ratio of reactions ^{197}Au(^{3}He, Xn) sup(200-x) Tl, where, x = 1, 2, 3 and 4, 9:34705 (RA;BR;In Portuguese)
Isomeric ratio in the ^{90}Zr (^{3}He, 2n)^{91}Mo reaction, 9:34689 (RA;BR;In Portuguese)
Total Cross Sections
Study on the energy dependence of γ-quantum yield in the interaction of ^{3}He and ^{4}He ions with sup(96,98)Ru, 9:34695 (RA;SU;In Russian)
HELIUM 4
HELIUM I
See also HELIUM II
Cooling
Maximum supercoolign in liquid ^{3}He-^{4}He mixtures near the tricritical point, 9:34580 (R;US)
Light Scattering
Optical effects of the gravitationally induced concentration gradient in tricritical ^{3}He-^{4}He, 9:34582 (R;US)
Solutions
Period-doubling two-torus state in a convecting ^{3}He-superfluid ^{4}He solution, 9:34584 (R;US)
Structure Factors
Dynamical scaling in ^{3}He-^{4}He liquid mixtures, 9:34581 (R;US)
Superfluidity
Dynamical scaling in ^{3}He-^{4}He liquid mixtures, 9:34581 (R;US)
Onset of oscillations in symmetric convective states in a superfluid ^{3}He-^{4}He mixture, 9:34583 (R;US)
Optical effects of the gravitationally induced concentration gradient in tricritical ^{3}He-^{4}He, 9:34582 (R;US)
Period-doubling two-torus state in a convecting ^{3}He-superfluid ^{4}He solution, 9:34584 (R;US)
Virial Equation
Mound activities in chemical and physical research: July-December 1983, 9:34971 (R;US)
HELIUM 4 REACTIONS
See ALPHA REACTIONS
HELIUM 4 TARGET
Photonuclear Reactions
Study of inelastic photoproduction of neutral pions on a helium nucleus, 9:34655 (RA;SU;In Russian)
HELIUM 5
Hypernuclei
Lambda N-ΣN coupling in S-shell Lambda-hypernuclei, 9:34738 (R;US)
HELIUM DILUTION REFRIGERATION
Maximum supercoolign in liquid ^{3}He-^{4}He mixtures near the tricritical point, 9:34580 (R;US)
HELIUM I
The phase of liquid helium-4 which is stable at temperatures above the lambda point (about 2.2 K).
Convection
Onset of oscillations in symmetric convective states in a superfluid ^{3}He-^{4}He mixture, 9:34583 (R;US)
Heat Transfer
Experimental study on the transient heat transfer when cooling with helium in different phase states, 9:34579 (RA;SU;In Russian)
Oscillations
Onset of oscillations in symmetric convective states in a superfluid ^{3}He-^{4}He mixture, 9:34583 (R;US)
HELIUM II
The phase of liquid helium-4 which is stable at temperatures between absolute zero and the lambda point (about 2.2 K).
Optical effects of the gravitationally induced concentration gradient in tricritical ^{3}He-^{4}He, 9:34582 (R;US)
Convection
Period-doubling two-torus state in a convecting ^{3}He-superfluid ^{4}He solution, 9:34584 (R;US)
Heat Transfer
Experimental study on the transient heat transfer when cooling with helium in different phase states, 9:34579 (RA;SU;In Russian)
HELIUM IONS
Abundance
Volumes of He^{+} and H^{+} zones in HII regions - The Orion nebula, 9:34542 (RA;BR)
Ion-Atom Collisions
Study of post-collision effect on autoionisation electron spectra in He^{+}-He collision, 9:34562 (R;FR;In French)
Q-Value
Determination of the mean energy needed for the creation of an ion pair for hydrogen- and helium ions in different gases with energy in the range 95-1110 keV, 9:34564 (R;DE;In German)
HELIUM METHOD
See ISOTOPE DATING
HEMICELLULOSE

Use only for articles of a very broad nature such as an annual research program, etc.
Closing talk, 9:34651 (RA;HU)
QCD, unifications, and the road to Asymptopia, 9:34588 (BA;US)
Forecasting
Future of high energy physics, 9:33941 (R;US)
Lectures
The high-energy limit, 9:34587 (B;US)
Meetings
The high-energy limit, 9:34587 (B;US)
Research Programs
DESY annual report on scientific activities 1982, 9:34585 (R;DE;In German)
Indiana University High Energy Physics Group technical progress report, November 1, 1983-November 30, 1984, 9:34598 (R;US)
HIGH ENERGY RADIOTHERAPY
See RADIOTHERAPY
HIGH EXPLOSIVES
See CHEMICAL EXPLOSIVES
HIGH FLUX ISOTOPE REACTOR
See HFIR REACTOR
HIGH FLUX NEUTRON SOURCE FACILITY
See NEUTRON SOURCE FACILITIES
HIGH FLUX REACTOR PETTEN
See HFR REACTOR
HIGH SPIN STATES
Gamma Spectroscopy
Behavior of nuclei at high angular momentum, 9:34653 (BA;JP)
HIGH TEMPERATURE GAS COOLED AND GRAPHITE
See HTGR TYPE REACTORS
HIGH VOLTAGE ALTERNATING CURRENT SYSTEMS
See HVAC SYSTEMS
HIGH VOLTAGE DIRECT CURRENT SYSTEMS
See HVDC SYSTEMS

HIGH-FREQUENCY HEATING
See also ECR HEATING
ICR HEATING
Alfven Waves
Powerful generators for plasma Alfven heating, 9:34888 (RA;SU;In Russian)
HIGH-LEVEL RADIOACTIVE WASTES
Retrieval Systems
Assessment of retrieval alternatives for the geologic disposal of nuclear waste. Final report, 9:32731 (R;US)
HIGHLY ENRICHED URANIUM
80 - 100 per cent.
Detection
Results from the study of UF_6 consumption on centrifuge process piping and its influence on gamma ray measurements, 9:32699 (R;US)
HIGH-VOLTAGE PULSE GENERATORS
Experimental investigations of the "Angara-5" facility module, 9:34853 (RA;SU;In Russian)
Design
Compulsator, a high power compensated pulsed alternator, 9:33872 (BA;US)
ECR Heating
High-Voltage pulse power supply for gyrotrons for ecr heating of a plasma in the T,10 facility, 9:34909 (RA;SU;In Russian)
Electron Guns
Development of the modulator of an electron linac three-electrode gun, 9:34046 (RA;UA;In Russian)
Energy Storage
Compulsator, a high power compensated pulsed alternator, 9:33872 (BA;US)
Thyristors
High-voltage nanosecond pulse ferpithyristor generators, 9:34045 (RA;UA;In Russian)
HIGHWAYS
See ROADS
HILACS
Electric Fields
Influence of electric field dipole component on ion motion in linear accelerator with phase-alternating focusing, 9:33981 (RA;SU;In Russian)
Performance
Reconstruction of a heavy ion linear accelerator, 9:33949 (RA;SU;In Russian)
HIROSHIMA
Nuclear Explosions
Calculations to assist in a new Hiroshima yield estimate. Final report, August 19-December 31, 1983, 9:34173 (R;US)
Yields
Calculations to assist in a new Hiroshima yield estimate. Final report, August 19-December 31, 1983, 9:34173 (R;US)
HISPANIC AMERICANS
Appropriate Technology
Hispanic business community participation in conservation and solar energy. Final report, 9:33584 (R;US)
HISTAMINE
Labelling
Organ-distribution and biochemical aspects in developing new radiopharmaceuticals labelled with metallocenes, 9:33841 (RA;IL)
HOG FUEL
See WOOD WASTES
HOMOGENEOUS PLASMA
Cyclotron Radiation
Emission of cyclotron radiation by a plasma with a tenuous component of runaway electrons, 9:34796 (RA;BR)
Excitation
Wave excitation by inhomogenous suprathermal electron beams, 9:34800 (RA;BR)
HOSPITALS
X-Ray Equipment
Evaluation of tests of X-ray equipment performed by experts in the hospitals of North Rhine-Westphalia, 9:34402 (R;DE;In German)
HOT GAS CLEANUP
Adsorbents
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
HOT PLASMA
Impurities
Protective plasma envelope, 9:34831 (TG;US)
Transport Theory
Plasma transport in three dimensions, 9:34792 (RA;US)
HOT WATER HEATERS
See WATER HEATERS
HOT-DRY-ROCK SYSTEMS
Hydraulic Fracturing
Hydraulic fracturing and propping tests at Yakedake field in Japan, 9:32979 (R;US)
Well Logging
Logging technology for high-temperature geothermal boreholes, 9:32962 (R;US)
HOUSES
Energy Demand
Influence of the interior design of a room on the room temperature curve and the heating energy, 9:33521 (R;CH;In German)
Indoor Air Pollution
Factors controlling indoor radon levels. Annual report, June 1983-May 1984, 9:34297 (R;US)
Solar Heating Systems
Contribution to the optimum design of a solar heating system for a residential building, 9:32940 (R;DE;In German)
Space Heating
Influence of the interior design of a room on the room temperature curve and the heating energy, 9:33521 (R;CH;In German)
Temperature Distribution
Influence of the interior design of a room on the room temperature curve and the heating energy, 9:33521 (R;CH;In German)
HTGR TYPE REACTORS
Fuel Element Failure
Kernel migration in failed, oxide-based HTGR fuel, 9:33089 (R;US)
Planning
High temperature gas-cooled reactor program. Advanced systems concepts design and technology development plan, 9:33118 (R;US)
Reactor Cores
Environmental influences on fuel burnup in Mk.III G.C.R.'s, 9:33091 (R;GB)
Reactor Kinetics
Environmental influences on fuel burnup in Mk.III G.C.R.'s, 9:33091 (R;GB)
Regarding overrelaxation for accelerating an iteration process, 9:33090 (R;US)
Reactor Operation
Licensed operating reactors. Status summary report data as of March 31, 1984. Vol. 8, No. 4, 9:33062 (R;US)
Reactor Vessels
Design criteria for prestressed concrete reactor vessels for high-temperature reactors, 9:33767 (J;US)
Specifications
Modular reactor: a deployment strategy for the long-term HTGR goal of very high temperature operation, 9:33117 (R;US)
Waste Heat Utilization
Recovery of heavy oil and tar sands using a high-temperature nuclear steam supply, 9:32654 (R;US)
HTO
See HEAVY WATER
TRITIUM COMPOUNDS
HUGENHOLTZ-PINES THEORY
See HYDROGEN

HUMAN POPULATIONS
Radiation Doses
Radiation dose to the thyroid due to incorporation of iodine isotopes: Age dependence and reliability of dose factors, 9:34445 (R;DE;In German)
HUMANS
See HUMAN POPULATIONS
HUMIC ACIDS
Dissociation
Investigations on the dissociation of high molecular organic compounds in natural water, 9:34355 (R;DE;In German)
Infrared Spectra
Investigations on the dissociation of high molecular organic compounds in natural water, 9:34355 (R;DE;In German)
HUMIDITY
Calculation Methods
Distribution of humidity in porous materials as a consequence of non-steady water-vapour diffusion, 9:33761 (R;DE;In German)
Computerized Simulation
Distribution of humidity in porous materials as a consequence of non-steady water-vapour diffusion, 9:33761 (R;DE;In German)
HUMUS
Lead
Lead in vegetation, forest floor material, and soils of the spruce-fir zone, Great Smoky Mountains National Park, 9:34335 (R;US)
HVAC SYSTEMS
For heating, ventilating, and air conditioning systems, see SPACE HVAC SYSTEMS.
Safety Engineering
Performance criteria guideline for three explosion protection methods of electrical equipment rated up to 15,000 volts AC. Open file report 15 Aug 81-1 Dec 82, 9:32645 (R;US)
HVDC SYSTEMS
69 to 230 kV.
Meetings
Urban applications of HVDC power transmission, 9:33044 (R;US)
Power Meters
Revenue-metering device for HVDC systems. Final report, 9:33022 (R;US)
HYBRID REACTORS
Breeding Ratio
Neutronic evaluation of fissile fuel breeding blankets for the fission-suppressed Tandem-Mirror Hybrid Reactor, 9:34950 (R;US)
Direct Energy Conversion
Charged particle energy recuperation in thermonuclear device in reactors, 9:34878 (RA;SU;In Russian)
Neutron Transport Theory
Neutronic evaluation of fissile fuel breeding blankets for the fission-suppressed Tandem-Mirror Hybrid Reactor, 9:34950 (R;US)
Parametric Analysis
Parametric investigation of a power hybrid tokamak reactor, 9:34905 (RA;SU;In Russian)
HYDRAULIC CONDUCTIVITY
Measuring Methods
Field determination of the hydrologic properties and parameters that control the vertical component of groundwater movement, 9:32755 (R;US)
HYDRAULIC RAMS
See PUMPS
HYDRAULIC TRANSPORT
Feasibility Studies
Development and analysis of slurry transport systems in longwall mining of coal. Open file report 30 Sep 81-21 Sep 82, 9:32603 (R;US)
HYDROCARBON LOGGING
See WELL LOGGING
HYDROCARBONS
See also ACENAPHTHENE
ALKANES
ALKENES
BENZENE
BIPHENYL
CHRYSENE
FLUORENE
PHENANTHRENE
POLYCYCLIC AROMATIC HYDROCARBONS
PYRENE
TOLUENE
Comparative Evaluations
Evaluation of NO/sub x/ and NO/sub x//SO/sub x/ flue gas treatment technology for coal-fired sources, 9:32582 (RA;US)
Emission
Total emission of CO, Hydrocarbons and NOsub(x) from the Danish carpark. Prognosis from year 1980 until 2000, 9:34224 (R;DK;In Danish)
Phase Diagrams
Displacement of oil by carbon dioxide. Final report, 9:32650 (R;US)
Phase Studies
Displacement of oil by carbon dioxide. Final report, 9:32650 (R;US)
Precipitation Scavenging
Effects of in-cloud scavenging on the transport and gas phase reactions of SO/sub x/, NO/sub x/, HC/sub x/, H/sub x/O/sub y/, and O_3 compounds, 9:34215 (BA;US)
Pyrolysis
Pyrolysis of coal-derived fuels using the laser-powered homogeneous pyrolysis technique, 9:32515 (R;US)
Seismic Surveys
Direct detection of hydrocarbons with seismic methods applied to land-data, 9:32649 (R;DE;In German)
Solubility
Solubility of hydrocarbons in the compressed natural gas. Application to petroleum migration in sedimentary basins, 9:32672 (R;FR;In French)
Toxicity
Techniques for the generation and monitoring of vapors, 9:34493 (BA;US)
Trace Amounts
Effects of in-cloud scavenging on the transport and gas phase reactions of SO/sub x/, NO/sub x/, HC/sub x/, H/sub x/O/sub y/, and O_3 compounds, 9:34215 (BA;US)
HYDROCHLORIC ACID
Precipitation Scavenging
Precipitation scavenging of highly soluble gases, 9:34216 (BA;US)
Precipitation scavenging and tropospheric mixing, 9:34219 (BA;US)
Removal
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
HYDROCYANIC ACID
Comparative Evaluations
Evaluation of NO/sub x/ and NO/sub x//SO/sub x/ flue gas treatment technology for coal-fired sources, 9:32582 (RA;US)
HYDROCYCPONES
See CYCLONE SEPARATORS
HYDROELECTRIC POWER
Resource Assessment
Development of small scale hydro-schemes. Part 1. Rapid assessment, 9:32807 (R;IE)
HYDROELECTRIC POWER PLANTS
See also LOW-HEAD HYDROELECTRIC POWER PLANTS
SMALL-SCALE HYDROELECTRIC POWER PLANTS
Electric Generators
CO_2 (carbon dioxide) fire protection study for hydrogenerators: report of findings, 9:32839 (R;US)
Licensing
Conducting a FERC environmental assessment: a case study and recommendations from the Terror Lake Project, 9:33439 (R;US)
Political Aspects
Conducting a FERC environmental assessment: a case study and recommendations from the Terror Lake Project, 9:33439 (R;US)
HYDROELECTRICITY
See HYDROELECTRIC POWER

HYDROFLUORIC ACID
Electronic Structure
Multiconfiguration wavefunctions for molecules: current approaches, 9:34558 (R;US)
Toxicity
Decomposition of sparked SF_6 and cytotoxicity of SF_6 decomposition products, 9:34473 (R;US)
HYDROGEN
Adsorption
Kinetics of the absorption of hydrogen by LaNi5H/sub x//n-undecane suspensions. Part II. The H_2/n-undecane system, 9:32781 (R;US)
Kinetics of the absorption of hydrogen by LaNi5H/sub x//n-undecane suspensions. Part I. The H_2/LaNi5H/sub x//n-undecane system, 9:32780 (R;US)
Low-energy process for separating hydrogen and methane in advanced coal gasification, 9:32482 (RA;US)
Separation of gas mixtures with coordination complexes, 9:33809 (R;US)
Atom-Molecule Collisions
Dynamic resonances in the reaction of fluorine atoms with hydrogen molecules, 9:34567 (R;US)
Chemical Reaction Yield
Coal gasification and tar conversion reactions over calcium oxide, 9:32487 (RA;US)
Chemisorption
Analysis of the hydrogen absorption in the U(Alsub(x)Nisub(1-x))2 system, 9:33653 (RA;IL)
Coadsorption studies on transition metals. Annual report 1 Jan-31 Dec 83, 9:33808 (R;US)
Metal-support interaction studies on clean metal surfaces (On platinum in the presence of silicon oxides), 9:32785 (RA;US)
Combustion
Analysis of combustion in closed or vented rooms and vessels, 9:33332 (R;US)
Consumption Rates
Effects of accumulated solids and solvent initial boiling point on dissolver performance. Final technical report, 9:32497 (R;US)
Desorption
Kinetics of the absorption of hydrogen by LaNi5H/sub x//n-undecane suspensions. Part II. The H_2/n-undecane system, 9:32781 (R;US)
Kinetics of the absorption of hydrogen by LaNi5H/sub x//n-undecane suspensions. Part I. The H_2/LaNi5H/sub x//n-undecane system, 9:32780 (R;US)
Isomers
Mound activities in chemical and physical research: July-December 1983, 9:34971 (R;US)
Phase Shift
Mound activities in chemical and physical research: July-December 1983, 9:34971 (R;US)
Quantitative Chemical Analysis
Lead deficiency and hydrogen content in lead dioxide battery-active material, 9:33416 (J;US)
Radiolysis
Radiation chemistry of hydrocarbon and alkyl halide systems. Annual progress report, August 1, 1983-May 31, 1984 (CF_3I - CH_3I mixture; pure CH_3I and CF_3I; H_2 - CO systems), 9:33826 (R;US)
Recovery
Electrochemical disposal of hydrogen sulfide. Final report, August 31, 1977-September 30, 1982, 9:32447 (R;US)
Subcontracted R and D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Volume 2, 9:32510 (R;US)
Separation Processes
Low-energy process for separating hydrogen and methane in advanced coal gasification, 9:32482 (RA;US)
Solubility
Effect of pressure on the solubility of molecular water in a β-phase palladium-hydrogen system, 9:33714 (TJ;US)
Sorption
Separation of gas mixtures by supported complexes, 9:33775 (RA;US)
Transport
Summary status of advanced water electrolysis and hydrogen storage/transport R and D, 9:32776 (R;US)
HYDROGEN 1 MINUS BEAMS
Beam Monitoring
A cusped field H^- ion source for LAMPF, 9:34102 (J;US)
Beam Scanners
A cusped field H^- ion source for LAMPF, 9:34102 (J;US)
Ion Sources
A cusped field H^- ion source for LAMPF, 9:34102 (J;US)
HYDROGEN 1 TARGET
Deuteron Reactions
Study of the $d + p \rightarrow p + p + n$ reaction in collinear geometry, 9:34654 (RA;SU;In Russian)
HYDROGEN 2
See DEUTERIUM
HYDROGEN 3
See TRITIUM
HYDROGEN ADDITIONS
Electronic Structure
Electronic states of a hydrogen impurity in a f.c.c. host, 9:33707 (RA;BR)
HYDROGEN CHLORIDES
See HYDROCHLORIC ACID
HYDROGEN CYANIDES
See HYDROCYANIC ACID
HYDROGEN DEUTERIDE
Atom-Molecule Collisions
Dynamic resonances in the reaction of fluorine atoms with hydrogen molecules, 9:34567 (R;US)
HYDROGEN EMBRITTLEMENT
Temperature Dependence
Internal corrosion offshore pipelines. Hydrogen induced cracking, 9:32669 (R;NO)
HYDROGEN FLUORIDES
See HYDROFLUORIC ACID
HYDROGEN FUELS
Fuel Substitution
Refueling considerations for liquid-hydrogen fueled vehicles, 9:33546 (R;US)
HYDROGEN HYDROXIDES
See WATER
HYDROGEN IONS
Abundance
Volumes of He^+ and H^+ zones in HII regions - The Orion nebula, 9:34542 (RA;BR)
Q-Value
Determination of the mean energy needed for the creation of an ion pair for hydrogen- and helium ions in different gases with energy in the range 95-1110 keV, 9:34564 (R;DE;In German)
HYDROGEN MINUS 1 BEAMS
See HYDROGEN 1 MINUS BEAMS
HYDROGEN NITRATES
See NITRIC ACID
HYDROGEN PHOSPHATES
See PHOSPHORIC ACID
HYDROGEN PRODUCTION
Biophotolysis
Immobilized chloroplast-ferredoxin-hydrogenase system for the simultaneous photoproduction of hydrogen and oxygen, 9:32779 (J;US)
Electrolysis
Summary status of advanced water electrolysis and hydrogen storage/transport R and D, 9:32776 (R;US)
Pyrolysis
Study of mechanism of thermolysis of steam in a cylindrical reactor between 1700-1900 K, 9:32778 (R;FR;In French)
HYDROGEN STORAGE
Research Programs
Summary status of advanced water electrolysis and hydrogen storage/transport R and D, 9:32776 (R;US)
HYDROGEN SULFATES
See SULFURIC ACID

HYDROGEN SULFIDES
Adsorption
Low-energy process for separating hydrogen and methane in advanced coal gasification, 9:32482 (RA;US)
Electrolysis
Electrochemical disposal of hydrogen sulfide. Final report, August 31, 1977-September 30, 1982, 9:32447 (R;US)
Phase Diagrams
Acid gas removal process, 9:32484 (RA;US)
Removal
Acid gas removal process, 9:32484 (RA;US)
Biokinetic study for SRC-I wastewater, 9:32514 (R;US)
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
Direct chlorination process for geothermal power plant off-gas - hydrogen sulfide abatement, 9:32965 (R;US)
Electrochemical disposal of hydrogen sulfide. Final report, August 31, 1977-September 30, 1982, 9:32447 (R;US)
Separation Processes
Low-energy process for separating hydrogen and methane in advanced coal gasification, 9:32482 (RA;US)
HYDROGENATION
Catalysts
Catalysts possessing augmented C-O and C-N hydrogenolysis activity. Preliminary progress report, August-September 1983, 9:33813 (R;US)
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 9:32532 (R;US)
Combined processing of coal and heavy resids. Progress report, January 16, 1984-April 15, 1984, 9:32520 (R;US)
Determination of the intrinsic activity and effective diffusivity of aged coal liquefaction catalysts, 9:32537 (R;US)
Effects of accumulated solids and solvent initial boiling point on dissolver performance. Final technical report, 9:32497 (R;US)
Homogenous high pressure hydrogenation of carbon monoxide using cobalt, ruthenium and iridium catalyst, 9:32796 (R;DE;In German)
Reduced molybdenum states in hydrodesulfurization: investigations using Chevrel phase catalysts, 9:33821 (R;US)
Study of the kinetics of hydrogenation using aged catalysts. Quarterly technical progress report, 1 October 1983-31 December 1983, 9:32522 (R;US)
Chemical Reaction Kinetics
Determination of the intrinsic activity and effective diffusivity of aged coal liquefaction catalysts, 9:32537 (R;US)
Deactivation
Study of the kinetics of hydrogenation using aged catalysts. Quarterly technical progress report, 1 October 1983-31 December 1983, 9:32522 (R;US)
Reaction Kinetics
Study of the kinetics of hydrogenation using aged catalysts. Quarterly technical progress report, 1 October 1983-31 December 1983, 9:32522 (R;US)
HYDROXYBENZENE
See PHENOL
HYDROXYL IONS
See ANIONS
HYDROXYL RADICALS
Chemical Reactions
Radiation chemistry of hydrocarbon and alkyl halide systems. Annual progress report, August 1, 1983-May 31, 1984, 9:33826 (R;US)
Flames
Two-dimensional measurements of the [OH] in a constant volume combustion chamber, 9:33848 (R;US)
HYDROXYTOLUENES
See CRESOLS
HYPERFRAGMENTS
See HYPERNUCLEI
HYPERNUCLEI
Binding Energy
Lambda N-ΣN coupling in S-shell Lambda-hypernuclei, 9:34738 (R;US)
Single particle energy relativistic estimation sub(Σ) ^{16}O hypernucleus, 9:34617 (RA;BR)
Energy-Level Transitions
Gamma-ray spectroscopy of hypernuclei, 9:34658 (R;US)
Lambda Particles
Mean-field approach to Λ and Σ hypernuclei, 9:34612 (RA;BR)
Level Widths
Widths of Σ-hypernuclear states, 9:34615 (RA;BR)
Nuclear Models
Quark tunneling in hypernuclei, 9:34741 (R;US)
Nuclear Potential
Mean field of Σ-hypernuclei, 9:34618 (RA;BR)
Nuclear Structure
Structure of Σ-hypernuclei, 9:34613 (RA;BR)
Potentials
Structure of Σ-hypernuclei, 9:34614 (RA;BR)
Quark Model
Quark tunneling in hypernuclei, 9:34741 (R;US)
Sigma Particles
Mean-field approach to Λ and Σ hypernuclei, 9:34612 (RA;BR)
HYPOTHYROIDISM
Bioassay
Radio in-vitro thyroid studies in newborn and children up to 14 years of age in consideration of present diseases, 9:34436 (R;DE;In German)

I

I-BEAM TYPE REACTORS
Plasma Heating
Spot heating calculation for a heavy ion driven high temperature experiment, 9:34946 (R;US)
ICE
Melting
Experimental study of natural convection melting of ice in salt solutions, 9:33884 (R;US)
ICR HEATING
Electromagnetic Fields
Electromagnetic theory of an antenna for ICR heating of a plasma in tokamaks, 9:34970 (TG;US)
IGNITION (THERMONUCLEAR)
See THERMONUCLEAR IGNITION
ILEUM
See SMALL INTESTINE
ILLITE
Particulates
Size distribution and mineralogy of aluminosilicate dust particles in tropical Pacific air and rain, 9:34286 (BA;US)
ILLUMINATION SYSTEMS
See LIGHTING SYSTEMS
IMPACT FUSION DRIVERS
Performance Testing
Research and development of a plasma jet mass accelerator as a driver for impact fusion. Final report, 9:34843 (R;US)
IMPACT STRENGTH
Computer Codes
WIPS: computer code for Whip and Impact Analysis of Piping Systems. Summary report and Part A: User's manual. Volume 1, 9:34992 (R;US)
IMPERFECTIONS
See DEFECTS
IMPERMEABLE DRY ROCK
See HOT-DRY-ROCK SYSTEMS
IMPORTANCE FUNCTION (NEUTRON)
See NEUTRON IMPORTANCE FUNCTION
IMPURITIES
Unwanted constituents, not for TRACE AMOUNTS, INTERFERING ELEMENTS, or metal and nonmetal additions.
Emission Spectroscopy
Quantitative chemical analysis of impurities in uranium matrices by emission spectrography, 9:33789 (RA;BR;In Portuguese)

IN CORE INSTRUMENTS
See also specific instruments plus FUEL ASSEMBLIES or REACTOR CORES.
Design
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
Operation
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
INCINERATION
See COMBUSTION
INCINERATORS
Demonstration Programs
Savannah River Plant low-level waste incinerator demonstration, 9:32724 (R;US)
Design
Equipment for incinerating oily mass. PFO-project No. 2302, 9:32666 (R;NO;In Norwegian)
Evaluation
Profile of existing hazardous waste incineration facilities and manufacturers in the United States. Final report, 9:33927 (R;US)
INCLINATION
Measuring Instruments
CSIRO horizontal borehole inclinometer - description and operation, 9:32586 (R;AU)
INCLUSIVE DISTRIBUTION
See DISTRIBUTION
INCOLOY 800
Corrosion
Corrosion of 316ss and incoloy 800 in molten $(NaK)NO_3$, 9:32928 (J;US)
Metals compatibility with molten sodium potassium nitrate salt, 9:32920 (J;US)
Creep
Low-cycle fatigue and creep-fatigue behavior of alloy 800 in the presence of saturated and superheated steam, 9:32921 (J;US)
Fatigue
Low-cycle fatigue and creep-fatigue behavior of alloy 800 in the presence of saturated and superheated steam, 9:32921 (J;US)
INCOMPRESSIBLE FLOW
Simulation
Numerical calculation of the main variables of the laminar flow around a circumferential square obstacle at the wall of a circular pipe, 9:33886 (R;BR;In Portuguese)
INCONEL 600
Decontamination
The effect of residual decontamination reagent on stress corrosion cracking of austenitic materials under high temperature water, 9:33204 (J;US)
Intergranular Corrosion
The effect of residual decontamination reagent on stress corrosion cracking of austenitic materials under high temperature water, 9:33204 (J;US)
Stress Corrosion
The effect of residual decontamination reagent on stress corrosion cracking of austenitic materials under high temperature water, 9:33204 (J;US)
INCONEL 718
Creep
Creep-rupture behavior of candidate Stirling engine alloys after long-term aging at 760°C in low-pressure hydrogen, 9:33595 (R;US)
Hydrogen
NMR study of hydrogen in cathodically charged Inconel 718, 9:33654 (RA;IL)
INCONEL 738
Corrosion Protection
Effect of surface doping on the oxidation of chromia former alloys, 9:33680 (R;US)
INCONEL X750
Decontamination
The effect of residual decontamination reagent on stress corrosion cracking of austenitic materials under high temperature water, 9:33204 (J;US)
Intergranular Corrosion
The effect of residual decontamination reagent on stress corrosion cracking of austenitic materials under high temperature water, 9:33204 (J;US)
Stress Corrosion
The effect of residual decontamination reagent on stress corrosion cracking of austenitic materials under high temperature water, 9:33204 (J;US)
INDIA
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
INDIUM
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
INDIUM 106
Energy Levels
Study of neutron-deficient Sn isotopes, 9:34688 (R;FR;In French)
INDIUM 107
Energy Levels
Study of neutron-deficient Sn isotopes, 9:34688 (R;FR;In French)
INDIUM 108
Energy Levels
Study of neutron-deficient Sn isotopes, 9:34688 (R;FR;In French)
INDIUM 111
Isotope Production
Production of ^{111}In, 9:33835 (RA;BR;In Portuguese)
INDIUM 113 TARGET
Deuteron Reactions
Study of the $^{115}In(d,t)^{114}An$ and $^{113}In(d,p)^{114}In$, 9:34694 (RA;SU;In Russian)
INDIUM 114
Excited States
Study of the $^{115}In(d,t)^{114}An$ and $^{113}In(d,p)^{114}In$, 9:34694 (RA;SU;In Russian)
INDIUM 115 TARGET
Deuteron Reactions
Study of the $^{115}In(d,t)^{114}An$ and $^{113}In(d,p)^{114}In$, 9:34694 (RA;SU;In Russian)
INDIUM 123
Isotope Production
Production of ^{123}I, 9:33834 (RA;BR;In Portuguese)
INDOOR AIR POLLUTION
Monitoring
Accumulation rates of ionic substances on indoor surfaces, 9:34274 (BA;US)
INDUSTRIAL PLANTS
See also COAL GASIFICATION PLANTS
COAL LIQUEFACTION PLANTS
COAL PREPARATION PLANTS
DESALINATION PLANTS
ETHANOL PLANTS
FEED MATERIALS PLANTS
PETROLEUM REFINERIES
WASTE PROCESSING PLANTS
Aerosol Monitoring
Monitoring ambient air for mutagenicity using the higher plant Tradescantia, 9:34293 (BA;US)
Cogeneration
Improvement of the energy efficiency: opportunities for industry (Netherlands), 9:33486 (R;NL;In Dutch)
Energy Conservation
Improvement of the energy efficiency: opportunities for industry (Netherlands), 9:33486 (R;NL;In Dutch)

Air Pollution Control
Industrial waste heat recovery and the potential for emissions reduction. Volume 7. Standard Classification Codes 3-04-002-04 to 3-05-010-03. Final report 25 Oct 77-28 Mar 79, 9:33561 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 8. Standard Classification Codes 3-05-010-99 to 3-06-010-01. Final report 25 Oct 77-28 Mar 79, 9:33562 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 9. Standard Classification Codes 3-06-011-01 to 3-90-005-33. Final report 25 Oct 77-28 Mar 79, 9:33563 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 10. Standard Classification Codes 3-90-005-99 to 3-90-008-99. Final report 25 Oct 77-28 Mar 79, 9:33564 (R;US)
Economics
Systems economics for industry functional modeling. Second annual technical report, 9:33433 (R;US)
Systems economics for industry functional modeling, 9:33434 (R;US)
Energy Conservation
Long-range conservation projection, 9:33506 (R;US)
Functional Models
Industry functional modeling, 9:33427 (R;US)
Systems economics for industry functional modeling, 9:33434 (R;US)
Heat Recovery Equipment
Industrial waste heat recovery and the potential for emissions reduction. Volume 1. Main report. Final report 25 Oct 77-28 Mar 79, 9:33555 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 2. Standard Classification Codes 1-01-001-01 to 1-02-007-03. Final report 25 Oct 77-28 Mar 79, 9:33556 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 3. Standard Classification Codes 1-02-007-04 to 2-03-999-98. Final report 25 Oct 77-28 Mar 79, 9:33557 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 4. Standard Classification Codes 2-04-001-01 to 3-01-025-05. Final report 25 Oct 77-28 Mar 79, 9:33558 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 5. Standard Classification Codes 3-01-025-10 to 3-02-013-01. Final report 25 Oct 77-28 Mar 79, 9:33559 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 6. Standard Classification Codes 3-02-014-01 to 3-04-002-03. Final report 25 Oct 77-28 Mar 79, 9:33560 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 7. Standard Classification Codes 3-04-002-04 to 3-05-010-03. Final report 25 Oct 77-28 Mar 79, 9:33561 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 8. Standard Classification Codes 3-05-010-99 to 3-06-010-01. Final report 25 Oct 77-28 Mar 79, 9:33562 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 9. Standard Classification Codes 3-06-011-01 to 3-90-005-33. Final report 25 Oct 77-28 Mar 79, 9:33563 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 10. Standard Classification Codes 3-90-005-99 to 3-90-008-99. Final report 25 Oct 77-28 Mar 79, 9:33564 (R;US)
Waste Heat Utilization
Industrial waste heat recovery and the potential for emissions reduction. Volume 1. Main report. Final report 25 Oct 77-28 Mar 79, 9:33555 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 2. Standard Classification Codes 1-01-001-01 to 1-02-007-03. Final report 25 Oct 77-28 Mar 79, 9:33556 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 3. Standard Classification Codes 1-02-007-04 to 2-03-999-98. Final report 25 Oct 77-28 Mar 79, 9:33557 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 4. Standard Classification Codes 2-04-001-01 to 3-01-025-05. Final report 25 Oct 77-28 Mar 79, 9:33558 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 5. Standard Classification Codes 3-01-025-10 to 3-02-013-01. Final report 25 Oct 77-28 Mar 79, 9:33559 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 6. Standard Classification Codes 3-02-014-01 to 3-04-002-03. Final report 25 Oct 77-28 Mar 79, 9:33560 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 7. Standard Classification Codes 3-04-002-04 to 3-05-010-03. Final report 25 Oct 77-28 Mar 79, 9:33561 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 8. Standard Classification Codes 3-05-010-99 to 3-06-010-01. Final report 25 Oct 77-28 Mar 79, 9:33562 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 9. Standard Classification Codes 3-06-011-01 to 3-90-005-33. Final report 25 Oct 77-28 Mar 79, 9:33563 (R;US)
Industrial waste heat recovery and the potential for emissions reduction. Volume 10. Standard Classification Codes 3-90-005-99 to 3-90-008-99. Final report 25 Oct 77-28 Mar 79, 9:33564 (R;US)
INERTIAL CONFINEMENT
A dynamic plasma confinement by inertial forces.
Bibliographies
Index of Laser Program publications and related reports, 1983, 9:34958 (R;US)
Heavy Ion Accelerators
The development of high energy heavy ions for inertial confinement fusion. A phase approach, 9:34969 (BA;US)
Laser Targets
Low density, microcellular foams, preparation, and articles, 9:34962 (P;US)
Power Supplies
Comet-II, a two-stage, magnetically switched pulsed-power module, 9:34954 (R;US)
Research Programs
GSI annual report 1981/82, 9:33446 (R;DE;In German)
Reviews
NRC survey on plasma physics and fluids fusion plasma confinement and heating. Chapter 8. Inertial confinement fusion, 9:34949 (R;US)
Thermonuclear Ignition
Muonic and polarized fusion for inertial confinement fusion, 9:34945 (R;DE)
INFORMATION SYSTEMS
Computer Codes
ORNL ALPHA MIS user's manual, 9:35006 (R;US)
Computer Networks
Online directory of databases for material properties, 9:35008 (R;US)
Directories
Online directory of databases for material properties, 9:35008 (R;US)
INFORMATION THEORY
Decentralized system theory, 9:33020 (R;US)
INFRARED SPECTRA
Temperature Measurement
Investigation of vaporization and devolatilization of coal/water mixtures. Seventh quarterly report, November 1, 1983-January 31, 1984, 9:32622 (R;US)

INHALATION
Dose Commitments
Investigations on natural radioactivity of indoor air pollution. Fundamental findings serving to estimate X-irradiation by inhalation of radon- and thoron daughter products, 9:34309 (R;DE;In German)
Dose Rates
Investigations on natural radioactivity of indoor air pollution. Fundamental findings serving to estimate X-irradiation by inhalation of radon- and thoron daughter products, 9:34309 (R;DE;In German)
INHOMOGENEOUS PLASMA
Cyclotron Radiation
Amplification of electron cyclotron radiation in non-maxwellian inhomogeneous plasmas, 9:34801 (RA;BR)
Induced electron-cyclotron emission from inhomogeneous anisotropic plasmas with electron population inversion, 9:34798 (RA;BR)
Momentum distribution dependence of induced electron-cyclotron emission, 9:34799 (RA;BR)
Emission Spectra
Amplification of electron cyclotron radiation in non-maxwellian inhomogeneous plasmas, 9:34801 (RA;BR)
Momentum distribution dependence of induced electron-cyclotron emission, 9:34799 (RA;BR)
INJECTION WELLS
Reservoir Pressure
Effect of stimulation by surfactants on the pressure gradient around an injection well, 9:32657 (R;NO)
INPUT WELL
See INJECTION WELLS
INPUT-OUTPUT ANALYSIS
Econometrics
Disaggregating input-output models, 9:33432 (J;US)
INSECTICIDES
Biological Effects
Labelled radioactive adenosine nucleotides for the determination of toxic action, 9:34477 (R;AT;In German)
IN-SITU GASIFICATION
Feasibility Studies
Underground coal gasification in the bituminous coal resource, 9:32492 (R;US)
Research Programs
Department of Energy's 1978 underground coal conversion program, 9:32539 (J;US)
Underground coal gasification in the bituminous coal resource, 9:32492 (R;US)
Seismic Surveys
High resolution seismic survey of the Hanna, Wyoming underground coal gasification area, 9:32453 (R;US)
IN-SITU RETORTING
Mathematical Models
Oil yield losses in non-uniform in situ oil shale retorts, 9:32686 (R;US)
INSOLATION
Calibration Standards
Availability of NBS (National Bureau of Standards) radiometric standards for solar irradiance studies. Final report, 9:32843 (R;US)
INSULATION (ELECTRICAL)
See ELECTRICAL INSULATION
INSULATION (THERMAL)
See THERMAL INSULATION
INSULATORS (ELECTRICAL)
See ELECTRICAL INSULATORS
INTEGRATED CIRCUITS
Fabrication
Wafer-scale laser pantography. VI. Direct-write interconnection of VLSI gate arrays, 9:33924 (R;US)
INTEGRATED UTILITY SYSTEMS
See TOTAL ENERGY SYSTEMS
INTERCONNECTED POWER SYSTEMS
Electric utility coordination in the VACAR region: potential for savings 1983-2000, 9:33476 (R;US)
Control
Emergency state control methods. Executive Summary, 9:33024 (R;US)
Operation of the large interconnected power system by decision and control in emergencies, 9:33474 (R;US)
Operation
Information flow in event-driven large-scale systems, 9:33475 (R;US)
Optimal stochastic operations scheduling, 9:33472 (R;US)
Photovoltaic Power Supplies
Dynamic simulation of dispersed grid-connected photovoltaic power systems: Task 1 - modelling and control, 9:32907 (R;US)
Photovoltaic system overview, 9:32908 (R;US)
Stability
Contribution to power system state estimation and transient stability analysis, 9:33473 (R;US)
INTERFACES
Mesh Generation
Numerical methods for tracking interfaces, 9:34981 (R;US)
INTERMEDIATE BOSONS
See also HIGGS BOSONS
INTERMEDIATE VECTOR BOSONS
Particle Identification
Vertex detector of the UA2 experiment (a low mass self sustaining system of cylindrical multiwire proportional chambers), 9:34133 (R;FR)
Particle Production
Transverse momentum distributions of jets and weak bosons, 9:34599 (R;US)
Particle Widths
Electroweak interaction parameters, 9:34608 (R;US)
Radiative Decay
Electroweak interaction parameters, 9:34608 (R;US)
Rest Mass
Electroweak interaction parameters, 9:34608 (R;US)
Weak Particle Decay
Forward-backward asymmetries in W and Z decays, 9:34628 (R;US)
INTERMEDIATE MASS NUCLEI
For nuclei with mass 41-180.

Cell Proliferation
^{3}H-thymidine autoradiographic study of cell proliferation and the influence of isoproterenol and kallikrein in various cell populations of the gastrointestinal tract in animal experiments, 9:34384 (R;DE;In German)
INTOR TOKAMAK
International Tokamak Reactor.
ICR Heating
System of HF-energy input into large tokamaks when icr heating, 9:34891 (RA;SU;In Russian)
Maximum Credible Accident
Choice of a technique for estimating maximum design accident of a tokamak reactor, 9:34904 (RA;SU;In Russian)
Microwave Equipment
System of HF-energy input into large tokamaks when icr heating, 9:34891 (RA;SU;In Russian)
Reliability
Estimation of reliability of a nuclear power plant with tokamak reactor, 9:34863 (RA;SU;In Russian)
Remote Control
Robototechnical complex for the "INTOR" installation remote control, 9:34857 (RA;SU;In Russian)
Superconducting Coils
Two-winding inductor for a tokamak reactor, 9:34943 (RA;SU;In Russian)
Transformers
Two-winding inductor for a tokamak reactor, 9:34943 (RA;SU;In Russian)
INTRUSION DETECTION SYSTEMS
Maintenance
Maintenance and the upgraded security system, 9:32771 (R;US)
INVERSE SCATTERING PROBLEM
Bianchi-Backlund transformations, conservation laws, and linearization of various field theories, 9:34640 (BA;US)
IODINE
Activation Analysis
Determination of iodine in blood serum by epithermal neutron activation followed by gamma ray spectrometry, 9:33797 (RA;IL)
Adsorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Desorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Emission Spectra
340 nm emission system in I_2 induced by a two-photon excitation process, 9:34563 (RA;BR)
Gamma Spectroscopy
Determination of iodine in blood serum by epithermal neutron activation followed by gamma ray spectrometry, 9:33797 (RA;IL)
Phase Transformations
340 nm emission system in I_2 induced by a two-photon excitation process, 9:34563 (RA;BR)

Beam Dynamics
Studying the numerical models of ion beam dynamics in shaping and accelerating systems, 9:34000 (RA;UA;In Russian)
Beam Monitoring
Comparative diagnostics of intensive ion beams, 9:34001 (RA;UA;In Russian)
Beam Production
Inertial fusion with low energy heavy ions, 9:34965 (J;US)
Beam Transport
Generation, focusing and transport of intense light ion beams, 9:34011 (BA;US)
Current Density
Measuring the low intensities of multicharged ion beams, 9:34002 (RA;UA;In Russian)
Focusing
Technique for studying ion dynamics in linear accelerators with focusing by axially symmetric accelerating filed, 9:33999 (RA;UA;In Russian)
ION COLLISIONS
See also ION-ATOM COLLISIONS

Electron Transfer
Charge-changing ionic collisions as a method for increasing specific deposition energy in heavy ion drivers, 9:34948 (R;DE)

ION CYCLOTRON-RESONANCE HEATING
See ICR HEATING

ION EXCHANGE MATERIALS
Chemical Preparation
Phenolic cation exchange resin material for recovery of cesium and strontium, 9:32745 (P;US)

ION EXCHANGE MEMBRANES
See ION EXCHANGE MATERIALS

ION IMPLANTATION
Research Programs
Ion implantation laboratory, 9:33639 (RA;BR)

ION MICROPROBE ANALYSIS
EHD Generators
Applications of EHD-ion sources in SIMS, 9:33801 (R;AT;In German)

ION MICROSCOPY
Research Programs
Field ion microscopy and spectroscopy of hydrogen in metals. Progress report, August 1, 1983-March 1, 1984, 9:34561 (R;US)

ION PROBES
Tandem Electrostatic Accelerators
Use of a tandem accelerator for light element analysis, 9:34573 (R;US)

ION SOURCES
IBM-5C stationary in source without an external magnetic field, 9:34881 (RA;SU;In Russian)
Beam Extraction
Ion extraction capabilities of two-grid accelerator systems, 9:34569 (R;US)
Cathodes
Ion source cathodes of melted and sintered lanthanum hexaboride, 9:34884 (RA;SU;In Russian)
Control Systems
Feedback-controlled gas feed system for ion sources, 9:34849 (R;US)
Electrical Insulators
Monolithic fiber-glass metalloceramic insulating unit, 9:34885 (RA;SU;In Russian)
Electrodes
Ion source ion-optical system electrodes fabricated by the method of plastic shape formation, 9:34907 (RA;SU;In Russian)
Fabrication
Operating experience with 80-keV/80-A ion sources in use for Doublet III NBI experiments, 9:34848 (R;US)
Focusing
To the calculation and optimization of an ion injector focusing system, 9:34887 (RA;SU;In Russian)
Gas Injection
Feedback-controlled gas feed system for ion sources, 9:34849 (R;US)
Hollow Cathodes
Hollow cathode ion source without magnetic field, 9:34897 (RA;SU;In Russian)
Hydrogen Ions 1 Minus
Development of a high-voltage accelerating channel of an ion injector, 9:34898 (RA;SU;In Russian)
Hydrogen negative ion stationary source with a hollow cathode, 9:34899 (RA;SU;In Russian)
Magnet Coils
Performance analysis of 180° reflection magnet in Doublet III neutral beamline, 9:34847 (R;US)
Multicharged Ions
Progress on the LBL ECR heavy ion source, 9:34095 (R;US)
Operation
Operating experience with 80-keV/80-A ion sources in use for Doublet III NBI experiments, 9:34848 (R;US)
Performance Testing
A cusped field H^- ion source for LAMPF, 9:34102 (J;US)
Polarized Beams
Polarized ion source, 9:34020 (RA;DE;In German)

ION THRUSTERS
Performance
Ion extraction capabilities of two-grid accelerator systems, 9:34569 (R;US)

ION-ATOM COLLISIONS
Autoionization
Study of post-collision effect on autoionisation electron spectra in He^+-He collision, 9:34562 (R;FR;In French)
Electron Capture
Coherence effects in heavy-ion-atom collisions, 9:34576 (BA;US)
Ionization
Coherence effects in heavy-ion-atom collisions, 9:34576 (BA;US)
Pair Production
Electron/positron detector for the orange-β-spectrometer, 9:34129 (RA;DE;In German)

IONIC REACTIONS
See CHEMICAL REACTIONS
IONS

IONIZATION CALORIMETERS
See SHOWER COUNTERS

IONIZATION CHAMBERS
See also LIQUID IONIZATION CHAMBERS
Performance
Environmental gamma-ray measurement methods for French nuclear installation impact studies, 9:33222 (J;US)
Sensitivity
Environmental gamma-ray measurement methods for French nuclear installation impact studies, 9:33222 (J;US)

IONIZING RADIATIONS
See also COSMIC RADIATION
GAMMA RADIATION
Carcinogenesis
Pollution and man, environmental pollution and man, the magnitude of the problem, historical aspects and definitions, 9:34471 (R;US)

IONS
Ions in solutions are indexed as compounds; ions in gases by the precoordinated descriptor consisting of the element name and the term ions; ions in beams by assigning either the specific name if available, e.g. ARGON 40 BEAMS
See also ANIONS
CESIUM IONS
HEAVY IONS
HELIUM IONS
HYDROGEN IONS
SODIUM IONS
URANIUM IONS
Charge Density
Electron-electron correlation in highly charged atoms, 9:34575 (BA;US)
Electron Correlation
Electron-electron correlation in highly charged atoms, 9:34575 (BA;US)

IPNS-I SYNCHROTRON
Intense Pulsed Neutron Source.
Planning
Summary report on responses to a questionnaire on DOE's materials research facilities, 9:34972 (R;US)

IRELAND
Energy Consumption
MEDEE-3: first results for Ireland and data collection. Final report, 9:33464 (R;XE)
Energy Demand
MEDEE-3: first results for Ireland and data collection. Final report, 9:33464 (R;XE)
Energy Policy
Ireland - energy situation 1982, 9:33424 (R;DE;In German)
Energy Supplies
Ireland - energy situation 1982, 9:33424 (R;DE;In German)

IRIDIUM
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)

IRIDIUM COMPOUNDS
Catalytic Effects
Homogenous high pressure hydrogenation of carbon monoxide using cobalt, ruthenium and iridium catalyst, 9:32796 (R;DE;In German)
IRISH SEA
Radionuclide Migration
Mathematical simulation of sediment and radionuclide transport in coastal waters. Volume 2. User's manual and computer program listing for FETRA, 9:34362 (R;US)
Mathematical simulation of sediment and radionuclide transport in coastal waters. Volume 1. Testing of the sediment/radionuclide transport model, FETRA, 9:34361 (R;US)
Sedimentation studies relevant to low-level radioactive effluent dispersal in the Irish Sea. Part 1. Radionuclides in marine sediments, 9:34364 (R;US)
IRON
See also IRON-ALPHA
Activation Analysis
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
Biological Accumulation
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
Deposition
Deposition of atmospheric trace constituents onto different natural surfaces, 9:34269 (BA;US)
Dry deposition of small particles to grass in field conditions, 9:34270 (BA;US)
Dry deposition of trace elements in Olympic National Park, 9:34271 (BA;US)
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Energy Absorption
Photon point source buildup factors for air, water, and iron, 9:33224 (J;US)
Environmental Transport
Estimates of dry and wet deposition and resuspension fluxes of several trace metals in the Southern Bight of the North Sea, 9:34283 (BA;US)
Ion Implantation
Influence of Tin implantation on the oxidation of iron, 9:33641 (RA;BR)
Irradiation
Neutron and gamma-ray penetrations in thick iron, 9:33241 (J;US)
Monitoring
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Oxidation
Influence of Tin implantation on the oxidation of iron, 9:33641 (RA;BR)
Particulates
Size distribution and mineralogy of aluminosilicate dust particles in tropical Pacific air and rain, 9:34286 (BA;US)
Physical Radiation Effects
Hyperfine interactions and radiation damage in metals, 9:33668 (RA;SU;In Russian)
Post-Irradiation Examination
Neutron and gamma-ray penetrations in thick iron, 9:33241 (J;US)
Precipitation Scavenging
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Scavenging rates of sulfur and trace metals from a smelter plume, 9:34260 (BA;US)
Quantitative Chemical Analysis
Factors affecting the iron oxidation state and foaming in SRP waste glass, 9:32750 (J;US)
IRON 54 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
IRON 55
Isotope Production
Production of ^{55}Fe, 9:33839 (RA;BR;In Portuguese)
IRON 56 REACTIONS
Deep Inelastic Heavy Ion Reactions
Non-equilibrium excitation energy division in deeply-inelastic collisions, 9:34708 (R;US)
Fission
Non-equilibrium excitation energy division in deeply-inelastic collisions, 9:34708 (R;US)
Nuclear Fireball Model
Secondary low-energy particles emitted in spallation of photoemulsion nuclei by 0.1-1 GeV/N ^{56}Fe nuclei and the fireball model, 9:34664 (RA;SU;In Russian)
Spallation
Secondary low-energy particles emitted in spallation of photoemulsion nuclei by 0.1-1 GeV/N ^{56}Fe nuclei and the fireball model, 9:34664 (RA;SU;In Russian)
IRON 56 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
IRON 58 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
IRON 60
Beta-Minus Decay
Half-life of ^{60}Fe, 9:34680 (R;US)
IRON ALLOYS
See also ALLOY-HS-31
HAYNES 188 ALLOY
INCONEL 600
INCONEL X750
IRON BASE ALLOYS
Lattice Vibrations
Lattice vibrational behavior of the exchange enhanced superconductor U_6Fe, 9:33629 (R;US)
Magnetic Properties
Magnetic behaviour of Fe-Si-B metallic glasses studied by neutron scattering, 9:33748 (RA;CH)
Moessbauer Effect
Moessbauer spectroscopy measurements of the magnetic properties of oriented SiFe sheets, 9:33661 (RA;CH)
Moessbauer studies in $Fe_{80}Ni_{80}P_{14}B_6$ and $Fe_{80}Ni_{88}Mo_4B_{18}$ metallic glasses, 9:33662 (RA;CH)
Neutron Diffraction
Magnetic behaviour of Fe-Si-B metallic glasses studied by neutron scattering, 9:33748 (RA;CH)
Physical Radiation Effects
Fundamental alloy studies (Fe-Ni-Cr; Fe-Cr-Mn), 9:33635 (R;US)
IRON BASE ALLOYS
See also STEELS
Microstructure
Phase transformations and microstructures of Fe-Nb, Fe-Nb-Mn, Fe-Nb-Mn-Cr alloys of high iron content, 9:33646 (RA;BR;In Portuguese)
Oxidation
Selective solar absorptance of some oxide and sulfide films grown in-situ on binary metal alloys. Final report, 9:32947 (R;US)
Phase Transformations
Phase transformations and microstructures of Fe-Nb, Fe-Nb-Mn, Fe-Nb-Mn-Cr alloys of high iron content, 9:33646 (RA;BR;In Portuguese)
Sulfidation
Selective solar absorptance of some oxide and sulfide films grown in-situ on binary metal alloys. Final report, 9:32947 (R;US)
IRON GARNETS
See FERRITE GARNETS

IRON ORES
Exports
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)
IRON OXIDES
See also ZIRCONOLITE
Catalytic Effects
New iron oxide catalyst reduction activities with hydrogen sulfide and hydrogen, 9:32452 (R;US)
Electric Conductivity
Molten carbonate fuel cell cathode development, 9:33493 (R;US)
Hole Mobility
Photoelectrolysis and hole injection at Fe_2O_3/TiO_2 heterojunction electrode, 9:32899 (J;US)
Photoelectrolysis
Photoelectrolysis and hole injection at Fe_2O_3/TiO_2 heterojunction electrode, 9:32899 (J;US)
Solubility
Molten carbonate fuel cell cathode development, 9:33493 (R;US)
Sorptive Properties
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
IRON PHOSPHIDES
Superconductivity
Electrical resistivity of rare earth iron phosphides, 9:33758 (R;US)
Magnetic susceptibility, electrical resistivity, and specific heat of single crystal $LaFe_4P_{12}$, 9:33757 (R;US)
IRON-AIR BATTERIES
Electrodes
Electrode characteristics of the iron-air battery, 9:33604 (J;US)
Silver retention in carbon-based bifunctional air electrodes, 9:33410 (J;US)
Performance
Urban electric vehicles with iron-air batteries, 9:33605 (J;US)
Thermal Analysis
Thermal management of the iron-air battery system, 9:33398 (J;US)
IRON-ALPHA
Physical Radiation Effects
Comparison of the magnetic relaxation spectra in α-Fe following low-temperature electron and neutron irradiation, 9:33663 (RA;CH)
IRON-FREE SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS
IRON-NICKEL BATTERIES
Capacity
Effects of standtime on the available capacity of lead-acid and nickel/iron electric vehicle batteries, 9:33374 (R;US)
Electrodes
Alkaline nickel electrode voltage vs. current performance, 9:33603 (J;US)
Performance
Alkaline nickel electrode voltage vs. current performance, 9:33603 (J;US)
Reviews
Study of bipolar batteries, 9:33387 (R;US)
IRRIGATION
Energy Conservation
Long-range conservation projection, 9:33506 (R;US)
ISABELLE
See ISABELLE STORAGE RINGS
ISABELLE STORAGE RINGS
Proton-Proton Interactions
Theoretical implications of ISABELLE physics, 9:34607 (BA;US)
ISING MODEL
Thermodynamic Properties
Rondom Ising model with long-range interactions, 9:34771 (RA;BR)
ISLANDS
See also TAIWAN
Radiation Monitoring
Radiological survey of Johnston Atoll. Dates of survey: April-August 1980. Revision 1, 9:34346 (R;US)
ISOBARIC NUCLEI
Nuclei having identical mass number.
Delta-1236 Resonances
Absorptive nuclear mean field of a Δ(1236) - isobar, 9:34729 (RA;BR)
Nuclear medium corrections for the Δ - isobar, 9:34728 (RA;BR)
Many-Body Problem
Nuclear medium corrections for the Δ - isobar, 9:34728 (RA;BR)
Potentials
Absorptive nuclear mean field of a Δ(1236) - isobar, 9:34729 (RA;BR)
ISOCHRONOUS CYCLOTRONS
See also CRNL SUPERCONDUCTING CYCLOTRON
Tritron, 9:33944 (RA;DE;In German)
Design
An isochronous stacking ring approach to the HTE, 9:34966 (J;US)
Performance
An isochronous stacking ring approach to the HTE, 9:34966 (J;US)
ISOTOPE DATING
Chlorine 36
Accelerator mass spectroscopy with completely stripped ^{36}Cl, 9:34150 (RA;DE;In German)
ISOTOPE ENRICHMENT
See ISOTOPE SEPARATION
ISOTOPE SEPARATION
For separation of isotopes of the same element only.
See also GASEOUS DIFFUSION PROCESS
Plasma source for a centrifuge, 9:32773 (RA;IL)
ISOTOPE SHIFT
See SPECTRAL SHIFT
ISOTOPIC SEPARATION
See ISOTOPE SEPARATION
ISOTOPIC SHIFT
See SPECTRAL SHIFT
ISRAEL
Radiometric Surveys
Aerial radiometric survey over Israel, 9:34512 (RA;IL)
ITALY
Government Policies
Act No. 8 of 10 January 1983 amending Act No. 393 of 2 August 1975 on requirements for the siting of nuclear electricity-generating plants, 9:33221 (R;IT;In Italian)
Nuclear Power Plants
Act No. 8 of 10 January 1983 amending Act No. 393 of 2 August 1975 on requirements for the siting of nuclear electricity-generating plants, 9:33221 (R;IT;In Italian)
Radiological Personnel
Act No. 25 of 31 January 1983 amending Act No. 1103 of 4 August 1965 and Decree No. 680 of 6 March 1968 on regulations governing the activities of technicians in medical radiology, 9:34760 (R;IT;In Italian)
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
IUS
See TOTAL ENERGY SYSTEMS

J

JAERI
Japanese Atomic Energy Research Institute.
Educational Facilities
Educational laboratory experiments on chemistry in a nuclear engineering school, 9:33844 (J;US)
JAILS
See PUBLIC BUILDINGS
JAPAN
See also HIROSHIMA

Hot-Dry-Rock Systems
Hydraulic fracturing and propping tests at Yakedake field in Japan, 9:32979 (R;US)
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
JAPANESE ATOMIC ENERGY RESEARCH INSTITUTE
See JAERI
JAPANESE ORGANIZATIONS
See also JAERI
Research Programs
Report of progress of research by common use of facilities in JAERI, 1981, 9:33142 (R;JP;In Japanese)
JEJUNUM
See SMALL INTESTINE
JENSEN SARCOMA
See EXPERIMENTAL NEOPLASMS
JET ENGINE FUELS
Absorption Spectroscopy
Comparison of JFTOT (Jet Fuel Thermal Oxidation Tests) and absorbance methods for determining jet fuel thermal stability. Technical report, 9:32670 (R;CA)
Energy Demand
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)
Stability
Comparison of JFTOT (Jet Fuel Thermal Oxidation Tests) and absorbance methods for determining jet fuel thermal stability. Technical report, 9:32670 (R;CA)
Thermal Stresses
Comparison of JFTOT (Jet Fuel Thermal Oxidation Tests) and absorbance methods for determining jet fuel thermal stability. Technical report, 9:32670 (R;CA)
JET MODEL
Transverse momentum distributions of jets and weak bosons, 9:34599 (R;US)
JET REACTORS
Construction
JET, the Joint European torus - a status report, 9:34854 (RA;SU)
JOINTS (ANATOMY)
See BONE JOINTS
JPFR REACTOR
See MONJU REACTOR
JUNCTION TRANSISTORS
Electrical Properties
Electrical properties of submicronic emitters. Application to the case of solar cells and subnanosecond hyperfrequency transitors, 9:32851 (R;FR;In French)
P-N Junctions
Electrical properties of submicronic emitters. Application to the case of solar cells and subnanosecond hyperfrequency transitors, 9:32851 (R;FR;In French)

K

K REACTOR
Neutron Flux
Neutron fluence in P,K reactor tank walls, 9:33243 (R;US)
Reactor Materials
Neutron fluence in P,K reactor tank walls, 9:33243 (R;US)
Reactor Vessels
Neutron fluence in P,K reactor tank walls, 9:33243 (R;US)
KALKAR POWER REACTOR
See SNR-1 REACTOR
KALLIKREIN
See KININOGENIN
KAOLINITE
Catalytic Effects
Thermal and catalytic cracking of tars and tar constituents from coal gasification processes, 9:32488 (RA;US)
Particulates
Size distribution and mineralogy of aluminosilicate dust particles in tropical Pacific air and rain, 9:34286 (BA;US)
KAON PLUS REACTIONS
Nuclear Reaction Kinetics
K^+-nucleus interaction, 9:34657 (R;US)
KAONS
Pair Production
Exclusive production of hadron pairs at large momentum transfer in photon-photon interactions, 9:34595 (R;DE)
Particle Production
Recent results from the PEP-4 TPC, 9:34604 (R;US)
KEROSENE
Energy Demand
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)
KHARKOV LINAC
Beam Monitoring
Scanning NMR magnetometer in the system of the LU-2 GeV accelerator beam energy parameter measurement, 9:34086 (RA;UA;In Russian)
Beam Monitors
Measuring the parameters of the LU-2 GeV accelerator beams, 9:34066 (RA;UA;In Russian)
Beam Production
Possibility of intense pion beam production at the LU-2 GeV accelerator, 9:34035 (RA;UA;In Russian)
Equipment Protection Devices
LU-2 GeV electron transport channel protection from beam damage, 9:34079 (RA;UA;In Russian)
Magnetometers
Scanning NMR magnetometer in the system of the LU-2 GeV accelerator beam energy parameter measurement, 9:34086 (RA;UA;In Russian)
Modifications
Kharkov 2 GeV linac exploitation and modernization results in 1981-1982 years, 9:34024 (RA;UA;In Russian)
Performance
Improvement of electron beam energy spectra of the LUEh 2 GeV linear accelerator, 9:34031 (RA;UA;In Russian)
Kharkov 2 GeV linac exploitation and modernization results in 1981-1982 years, 9:34024 (RA;UA;In Russian)
Reliability
Kharkov 2 GeV linac exploitation and modernization results in 1981-1982 years, 9:34024 (RA;UA;In Russian)
Safety
LU-2 GeV electron transport channel protection from beam damage, 9:34079 (RA;UA;In Russian)
Synchronization
Synchronizer for the LU-2 GeV accelerator, 9:34080 (RA;UA;In Russian)
KIDNEYS
Biological Functions
Evaluation of biological indicators of body burden of cadmium in humans, 9:34492 (J;US)
KIESELGUHR
See DIATOMACEOUS EARTH
KILNS
Design
Equipment for incinerating oily mass. PFO-project No. 2302, 9:32666 (R;NO;In Norwegian)
KINETICS EQUATIONS (REACTOR)
See REACTOR KINETICS EQUATIONS
KININOGENIN
Code number 3.4.21.8
Biological Effects
^{3}H-thymidine autoradiographic study of cell proliferation and the influence of isoproterenol and kallikrein in various cell populations of the gastrointestinal tract in animal experiments, 9:34384 (R;DE;In German)
KLYSTRONS
Coatings
Coating of the SLAC klystron windows, 9:34096 (R;US)

Efficiency
Electron linac klystron efficiency increase at the expense of focusing field profile optimization, 9:34038 (RA;UA;In Russian)
Oscillation Modes
Excitation of supplementary oscillations in a multiresonator klystron, 9:34037 (RA;UA;In Russian)
Windows
Coating of the SLAC klystron windows, 9:34096 (R;US)
KNOCK-ON ELECTRONS
See ELECTRONS
KOREA (SOUTH)
See REPUBLIC OF KOREA
KRYPTON 85
Gas Chromatography
Monitoring krypton-85 during Three Mile Island Unit 2 purging, 9:33223 (J;US)
Radioassay
Monitoring krypton-85 during Three Mile Island Unit 2 purging, 9:33223 (J;US)
Sampling
Monitoring krypton-85 during Three Mile Island Unit 2 purging, 9:33223 (J;US)
KRYPTON 86 REACTIONS
Deep Inelastic Heavy Ion Reactions
Diabatic two-center shell model, 9:34726 (R;DE)
KUHFR REACTOR
Mechanical Vibrations
Flow test for the full scale core mock-up to the KUHFR, (2). Flow-induced vibrations of the core, 9:33244 (R;JP;In Japanese)
Neutron Reflectors
Report on material tests and mock-up tests for fabrication of the KUHFR reflector tank, 9:33245 (R;JP;In Japanese)
Performance Testing
Flow test for the full scale core mock-up to the KUHFR, (2). Flow-induced vibrations of the core, 9:33244 (R;JP;In Japanese)
KYOTO UNIVERSITY HIGH FLUX REACTOR
See KUHFR REACTOR

L

L-2 STELLARATOR
ECR Heating
Design of a technical complex for ecr heating of a plasma in the L-2 stellarator, 9:34877 (RA;SU;In Russian)
LABELLED COMPOUNDS
Compounds labelled with either stable or radioactive isotopes.
See also CARBON 14 COMPOUNDS
RADIOPHARMACEUTICALS
TRITIUM COMPOUNDS
Chemical Preparation
Labelled organic compounds, 9:33843 (RA;CS;In Russian)
LABORATORY ANIMALS
Nutrition
Nutritional requirements and contaminant analysis of laboratory animal feeds, 9:34481 (R;US)
LABORATORY BUILDINGS
Energy Audits
Alternate energy sources for ConnDOT's (Connecticut Department of Transportation) materials testing laboratory: feasibility study, 9:32942 (R;US)
LAGE FLUX REAKTOR PETTEN
See LFR REACTOR
LAMBDA NEUTRAL
See LAMBDA PARTICLES
LAMBDA PARTICLES
Particle Production
Study of dihyperon production, 9:34616 (RA;BR)
Potentials
Mean-field approach to Λ and Σ hypernuclei, 9:34612 (RA;BR)
LAMINAR FLOW
Simulation
Numerical calculation of the main variables of the laminar flow around a circumferential square obstacle at the wall of a circular pipe, 9:33886 (R;BR;In Portuguese)
LAMPF LINAC
Polarized Beams
Need for an intense polarized source at LAMPF. Report on a workshop held at Los Alamos, November 9, 1983, 9:34094 (R;US)
Proton Sources
Need for an intense polarized source at LAMPF. Report on a workshop held at Los Alamos, November 9, 1983, 9:34094 (R;US)
LAMPS
See LIGHT BULBS
LAND FILLS
See SANITARY LANDFILLS
LAND LEASING
Administrative Procedures
Federal coal-leasing policy; and the Bisti Badlands Wilderness proposal. Oversight hearings before the Subcommittee on Mining, Forest Management, and Bonneville Power Administration and the Subcommittee on Public Lands and National Parks, House of Representatives, Ninety-Eighth Congress, First Session, 9:32648 (B;US)
Economic Impact
Fair market value of federal coal, 9:32641 (J;US)
LAND POLLUTION
Decontamination
Development of chemical countermeasures for hazardous waste contaminated soil, 9:34338 (R;US)
Environmental Effects
Methods to evaluate ecotoxicological effects of chemicals. Vol. 2, 9:34337 (R;DE;In German)
Pollution Control Equipment
Ground probing of contaminated sites, 9:33938 (R;DE;In German)
LAND RECLAMATION
Baseline Ecology
Mccallum study area: resource and potential reclamation evaluation. Final report, 9:32563 (R;US)
LANDFILLS
See SANITARY LANDFILLS
LANGMUIR OSCILLATIONS
See PLASMA WAVES
LANOXIN
See DIGOXIN
LANTHANIDES
See RARE EARTHS
LANTHANUM 140
Fission Yield
Fission product yields for thermal-neutron fission of plutonium-239, 9:34720 (J;US)
LANTHANUM BASE ALLOYS
Sorptive Properties
Kinetics of the absorption of hydrogen by LaNi$_5$H/sub x//n-undecane suspensions. Part II. The H_2/n-undecane system, 9:32781 (R;US)
Kinetics of the absorption of hydrogen by LaNi$_5$H/sub x//n-undecane suspensions. Part I. The H_2/LaNi$_5$H/sub x//n-undecane system, 9:32780 (R;US)
LANTHANUM CHROMITES
See CHROMIUM OXIDES
LANTHANUM HYDRIDES
Spin-Lattice Relaxation
Conduction electron density of states and proton spin-lattice relaxation in the dihydrides of Sc, Y, La, and Lu, 9:33671 (R;US)
LANTHANUM PHOSPHIDES
Superconductivity
Electrical resistivity of rare earth iron phosphides, 9:33758 (R;US)
Magnetic susceptibility, electrical resistivity, and specific heat of single crystal $LaFe_4P_{12}$, 9:33757 (R;US)

LARAMIE ENERGY TECHNOLOGY CENTER
Research Programs
Simulated in situ retorting of Michigan Antrim oil shale, 9:32687 (J;US)
LARYNX
Neoplasms
Results of primary and postoperative radiotherapy of malignant tumours of the larynx and posterior pharynx, 9:34413 (R;DE;In German)
Radiotherapy
Results of primary and postoperative radiotherapy of malignant tumours of the larynx and posterior pharynx, 9:34413 (R;DE;In German)
LASER FUSION REACTORS
See also CASCADE REACTORS
Feasibility Studies
Development status of technological problems of laser thermonuclear fusion, 9:34892 (RA;SU;In Russian)
Free Electron Lasers
Free electron lasers for laser fusions, 9:33879 (BA;US)
Optical Systems
Wide spectrum antireflective coating for laser fusion systems. Final report, 9:34957 (R;US)
Parametric Analysis
Parametric analysis of a power plant on the basis of laser fusion, 9:34872 (RA;SU;In Russian)
LASER RADIATION
Absorption
Transmission and reflection of laser beams propagating through aerosol clouds in space, 9:34555 (R;US)
Multiple Scattering
Transmission and reflection of laser beams propagating through aerosol clouds in space, 9:34555 (R;US)
LASER SPECTROSCOPY
See also RAMAN SPECTROSCOPY
Development of an instrument package for the measurement of dry deposition fluxes by eddy correlation, 9:34268 (BA;US)
LASER-PRODUCED PLASMA
Electron Density
Electron density interferometry measurement in laser-matter interaction, 9:34844 (R;FR;In French)
Ionization
Experimental study of heavy ion beam interaction with a CO_2 laser produced plasma, 9:34840 (R;FR;In French)
Plasma Diagnostics
Electron density interferometry measurement in laser-matter interaction, 9:34844 (R;FR;In French)
Plasma Simulation
Calculation of the effect of suprathermal electrons in laser-irradiated targets using a simple model, 9:34850 (RA;IL)
LASERS
Light Amplification by Stimulated Emission of Radiation.
See also FREE ELECTRON LASERS
X-RAY LASERS
Stability
Argument principle in stability analysis: application to a single-mode laser with optical feedback, 9:33878 (R;US)
LASL
Radiation Monitoring
Environmental surveillance at Los Alamos during 1983, 9:34312 (R;US)
Research Programs
Engineering sciences research highlights. Fiscal year 1983, 9:34990 (R;US)
Los Alamos Science, Number 10, Spring 1984, 9:34556 (R;US)
LATENT HEAT STORAGE
Experimental and theoretical comparison of a water storage system and of a phase-change material storage system on the experimental solar building of Bourgoin-Jallieu (Isere), 9:32952 (R;FR;In French)
LATHES
Design
Design of a high-performance slide and drive system for a small precision machining research lathe, 9:33869 (R;US)
LATTICE FIELD THEORY
Behavior of the Wilson parameter in U(1) lattice gauge theory with long range gauge invariant interactions, 9:34632 (R;FR)
Inelastic strong interactions at high energies. Final report, June 1, 1976-May 31, 1984, 9:34637 (R;US)
Elastic Scattering
Relation between finite size effects and elastic scattering processes, 9:34644 (R;DE)
Monte Carlo Method
Monte Carlo simulations with Symanzik improved actions, 9:34636 (R;DE)
Perturbation Theory
Perturbative corrections to university and renormalization group behaviour, 9:34638 (R;US)
Weak coupling tests of lattice QCD, 9:34629 (R;US)
Renormalization
Monte Carlo renormalization group calculations for SU(2) lattice gauge theory, 9:34639 (R;US)
Perturbative corrections to university and renormalization group behaviour, 9:34638 (R;US)
Weak-Coupling Model
Weak coupling tests of lattice QCD, 9:34629 (R;US)
Wilson Loop
Weak coupling tests of lattice QCD, 9:34629 (R;US)
LATTICES (REACTOR)
See REACTOR LATTICES
LAWRENCE BERKELEY LABORATORY
Radiation Monitoring
Annual environmental monitoring report of the Lawrence Berkeley Laboratory, 1983, 9:34313 (R;US)
LAWRENCE LIVERMORE LABORATORY
Array Processors
S-1 Mark IIA supercomputer, 9:35003 (R;US)
Collective Accelerators
LLL experiments in collective field acceleration, 9:33972 (BA;US)
LEACHATES
Toxicity
Evaluation of thickening and dewatering characteristics of SRC-I wastewater treatment sludges. Final technical report, 9:32513 (R;US)
LEAD
Activation Analysis
Fast transport facility for activation analysis with high-energy neutrons, 9:33799 (R;AT;In German)
Deposition
Deposition of atmospheric trace constituents onto different natural surfaces, 9:34269 (BA;US)
Dry deposition of small particles to grass in field conditions, 9:34270 (BA;US)
Dry deposition of trace elements in Olympic National Park, 9:34271 (BA;US)
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Ecological Concentration
Lead in vegetation, forest floor material, and soils of the spruce-fir zone, Great Smoky Mountains National Park, 9:34335 (R;US)
Size distribution of atmospheric Pb and ^{210}Pb in rural New Jersey: implications for wet and dry deposition, 9:34327 (BA;US)
Environmental Transport
Estimates of dry and wet deposition and resuspension fluxes of several trace metals in the Southern Bight of the North Sea, 9:34283 (BA;US)
Precipitation Scavenging
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Scavenging rates of sulfur and trace metals from a smelter plume, 9:34260 (BA;US)
LEAD 208 TARGET
Alpha Reactions
Nuclear structure and intermediate energy hadron probes: excitation of high energy multipole resonances by inelastic scattering of 340 MeV and 480 MeV α-particle, 9:34671 (R;FR)
LEAD 210
Airborne emission control technology for the elemental phosphorus industry. Final report, 9:34314 (R;US)

Deposition
^{210}Pb as a tracer of the deposition of sub-micrometer aerosols, 9:34326 (BA;US)
Ecological Concentration
Size distribution of atmospheric Pb and ^{210}Pb in rural New Jersey: implications for wet and dry deposition, 9:34327 (BA;US)
Gamma Spectroscopy
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Washout
Atmosphere to snow transfers in Antarctica, 9:34325 (BA;US)
Scavenging ratios and dry deposition velocities of radioactive particles in the tropical regions of India, 9:34324 (BA;US)

LEAD 212
Diffusion
Deposition and resuspension, 9:34266 (BA;US)
Radioecological Concentration
Aerial radiological survey of the Palo Verde Nuclear Generating Station and surrounding area, Wintersburg, Arizona. Date of survey: November 1982, 9:34307 (R;US)
Washout
Scavenging ratios and dry deposition velocities of radioactive particles in the tropical regions of India, 9:34324 (BA;US)

LEAD 214
Radioecological Concentration
Aerial radiological survey of the Palo Verde Nuclear Generating Station and surrounding area, Wintersburg, Arizona. Date of survey: November 1982, 9:34307 (R;US)

LEAD ALLOYS
Superconductivity
Superconductivity in ternary rare earth palladium Heusler compounds, 9:33672 (R;US)

LEAD METHOD
See ISOTOPE DATING

LEAD OXIDES
Inelastic Scattering
Inelastic neutron scattering study of β-PbO_2: recent results, 9:33379 (R;US)
Neutron Diffraction
Lead deficiency and hydrogen content in lead dioxide battery-active material, 9:33416 (J;US)

LEAD-ACID BATTERIES
Battery Charging
Charging characteristics of a sealed, starved electrolyte lead-acid cell designed for photovoltaic applications, 9:32871 (J;US)
Capacity
Effects of standtime on the available capacity of lead-acid and nickel/iron electric vehicle batteries, 9:33374 (R;US)
Testing of batteries for solar applications, 9:32869 (J;US)
Materials
Lead deficiency and hydrogen content in lead dioxide battery-active material, 9:33416 (J;US)
Performance Testing
Development of a sealed, starved electrolyte lead-acid battery for photovoltaic applications, 9:32870 (J;US)
Testing of batteries for solar applications, 9:32869 (J;US)
Reviews
Study of bipolar batteries, 9:33387 (R;US)

LEADING ABSTRACT
Proceedings of the international conference on high energy nuclear physics held at Balatonfuered, 6-11 June 1983, 9:34586 (R;HU)

LEAVES
Lead
Lead in vegetation, forest floor material, and soils of the spruce-fir zone, Great Smoky Mountains National Park, 9:34335 (R;US)

LEGISLATION
Site Selection
Nuclear waste management: issues and progress, 9:32744 (J;US)

LEGISLATIVE PROGRAMS
See LEGISLATION

LEGUMINOSAE
Productivity
Impact of O_3 and SO_2 on soybean yield (CSRCLAP) (Glycine max), 9:34475 (R;US)
Impact of O_3 on yield of four soybean cultivars (CSRCLAP) (Glycine max; Amsoy-71; Corsay-79; Pella; Williams-79), 9:34474 (R;US)

LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET

LEPTON-NUCLEON INTERACTIONS

Deep Inelastic Scattering
Deep inelastic phenomena, 9:34625 (BA;US)

LEPTONS
See also ELECTRONS
MUONS
NEUTRINOS
Unified Gauge Models
SU(5) without SU(5): why B-L is conserved and baryon number not in unified models of quarks and leptons, 9:34641 (BA;US)

LEUKEMIA
Extracorporeal Irradiation
Extracorporeal radiotherapy of blood using conventional radiation sources for treatment of CLL, 9:34410 (R;DE;In German)

LEVEL INDICATORS
Radiometric Gages
Nuclear float. An accurate contact-free continuous level-gauge, 9:34130 (RA;IL)

LEWIS ACIDS
Chemical Reactions
Arylations of coal model systems, 9:32519 (R;US)

LFR REACTOR
Research Programs
Annual report 1982, 9:33233 (R;NL;In Dutch)

LIBERIA
Energy Analysis
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)
Energy Demand
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)

LI-DRIFTED GE DETECTORS
Computerized Control Systems
Calibration and performance of a high-resolution gamma-spectroscopy system, 9:32693 (R;US)

LIFE SUPPORT SYSTEMS
Reliability
Laboratory testing of compressed-oxygen self-rescuers for ruggedness and reliability. Report of investigations/1983, 9:32598 (R;US)

LIGASES
Code number 6.
Agglomeration
Undecagold labelling of glutamine synthetase from E. Coli, 9:34375 (R;US)
Molecular Weight
Undecagold labelling of glutamine synthetase from E. Coli, 9:34375 (R;US)
Scanning Electron Microscopy
Alignment of low dose stem images of unstained macromolecules, 9:34376 (R;US)

LIGHT BULBS
Ballasts
High-intensity discharge (HID) solid-state ballast program: engineering development report. Phase II, 9:33517 (R;US)

LIGHT GUIDES
See OPTICAL FIBERS

LIGHT NUCLEI
For nuclei with mass 1-40.

Cluster Model
Energy spectra of light nuclei in potential with forbidden states, 9:34656 (RA;SU;In Russian)

Energy Levels
Energy spectra of light nuclei in potential with forbidden states, 9:34656 (RA;SU;In Russian)

Energy-Level Transitions
Analysis of nonstatistical effects in excited state spectra of complex nuclei, 9:34735 (RA;SU;In Russian)

Giant Resonance
Giant dipole resonances built on highly excited states of light nuclei, 9:34666 (R;US)

Mass Formulae
Analysis of empirical mass relations, 9:34737 (RA;SU;In Russian)

LIGHT WATER COOLED REACTORS
See WATER COOLED REACTORS

LIGHTING SYSTEMS

Computer Codes
CONTROLITE 1.0: program documentation, 9:33518 (R;US)

Control Systems
CONTROLITE 1.0: program documentation, 9:33518 (R;US)

LIGHTNING
Lightning strike density for the contiguous United States from thunderstorm duration records, 9:34176 (R;US)

LIGNIN

Infrared Spectra
Investigations on the dissociation of high molecular organic compounds in natural water, 9:34355 (R;DE;In German)

LIGNITE

Chemical Composition
Fundamental combustion studies of low-rank coal slurries. Quarterly technical progress report. No. 1, March 1-May 31, 1984, 9:32620 (R;US)

Particle Size
Fundamental combustion studies of low-rank coal slurries. Quarterly technical progress report. No. 1, March 1-May 31, 1984, 9:32620 (R;US)

LIME-LIMESTONE WET SCRUBBING PROCESSES

Additives
Buffer additives for lime/limestone slurry scrubbing synthesis, mass transfer, and degradation. Final report Oct 80-Oct 83, 9:34243 (R;US)

LIMESTONE

Catalytic Effects
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)

Injection
IERL-RTP research on sulfur capture in LIMB, 9:32581 (RA;US)
LIMB testing: the use of dry sorbents to reduce sulfur oxide emissions from pulverized-coal flames under low-NO/sub x/ conditions, 9:32632 (RA;US)
Review of in-furnace NO/sub x reduction and SO/sub x/ reduction by sorbent injection, 9:32576 (RA;US)

Sorptive Properties
Calcium silicate cement sorbent for H_2S removal and improved coal gasification processes, 9:32483 (RA;US)
Development of criteria for extension of applicability of low emission, high efficiency coal burners. Annual report Sep 77-Sep 78, 9:32564 (R;US)

LINACS
See LINEAR ACCELERATORS

LINEAR ACCELERATORS
See also FMIT LINAC
HILACS
KHARKOV LINAC
LAMPF LINAC
MIT BATES LINAC
ORELA
STANFORD LINEAR COLLIDER

Beam Bunchers
Tunable waveguide of a linear accelerator bunching section, 9:34029 (RA;UA;In Russian)

Beam Bunching
Analytical studying of the process of particle capture in the field of travelling electromagnetic wave, 9:33998 (RA;UA;In Russian)
Radial dynamics of a beam in the 3-cm linear electron accelerator for the energy of 3.0 MeV, 9:33996 (RA;UA;In Russian)
To the problem of a wave-type transformer effecting electron beam acceleration and bunching in an electron linac injector section, 9:34053 (RA;UA;In Russian)

Beam Currents
Coaxial type resonator current load, 9:34054 (RA;UA;In Russian)
Computer calculation of high-current electron linac electrodynamic parameters, 9:33954 (RA;UA;In Russian)
Increase of electron beam intensity on the LUEh-40 in ector, 9:34043 (RA;UA;In Russian)

Beam Dynamics
Electrodynamic model of transients during charged particle bunch motion through a resonator, 9:33988 (RA;UA;In Russian)
LUER-40M medicine linear accelerator structure, 9:33948 (RA;SU;In Russian)
Technique for studying ion dynamics in linear accelerators with focusing by axially symmetric accelerating filed, 9:33999 (RA;UA;In Russian)

Beam Injection
Linear accelerator injector control system, 9:34075 (RA;UA;In Russian)
System for stabilizing ion beam intensity in an injector of the meson factory linac, 9:34091 (RA;UA;In Russian)
To the problem of a wave-type transformer effecting electron beam acceleration and bunching in an electron linac injector section, 9:34053 (RA;UA;In Russian)

Beam Monitoring
High-frequency structures for excitation of an electro-optical converter of the picosecond linear accelerator electron beam parameters, 9:34071 (RA;UA;In Russian)
Measuring currents of colliding charged particle beams, 9:34064 (RA;UA;In Russian)
Studying the fine structure of beam current pulses in an electron waveguide accelerator, 9:33959 (RA;UA;In Russian)

Beam Monitors
TV-acquired optical diagnostics systems on ATA, 9:34005 (R;US)

Beam Optics
Methods of monoenergetic beam production in electron linear accelerators, 9:33984 (RA;SU;In Russian)

Beam Production
Quantum mechanical restrictions for limiting possibilities of precise beam production in linear accelerators, 9:33958 (RA;UA;In Russian)

Beam Shaping
Developing a system for formation of figure profiled irradiation fields at an electron linac, 9:33989 (RA;UA;In Russian)
Quantum mechanical restrictions for limiting possibilities of precise beam production in linear accelerators, 9:33958 (RA;UA;In Russian)

Beam Transport
Bremsstrahlung dose rate during electron scattering in a beam transport channel, 9:33993 (RA;UA;In Russian)
Electron linac universal accelerating cell, 9:33953 (RA;UA;In Russian)

Capacitors
Power capacitive connection in HF linear accelerators on the base of self-excited oscillators, 9:34048 (RA;UA;In Russian)

Cavity Resonators
Accelerating structures with transversal rods for small-sized electron linacs, 9:34039 (RA;UA;In Russian)
Accelerating resonator calculation by the series method, 9:34060 (RA;UA;In Russian)
Calculation of tolerances in accelerating structures, 9:34088 (RA;UA;In Russian)
Coaxial type resonator current load, 9:34054 (RA;UA;In Russian)

Current loaded resonator with supplying waveguide, 9:34062 (RA;UA;In Russian)
Dispersion properties of a cylindrical H-resonator loaded with a ferrite sphere, 9:34061 (RA;UA;In Russian)
Electric strength of the accelerating structures of small-sized standing wave electron linacs, 9:34040 (RA;UA;In Russian)
Electromagnetic field structure in a cylindrical H-resonator loaded with a ferrite sphere, 9:33997 (RA;UA;In Russian)
Methods for the analysis of transients in the accelerating system of induction linacs, 9:34058 (RA;UA;In Russian)
On-line control of multisection accelerating cell parameters, 9:34078 (RA;UA;In Russian)
Optimization of the electrodynamic characteristics of axially symmetric resonators and waveguides for linacs, 9:34057 (RA;UA;In Russian)
Power capacitive connection in HF linear accelerators on the base of self-excited oscillators, 9:34048 (RA;UA;In Russian)
Radiation field numerical simulation, 9:33994 (RA;UA;In Russian)
Rigorous mathematical models of accelerating structure resonance cells, 9:34063 (RA;UA;In Russian)
Small-sized electron and ion linear resonator accelerators on the base of self-excited oscillators, 9:34047 (RA;UA;In Russian)
Standing wave accelerating systems on the base of multibeam structures, 9:34041 (RA;UA;In Russian)

Colliding Beams
Measuring currents of colliding charged particle beams, 9:34064 (RA;UA;In Russian)

Computer Codes
Developing the package of service programs for electron linac calculation, 9:33956 (RA;UA;In Russian)

Computerized Control Systems
New pulser for principal PO power, 9:34099 (TG;US)
Software for the injector on-line control system, 9:34076 (RA;UA;In Russian)

Control Systems
Circuit for control and stabilization of beam mean current in electron linear accelerator, 9:33963 (RA;SU;In Russian)
Electron linac with wide-range control of parameters - the main installation of a radiation-accelerating facility, 9:34033 (RA;UA;In Russian)

Design
3-cm cryogenic linac (design parameters), 9:33952 (RA;UA;In Russian)
An isochronous stacking ring approach to the HTE, 9:34966 (J;US)
PHERMEX electron gun development, 9:34100 (J;US)

Efficiency
"Fakel" accelerator work state and some results, 9:33951 (RA;SU;In Russian)

Electric Fields
Development of linear accelerators with radial lines excited by an external pulse generator, 9:33983 (RA;SU;In Russian)

Electromagnetic Lenses
Optimization of the LUEh-15-15000D accelerator focusing system, 9:34059 (RA;UA;In Russian)

Electron Sources
Behaviour of the virtual electron source of the Philips SL 75-10 linear accelerator, 9:34023 (RA;IL)
Parity violating weak neutral current effects in elastic e-^{12}C scattering. Progress report, January 1, 1983-April 15, 1984, 9:34016 (R;US)

Energy Losses
Calculating the parameters of losses due to spurious modes in linac accelerating structures, 9:33955 (RA;UA;In Russian)

Energy Spectra
Methods of monoenergetic beam production in electron linear accelerators, 9:33984 (RA;SU;In Russian)

Energy Storage
Energy characteristics of an electron linac with storage in the HF power system, 9:34056 (RA;UA;In Russian)
Two-frequency electron linac with a beam radiation field energy storage, 9:34055 (RA;UA;In Russian)

Focusing
Focusing system of a low-energy electron linac with a wide-range control of beam parameters, 9:34050 (RA;UA;In Russian)
Standing wave electron linac with proper HF-field focusing, 9:34051 (RA;UA;In Russian)

Image Converters
High-frequency structures for excitation of an electro-optical converter of the picosecond linear accelerator electron beam parameters, 9:34071 (RA;UA;In Russian)

Irradiation Procedures
On-line system for determination of the optimum irradiation conditions for the irradiation-accelerator benchmark, 9:34077 (RA;UA;In Russian)

Klystrons
Electron linac klystron efficiency increase at the expense of focusing field profile optimization, 9:34038 (RA;UA;In Russian)
Excitation of supplementary oscillations in a multiresonator klystron, 9:34037 (RA;UA;In Russian)

Mathematical Models
Mathematical description of the 10 MeV three-section electron linac, 9:33960 (RA;UA;In Russian)

Meetings
Physical experiment technique, 9:33964 (R;UA;RU)
Physical experiment technique, 9:33962 (R;UA;RU)

Modifications
Present status and reconstruction of the LUEh-25 electron linac, 9:34032 (RA;UA;In Russian)

Neutron Sources
Preliminary study of possible ORELA replacement options, 9:33966 (R;US)

On-Line Control Systems
Linear accelerator injector control system, 9:34075 (RA;UA;In Russian)
On-line system for determination of the optimum irradiation conditions for the irradiation-accelerator benchmark, 9:34077 (RA;UA;In Russian)
Software for the injector on-line control system, 9:34076 (RA;UA;In Russian)

On-Line Measurement Systems
Information and measuring system for the FAKEL linac, 9:34081 (RA;UA;In Russian)
Measuring currents of colliding charged particle beams, 9:34064 (RA;UA;In Russian)
Systems for measuring beam parameters in the LUEh-120ITs high-current injector subsystems of the EhKU-6 synchrotron on-line control system, 9:34074 (RA;UA;In Russian)

Optimization
Electron linac universal accelerating cell, 9:33953 (RA;UA;In Russian)

Performance
An isochronous stacking ring approach to the HTE, 9:34966 (J;US)
Computer calculation of high-current electron linac electrodynamic parameters, 9:33954 (RA;UA;In Russian)
Operation experience of the REhLUS portable standing wave electron linacs, 9:34034 (RA;UA;In Russian)
PHERMEX electron gun development, 9:34100 (J;US)
Present state of the 300 MeV electron linear accelerator LUEh-300, 9:34025 (RA;UA;In Russian)
U-30 electron linac operating characteristics, 9:34052 (RA;UA;In Russian)

Power Conditioning Circuits
Operating experience with the 50 MeV 10kA ATA power conditioning system, 9:33968 (R;US)

Proton Beams
System for measuring linac proton beam energy spectra during a single pulse, 9:34089 (RA;UA;In Russian)

Radiology
Experimental evaluation of photoneutron doses and photoneutron spectrum from A 16 MeV X-ray medical linear accelerator using CR-39 and polycarbonate passive detectors, 9:34454 (RA;IL)

Reliability
"Fakel" accelerator work state and some results, 9:33951 (RA;SU;In Russian)
Remote Viewing Equipment
TV-acquired optical diagnostics systems on ATA, 9:34005 (R;US)
RF Systems
Design of the radiofrequency power supply system for the LUE-120-ITs high-current electron linear accelerator, 9:34027 (RA;UA;In Russian)
Energy characteristics of an electron linac with storage in the HF power system, 9:34056 (RA;UA;In Russian)
HF-system of a two-sectional standing wave acceleratar, 9:34042 (RA;UA;In Russian)
Specifications
"EhLIUS"-complex of linear electron accelerators in the Kharkov University, 9:34026 (RA;UA;In Russian)
Electron linear accelerators for radiotherapy, 9:33950 (RA;SU;In Russian)
Standing Waves
LUER-40M medicine linear accelerator structure, 9:33948 (RA;SU;In Russian)
Transients
Electrodynamic model of transients during charged particle bunch motion through a resonator, 9:33988 (RA;UA;In Russian)
Transients calculation in a three-section electron accelerator taking into account current loads, 9:33957 (RA;UA;In Russian)
Trigger Circuits
Unit for synchronization of linear accelerator pulsed system triggering, 9:34068 (RA;UA;In Russian)
Waveguides
Spatial-time and spectral characteristics of diffraction radiation of a point charge moving along the axis of a circular waveguide section, 9:33995 (RA;UA;In Russian)

LINEAR PROGRAMMING
Duality
Duality in inexact fractional programming with set-inclusive constraints, 9:34997 (R;US)

LINEAR THETA PINCH DEVICES
Technological problems for construction of a "Combined pinch" device, 9:34862 (RA;SU;In Russian)
Plasma Confinement
Megagauss magnetic field production and eValuation of their application for dense plasma confinement in a linear theta-pinch reactor, 9:34814 (RA;SU;In Russian)
Plasma Heating
Linear theta pinch devices with a fast rising magnetic field for dense plasma heating, 9:34813 (RA;SU;In Russian)

LINEAR Z PINCH DEVICES
Technological problems for construction of a "Combined pinch" device, 9:34862 (RA;SU;In Russian)

LINERS
Crack Propagation
Conditions of crack propagation in steel with austenitic overlay at variable load, 9:33659 (RA;CS;In Czech)
Deformation
Study on deformation of thick-wall short-circuited solenoids in a strong magnetic field in application to their use in a reactor with plasmoid in ection, 9:34908 (RA;SU;In Russian)
Performance Testing
Application of a cold metal reactor wall to the entrained-bed gasification of coal (Water-cooled metal liner), 9:32470 (RA;US)

LIOUVILLE EQUATION
See BOLTZMANN-VLASOV EQUATION

LIPOPROTEINS
Blood Chemistry
Characterization of biophysical properties of baboon lipoproteins: modulation by dietary fat and cholesterol, 9:34440 (R;US)
Quantitative Chemical Analysis
Characterization of biophysical properties of baboon lipoproteins: modulation by dietary fat and cholesterol, 9:34440 (R;US)

LIQUID CRYSTALS
Melting
Melting mechanisms in paraffins and liquid crystals, 9:33741 (RA;BR)

LIQUID IONIZATION CHAMBERS
Photon detectors, E/sub γ/ = several MeV to 1 GeV, 9:34113 (R;US)

LIQUID METAL TEST FACILITIES
See TEST FACILITIES

LIQUID PHASE METHANOL PROCESS
Catalysts
Liquid Phase Methanol Process Development Unit: installation, operation, and support studies. Technical progress report No. 10, 1 January-31 March 1984, 9:32794 (R;US)
Performance Testing
Liquid Phase Methanol Process Development Unit: installation, operation, and support studies. Technical progress report No. 10, 1 January-31 March 1984, 9:32794 (R;US)
Process Development Units
Liquid Phase Methanol Process Development Unit: installation, operation, and support studies. Technical progress report No. 10, 1 January-31 March 1984, 9:32794 (R;US)

LITHIUM 6 REACTIONS
Breakup Reactions
^{6}Li fragmentation on ^{59}Co target at 41 MeV, 9:34684 (RA;SU;In Russian)
Investigation of the reaction ^{6}Li + ^{40}Ca at 156 MeV in a coincidence experiment, 9:34678 (R;DE)

LITHIUM 6 TARGET
Muon Reactions
Two-cluster disintegration of lithium isotopes in interactions with γ-quanta and μ^--mesons, 9:34662 (RA;SU;In Russian)
Photonuclear Reactions
Two-cluster disintegration of lithium isotopes in interactions with γ-quanta and μ^--mesons, 9:34662 (RA;SU;In Russian)
Proton Reactions
Quasi-free scattering and nuclear structure investigation, 9:34659 (RA;BR)

LITHIUM 7
Hypernuclei
Gamma-ray spectroscopy of hypernuclei, 9:34658 (R;US)

LITHIUM 7 TARGET
Photonuclear Reactions
Two-cluster disintegration of lithium isotopes in interactions with γ-quanta and μ^--mesons, 9:34662 (RA;SU;In Russian)

LITHIUM ALLOYS
Sputtering
Sputtering properties of copper-lithium alloys at reactor-level temperatures and surface erosion rates, 9:33625 (R;US)

LITHIUM CARBONATES
Sorptive Properties
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)

LITHIUM COMPOUNDS
See also LITHIUM CARBONATES
LITHIUM OXIDES
Raman Spectra
Raman scattering in piezoelectric crystals with particular respect to orthorhombic $LiGaO_2$, 9:33749 (R;AT;In German)

LITHIUM FLUORIDES
Physical Radiation Effects
Isothermal annealing of tritium from the irradiated LiF crystals with different faulty structures, 9:33753 (RA;SU;In Russian)

LITHIUM IODIDES
Ionic Conductivity
Nuclear magnetic resonance studies of ion motion in solid electrolytes. Annual report, April 1, 1983-March 31, 1984, 9:33738 (R;US)
Nuclear Magnetic Resonance
Nuclear magnetic resonance studies of ion motion in solid electrolytes. Annual report, April 1, 1983-March 31, 1984, 9:33738 (R;US)

LITHIUM OXIDES
Chemical Properties
Property studies of solid tritium breeding materials, 9:33703 (RA;US)
Electric Conductivity
Molten carbonate fuel cell cathode development, 9:33493 (R;US)
Heat Transfer
TRIO-01 experiment, 9:33704 (RA;US)
Mechanical Properties
Property studies of solid tritium breeding materials, 9:33703 (RA;US)
Solubility
Molten carbonate fuel cell cathode development, 9:33493 (R;US)
Tritium Recovery
TRIO-01 experiment, 9:33704 (RA;US)
LITHIUM-CHLORINE BATTERIES
Cathodes
Use of a polyacetylene cathode in primary lithium-thionyl chloride cells, 9:33368 (R;US)
LITHIUM-SULFUR BATTERIES
Electrodes
Lithium-alloy/metal sulfide battery research, 9:33371 (R;US)
Impact Tests
Shock sensitivity of discharged lithium-sulfur dioxide cells, 9:33394 (J;US)
Performance Testing
Lithium-alloy/metal sulfide battery research, 9:33371 (R;US)
Safety
Shock sensitivity of discharged lithium-sulfur dioxide cells, 9:33394 (J;US)
LMFBR TYPE REACTORS
See also CLINCH RIVER BREEDER REACTOR
EBR-2 REACTOR
SNR-1 REACTOR
SNR-2 REACTOR
SUPER PHENIX REACTOR
Breeding Blankets
A liquid-metal fast breeder reactor core design with seed blanket modular assemblies, 9:33348 (J;US)
Computerized Simulation
The DSNP simulation language and its application to liquid-metal fast breeder reactor transient analyses, 9:33355 (J;US)
Containment Systems
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)
Coolant Loops
Determination of CTS-1 parameters in emergency cases, 9:33271 (RA;BR;In Portuguese)
Loop for tests with sodium fire - CTS-2, 9:33272 (RA;BR;In Portuguese)
Operation, maintenance and modifications in the sodium thermal loop - CTS-1, 9:33098 (RA;BR;In Portuguese)
Possibilities evaluation of sodium simulation with the water loop, 9:33100 (RA;BR;In Portuguese)
Project of diffusion cold trap for CTS-1, 9:33099 (RA;BR;In Portuguese)
Explosions
Mechanisms of vapor explosions. Final report, September 1, 1976-March 31, 1984, 9:33257 (R;US)
Failed Element Monitors
Modeling delayed neutron monitoring systems for fast breeder reactors, 9:33094 (R;US)
Fluid-Structure Interactions
Investigation of sodium concrete interaction and the effect of different by-products, 9:33269 (R;DE)
Fuel Assemblies
A liquid-metal fast breeder reactor core design with seed blanket modular assemblies, 9:33348 (J;US)
Fuel Pins
Testing of wet scrap recovery equipment for mixed oxide scrap reprocessing, 9:32700 (R;US)
The effect of time delays in fuel pin failure on LOF-TOP transient calculations for a commercial-sized LMFBR, 9:33357 (J;US)
Fuel-Coolant Interactions
Fragmentation of UO_2 and UC drops entering a sodium pool, 9:33251 (R;US)
Loss of Coolant
Flashing and jet impinging condensation during a postulated sodium blowdown accident of an experiment loop in a test reactor cavity, 9:33254 (R;US)
Loss of Flow
The effect of time delays in fuel pin failure on LOF-TOP transient calculations for a commercial-sized LMFBR, 9:33357 (J;US)
Meltdown
Behavior of impregnated charcoal filters during a two-stage accident, 9:33352 (J;US)
Nuclear Fuels
Examination of fast reactor fuels and FBR analytical quality-assurance standards and methods. Progress report, October 1-December 31, 1983, 9:33112 (R;US)
Primary Coolant Circuits
Transient simulation in a medium channel of LMFBR, 9:33279 (RA;BR;In Portuguese)
Reactor Accidents
Direct measurement of aerosol shape factors, 9:33294 (R;DE;In German)
Testing of the CONTAIN code, 9:33322 (R;US)
Reactor Channels
Transient simulation in a medium channel of LMFBR, 9:33279 (RA;BR;In Portuguese)
Reactor Components
Examination of fast reactor fuels and FBR analytical quality-assurance standards and methods. Progress report, October 1-December 31, 1983, 9:33112 (R;US)
Reactor Cooling Systems
The DSNP simulation language and its application to liquid-metal fast breeder reactor transient analyses, 9:33355 (J;US)
Reactor Cores
A liquid-metal fast breeder reactor core design with seed blanket modular assemblies, 9:33348 (J;US)
Calculations of pressure drop and redistribution of rate of flow in LMFBR reactor core, 9:33106 (RA;BR;In Portuguese)
Reactor Instrumentation
Modeling delayed neutron monitoring systems for fast breeder reactors, 9:33094 (R;US)
Reactor Internals
N-47 postprocessor for high temperature inelastic analyses, 9:33095 (R;US)
Sloshing response of a reactor tank with internals, 9:33256 (R;US)
Reactor Kinetics
Neutronic calculation on LMFBR (1250 MWe) benchmark model, 9:33096 (RA;BR;In Portuguese)
The DSNP simulation language and its application to liquid-metal fast breeder reactor transient analyses, 9:33355 (J;US)
Reactor Materials
Investigation of sodium concrete interaction and the effect of different by-products, 9:33269 (R;DE)
Safety of sodium storage and sodium extinction, 9:33281 (RA;BR;In Portuguese)
Study on the production, elimination and quality of sodium smoke, 9:33107 (RA;BR;In Portuguese)
Reactor Safety
Liquid metal fires. A review of work status in the United Kingdom, 9:33292 (RA;AT)
United States position paper on sodium fires, design and testing, 9:33293 (RA;AT)
Reactor Vessels
N-47 postprocessor for high temperature inelastic analyses, 9:33095 (R;US)
Sloshing response of a reactor tank with internals, 9:33256 (R;US)
Seismic Effects
Sloshing response of a reactor tank with internals, 9:33256 (R;US)

Transient Overpower Accidents
The effect of time delays in fuel pin failure on LOF-TOP transient calculations for a commercial-sized LMFBR, 9:33357 (J;US)
Transients
Development of a computer code for transient simulation in fast reactors, 9:33278 (RA;BR;In Portuguese)
LOAD MANAGEMENT
Cost Benefit Analysis
Measuring the benefits and costs of utility conservation and load-management programs, 9:33583 (J;GB)
Planning
Measuring the benefits and costs of utility conservation and load-management programs, 9:33583 (J;GB)
Simulation
Radial, internal network equivalent for safety monitoring of interconnected networks with a number of regional control centers, 9:33049 (R;CH;In German)
LOCA

LONGWALL MINING
Dusts
Longwall dust control field tests, 9:32595 (R;US)
Water infusion - an effective and economical longwall dust control. Report of investigations/1983, 9:32597 (R;US)
Engineering Geology
Experience from initial longwalling at West Cliff Colliery (Australia), 9:32589 (R;AU)
Mine Haulage
Development and analysis of slurry transport systems in longwall mining of coal. Open file report 30 Sep 81-21 Sep 82, 9:32603 (R;US)
Mining Equipment
Evaluation of coal winning technology - an assessment of the National Coal Board's technological developments, 9:32604 (R;GB)
Production
Experience with initial longwalling at John Darling Colliery (Australia), 9:32590 (R;AU)
Productivity
Evaluation of coal winning technology - an assessment of the National Coal Board's technological developments, 9:32604 (R;GB)
Roofs
Experience with initial longwalling at John Darling Colliery (Australia), 9:32590 (R;AU)
Safety Engineering
Control of longwall gob gas with cross-measure boreholes: Upper Kittanning Coalbed. Report of investigations/1983, 9:32599 (R;US)
Stresses
Experience from initial longwalling at West Cliff Colliery (Australia), 9:32589 (R;AU)
Technology Assessment
Evaluation of coal winning technology - an assessment of the National Coal Board's technological developments, 9:32604 (R;GB)
LOOPS (COOLANT)
See COOLANT LOOPS
LORENTZ INVARIANCE
Lattice Field Theory
Restoration of Lorentz invariance in SU(2) and SU(3) lattice gauge theories, 9:34633 (R;DE)
LOS ALAMOS MESON PHYSICS FACILITY
See LAMPF LINAC
LOS ALAMOS SCIENTIFIC LABORATORY
See LASL
LOSS OF COOLANT
Multidimensional and two-phase flow effects in PWR core reflooding. Final report, 9:33262 (R;US)
Computerized Simulation
LOCA analyses, 9:33285 (RA;CS;In Czech)
Fluid-Structure Interactions
An assessment of TRAC-PD2 refill calculations based on Creare countercurrent flow tests, 9:33350 (J;US)
Flashing and jet impinging condensation during a postulated sodium blowdown accident of an experiment loop in a test reactor cavity, 9:33254 (R;US)
Heat Transfer
An assessment of TRAC-PD2 refill calculations based on Creare countercurrent flow tests, 9:33350 (J;US)
Fast numerical methods in 3-D (PWR; BWR), 9:33297 (R;US)
Flashing and jet impinging condensation during a postulated sodium blowdown accident of an experiment loop in a test reactor cavity, 9:33254 (R;US)
LOCA analyses, 9:33285 (RA;CS;In Czech)
ROSA-III base test series for a large break loss-of-coolant accident in a boiling water reactor, 9:33347 (J;US)
Simulation of the thermalhydraulic behavior of a PWR fuel rod during blowdown, 9:33276 (RA;BR;In Portuguese)
Hydraulics
An assessment of TRAC-PD2 refill calculations based on Creare countercurrent flow tests, 9:33350 (J;US)
Fast numerical methods in 3-D (PWR; BWR), 9:33297 (R;US)
Flashing and jet impinging condensation during a postulated sodium blowdown accident of an experiment loop in a test reactor cavity, 9:33254 (R;US)
LOCA analyses, 9:33285 (RA;CS;In Czech)
ROSA-III base test series for a large break loss-of-coolant accident in a boiling water reactor, 9:33347 (J;US)
Simulation of the thermalhydraulic behavior of a PWR fuel rod during blowdown, 9:33276 (RA;BR;In Portuguese)
Hydrodynamics
Fast numerical methods in 3-D (PWR; BWR), 9:33297 (R;US)
Pumps
Development of an analytic model to determine pump performance under two-phase flow conditions. Final report, 9:33265 (R;US)
Reactor Safety Experiments
ROSA-III base test series for a large break loss-of-coolant accident in a boiling water reactor, 9:33347 (J;US)
Test Facilities
ROSA-III base test series for a large break loss-of-coolant accident in a boiling water reactor, 9:33347 (J;US)
Thermal Stresses
Effect of LOCA simulation procedures on cross-linked polyolefin cable's performance, 9:33325 (R;US)
Two-Phase Flow
Code assessment by a two-phase nozzle flow experiment, 9:33346 (J;US)
LOSS OF FLOW
Fuel Element Failure
The effect of time delays in fuel pin failure on LOF-TOP transient calculations for a commercial-sized LMFBR, 9:33357 (J;US)
Heat Transfer
Calculation of transients in WWER power plant, 9:33287 (RA;CS;In Czech)
TRAC-PF1 analysis of loss-of-fluid test L6-7/L9-2, 9:33295 (R;US)
Hydraulics
Calculation of transients in WWER power plant, 9:33287 (RA;CS;In Czech)
TRAC-PF1 analysis of loss-of-fluid test L6-7/L9-2, 9:33295 (R;US)
LOW DOSE IRRADIATION
Risk Assessment
Estimating the risks of cancer mortality and genetic defects resulting from exposures to low levels of ionizing radiation, 9:34458 (R;US)
LOW FLUX REACTOR PETTEN
See LFR REACTOR

LOW-HEAD HYDROELECTRIC POWER PLANTS
Prior to August 1978 HYDROELECTRIC POWER PLANTS was used.
Field Tests
Application of marine thrusters as ultra-low head hydroturbines, 9:32840 (R;US)
Field test of ultra-low head hydropower package based on marine thrusters. Final report, 9:32809 (R;US)
Thrusters
Application of marine thrusters as ultra-low head hydroturbines, 9:32840 (R;US)
LOW-LEVEL RADIOACTIVE WASTES
Radiation Hazards
PRESTO-PREP: a data preprocessor for the PRESTO-II code, 9:34461 (R;US)
Radioactive Waste Disposal
Seismic design of low-level nuclear waste repositories and toxic waste management facilities, 9:32762 (R;US)
Storage stability of bituminized reactor wastes, 9:32735 (R;FI)
Radionuclide Migration
Some statistical and sampling needs for detecting spills or migration at commercial low-level radioactive waste disposal sites, 9:32759 (R;US)
LUMBER INDUSTRY
See WOOD PRODUCTS INDUSTRY
LUNAR MATERIALS
Particle Tracks
Model for GCR-particle fluxes in stony meteorites and production rates of cosmogenic nuclides, 9:34549 (R;US)
LUNGS
Activation Analysis
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
Biological Models
Large animal model for health hazard assessment of environmental pollutants, 9:34470 (R;US)
Dynamic Function Studies
Chemical characterization and toxicologic evaluation of airborne mixtures: inhalation toxicology of diesel fuel obscurant aerosol in Spargue-Dawley rats. Final report, phase 2, repeated exposures, 9:34482 (R;US)
Neoplasms
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
LUTETIUM ALLOYS
Superconductivity
Superconductivity in ternary rare earth palladium Heusler compounds, 9:33672 (R;US)
LUTETIUM HYDRIDES
Spin-Lattice Relaxation
Conduction electron density of states and proton spin-lattice relaxation in the dihydrides of Sc, Y, La, and Lu, 9:33671 (R;US)
LWR TYPE REACTORS
See WATER COOLED REACTORS
LYMPHOCYTES
Biological Radiation Effects
Effect of the addition of unirradiated autologous monocytes on the thymidine uptakes of PHA stimulated γ irradiated OKT4+, OKT8+ and peripheral blood lymphocytes, 9:34453 (RA;IL)
Cell Proliferation
Cytogenetic monitoring of human populations, 9:34496 (BA;US)
Chromosomal Aberrations
Cytogenetic monitoring of human populations, 9:34496 (BA;US)
Relationship between radiation load and chromosome aberrations in permanent staff of nuclear facilities, 9:34448 (R;DE;In German)
Sister Chromatid Exchanges
Cytogenetic monitoring of human populations, 9:34496 (BA;US)
LYMPHOID CELLS
See LYMPHOCYTES
LYSHOLM ENGINE
See HELICAL ROTARY SCREW EXPANDER

MACERALS
Acoustic Microscopy
Photoacoustic microscopy of coal macerals. Annual report Jan-Dec 83, 9:32550 (R;US)
Expansion
Data base for the analysis of compositional characteristics of coal seams and macerals. Final report, Part 9. Interaction of gases, vapors and liquids with coals and macerals at ambient temperatures: their use to characterize porosity, 9:32545 (R;US)
Porosity
Data base for the analysis of compositional characteristics of coal seams and macerals. Final report, Part 9. Interaction of gases, vapors and liquids with coals and macerals at ambient temperatures: their use to characterize porosity, 9:32545 (R;US)
Swelling
Data base for the analysis of compositional characteristics of coal seams and macerals. Final report, Part 9. Interaction of gases, vapors and liquids with coals and macerals at ambient temperatures: their use to characterize porosity, 9:32545 (R;US)
MAGELLANIC CLOUDS
Photometry
Surface photometry of southern galaxies, 9:34540 (RA;BR)
MAGIC NUCLEI
Quasiparticle-Phonon Model
Selection of mixing with phonons from phenomenological characteristics of single-particle motion in magic nuclei, 9:34736 (RA;SU;In Russian)
MAGIC NUMBERS
See MAGIC NUCLEI
MAGMA SYSTEMS
Heat Extraction
Program to investigate the engineering feasibility of extracting energy from shallow magma bodies, 9:32987 (R;US)
Research Programs
Program to investigate the engineering feasibility of extracting energy from shallow magma bodies, 9:32987 (R;US)
MAGNESIUM
Blood Chemistry
Alterations of serum potassium, serum magnesium and adenosine diphosphate due to various contrast media containing iodine, 9:34400 (R;DE;In German)
Deposition
Comparison of surrogate surfaces for dry deposition collection, 9:34272 (BA;US)
Dry deposition of trace elements in Olympic National Park, 9:34271 (BA;US)
Ecological Concentration
Effects of acid precipitation on forest soils and watershed biogeochemistry in New England. A technical progress report, 9:34336 (R;US)
MAGNESIUM 24 TARGET
Carbon 12 Reactions
Contribution to the study of heavy-ion induced quasi-elastic processes in the 2s-1d shell, 9:34667 (R;FR;In French)
MAGNESIUM 26 TARGET
Proton Reactions
Analysis of scattering of protons with energy near 6 MeV on nuclei with A=26,50, 9:34669 (RA;SU;In Russian)
MAGNESIUM OXIDES
Chemical Radiation Effects
Role of admixed hydroxyl groups in the processes of formation of radiation defects in oxides of alkaline earth elements (Gamma radiation), 9:33830 (RA;UA;In Russian)

Physical Radiation Effects
Structural performance of low-activation ceramics after high-dose neutron irradiation, 9:33706 (RA;US)
Sorptive Properties
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
MAGNET COILS
See also PULSED MAGNET COILS
Configuration
Modular low aspect ratio-high beta torsatron, 9:34961 (P;US)
Cooling Systems
Calculation of hydraulic and temperature characteristics of cryoresistive coils of the "T-15" device with account for heat transfer between coil layers in the regimes of preliminary cooling and cryostatic cooling, 9:34933 (RA;SU;In Russian)
Specifications
Design and fabrication of the magnetic system for the "Uragan-3" torsatron with a spatial divertor, 9:34915 (RA;SU;In Russian)
Strains
Study on the stress-strained state of the toroidal field coils of tokamak type devices, 9:34939 (RA;SU;In Russian)
Stresses
Study on the stress-strained state of the toroidal field coils of tokamak type devices, 9:34939 (RA;SU;In Russian)
MAGNETIC BREMSSTRAHLUNG
See SYNCHROTRON RADIATION
MAGNETIC CIRCUITS
Switches
Magnetic switches and circuits. Rev. 2, 9:33918 (R;US)
MAGNETIC COILS
See MAGNET COILS
MAGNETIC ENERGY STORAGE
Superconducting Coils
Magnet systems for superconducting induction-type power storages without external fields, 9:34934 (RA;SU;In Russian).
MAGNETIC FIELDS
Calculation Methods
Two-sided algorithms for calculating electric and magnetic fields in resonators of complex shape, 9:33992 (RA;UA;In Russian)
Detection
d/dt[B^2] detector: method of operation, 9:34155 (R;US)
MAGNETIC MATERIALS
See also FERRIMAGNETIC MATERIALS
FERROMAGNETIC MATERIALS
Meetings
Proceedings of the 6th European conference on soft magnetic materials held at Eger, 6-9 September 1983, 9:33664 (R;CH)
MAGNETIC MIRRORS
Including systems with minimum-B configuration.
Magnet Coils
Magnet system of the "AMBAL" experimental trap with ambipolar mirrors, 9:34942 (RA;SU;In Russian)
MAGNETIC MONOPOLES
Rubakov effect, 9:34630 (R;DE)
Research Programs
Intermediate-energy nuclear theory. Progress report, March 1, 1982-February 29, 1984, 9:34649 (R;US)
Progress report of a research program in experimental high energy physics. Progress report, January 1, 1984-December 31, 1984, 9:34597 (R;US)
MAGNETIC SPECTROMETERS
See also FLAT MAGNETIC SPECTROMETERS
Calibration
Application of nuclear photoemulsion for magnet spectrometer calibration, 9:34093 (RA;UA;In Russian)
MAGNETOHYDRODYNAMIC GENERATORS
See MHD GENERATORS
MAGNETOHYDRODYNAMICS
Incompressible Flow
Selective decay hypothesis at high mechanical and magnetic Reynolds numbers, 9:34791 (RA;US)
Nonlinear Problems
Calculations of stationary solutions for the non linear viscous resistive MHD equations in slab geometry, 9:34793 (R;FR)
Nonlinear dynamics. Volume 357, 9:34789 (R;US)
MAGNETOSPHERE
Spatial Distribution
Journeys of a spacecraft, 9:34557 (RA;US)

Information Systems
ORNL ALPHA MIS user's manual, 9:35006 (R;US)
Programming
Conceptual design: Subtask 1.B of the Major Item System Mapping project, 9:34978 (R;US)
MANGANESE
Deposition
Deposition of atmospheric trace constituents onto different natural surfaces, 9:34269 (BA;US)
Dry deposition of trace elements in Olympic National Park, 9:34271 (BA;US)
Environmental Transport
Estimates of dry and wet deposition and resuspension fluxes of several trace metals in the Southern Bight of the North Sea, 9:34283 (BA;US)
Intestinal Absorption
Radioisotope studies for quantitative measurement of manganese absorption, 9:34446 (R;DE;In German)
Tissue Distribution
Radioisotope studies for quantitative measurement of manganese absorption, 9:34446 (R;DE;In German)
MANGANESE 54
Leaching
Full-scale leaching study of commercial reactor waste forms, 9:32716 (R;US)
Radioecological Concentration
1. Quarterly progress report 1983, 9:34365 (R;FR;In French)
2. Quarterly progress report, 1983, 9:34366 (R;FR;In French)
4. Quarterly progress report, 1982, 9:34367 (R;FR;In French)
Aerial radiological survey of the Brookhaven National Laboratory and surrounding area, May 1980, 9:34305 (R;US)
Washout
Scavenging ratios and dry deposition velocities of radioactive particles in the tropical regions of India, 9:34324 (BA;US)
MANGANESE ALLOYS
See also STEEL-0KH18N10T
Microstructure
Phase transformations and microstructures of Fe-Nb, Fe-Nb-Mn, Fe-Nb-Mn-Cr alloys of high iron content, 9:33646 (RA;BR;In Portuguese)
Physical Radiation Effects
Fundamental alloy studies (Fe-Ni-Cr; Fe-Cr-Mn), 9:33635 (R;US)
MANGANESE COMPOUNDS
See also MANGANESE OXIDES
Electron Microscopy
EM study of the structure and composition of grain boundaries in (Mn,Zn) Fe_2O_4, 9:33766 (BA;US)
Grain Boundaries
EM study of the structure and composition of grain boundaries in (Mn,Zn) Fe_2O_4, 9:33766 (BA;US)

MANGANESE FLUORIDES
Structural Chemical Analysis
Studies of magnetism and exchange scattering in solids using synchrotron radiation and spin polarized photoemission. Final technical report, June 1, 1981-May 31, 1984, 9:33739 (R;US)
MANGANESE OXIDES
Electric Conductivity
Molten carbonate fuel cell cathode development, 9:33493 (R;US)
Solubility
Molten carbonate fuel cell cathode development, 9:33493 (R;US)
Sorptive Properties
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
MANUFACTURING FACILITIES

LITHIUM-CHLORINE BATTERIES
NICKEL-HYDROGEN BATTERIES
Catalysts
Electrochemistry of perovskites, 9:33407 (J;US)
Cathodes
Oxygen electrode in metal air batteries, 9:33406 (J;US)
Electrodes
Anodic dissolution of aluminum and aluminum alloys: effects of temperature and stannate concentration, 9:33411 (J;US)
Catalytic systems for bifunctional oxygen electrodes, 9:33409 (J;US)
Gas transport study of bifunctional air electrodes, 9:33408 (J;US)

METALLIC GLASSES
Catalytic Effects
Metallic glasses as new catalyst systems for energy conversion. Annual progress report and final technical report, 9:33633 (R;US)
Splat Cooling
Metallic glasses as new catalyst systems for energy conversion. Annual progress report and final technical report, 9:33633 (R;US)
METAL-METAL BATTERIES
Charge State
Self-discharge in alkali metal-containing bimetallic cells, 9:33423 (BA;US)
Performance
High-rate lithium/selenium secondary cell with a fused-salt electrolyte, 9:33421 (BA;US)
Performance characteristics of a lithium-tellurium cell, 9:33422 (BA;US)
METALS
See also ACTINIDES
ALKALI METALS
ALUMINIUM
ANTIMONY
BISMUTH
CADMIUM
INDIUM
LEAD
MERCURY
POLONIUM
RARE EARTHS
SCRAP METALS
TIN
TRANSITION ELEMENTS
ZINC
Abundance
DDO photometry and metallic abundances of E and SO galaxies and globular clusters of the LMC and SMC, 9:34543 (RA;BR)
Corrosion Protection
Corrosion control through a better understanding of the metallic substrate/organic coating/interface. Annual report No. 4, 1 Sep 82-30 Sep 83, 9:33620 (R;US)
Deformation
Materials response to large plastic deformation, 9:33689 (BA;US)
Electric Conductivity
Computeraided measurement of electric resistances of metals irradiated with electrons, 9:33637 (R;DE;In German)
Fatigue
Investigations on crack formation in fatigue slip bands, 9:33652 (R;DE;In German)
Fracture Mechanics
Investigations on crack formation in fatigue slip bands, 9:33652 (R;DE;In German)
Physical Radiation Effects
Computeraided measurement of electric resistances of metals irradiated with electrons, 9:33637 (R;DE;In German)
Effects of irradiation on diffusion in metals and alloys, 9:33693 (BA;GB)
Experimental studies of helium in metals, 9:33685 (J;GB)
Plasticity
Materials response to large plastic deformation, 9:33689 (BA;US)
Radiation Effects
Radiation-induced outgassing from sorption pump material, 9:33187 (J;US)
METASTASES
Correlations
Degree of correlation between cancer proneness, metastaic potential, and DNA repair capacity, 9:34452 (RA;IL)
METEORITES
Particle Tracks
Model for GCR-particle fluxes in stony meteorites and production rates of cosmogenic nuclides, 9:34549 (R;US)
METER WAVE RADIATION
See RADIOWAVE RADIATION
METHANATION
Catalysts
Metal-support interaction studies on clean metal surfaces, 9:32785 (RA;US)
Promoter modifications of catalytic activity and selectivity. Final report, April 1, 1982-March 31, 1984, 9:32784 (R;US)
METHANE
Adsorption
Low-energy process for separating hydrogen and methane in advanced coal gasification, 9:32482 (RA;US)
Biosynthesis
Filtration and methane fermentation of microscopic algae, 9:32852 (R;FR;In French)
Methane from biomass and waste. Annual technical progress report, 9:32787 (R;US)
Microbiological and biochemical studies towards optimization of substrate utilization by methanogenic bacteria. Annual report Dec 82-Dec 83, 9:32788 (R;US)
Chemical Reaction Yield
Coal gasification and tar conversion reactions over calcium oxide, 9:32487 (RA;US)
Process development studies in coal gasification, 9:32489 (RA;US)
Combustion
Conditional velocity statistics in premixed CH_4-air and C_2H_4-air turbulent flames, 9:33845 (R;US)
Elementary processes in the catalytic combustion of methane (mechanism, intermediates and controlling reactions). Annual report Oct 82-Sep 83, 9:33847 (R;US)
Molecular beam mass spectrometer sampling of flash ignited combustion, 9:33846 (R;US)
Two-dimensional measurements of the [OH] in a constant volume combustion chamber, 9:33848 (R;US)
Desorption
Development of coal-gas production simulators and mathematical models for well test strategies (computer models for single- or two-phase flow of methane and water in heterogeneous coal seams to a single, vertical production well connected to a finite conductivity vertical fracture). Topical report Aug 81-Oct 82, 9:32596 (R;US)
Diffusion
Influence of changing particle structure on the rate of gas-solid gasification reactions, 9:32462 (RA;US)
Fires
Studies of flames from various accidental release geometries. Flame size and radiation measurements, 9:32659 (R;NO)
Ion Implantation
Release of ion-implanted and transmutation-produced helium from nickel (Thermal neutrons), 9:33686 (J;GB)
Measuring Methods
Geophysical techniques for coalbed evaluation. Final report Apr 82-Dec 83, 9:32587 (R;US)
Physical Radiation Effects
Release of ion-implanted and transmutation-produced helium from nickel (Thermal neutrons), 9:33686 (J;GB)
Production
Composition of gas produced by large scale anaerobic digestion of municipal solid waste, 9:32792 (BA;US)
Fifth symposium on biotechnology for fuels and chemicals, 9:32798 (B;US)
Full scale field demonstration of unheated anaerobic contact stabilization, 9:32782 (R;US)
Removal
Control of longwall gob gas with cross-measure boreholes: Upper Kittanning Coalbed. Report of investigations/1983, 9:32599 (R;US)
Reserves
Geophysical techniques for coalbed evaluation. Final report Apr 82-Dec 83, 9:32587 (R;US)
Separation Processes
Low-energy process for separating hydrogen and methane in advanced coal gasification, 9:32482 (RA;US)
METHANOGENIC BACTERIA
Biochemistry
Microbiological and biochemical studies towards optimization of substrate utilization by methanogenic bacteria. Annual report Dec 82-Dec 83, 9:32788 (R;US)

METHANOL
Conversion
Proceedings of the fifth meeting on basic heterogeneous catalysis surface science research, 9:32442 (R;US)
Cost
Cost of liquid fuels from coal. Part 3. Methanol and methanol-derived gasoline, 9:32530 (R;GB)
Production
Liquid Phase Methanol Process Development Unit: installation, operation, and support studies. Technical progress report No. 10, 1 January-31 March 1984, 9:32794 (R;US)
Progress in studies on catalyzed gasification of biomass, 9:32797 (R;US)
Sorptive Properties
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
Synthesis
Proceedings of the fifth meeting on basic heterogeneous catalysis surface science research, 9:32442 (R;US)
METHOTREXATE
Excretion
Intravenous elimination and percutaneous absorption of topically applied Methotrexate-^{14}C (NSC 740) in Yorkshire White pigs. Report for Oct-Dec 78, 9:34392 (R;US)
Tissue Distribution
Intravenous elimination and percutaneous absorption of topically applied Methotrexate-^{14}C (NSC 740) in Yorkshire White pigs. Report for Oct-Dec 78, 9:34392 (R;US)
METHYL ALCOHOL
See METHANOL
METHYL BROMIDE
Thermal Diffusion
Mound activities in chemical and physical research: July-December 1983, 9:34971 (R;US)
METHYL IODIDE
Photolysis
Radiation chemistry of hydrocarbon and alkyl halide systems. Annual progress report, August 1, 1983-May 31, 1984 (CF_3I - CH_3I mixture; pure CH_3I and CF_3I; H_2 - CO systems), 9:33826 (R;US)
METHYL PHENOLS
See CRESOLS
METHYLBENZENE
See TOLUENE
METHYL-FUEL
See ALCOHOLS
METHANOL
METRIC SYSTEM
Implementation
US Department of Energy (DOE) Guidelines for the development of metrication program plans, 9:34975 (R;US)
MEXICO
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
MHD GENERATORS
See also CLOSED-CYCLE MHD GENERATORS
PULSED MHD GENERATORS
Electric Discharges
Fossil fuel fired closed cycle MHD power generating experiments, 9:33490 (R;NL)
Performance
Fossil fuel fired closed cycle MHD power generating experiments, 9:33490 (R;NL)
Plasma Diagnostics
Fossil fuel fired closed cycle MHD power generating experiments, 9:33490 (R;NL)
MICROBIAL FLORA
See MICROORGANISMS
MICROBIAL PROCESSES
See BIOCONVERSION
MICROCOMPUTERS
See MICROPROCESSORS
MICRODOSIMETRY
Q-Value
Determination of the mean energy needed for the creation of an ion pair for hydrogen- and helium ions in different gases with energy in the range 95-1110 keV, 9:34564 (R;DE;In German)
MICROFLORA
See MICROORGANISMS
MICROORGANISMS
See also BACTERIA
UNICELLULAR ALGAE
Mineralization
Final administrative report, the BIOSIS-project/. Canada 1980-1982, 9:34432 (R;NO;In Norwegian,English)
Oil Spills
Final administrative report, the BIOSIS-project/. Canada 1980-1982, 9:34432 (R;NO;In Norwegian,English)
Shores
Final administrative report, the BIOSIS-project/. Canada 1980-1982, 9:34432 (R;NO;In Norwegian,English)
MICROPROCESSORS
Determination of the polarization resistance with AC impedance measurements, 9:35004 (J;US)
Radiation Hardening
GfW-handbook for irradiation test guidelines for radiation hardness of electronic components, 9:34142 (R;DE)
MICROSCOPES
Design
Development and capabilities of the LLNL Focused-Beam Reflection-Mode Acoustic Microscope (Focused-Beam Reflection-Mode Acoustic Microscope (FRAM)), 9:34156 (R;US)
Evaluation
Development and capabilities of the LLNL Focused-Beam Reflection-Mode Acoustic Microscope (Focused-Beam Reflection-Mode Acoustic Microscope (FRAM)), 9:34156 (R;US)
Uses
Development and capabilities of the LLNL Focused-Beam Reflection-Mode Acoustic Microscope (Focused-Beam Reflection-Mode Acoustic Microscope (FRAM)), 9:34156 (R;US)
MICROTRONS
Design
GEM, ANL 4-GeV CW electron microtron design, 9:33970 (J;US)
Hexagonal Configuration
GEM, ANL 4-GeV CW electron microtron design, 9:33970 (J;US)
Operation
GEM, ANL 4-GeV CW electron microtron design, 9:33970 (J;US)
Performance
GEM, ANL 4-GeV CW electron microtron design, 9:33970 (J;US)
MICROWAVE AMPLIFIERS
See also MASERS
High-Voltage Pulse Generators
High-Voltage pulse power supply for gyrotrons for ecr heating of a plasma in the T,10 facility, 9:34909 (RA;SU;In Russian)
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILITARY FACILITIES
Total Energy Systems
Initial feasibility report on decentralized small cogeneration for Navy shore bases. Final report 1 Oct 82-30 Sep 83, 9:33575 (R;US)
Waste Management
Installation restoration program. Phase I. Records search. Niagara Falls Air Force Reserve facility, New York, 9:34348 (R;US)
Installation Restoration Program Phase I - Records Search, O'Hare Air Reserve Forces Facility, Illinois, 9:34349 (R;US)

MILITARY PERSONNEL
Radiation Hazards
Initial human response to nuclear radiation. Technical report, 9:34442 (R;US)
MILK
Radioactivity
Environmental Radiation Data, report 35 (July-September 1983), 9:34316 (R;US)
MILKY WAY
Cosmic Ray Flux
Model for GCR-particle fluxes in stony meteorites and production rates of cosmogenic nuclides, 9:34549 (R;US)
MILL TAILINGS
Radiation Hazards
Health effects estimation for contaminated properties, 9:34462 (R;US)
Remedial Action
Uranium mill tailings remedial action technology, 9:32736 (R;US)
MINE HAULAGE
Comparative Evaluations
Development and analysis of slurry transport systems in longwall mining of coal. Open file report 30 Sep 81-21 Sep 82, 9:32603 (R;US)
MINE ROADWAYS
Performance Testing
Development and testing of a new support-integrated system for heading roads in coal and rock, 9:33934 (R;DE;In German)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERAL INDUSTRY
Permits
Colorado's Joint Review Process for major energy and mineral resource development projects, 9:33437 (R;US)
MINERALS
See also ZEOLITES
Isotope Dating
Ores and minerals dating by mass spectrometry, 9:33781 (RA;BR;In Portuguese)
Mass Spectroscopy
Ores and minerals dating by mass spectrometry, 9:33781 (RA;BR;In Portuguese)
Vapor Condensation
Theory of fine particle formation in coal combustion, 9:32617 (R;US)
MINERS
See also COAL MINERS
Health Hazards
High risk groups in oil shale workforce, 9:32691 (R;US)
MINING
See also COAL MINING
OIL SHALE MINING
SURFACE MINING
UNDERGROUND MINING
Safety Engineering
Annual report of the Clausthal-Zellerfeld Board of Mines 1982, 9:33936 (R;DE;In German)
MINING EQUIPMENT
Noise Pollution Control
Noise control of rubber-tired front-end loaders used in surface mining. Open file report 13 Apr 79-31 May 83, 9:32601 (R;US)
MIRRORS
Physical Radiation Effects
Response of multilayer films and mirrors to intense x-irradiation, 9:34143 (R;US)
MIRRORS (MAGNETIC)
See MAGNETIC MIRRORS
MISGURNUS
See FISHES
MIT BATES LINAC
Bates Electron Linear Accelerator Facility at MIT.
Construction
Accelerator development at Bates, 9:34105 (J;US)
Modifications
Accelerator development at Bates, 9:34105 (J;US)
MIXED OXIDE FUEL FABRICATION PLANTS
Nuclear Materials Management
Method for the examination of plutonium quantity in plutonium dioxide used in fuel fabrication for fast neutron reactors at the Cadarache fuel fabrication plant, 9:32765 (R;FR;In French)
MIXED OXIDE FUELS
Uranium dioxide mixed with other oxides.
Chemical Analysis
Determination of the distribution of plutonium concentration in uranium- and plutonium dioxide by X-ray analysis, 9:32701 (R;DE;In German)
Fission Product Release
Irradiation performance of coated fuel particles with fission product retaining kernel additives, 9:33203 (J;US)
MOBILE HOMES
Energy Conservation
Saving money through energy conservation in manufactured housing, 9:33512 (R;US)
MOBILE REACTORS
Designed to be movable while in operation.
See also SPACE POWER REACTORS
Specifications
Low power unattended defense reactor, 9:33114 (R;US)

MOLECULAR SIEVES
Materials Testing
Radiation-induced outgassing from sorption pump material, 9:33187 (J;US)
Radiation Effects
Radiation-induced outgassing from sorption pump material, 9:33187 (J;US)
MOLECULE COLLISIONS
Angular Distribution
Energy redistribution in diatomic molecules on surfaces, 9:34566 (R;US)
MOLECULES
Electronic Structure
Multiconfiguration wavefunctions for molecules: current approaches, 9:34558 (R;US)
MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Cathodes
Molten carbonate fuel cell cathode development, 9:33493 (R;US)
Corrosion
Corrosion of 316L stainless steel in environments simulating molten carbonate fuel cell conditions, 9:33499 (J;US)
Electrodes
Molten carbonate fuel cell performance model update. Quarterly report, October 1983-December 1983, 9:33494 (R;US)

Fuels
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
Gas Flow
Molten carbonate fuel cell performance model update. Quarterly report, October 1983-December 1983, 9:33494 (R;US)
Performance
Molten carbonate fuel cell performance model update. Quarterly report, October 1983-December 1983, 9:33494 (R;US)

MOLTEN SALT REACTORS
Accelerator Breeders
Single-fluid-type accelerator molten-salt breeder (AMSB), 9:33111 (R;JP)
Reactor Kinetics
Single-fluid-type accelerator molten-salt breeder (AMSB), 9:33111 (R;JP)

MOLYBDENUM
Catalytic Effects
Advanced coal liquefaction research. Quarterly technical progress report, January 1-March 31, 1983, 9:32516 (R;US)
Dimerization
Supersonic metal cluster beams. Technical progress report, March 16, 1983-March 15, 1984, 9:33632 (R;US)
Electronic Structure
Supersonic metal cluster beams. Technical progress report, March 16, 1983-March 15, 1984, 9:33632 (R;US)
Sputtering
Sputtering phenomena in ion thrusters. Final Report, 9:34568 (R;US)
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)

MOLYBDENUM 100 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)

MOLYBDENUM 92 REACTIONS
Deep Inelastic Heavy Ion Reactions
Diabatic two-center shell model, 9:34726 (R;DE)
Nuclear Potential
Diabatic interaction potential for nucleus-nucleus collisions, 9:34727 (R;DE)

MOLYBDENUM 92 TARGET
Molybdenum 92 Reactions
Diabatic interaction potential for nucleus-nucleus collisions, 9:34727 (R;DE)
Diabatic two-center shell model, 9:34726 (R;DE)
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)

MOLYBDENUM 94 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)

MOLYBDENUM 95 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)

MOLYBDENUM 96 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)

MOLYBDENUM 97 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)

MOLYBDENUM 98 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)

MOLYBDENUM ALLOYS
See also INCONEL 718
INCONEL 738
STAINLESS STEEL-316
Thermodynamic Properties
Combined thermodynamic study of nickel-base alloys. Final report, 9:33631 (R;US)

MOLYBDENUM OXIDES
Chemical Reaction Yield
MoO_3, ex MoS_2 with further processing of the metal-bearing waste sulfuric acid generated in the process, 9:33699 (R;DE;In German)
Lattice Vibrations
Lattice vibrational behavior of $SnMo_6S_8$ and oxygen defected $SnMo_6S_{7.8}O_{0.2}$, 9:33628 (R;US)

MOLYBDENUM SULFIDES
Catalytic Effects
Reduced molybdenum states in hydrodesulfurization: investigations using Chevrel phase catalysts, 9:33821 (R;US)
Lattice Vibrations
Lattice vibrational behavior of $SnMo_6S_8$ and oxygen defected $SnMo_6S_{7.8}O_{0.2}$, 9:33628 (R;US)
Oxidation
MoO_3, ex MoS_2 with further processing of the metal-bearing waste sulfuric acid generated in the process, 9:33699 (R;DE;In German)

MONAZITES
Heat Treatments
Leaching behaviour of heat-treated monazite, 9:33747 (RA;IL)
Leaching
Alpha-recoil effects on dissolution of monazite, 9:33746 (RA;IL)
Leaching behaviour of heat-treated monazite, 9:33747 (RA;IL)
Radiation Effects
Alpha-recoil effects on dissolution of monazite, 9:33746 (RA;IL)

MONJU REACTOR
Reactor Safety
Japanese studies on sodium fires, design and testing, 9:33110 (RA;AT)

MONTMORILLONITE
Catalytic Effects
Thermal and catalytic cracking of tars and tar constituents from coal gasification processes, 9:32488 (RA;US)

Radionuclide Migration
Measurement of radionuclide diffusion in ocean floor sediment and clay, 9:34368 (J;US)

MULTI-CHANNEL ANALYZERS
Specifications
Multichannel analyzers (Prototype), 9:34125 (RA;BR;In Portuguese)

MULTIGROUP THEORY
Computer Calculations
Modular system for sensitivity calculations and cross sections adjustments, 9:33127 (RA;BR;In Portuguese)
Presentation and user's manual of GAMTEC-II computer code, 9:33138 (RA;BR;In Portuguese)
RMAT 1D computer code. Implantation and user's code, 9:33137 (RA;BR;In Portuguese)
Newton Method
Generalized quasi-static method for nuclear reactor space-time kinetics, 9:33143 (J;US)
One-Dimensional Calculations
Solution of one-dimensional multigroup - diffusion equation by Fourier series with a few terms, 9:33121 (RA;BR;In Portuguese)

MULTIWIRE PROPORTIONAL CHAMBERS
Design
Vertex detector of the UA2 experiment (a low mass self sustaining system of cylindrical multiwire proportional chambers), 9:34133 (R;FR)

MUNICIPAL BUILDINGS
See PUBLIC BUILDINGS

MUNICIPAL WASTES
Anaerobic Digestion
Composition of gas produced by large scale anaerobic digestion of municipal solid waste, 9:32792 (BA;US)
Full scale field demonstration of unheated anaerobic contact stabilization, 9:32782 (R;US)
Briquetting
Simplex coal and biomass gasification process. Phase II-C. Demonstration of Bepex briquetting process properties of commercial Simplex briquettes, 9:32607 (R;US)
Classification
Pulsed-flow air classification for waste to energy production. Final report, 9:33578 (R;US)
Recycling
Construction and development of a resource recovery facility for household waste and commercial waste on a sanitary landfill, 9:33926 (R;DE;In German)

MUON-PROTON INTERACTIONS
Deep Inelastic Scattering
Semi-inclusive hadron production in the deep inelastic μp scattering. Results of experiments of the European Muon Collaboration, 9:34601 (R;DE;In German)
Semi-inclusive Interactions
Semi-inclusive hadron production in the deep inelastic μp scattering. Results of experiments of the European Muon Collaboration, 9:34601 (R;DE;In German)

MUONS
Particle Production
Recent results from the PEP-4 TPC, 9:34604 (R;US)

MUSEUMS
See EDUCATIONAL FACILITIES

MUTAGENESIS
Dose-Response Relationships
Is radiation an appropriate model for chemical mutagenesis and carcinogenesis, 9:34466 (BA;US)
Radiobiology
Is radiation an appropriate model for chemical mutagenesis and carcinogenesis, 9:34466 (BA;US)

MWD SYSTEMS
Sensors and data transmission equipment for real time measurements while drilling.
Research Programs
Analyzing the dynamic behavior of downhole equipment during drilling, 9:32986 (R;US)

MWPC
See MULTIWIRE PROPORTIONAL CHAMBERS

MYOCARDIUM
Biomedical Radiography
Left ventriculography in physical loading conditions on gamma camera nuclear ohaio sigma 410, 9:34408 (RA;BG;In Bulgarian)
Noninvasive diagnosis of right ventricular infarction, 9:34423 (RA;IL)

MYXEDEMA
See HYPOTHYROIDISM

N

N CODES
Validation
Verification of the network flow and transport/distributed velocity (NWFT/DVM) computer code, 9:32757 (R;US)

NAI DETECTORS
Photon detectors, E/sub γ/ = several MeV to 1 GeV, 9:34113 (R;US)
Accuracy
Environmental radiation monitoring system development for atmospheric plumes from light water reactor nuclear power plants, 9:34329 (J;US)
Design
Environmental radiation monitoring system development for atmospheric plumes from light water reactor nuclear power plants, 9:34329 (J;US)

NAL SYNCHROTRON

Solidification
Pattern selection in single-component systems coupling Benard convection and solidification, 9:33904 (R;DE)

NATURAL GAS
Chemisorption
Coadsorption studies on transition metals. Annual report 1 Jan-31 Dec 83, 9:33808 (R;US)

Combustion
Refinery heater fiber burner demonstration program. Final report Oct 81-Dec 83, 9:32684 (R;US)
Desulfurization
SO2 emissions in natural gas production industry: background information for proposed standards. Draft environmental impact statement, 9:34371 (R;US)
Energy Consumption
Synopsis of the Annual Energy Review and Outlook 1983, 9:33459 (R;US)
Energy Demand
Analysis of the potential for gas demand strategies. Report on evaluation of existing gas models and plan for creating a model appropriate to the needs of DOE/RA, 9:33426 (R;US)
Energy Models
Analysis of the potential for gas demand strategies. Report on evaluation of existing gas models and plan for creating a model appropriate to the needs of DOE/RA, 9:33426 (R;US)
Legislation
First report required by Section 123 of the Natural Gas Policy Act of 1978. Executive summary, 9:32681 (R;US)
Market
Competition and other current issues in the natural gas market, 9:32679 (R;US)
First report required by Section 123 of the Natural Gas Policy Act of 1978. Executive summary, 9:32681 (R;US)
Natural gas monthly, April 1984, 9:32678 (R;US)
Phase Studies
Liquid-vapor and solid-liquid-vapor phase equilibria in natural gas systems. Annual report 1 Jan 83-1 Jan 84, 9:32682 (R;US)
Prices
First report required by Section 123 of the Natural Gas Policy Act of 1978. Executive summary, 9:32681 (R;US)
Production
Naval Petroleum and Oil Shale Reserves. Annual report of operations, fiscal year 1983, 9:32661 (R;US)
Reserves
Natural gas monthly, April 1984, 9:32678 (R;US)
Resource Assessment
Natural gas monthly, April 1984, 9:32678 (R;US)
Solvent Properties
Solubility of hydrocarbons in the compressed natural gas. Application to petroleum migration in sedimentary basins, 9:32672 (R;FR;In French)
Supply and Demand
First report required by Section 123 of the Natural Gas Policy Act of 1978. Executive summary, 9:32681 (R;US)

NATURAL GAS APPLIANCES
See GAS APPLIANCES

NATURAL GAS DEPOSITS
See also NATURAL GAS FIELDS
Hydraulic Fracturing
Western Gas Sands Subprogram, 9:32675 (R;US)

NATURAL GAS FIELDS
Computerized Simulation
Petroleum and gas reservoir models, EFP 81. Technical status report 1981-05-01 to 1982-02-28, 9:32656 (R;DK;In Danish)

NATURAL GAS WELLS
Explosive Fracturing
Application of a new multiple fracturing technique to enhance gas production in Devonian shale, 9:32680 (R;US)
Well Drilling
Multi-well experiment MWX-3 as-built report, 9:32677 (R;US)
Well Logging
Multi-well experiment MWX-3 as-built report, 9:32677 (R;US)

NATURAL LIGHTING
See DAYLIGHTING

NATURAL RUBBER
Exports
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)

NATURAL URANIUM
Radiation Doses
Evaluation of the radiation field from uranium, 9:32760 (RA;IL)

NATURE RESERVES
Visibility
Copper smelters and atmospheric visibility in national parks and wilderness areas in the southwest, 9:34229 (R;US)

NAVAL OIL SHALE RESERVES
Naval Petroleum and Oil Shale Reserves. Annual report of operations, fiscal year 1983, 9:32661 (R;US)

NAVAL PETROLEUM RESERVE
Exploitation
Naval Petroleum and Oil Shale Reserves. Annual report of operations, fiscal year 1983, 9:32661 (R;US)

NEA
Nuclear Energy
NEA activities in 1982, 9:33119 (R;FR)

NEBULAE
Ionization
Volumes of He^+ and H^+ zones in HII regions - The Orion nebula, 9:34542 (RA;BR)

NEGATIVE IONS
See ANIONS

NEGATONS
See ELECTRONS

NEGATRONS
See ELECTRONS

NEOCLASSICAL TRANSPORT THEORY
Variational Methods
Electron transport in EBT in the low collision frequency limit, 9:34821 (R;US)

NEOPLASMS
See also GLIOMAS
LEUKEMIA
Activation Analysis
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
Diagnosis
Clinic, diagnosis and therapy of tumors of the small intestine. A survey about 53 cases between 1961 and 1980, 9:34404 (R;DE;In German)
Radiotherapy
Results of radiotherapy of malignant tumors of the epi-, meso- and hypopharynx. A retrospective study from 1960 to 1978, 9:34405 (R;DE;In German)
Scintiscanning
Portrayal of pheochromocytoma and normal human adrenal medulla by m-[^{123}I]iodobenzylguanidine: concise communication, 9:34428 (J;US)

NEPTUNIUM 237
Moessbauer Effect
Study of hyperfine interactions in neptunium chalcogenides: NpS_3, $NpSe_3$, Np_2Se_5, Np_3S_5 and Np_3Se_5 by neptunium 237 Moessbauer resonance, 9:33833 (R;FR;In French)

NEPTUNIUM COMPLEXES
Solvent Extraction
Study of the chemical interactions of actinide cations in solution at macroscopic concentrations, 9:32702 (R;FR;In French)

NEPTUNIUM ISOTOPES
See also NEPTUNIUM 237
Diffusion
Measurement of radionuclide diffusion in ocean floor sediment and clay, 9:34368 (J;US)

NEPTUNIUM SELENIDES
Hyperfine Structure
Study of hyperfine interactions in neptunium chalcogenides: NpS_3, $NpSe_3$, Np_2Se_5, Np_3S_5 and Np_3Se_5 by neptunium 237 Moessbauer resonance, 9:33833 (R;FR;In French)

NEPTUNIUM SULFIDES
Hyperfine Structure
Study of hyperfine interactions in neptunium chalcogenides: NpS_3, $NpSe_3$, Np_2Se_5, Np_3S_5 and Np_3Se_5 by neptunium 237 Moessbauer resonance, 9:33833 (R;FR;In French)

NERVOUS SYSTEM DISEASES
Diagnosis
Axial CT of the brain compared with other clinical methods of examination in neuropaediatry, 9:34414 (R;DE;In German)

NETHERLANDS
Energy Conservation
Improvement of the energy efficiency: opportunities for industry, 9:33486 (R;NL;In Dutch)
Energy Policy
Calculations with the energy model SELPE: investments in four energy scenarios, 9:33428 (R;NL;In Dutch)
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
NETWORKS (COMPUTER)
See COMPUTER NETWORKS
NEUTRAL BEAM SOURCES
See also ATOMIC BEAM SOURCES
Magnet Coils
Performance analysis of 180° reflection magnet in Doublet III neutral beamline, 9:34847 (R;US)
NEUTRAL-CURRENT INTERACTIONS
Research Programs
Progress report of a research program in experimental high energy physics. Progress report, January 1, 1984-December 31, 1984, 9:34597 (R;US)
NEUTRALIZATION (CHEMICAL)
See PH VALUE
NEUTRINO OSCILLATION
Introduction to neutrino oscillations and neutrino masses, 9:34621 (R;DE)
Research Programs
Progress report of a research program in experimental high energy physics. Progress report, January 1, 1984-December 31, 1984, 9:34597 (R;US)
NEUTRINO-ELECTRON INTERACTIONS
See also ANTINEUTRINO-ELECTRON INTERACTIONS
Research Programs
Progress report of a research program in experimental high energy physics. Progress report, January 1, 1984-December 31, 1984, 9:34597 (R;US)
NEUTRINO-PROTON INTERACTIONS
See also ANTINEUTRINO-PROTON INTERACTIONS
Research Programs
Progress report of a research program in experimental high energy physics. Progress report, January 1, 1984-December 31, 1984, 9:34597 (R;US)
NEUTRINOS
See also ANTINEUTRINOS
Energy Spectra
Restoration of neutrino spectra from ^{235}U and ^{239}Pu fission products on the base of beta spectra, 9:34692 (RA;SU;In Russian)
Mass
Angular correlation in Auger cascade coincidence measurements, 9:34572 (R;US)
Rest Mass
Introduction to neutrino oscillations and neutrino masses, 9:34621 (R;DE)
NEUTRON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
NEUTRON REACTIONS
NEUTRON BEAMS
Beam Transport
Computational investigations on a catenary-shaped double-reflecting neutron guide, 9:34745 (R;DE)
NEUTRON CAMERAS
Images
Source imaging using neutron pinhole cameras based on position-sensitive proportional counters, 9:34140 (J;US)
Performance
Source imaging using neutron pinhole cameras based on position-sensitive proportional counters, 9:34140 (J;US)
Position Sensitive Detectors
Source imaging using neutron pinhole cameras based on position-sensitive proportional counters, 9:34140 (J;US)
Proportional Counters
Source imaging using neutron pinhole cameras based on position-sensitive proportional counters, 9:34140 (J;US)
NEUTRON CAPTURE
See NEUTRON REACTIONS
NEUTRON CAPTURE THERAPY
TRIGA Type Reactors
A design study of the neutron irradiation facility for boron neutron capture therapy, 9:34429 (J;US)
NEUTRON DETECTION
Gas Scintillation Detectors
Comparative measurements between a Li-6 glass and a He-3 high-pressure gas scintillator, 9:34118 (R;DE)
Proportional Counters
TACI: a code for interactive analysis of neutron data produced by a tissue equivalent proportional counter, 9:34135 (R;US)
Solid Scintillation Detectors
Comparative measurements between a Li-6 glass and a He-3 high-pressure gas scintillator, 9:34118 (R;DE)
Tissue-Equivalent Detectors
TACI: a code for interactive analysis of neutron data produced by a tissue equivalent proportional counter, 9:34135 (R;US)
NEUTRON DETECTORS
See also ACTIVATION DETECTORS
Calibration
Absolute calibration technique for spontaneous fission sources, 9:32764 (R;US)
NEUTRON DIFFRACTOMETERS
Beam Profiles
Intensity profiles behind a five-stage neutron interferometer, 9:34746 (R;DE;In German)
Control Systems
Control program of the neutron four-circle-diffractometer P32 at the SILOE reactor/CEN Grenoble, 9:34132 (R;DE)
NEUTRON DIFFUSION EQUATION
Computer Calculations
EXTERMINATOR - 2 computer code, 9:33132 (RA;BR;In Portuguese)
HAMMER, LITHE and HELP computer codes, 9:33131 (RA;BR;In Portuguese)
Presentation and user's manual of ONED computer code, 9:33136 (RA;BR;In Portuguese)
Four-Dimensional Calculations
A Multiregion calculation in the theory of neutron diffusion, 9:34756 (J;US)
Newton Method
Generalized quasi-static method for nuclear reactor space-time kinetics, 9:33143 (J;US)
Numerical Solution
A Multiregion calculation in the theory of neutron diffusion, 9:34756 (J;US)
Three-Dimensional Calculations
Synthesis method with finite elements for three-dimensional diffusion multigroup calculations, 9:33135 (RA;BR;In Portuguese)
NEUTRON DOSIMETRY
Activation Detectors
Integral reaction rate measurements in ^{252}Cf and ^{235}U fission spectra. Final report, 9:34134 (R;US)
Calibration Standards
Contribution to the development of a primary standard for high energy neutron beams, 9:34117 (R;FR;In French)
Calorimetric Dosemeters
Contribution to the development of a primary standard for high energy neutron beams, 9:34117 (R;FR;In French)
Evaluation
Experimental evaluation of photoneutron doses and photoneutron spectrum from A 16 MeV X-ray medical linear accelerator using CR-39 and polycarbonate passive detectors, 9:34454 (RA;IL)
Performance Testing
Neutron and gamma personnel dosemeter response in mixed radiation fields, 9:34138 (J;GB)
NEUTRON ECONOMY
See NEUTRON FLUX
NEUTRON FLUX
Coupling
A rigorous treatment of transverse buckling effects in two-dimensional neutron transport computations, 9:33148 (J;US)

Homogenization Methods
Approximation procedures for the spatial variable in neutronic distribution, 9:33124 (RA;BR;In Portuguese)
Multigroup Theory
Solution of one-dimensional multigroup - diffusion equation by Fourier series with a few terms, 9:33121 (RA;BR;In Portuguese)
Neutron Transport Theory
Approximation procedures for the energy variable in neutronic distribution, 9:33123 (RA;BR;In Portuguese)

NEUTRON FLUX DENSITY
See NEUTRON FLUX

NEUTRON IMPORTANCE FUNCTION
Distribution
A recursive Monte Carlo method for estimating importance function distributions in deep-penetration problems, 9:34753 (J;US)
Monte Carlo Method
A recursive Monte Carlo method for estimating importance function distributions in deep-penetration problems, 9:34753 (J;US)

NEUTRON MATTER
See NUCLEAR MATTER

NEUTRON REACTIONS
Capture
Ru(n,γ) cross sections above 2.6 KeV, 9:34701 (J;US)
Charge-Exchange Reactions
Activation cross sections for ^{66}Zn(n,p)^{66}Cu, 9:34685 (J;US)
Cross section measurement for the ^{52}Cr(n,p)^{52}V reaction near threshold, 9:34679 (J;US)
Elastic Scattering
Analyzing power Asub(y)(THETA) for ^{12}C(n vector,nsub(0,1))^{12}C in the neutron energy range from 6.8 to 17.3 MeV, 9:34660 (R;DE;In German)
Fast Fission
Near-equilibrium measurements of delayed neutron spectra from fast fission of plutonium-240, 9:34718 (J;US)
Fission
Determination of fission product yields lanthanides and yttrium, in the ^{238}U fission with neutrons of fission spectra, 9:34710 (RA;BR;In Portuguese)
Note on the prompt-fission-neutron spectra of uranium-233 and -235 and plutonium-239 and -240 relative to that of californium-252, 9:34716 (J;US)
Inelastic Scattering
Activation of isomeric states of nuclei in reactions of inelastic scattering of photons and neutrons in activation analysis at electron accelerator, 9:34696 (RA;SU;In Russian)
Analyzing power Asub(y)(THETA) for ^{12}C(n vector,nsub(0,1))^{12}C in the neutron energy range from 6.8 to 17.3 MeV, 9:34660 (R;DE;In German)
Angular anisotropy of neutron inelastic scattering on Se nuclei and the role of the direct reaction mechanism in the range of E approximately 1 MeV, 9:34683 (RA;SU;In Russian)
Cross section measurement for the reaction /sup 103/Rh (n,n') /sup 103m/Rh , 9:34700 (J;US)
Pickup Reactions
Measurement of cross sections for the ^{63}Cu(n,α)^{60}Co reaction from threshold to 10 MeV, 9:34686 (J;US)
RBE
Relative biological effectiveness in V79 Chinese hamster cells of the neutron capture reactions in boron and nitrogen, 9:34464 (J;US)
Thermal Fission
Fission product yields for thermal-neutron fission of plutonium-239, 9:34720 (J;US)
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
Total Cross Sections
Description of the total cross sections for neutron scatteripg on germanium isotopes in the energy range approximately 1 MeV using the generalized optical model, 9:34677 (RA;SU;In Russian)

NEUTRON REFLECTORS
Fabrication
Report on material tests and mock-up tests for fabrication of the KUHFR reflector tank, 9:33245 (R;JP;In Japanese)

NEUTRON SOURCE FACILITIES
See also IPNS-I SYNCHROTRON
Planning
Summary report on responses to a questionnaire on DOE's materials research facilities, 9:34972 (R;US)

NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Feasibility Studies
Preliminary study of possible ORELA replacement options, 9:33966 (R;US)
Maintenance
Neutron generators, 9:32772 (RA;BR;In Portuguese)
Neutron Flux
PGN,plasma neutron source, 9:34906 (RA;SU)
Thermonuclear Reactions
Neutron plasma sources on the base of electromagnetic traps for technological testing of thermonuclear reactor materials, 9:34875 (RA;SU;In Russian)

NEUTRON SPECTRA
Computer Calculations
Neutron spectral calculation in fundamental method for fast reactors - comparative analysis between differents methodologies, 9:33126 (RA;BR;In Portuguese)

NEUTRON SPECTROSCOPY
Spectrometry of fast neutrons, 9:34123 (RA;BR;In Portuguese)
Time-of-Flight Method
Neutron time-of-flight data acquisition system, 9:34119 (R;GB)

NEUTRON STARS
Nuclear Matter
Physics of ultra-high-density matter, 9:34523 (R;FR;In French)
Pion Condensation
Pion condensation and neutron star dynamics, 9:34547 (RA;HU)
Star Evolution
Physics of ultra-high-density matter, 9:34523 (R;FR;In French)

NEUTRON THERAPY
See also NEUTRON CAPTURE THERAPY
Depth Dose Distributions
Organ doses and effective dose equivalent for external neutron beams derived by the CHORD-method, 9:34397 (R;DE)
Dose Equivalents
Organ doses and effective dose equivalent for external neutron beams derived by the CHORD-method, 9:34397 (R;DE)

NEUTRON TRANSPORT
Computer Codes
Systems guide to MCNP (Monte Carlo Neutron and Photon Transport Code), 9:34749 (R;US)

NEUTRON TRANSPORT THEORY
See also MULTIGROUP THEORY
Adjoint Difference Method
Convergence rates of spatial difference equations for the discrete-ordinates neutron transport equations in slab geometry, 9:33150 (J;US)
Analytical Solution
Exponentially time dependent solutions of the monoenergetic neutron transport equation for plane symmetry, 9:34747 (RA;IL)
Boltzmann Equation
Approximation procedures for the angular variable in neutronic distribution, 9:33122 (RA;BR;In Portuguese)
Computer Calculations
ANISN - Presentation and user's manual, 9:33139 (RA;BR;In Portuguese)
Corrections
A rigorous treatment of transverse buckling effects in two-dimensional neutron transport computations, 9:33148 (J;US)
Discrete Ordinate Method
A rigorous treatment of transverse buckling effects in two-dimensional neutron transport computations, 9:33148 (J;US)
Comparison of the order of approximation in several spatial difference schemes for the discrete-ordinates transport equation in one-dimensional plane geometry, 9:33144 (J;US)
Convergence rates of spatial difference equations for the discrete-ordinates neutron transport equations in slab geometry, 9:33150 (J;US)

Finite Element Method
A rigorous treatment of transverse buckling effects in two-dimensional neutron transport computations, 9:33148 (J;US)
Multigroup Theory
Approximation procedures for the energy variable in neutronic distribution, 9:33123 (RA;BR;In Portuguese)
Perturbation Theory
Homogenized diffusion approximations to the neutron transport equation, 9:33145 (J;US)
Two-Dimensional Calculations
A rigorous treatment of transverse buckling effects in two-dimensional neutron transport computations, 9:33148 (J;US)
Linear characteristic-nodal transport method for the two-dimensional (x,y)-geometry multigroup discrete ordinates equations over an arbitrary triangle mesh, 9:34748 (R;US)
Variational Methods
A rigorous treatment of transverse buckling effects in two-dimensional neutron transport computations, 9:33148 (J;US)

NEUTRON-DEFICIENT ISOTOPES
Mass
Analysis of empirical mass relations, 9:34737 (RA;SU;In Russian)

NEUTRON-RICH ISOTOPES
Beta-Minus Decay
Beta spectroscopy on neutron-rich nuclei of mass $93 <= A <= 100$, 9:34682 (R;DE;In German)
Mass Defect
Beta spectroscopy on neutron-rich nuclei of mass $93 <= A <= 100$, 9:34682 (R;DE;In German)

NEUTRONS
See also FAST NEUTRONS
THERMAL NEUTRONS
Diffusion
A Multiregion calculation in the theory of neutron diffusion, 9:34756 (J;US)
Multigroup Theory
Neutron diffusion in graphite poisoned with 1/v and non-1/v absorbers, 9:33215 (J;US)
Neutron Diffusion Equation
Neutron diffusion in graphite poisoned with 1/v and non-1/v absorbers, 9:33215 (J;US)

NEVADA TEST SITE
Radiation Monitoring
Operation Phalanx onsite radiological safety report, October 1982-September 1983, 9:34169 (R;US)
Radioactive Waste Disposal
Commercial nuclear waste research and development program. Quarterly report, January-March 1984, 9:32720 (R;US)

NEW HAMPSHIRE
Igneous Rocks
Crystalline rocks of the northeastern United States, 9:34506 (R;US)
Crystalline rocks of the northeastern United States, 9:34507 (R;US)

NEW JERSEY
Igneous Rocks
Crystalline rocks of the northeastern United States, 9:34506 (R;US)
Crystalline rocks of the northeastern United States, 9:34507 (R;US)

NEW MEXICO
Coal Mining
Federal coal-leasing policy; and the Bisti Badlands Wilderness proposal. Oversight hearings before the Subcommittee on Mining, Forest Management, and Bonneville Power Administration and the Subcommittee on Public Lands and National Parks, House of Representatives, Ninety-Eighth Congress, First Session, 9:32648 (B;US)
Geochemical Surveys
Low-temperature geothermal potential of the Ojo Caliente warm springs area, northern New Mexico, 9:32961 (R;US)
Land Leasing
Federal coal-leasing policy; and the Bisti Badlands Wilderness proposal. Oversight hearings before the Subcommittee on Mining, Forest Management, and Bonneville Power Administration and the Subcommittee on Public Lands and National Parks, House of Representatives, Ninety-Eighth Congress, First Session, 9:32648 (B;US)
Resistivity Surveys
Low-temperature geothermal potential of the Ojo Caliente warm springs area, northern New Mexico, 9:32961 (R;US)
Temperature Surveys
Low-temperature geothermal potential of the Ojo Caliente warm springs area, northern New Mexico, 9:32961 (R;US)
Wilderness Protection Acts
Federal coal-leasing policy; and the Bisti Badlands Wilderness proposal. Oversight hearings before the Subcommittee on Mining, Forest Management, and Bonneville Power Administration and the Subcommittee on Public Lands and National Parks, House of Representatives, Ninety-Eighth Congress, First Session, 9:32648 (B;US)

NEW SOUTH WALES
Coal Industry
Coal in New South Wales, 9:32637 (R;AU)

NEW YORK
Igneous Rocks
Crystalline rocks of the northeastern United States, 9:34506 (R;US)
Crystalline rocks of the northeastern United States, 9:34507 (R;US)

NICKEL
Catalytic Effects
Advanced coal liquefaction research. Quarterly technical progress report, January 1-March 31, 1983, 9:32516 (R;US)
Steam reforming of aromatic hydrocarbons, 9:32490 (RA;US)
Deposition
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Dimerization
Supersonic metal cluster beams. Technical progress report, March 16, 1983-March 15, 1984, 9:33632 (R;US)
Electronic Structure
Supersonic metal cluster beams. Technical progress report, March 16, 1983-March 15, 1984, 9:33632 (R;US)
Ion Implantation
Release of ion-implanted and transmutation-produced helium from nickel (Thermal neutrons), 9:33686 (J;GB)
Physical Radiation Effects
Release of ion-implanted and transmutation-produced helium from nickel (Thermal neutrons), 9:33686 (J;GB)
Response of multilayer films and mirrors to intense x-irradiation, 9:34143 (R;US)
Theory of small clusters of helium in metals, 9:33684 (J;GB)
Precipitation Scavenging
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Scavenging rates of sulfur and trace metals from a smelter plume, 9:34260 (BA;US)
Surface Properties
Coadsorption studies on transition metals. Annual report 1 Jan-31 Dec 83, 9:33808 (R;US)

NICKEL 58 TARGET
Alpha Reactions
Nuclear structure and intermediate energy hadron probes: excitation of high energy multipole resonances by inelastic scattering of 340 MeV and 480 MeV α-particle, 9:34671 (R;FR)
Proton Reactions
Analysis of experimental data on inelastic scattering of protons with approximately 6 MeV energy in ^{58}Ni, 9:34674 (RA;SU;In Russian)

NICKEL 60 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)

NICKEL ALLOYS
See also ALLOY-HS-31
CHROMIUM-NICKEL STEELS
NICKEL BASE ALLOYS
Moessbauer Effect
Moessbauer studies in $Fe_{40}Ni_{40}P_{14}B_6$ and $Fe_{40}Ni_{38}Mo_4B_{18}$ metallic glasses, 9:33662 (RA;CH)

Physical Radiation Effects
Fundamental alloy studies (Fe-Ni-Cr; Fe-Cr-Mn), 9:33635 (R;US)
Non-equilibrium segregation in irradiated alloys, 9:33694 (BA;GB)
Sorptive Properties
Analysis of the hydrogen absorption in the U(Alsub(x)Nisub(1-x))$_2$ system, 9:33653 (RA;IL)
Experimental studies of the geometric and electronic structure of chemisorption bonding. Annual report Jan-Dec 83, 9:33818 (R;US)
Kinetics of the absorption of hydrogen by LaNi$_5$H/sub x//n-undecane suspensions. Part II. The H$_2$/n-undecane system, 9:32781 (R;US)
Kinetics of the absorption of hydrogen by LaNi$_5$H/sub x//n-undecane suspensions. Part I. The H$_2$/LaNi$_5$H/sub x//n-undecane system, 9:32780 (R;US)

NICKEL BASE ALLOYS
See also HAYNES 188 ALLOY
Oxidation
Selective solar absorptance of some oxide and sulfide films grown in-situ on binary metal alloys. Final report, 9:32947 (R;US)
Phase Diagrams
Combined thermodynamic study of nickel-base alloys. Final report, 9:33631 (R;US)
Physical Radiation Effects
Nonequilibrium segregation and phase instability in alloy films during elevated-temperature irradiation in a high-voltage electron microscope, 9:33626 (R;US)
Sulfidation
Selective solar absorptance of some oxide and sulfide films grown in-situ on binary metal alloys. Final report, 9:32947 (R;US)
Thermodynamic Properties
Combined thermodynamic study of nickel-base alloys. Final report, 9:33631 (R;US)

NICKEL HYDROXIDES
Electrochemistry
Structural studies of alkaline nickel electrode powders, 9:33401 (J;US)

NICKEL SULFIDES
Electrochemistry
Electrochemical performance of porous nickel sulfide electrodes, 9:33376 (R;US)

NICKEL-CADMIUM BATTERIES
Reviews
Study of bipolar batteries, 9:33387 (R;US)

NICKEL-HYDROGEN BATTERIES
Reviews
Study of bipolar batteries, 9:33387 (R;US)

NICKEL-IRON BATTERIES
See IRON-NICKEL BATTERIES

NICKEL-ZINC BATTERIES
Battery Charging
Charging studies on maintenance-free nickel-zinc cells, 9:33396 (J;US)
Cathodes
Performance of nickel cathodes as free standing electrodes in the Ni-Zn vibrocel, 9:33402 (J;US)
Design
Recent advances in nickel-zinc cell technology, 9:33391 (J;US)
Electrodes
Effect of inorganic additives on zinc electrodes in alkaline batteries, 9:33403 (J;US)
Reviews
Study of bipolar batteries, 9:33387 (R;US)
Technology Assessment
Recent advances in nickel-zinc cell technology, 9:33391 (J;US)

NIOBIUM
Absorption Spectroscopy
Determination of niobium and tantalum/niobium mixtures, 9:33785 (RA;BR;In Portuguese)

NIOBIUM 100
Beta-Minus Decay
Beta spectroscopy on neutron-rich nuclei of mass 93<=A<=100, 9:34682 (R;DE;In German)
Mass Defect
Beta spectroscopy on neutron-rich nuclei of mass 93<=A<=100, 9:34682 (R;DE;In German)

NIOBIUM ALLOYS
See also INCONEL 600
INCONEL 718
NIOBIUM BASE ALLOYS
Microstructure
Phase transformations and microstructures of Fe-Nb, Fe-Nb-Mn, Fe-Nb-Mn-Cr alloys of high iron content, 9:33646 (RA;BR;In Portuguese)
Phase Transformations
Phase transformations and microstructures of Fe-Nb, Fe-Nb-Mn, Fe-Nb-Mn-Cr alloys of high iron content, 9:33646 (RA;BR;In Portuguese)
Shape Memory Effect
X-ray diffraction study of shape memory in uranium-niobium alloys, 9:33696 (BA;US)

NIOBIUM BASE ALLOYS
Compression
X-ray investigation of Nb3Ge under high pressure, 9:33674 (R;DE;In German)
Superconductivity
Multifilamentary superconducting (NbTa)-Sn composite wire by solid-liquid reaction for possible application above 20 tesla, 9:33687 (J;NL)

Comparison of several techniques for determining dry deposition flux, 9:34278 (BA;US)
Deposition of atmospheric trace constituents onto different natural surfaces, 9:34269 (BA;US)
Pollutant deposition as a result of interception of wind-driven cloud - measurements made at a site in northern England, 9:34185 (BA;US)
Relationship between dry deposition as measured via collection with a dry bucket vs ambient air concentrations, 9:34273 (BA;US)
Precipitation Scavenging
Preliminary measurements on the scavenging of sulfate and nitrate by clouds, 9:34251 (BA;US)

NITRIC ACID
Deposition
Measurements of the dry-deposition flux of nitric acid vapor to grasslands and forest, 9:34342 (BA;US)
Precipitation Scavenging
Precipitation scavenging of highly soluble gases, 9:34216 (BA;US)
Precipitation scavenging and tropospheric mixing, 9:34219 (BA;US)
Scavenging of nitric acid vapor by snow, 9:34257 (BA;US)

NITRIC OXIDE
NO.
Air Pollution Control
In-furnace control of NO formation in gas- and oil-fired utility boilers, 9:32631 (RA;US)

NITROCELLULOSE
Diffusion
Determination of phlegmatizer concentration profiles in nitrocellose propellant grains by means of radioisotope tracer technique, 9:34159 (R;DE;In German)

NITROGEN
Diffusion
Influence of changing particle structure on the rate of gas-solid gasification reactions, 9:32462 (RA;US)

Electronic Structure
Multiconfiguration wavefunctions for molecules: current approaches, 9:34558 (R;US)
NITROGEN 14
Neutron Reactions
Relative biological effectiveness in V79 Chinese hamster cells of the neutron capture reactions in boron and nitrogen, 9:34464 (J;US)
NITROGEN 14 REACTIONS
Fusion Reactions
Detection of a direct process in the $^{12}C(^{14}N,d)^{24}Mg$ reaction, 9:34663 (RA;SU;In Russian)
NITROGEN 14 TARGET
Proton Reactions
Quasi-free scattering and nuclear structure investigation, 9:34659 (RA;BR)
NITROGEN DIOXIDE
NO_2.
Biological Effects
Dry deposition of nitrogen dioxide to Scots pine needles, 9:34339 (BA;US)
Foliar Uptake
Dry deposition of nitrogen dioxide to Scots pine needles, 9:34339 (BA;US)
Monitoring
Update on NO/sub x/ related regulations, 9:34332 (RA;US)
NITROGEN NITRIDES

Economic and engineering analysis of arch-fired furnaces, 9:32630 (RA;US)
Economics of SCR post combustion NO/sub x/ control processes, 9:32638 (RA;US)
Evaluation of tangential fired low NO/sub x/ burner, 9:32627 (RA;US)
Evaluation of NO/sub x/ and NO/sub x//SO/sub x/ flue gas treatment technology for coal-fired sources, 9:32582 (RA;US)
Fossil steam generator NO/sub x/ control update, 9:32624 (RA;US)
Foster Wheeler's low NO/sub x/ combustion program status and developments, 9:32623 (RA;US)
Fuel staging for pulverized coal furnace NO/sub x/ control, 9:32575 (RA;US)
LIMB testing: the use of dry sorbents to reduce sulfur oxide emissions from pulverized-coal flames under low-NO/sub x/ conditions, 9:32632 (RA;US)
Low-NO/sub x/ firing system for tangentially coal-fired utility boilers: preliminary testing, 9:32629 (RA;US)
Low-NO/sub x/ tangential system SO/sub x/ control through sorbent injection, 9:32579 (RA;US)
NO/sub x/ reduction by reburning with gas and coal: bench scale studies, 9:32574 (RA;US)
Operation and performance report of the Steinmueller low NO/sub x/ SM-burner and its potential towards utility boiler SO/sub x/-control via sorbent injection, 9:32578 (RA;US)
Proceedings of the 1982 joint symposium on stationary combustion NO/sub x/ control. Volume 1. Utility boiler applications, 9:34226 (R;US)
Review of in-furnace NO/sub x reduction and SO/sub x/ reduction by sorbent injection, 9:32576 (RA;US)
Status of NO/sub x/ controls for Riley Stoker wall-fired and turbo-fired boilers, 9:32569 (RA;US)
Status of tangential firing low NO/sub x/ technology, 9:32625 (RA;US)
Status of Japanese technical development for coal combustion NO/sub x/ control (Matsushima Thermal Power Station and Takehara Thermal Power Station), 9:32572 (RA;US)
Thermal DeNO/sub x/ demonstration project, 9:32664 (RA;US)
Collisions
Energy redistribution in diatomic molecules on surfaces, 9:34566 (R;US)
Combustion Control
Proceedings of the 1982 joint symposium on stationary combustion NO/sub x/ control. Volume 1. Utility boiler applications, 9:34226 (R;US)
Comparative Evaluations
Evaluation of NO/sub x/ and NO/sub x//SO/sub x/ flue gas treatment technology for coal-fired sources, 9:32582 (RA;US)
Deposition
Update on acid deposition, 9:34227 (RA;US)
Emission
NO/sub x/ emissions control with the distributed mixing burner. Part I. Field evaluation on an industrial size boiler, 9:32626 (RA;US)
Total emission of CO, Hydrocarbons and NOsub(x) from the Danish carpark. Prognosis from year 1980 until 2000, 9:34224 (R;DK;In Danish)
Utility perspective on NO/sub x/ control, 9:32568 (RA;US)
Monitoring
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Update on NO/sub x/ related regulations, 9:34332 (RA;US)
Precipitation Scavenging
Effects of in-cloud scavenging on the transport and gas phase reactions of SO/sub x/, NO/sub x/, HC/sub x/, H/sub x/O/sub y/, and O_3 compounds, 9:34215 (BA;US)
Reduction
Catalytic DeNO/sub x/ demonstration system Huntington Beach Generating Station Unit 2, 9:32583 (RA;US)
Current status of dry NO/sub x/-SO/sub x/ emission control processes, 9:32584 (RA;US)
Thermal DeNO/sub x/ demonstration project, 9:32664 (RA;US)
Separation Processes
Development of criteria for extension of applicability of low emission, high efficiency coal burners. Annual report Sep 77-Sep 78, 9:32564 (R;US)
Trace Amounts
Effects of in-cloud scavenging on the transport and gas phase reactions of SO/sub x/, NO/sub x/, HC/sub x/, H/sub x/O/sub y/, and O_3 compounds, 9:34215 (BA;US)
NITROSO COMPOUNDS
Comparative Evaluations
Evaluation of NO/sub x/ and NO/sub x//SO/sub x/ flue gas treatment technology for coal-fired sources, 9:32582 (RA;US)
NITROUS OXIDE
N_2O.
Monitoring
Analysis of long-term NO emission data from pulverized coal-fired utility boilers, 9:32571 (RA;US)
NMR
See NUCLEAR MAGNETIC RESONANCE
NMR SPECTROMETERS
Construction
Solid state NMR methods for coal science. Progress report, January 1-March 31, 1984, 9:32546 (R;US)
Performance Testing
Solid state NMR methods for coal science. Progress report, January 1-March 31, 1984, 9:32546 (R;US)
NOISE POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.

Manuals
Noise control of rubber-tired front-end loaders used in surface mining. Open file report 13 Apr 79-31 May 83, 9:32601 (R;US)
NONAXIAL NUCLEI

In-Situ Retorting
Oil yield losses in non-uniform in situ oil shale retorts, 9:32686 (R;US)
Simulated in situ retorting of Michigan Antrim oil shale, 9:32687 (J;US)
Retorting
Formation, deposition, and drainage of mist in porous media with application to oil shale retorting, 9:32685 (R;US)
OIL SPILL FINGERPRINTING
See OIL SPILLS
OIL SPILLS
Biodegradation
Final administrative report, the BIOSIS-project/. Canada 1980-1982, 9:34432 (R;NO;In Norwegian,English)
Microbiology II. Biodegradation of oil - 1981. Study results, 9:34490 (RA;NO)
Microbiology: II. Biodegradation of oil - 1980 study results, 9:34433 (RA;NO)
Combustion
Equipment for incinerating oily mass. PFO-project No. 2302, 9:32666 (R;NO;In Norwegian)
Microorganisms
Microbiology: II. Biodegradation of oil - 1980 study results, 9:34433 (RA;NO)
Mineralization
Final administrative report, the BIOSIS-project/. Canada 1980-1982, 9:34432 (R;NO;In Norwegian,English)
Microbiology II. Biodegradation of oil - 1981. Study results, 9:34490 (RA;NO)
Microbiology: II. Biodegradation of oil - 1980 study results, 9:34433 (RA;NO)
Skimmers
OHMSETT (Oil and Hazardous Materials Simulated Environmental Test Tank) test series 77: Global Oil Recovery Skimmer, Veegarm Skimming Arm, Kebab 600, Wylie Skimmer and the Skim-Pak Cluster. Final report Jan 80-Jun 81, 9:32665 (R;US)
Solidification
Final administrative report, the BIOSIS-project/. Canada 1980-1982, 9:34432 (R;NO;In Norwegian,English)
OIL WELLS
Carbon Dioxide Injection
Carbon dioxide for the recovery of (residual) crude oil. Final report, 9:32652 (R;US)
Displacement of oil by carbon dioxide. Final report, 9:32650 (R;US)
In-Situ Combustion
Study on the available fuel during co-current in-situ combustion (heavy oil), 9:32655 (R;FR;In French)
Steam Injection
Recovery of heavy oil and tar sands using a high-temperature nuclear steam supply, 9:32654 (R;US)
Waterflooding
About unilateral problems degenerated from the theory of two-phase flow in porous medium. Application to G. Chavent's modelling of techniques of secondary exploitation of petroleum deposits, 9:32653 (R;FR;In French)
Effect of stimulation by surfactants on the pressure gradient around an injection well, 9:32657 (R;NO)
OLEFINS
See ALKENES
OLIVINE
Electric Conductivity
Mechanisms of electrical conductivity in olivine, 9:33756 (R;US)
Thermoelectric Properties
Mechanisms of electrical conductivity in olivine, 9:33756 (R;US)
OLIVINES
See OLIVINE
ONCOGENIC TRANSFORMATIONS
Radioinduction
Multifractionation of ^{60}Co gamma-rays reduces neoplastic transformation in vitro, 9:34465 (J;US)
ON-LINE COMPUTERS
See ON-LINE SYSTEMS
ON-LINE CONTROL SYSTEMS
Documentation
Ideas to improve on-line control documentation with a view to new on-line control concepts, 9:33033 (RA;DE;In German)
Maintenance
Possibilities and procedures for maintenance of on-line control systems, 9:33029 (RA;DE;In German)
Operation
Present on-line control concepts - necessity or luxury, 9:33031 (RA;DE;In German)
Outages
First results of outage statistics of on-line control systems, 9:33030 (RA;DE;In German)
Reliability
Reliability prediction of different on-line control systems, 9:33027 (RA;DE;In German)

Statistics
First results of outage statistics of on-line control systems, 9:33030 (RA;DE;In German)
Uses
New on-line control generation in the view of the user critical review and requirements, 9:33032 (RA;DE;In German)
ON-LINE MEASUREMENT SYSTEMS
Energy Spectra
System for measuring linac proton beam energy spectra during a single pulse, 9:34089 (RA;UA;In Russian)
ON-LINE SYSTEMS
See also ON-LINE CONTROL SYSTEMS
ON-LINE MEASUREMENT SYSTEMS
Data Covariances
Uncertainty analysis of time-dependent nonlinear systems: theory and application to transient thermal hydraulics, 9:33345 (J;US)
Response Functions
Uncertainty analysis of time-dependent nonlinear systems: theory and application to transient thermal hydraulics, 9:33345 (J;US)
Sensitivity Analysis
Uncertainty analysis of time-dependent nonlinear systems: theory and application to transient thermal hydraulics, 9:33345 (J;US)
OPE MODEL
Delta-1236 Resonances
Nonlocality of the isobar propagation and the effective Δ-nucleus spin-orbit interaction, 9:34731 (RA;BR)
OPTICAL FIBERS
Connectors
Optical fiber termination and splicing techniques, 9:33867 (R;US)
Joining
Optical fiber termination and splicing techniques, 9:33867 (R;US)
Polishing
Optical fiber termination and splicing techniques, 9:33867 (R;US)
OPTICAL SYSTEMS
Antireflection Coatings
Wide spectrum antireflective coating for laser fusion systems. Final report, 9:34957 (R;US)
ORANGE-TYPE SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS
ORBITAL SOLAR POWER PLANTS
Microwave Power Transmission
Solid state SPS microwave generation and transmission study. Volume I. Phase II final report, 9:32903 (R;US)
ORELA
Oak Ridge Electron Linear Accelerator.
Beam Dynamics
ORELA flight path 1: determinations of its effective length vs energy, experimental energies, and energy resolution function and their uncertainties, 9:34003 (R;US)
ORES
See also IRON ORES
Isotope Dating
Ores and minerals dating by mass spectrometry, 9:33781 (RA;BR;In Portuguese)
Mass Spectroscopy
Ores and minerals dating by mass spectrometry, 9:33781 (RA;BR;In Portuguese)
ORGANIC COMPOUNDS
See also AMINES
AROMATICS
HYDROCARBONS
ORGANIC PHOSPHORUS COMPOUNDS
ORGANIC SULFUR COMPOUNDS
PROTEINS
Removal
Treatment of coal gasification wastewater using rotating biological contactors (Total organic carbon), 9:32555 (R;US)
ORGANIC INSULATORS
Electrical Properties
Cryogenic neutron irradiation effects in organic insulators for superconducting coils, 9:33725 (RA;US)
Mechanical Properties
Cryogenic neutron irradiation effects in organic insulators for superconducting coils, 9:33725 (RA;US)
Radiation Effects
Cryogenic neutron irradiation effects in organic insulators for superconducting coils, 9:33725 (RA;US)
ORGANIC PHOSPHORUS COMPOUNDS
Excluding NUCLEIC ACIDS and NUCLEOTIDES.
Tissue Distribution
Action of cholinergic poisons on the central nervous system and effectiveness of potential antidotes. Annual report 1 Jul 81-30 Jun 82, 9:34468 (R;US)
Toxicity
Action of cholinergic poisons on the central nervous system and effectiveness of potential antidotes. Annual report 1 Jul 81-30 Jun 82, 9:34468 (R;US)
Chemical pretreatment. Effects on acetylcholine, behavior, and agent incapacitation. Final report 1 Oct 79-30 Sep 82, 9:34467 (R;US)
ORGANIC SOLVENTS
Boiling Points
Effects of accumulated solids and solvent initial boiling point on dissolver performance. Final technical report, 9:32497 (R;US)
Chemical Composition
Combined processing of coal and heavy resids. Progress report, January 16, 1984-April 15, 1984 (Use of crude and residual petroleum products as solvents), 9:32520 (R;US)
Effects of start-up solvent on composition of recycle liquefaction product slurry from low-rank coal, 9:32449 (R;US)
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)
Chemical Reactions
Cleavage of aromatic carbon-carbon bonds (Cleavage reactions with o-terphenyl), 9:32450 (R;US)
Cleaning
Solvent cleanup using base-treated silica gel solid adsorbent, 9:32708 (R;US)
Comparative Evaluations
Combined processing of coal and heavy resids. Progress report, January 16, 1984-April 15, 1984 (Use of crude and residual petroleum products as solvents), 9:32520 (R;US)
Enthalpy
Subcontracted R & D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Vol. 3, 9:32511 (R;US)
Hydrogen Transfer
Cleavage of aromatic carbon-carbon bonds (Cleavage reactions with o-terphenyl), 9:32450 (R;US)
Hydrogenation
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)
Study of the kinetics of hydrogenation using aged catalysts. Quarterly technical progress report, 1 October 1983-31 December 1983, 9:32522 (R;US)
Recycling
Effects of start-up solvent on composition of recycle liquefaction product slurry from low-rank coal, 9:32449 (R;US)
Roles and origins of active solvents for coal liquefaction. Final report, 9:32528 (R;US)
Solvent Properties
Evaluation of intermolecular attractive forces in coal derived liquids. Quarterly report, February 1984-April 1984, 9:32524 (R;US)
Structural Chemical Analysis
Effects of start-up solvent on composition of recycle liquefaction product slurry from low-rank coal, 9:32449 (R;US)
Thermodynamic Properties
Subcontracted R and D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Volume 1 (Mostly gases and light hydocarbons with aromatics and coal liquid fractions), 9:32509 (R;US)

ORGANIC SULFUR COMPOUNDS
See also SULFONIC ACIDS
THIOPHENE
Heats of formation of gas phase organosulfur molecules radicals and ions measured by Pipeco. Progress report, August 1981-May 31, 1982, 9:33819 (R;US)
Heats of formation of gas phase organosulfur molecules, radicals and ions measured by PEPICO, and application of ^{17}O and ^{33}S NMR spectroscopy to structure determinations of organosulfur compounds. Progress report, June 1, 1983-April 15, 1984, 9:33820 (R;US)
Removal
Acid gas removal process, 9:32484 (RA;US)
ORNL
Accounting
Conceptual design: Subtask 1.B of the Major Item System Mapping project, 9:34978 (R;US)
Management
Conceptual design: Subtask 1.B of the Major Item System Mapping project, 9:34978 (R;US)
Radioactive Waste Disposal
Design and construction of a French drain for groundwater diversion in solid waste storage area six at the Oak Ridge National Laboratory, 9:32734 (R;US)
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Radioactive Waste Facilities
Feasible modifications for the low-level waste treatment plant at Oak Ridge National Laboratory, 9:32733 (R;US)
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Radioactive Waste Processing
Investigation of the concentration, distribution, and inventory of radionuclides in the sediment of Process Waste System Basin 3524, 9:34363 (R;US)
Research Programs
Energy Division annual progress report for period ending September 30, 1983, 9:33429 (R;US)
ORNL RESEARCH REACTOR
See ORR REACTOR
ORNL-PCA REACTOR
Reactor Operation
Bulk Shielding Facility quarterly report, October, November, and December 1983, 9:33236 (R;US)
ORR REACTOR
Reactor Operation
Oak Ridge Research Reactor quarterly report, October, November, and December 1983, 9:33235 (R;US)
ORTHOGONAL PINCH DEVICES (LINEAR)

OXYGEN METERS
Experiences with zirconium dioxide measuring cells for oxygen concentrations in flue gases, 9:32560 (RA;DE;In German)
Fabrication
Developments in electrochemical oxygen meter probes for use in liquid sodium, 9:33237 (J;US)
Performance Testing
Developments in electrochemical oxygen meter probes for use in liquid sodium, 9:33237 (J;US)
Solid Electrolytes
Developments in electrochemical oxygen meter probes for use in liquid sodium, 9:33237 (J;US)
OZONE
Dry deposition on coniferous forest of SO_2 at ppb levels, 9:34341 (BA;US)

Biological Effects
Effects of ozone or SO_2 on growth and yield of rice. Final report Jan-Dec 82, 9:34484 (R;US)
Impact of O_3 and SO_2 on soybean yield (CSRCLAP), 9:34475 (R;US)
Impact of O_3 on winter wheat yield (CSRCLAP), 9:34476 (R;US)
Impact of O_3 on yield of four soybean cultivars (CSRCLAP), 9:34474 (R;US)
Chemical Reactions
Comparison of the ozonolysis products of the methylnaphthalenes and dimethylnapthalenes in hexane, methanol, and water, 9:33822 (R;US)
Deposition
Experimental constraints in micrometeorological gaseous pollutant fluxes, 9:34343 (BA;US)
Precipitation Scavenging
Effects of in-cloud scavenging on the transport and gas phase reactions of SO/sub x/, NO/sub x/, HC/sub x/, H/sub x/O/sub y/, and O_3 compounds, 9:34215 (BA;US)
Trace Amounts
Effects of in-cloud scavenging on the transport and gas phase reactions of SO/sub x/, NO/sub x/, HC/sub x/, H/sub x/O/sub y/, and O_3 compounds, 9:34215 (BA;US)

P

P CODES
Evaluation
Gasification modeling support (CHEMFLUB, FLAG, FLAME and PCGC-2), 9:32476 (RA;US)
P REACTOR
Neutron Flux
Neutron fluence in P,K reactor tank walls, 9:33243 (R;US)
Reactor Materials
Neutron fluence in P,K reactor tank walls, 9:33243 (R;US)
Reactor Vessels
Neutron fluence in P,K reactor tank walls, 9:33243 (R;US)
PACKAGING
Performance Testing
Safety analysis report for packages: packaging of fissile and other radioactive materials. Final report, 9:32710 (R;US)
PADUCAH PLANT
Radiation Monitoring
Environmental monitoring report: United States Department of Energy, Paducah Gaseous Diffusion Plant, calendar year 1983, 9:34311 (R;US)
PAH
See POLYCYCLIC AROMATIC HYDROCARBONS
PAIR SPECTROMETERS
Photon detectors, E/sub γ/ = several MeV to 1 GeV, 9:34113 (R;US)
PALLADIUM
Solvent Properties
Effect of pressure on the solubility of molecular water in a β-phase palladium-hydrogen system, 9:33714 (TJ;US)
Specific Heat
Absence of magnetic field dependence of the cyclotron effective masses in Pd, 9:33627 (R;US)
PALLADIUM 102 TARGET
Proton Reactions
Analysis of 6 MeV proton scattering on Pd even-even nuclei and dependence of the power of an imaginary part of the optical potential on the mass number, 9:34693 (RA;SU;In Russian)
PALLADIUM 104 TARGET
Proton Reactions
Analysis of 6 MeV proton scattering on Pd even-even nuclei and dependence of the power of an imaginary part of the optical potential on the mass number, 9:34693 (RA;SU;In Russian)
PALLADIUM 106 TARGET
Proton Reactions
Analysis of 6 MeV proton scattering on Pd even-even nuclei and dependence of the power of an imaginary part of the optical potential on the mass number, 9:34693 (RA;SU;In Russian)
PALLADIUM 108 TARGET
Proton Reactions
Analysis of 6 MeV proton scattering on Pd even-even nuclei and dependence of the power of an imaginary part of the optical potential on the mass number, 9:34693 (RA;SU;In Russian)
PALLADIUM 110 TARGET
Proton Reactions
Analysis of 6 MeV proton scattering on Pd even-even nuclei and dependence of the power of an imaginary part of the optical potential on the mass number, 9:34693 (RA;SU;In Russian)
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
PALLADIUM ALLOYS
Splat Cooling
Metallic glasses as new catalyst systems for energy conversion. Annual progress report and final technical report, 9:33633 (R;US)
Superconductivity
Superconductivity in ternary rare earth palladium Heusler compounds, 9:33672 (R;US)
Thermomagnetism
Thermomagnetic properties of GdPd, 9:33678 (R;US)
PALLADIUM COMPLEXES
Chemical Preparation
Separation of gas mixtures by supported complexes ($Pd_3(dpm)_2X_3$), 9:33775 (RA;US)
Sorptive Properties
Separation of gas mixtures by supported complexes ($Pd_3(dpm)_2X_3$), 9:33775 (RA;US)
PALLADIUM HYDRIDES
Phase Studies
Effect of pressure on the solubility of molecular water in a β-phase palladium-hydrogen system, 9:33714 (TJ;US)
PALO DURO BASIN
Exploratory Wells
Well completion report - J. Friemel No. 1 (PD-9) well, Palo Duro Basin, Texas: unanalyzed data, 9:32714 (R;US)
PAPER INDUSTRY
Power Demand
Industrial process models of electricity demand. Volume 1. Summary report. Final report, 9:33461 (R;US)
Industrial process models of electricity demand. Volume 2. The pulp and paper industry. Final report, 9:33462 (R;US)
PARAFFIN
Melting
Melting mechanisms in paraffins and liquid crystals, 9:33741 (RA;BR)
PARAFFINS

QUARK-QUARK INTERACTIONS
Amplitudes
Quadratic constraints in amplitude analysis, 9:34645 (R;US)

PARTICLE MODELS
See also JET MODEL
UNIFIED GAUGE MODELS
Exotic multiquark states with charm, 9:34624 (BA;US)

PARTICLE RESUSPENSION
Deposition and resuspension, 9:34266 (BA;US)
Some recent studies of the resuspension of deposited material from soil and grass, 9:34322 (BA;US)
Mathematical Models
Concept of resuspension rates applied to problems of fugitive dust emissions and wind erosion, 9:34345 (BA;US)
Universal model for entrainment processes, 9:34281 (BA;US)

PARTICLE SIZE
Measuring Methods
Simultaneous in situ measurement of the size, temperature and velocity of particles in a combustion environment, 9:32633 (R;US)

PARTICLE SIZE CLASSIFIERS
Testing
Pulsed-flow air classification for waste to energy production. Final report, 9:33578 (R;US)

PARTICLE-HOLE MODEL
Life time of nuclear hole states in the relativistic theory of Walecka, 9:34730 (RA;BR)

PARTICLES
When appropriate use more specific terms listed under CHARGED PARTICLES, ELEMENTARY PARTICLES, and QUASI PARTICLES.
See also PARTICULATES
Critical Velocity
Experimental studies on the velocity of a particle immersed in a rotating fluid, 9:33891 (RA;BR;In Portuguese)
Fluid Flow
Experimental studies on the velocity of a particle immersed in a rotating fluid, 9:33891 (RA;BR;In Portuguese)
Precipitation Scavenging
Scavenging of submicron particles in mixed clouds: physical mechanisms - laboratory experiments, 9:34203 (BA;US)

PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Deposition
Comparison of several techniques for determining dry deposition flux, 9:34278 (BA;US)
Deposition and resuspension, 9:34266 (BA;US)
Dry deposition model sensitivity, 9:34321 (BA;US)
Eddy flux and profile measurements of small-particle dry-deposition velocity at the Boulder Atmospheric Observatory (BAO), 9:34277 (BA;US)
Influence of relative humidity and sea salt nuclei on the eddy flux determination of small particle dry deposition over the sea, 9:34284 (BA;US)
Relationship between dry deposition as measured via collection with a dry bucket vs ambient air concentrations, 9:34273 (BA;US)
Emission
Concept of resuspension rates applied to problems of fugitive dust emissions and wind erosion, 9:34345 (BA;US)
Filtration
Control of respirable particles and radon progeny with portable air cleaners, 9:34230 (R;US)
Inhalation
Problems associated with assessing the mutagenicity of inhalable particulate matter, 9:34294 (BA;US)
Monitoring
LIDAR measurements in the vicinity of the Kingston Steam Plant, Tennessee, during March 18-22, 1981, 9:34228 (R;US)
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Mutagen Screening
Genetic effects of ethylene dibromide in drosophila melanogaster, 9:34295 (BA;US)
Monitoring ambient air for mutagenicity using the higher plant Tradescantia, 9:34293 (BA;US)
Problems associated with assessing the mutagenicity of inhalable particulate matter, 9:34294 (BA;US)
Particle Size
Simultaneous in situ measurement of the size, temperature and velocity of particles in a combustion environment, 9:32633 (R;US)
Removal
Development of a process for the simultaneous high-temperature removal of alkali and particulates in pressurized gasification systems, 9:32481 (RA;US)
Temperature Measurement
Simultaneous in situ measurement of the size, temperature and velocity of particles in a combustion environment, 9:32633 (R;US)
Velocity
Simultaneous in situ measurement of the size, temperature and velocity of particles in a combustion environment, 9:32633 (R;US)
X-Ray Fluorescence Analysis
Profiles of elements in the surface boundary layer, 9:34280 (BA;US)

PARTONS
Distribution Functions
Relation of parton distribution functions in Drell-Yan process to deeply inelastic scattering, 9:34610 (R;US)

PASSIVE SOLAR COOLING SYSTEMS
Construction

Gasification
Gasification of indigenous fuels and the use of gas in commercial greenhouses, 9:32538 (R;FI;In Finnish)
Liquefaction
Oil from peat and biomass. Final report from the fifth stage, 9:32534 (R;SE;In Swedish and English)
Marketing
Peat in Nord-Troendelag. A survey of the selection of products and the production methods, 9:32551 (R;NO;In Norwegian)
Production
Peat in Nord-Troendelag. A survey of the selection of products and the production methods, 9:32551 (R;NO;In Norwegian)
Sampling
Development of sampling method for milled peat, 9:32552 (R;FI;In Finnish)
Uses
Peat in Nord-Troendelag. A survey of the selection of products and the production methods, 9:32551 (R;NO;In Norwegian)
Peatlands as an energy source in Finland, 9:32640 (R;FI)
PEC BRASIMONE REACTOR
Fuel Elements
Elastic analysis of the grid where the PEC reactor fuel elements are supported, 9:33104 (RA;BR;In Portuguese)
Pressure Vessels
Study on the efforts produced by an incident of abrupt liberation of energy in PEC reactor, 9:33277 (RA;BR;In Portuguese)
Reactor Accidents
Study on the efforts produced by an incident of abrupt liberation of energy in PEC reactor, 9:33277 (RA;BR;In Portuguese)
Reactor Cores
Elastic analysis of the grid where the PEC reactor fuel elements are supported, 9:33104 (RA;BR;In Portuguese)
Reactor Safety
Italian position paper on the safety analysis of liquid metal fast breeder reactors as related to sodium fires. The PEC reactor, 9:33291 (RA;AT)
PELLETS (FUEL)
See FUEL PELLETS
PENETRATORS
Fracture Properties
Fracture behavior of a uranium and a tungsten alloy in a notched component with inertia loading. Final report, 9:33621 (R;US)
PENNSYLVANIA
Igneous Rocks
Crystalline rocks of the northeastern United States, 9:34506 (R;US)
Crystalline rocks of the northeastern United States, 9:34507 (R;US)

PERFORMANCE TESTING
Hydraulics
Flow test for the full scale core mock-up to the KUHFR, (2). Flow-induced vibrations of the core, 9:33244 (R;JP;In Japanese)
PERIPHYTON
See AUFWUCHS
PERMEABILITY COEFFICIENT (FLUID MECHANICS
See HYDRAULIC CONDUCTIVITY
PEROVSKITES
Electrochemistry
Electrochemistry of perovskites, 9:33407 (J;US)
PEROXIDES
Precipitation Scavenging
Effects of in-cloud scavenging on the transport and gas phase reactions of SO/sub x/, NO/sub x/, HC/sub x/, H/sub x/O/sub y/, and O_3 compounds, 9:34215 (BA;US)
Precipitation scavenging of highly soluble gases, 9:34216 (BA;US)
Precipitation scavenging and tropospheric mixing, 9:34219 (BA;US)
Trace Amounts
Effects of in-cloud scavenging on the transport and gas phase reactions of SO/sub x/, NO/sub x/, HC/sub x/, H/sub x/O/sub y/, and O_3 compounds, 9:34215 (BA;US)
PERSONNEL
Studies of groups of persons employed in a particular field of endeavor. For studies on individuals in a group see also MAN.
See also MILITARY PERSONNEL
MINERS
PROFESSIONAL PERSONNEL
REACTOR OPERATORS
Health Hazards
High risk groups in oil shale workforce, 9:32691 (R;US)
Regulatory Guides
Qualification of organizations for independent technical supervision, 9:33449 (R;BR;In Portuguese)
Respiratory System Diseases
Risk of dust-induced lung disease in oil shale workers, 9:32692 (R;US)
PERSONNEL DOSIMETRY
Activation Analysis
Design and use of a constant geometry system to measure activated indium foil in personnel security badges, 9:34137 (R;US)
Information Systems
Interactive radiation dosimetry database, 9:34463 (R;CA)
Performance Testing
Neutron and gamma personnel dosemeter response in mixed radiation fields, 9:34138 (J;GB)
PERSONNEL FILM DOSIMETRY
See PERSONNEL DOSIMETRY
PERTECHNETATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.

Diffusion
Measurement of radionuclide diffusion in ocean floor sediment and clay, 9:34368 (J;US)
PERTURBATION THEORY
Delayed Neutron Precursors
Time-dependent generalized perturbation theory for coupled neutron-nuclide problems, 9:33147 (J;US)
PETN
Electrochemistry
Electrochemical properties of CP, HMX, RDX, and PETN, 9:34160 (R;US)
PETROCHEMICAL FEEDSTOCKS
See CHEMICAL FEEDSTOCKS
PETROLEUM
Limited to crude oil; see also COAL LIQUIDS, SHALE OIL, etc.
See also PETROLEUM FRACTIONS
Arctic Regions
Final administrative report, the BIOSIS-project/. Canada 1980-1982, 9:34432 (R;NO;In Norwegian,English)
Microbiology: II. Biodegradation of oil - 1980 study results, 9:34433 (RA;NO)
Biodegradation
Final administrative report, the BIOSIS-project/. Canada 1980-1982, 9:34432 (R;NO;In Norwegian,English)
Microbiology II. Biodegradation of oil - 1981. Study results, 9:34490 (RA;NO)
Microbiology: II. Biodegradation of oil - 1980 study results, 9:34433 (RA;NO)
Chemical Analysis
Analysis of heaviest crude oils and hydropyrolysis products, 9:32671 (R;DE;In German)
Chemical Properties
Fractional distillation of North Sea oil. Final report for NTNF-KS, 9:32673 (R;NO;In Norwegian)
Energy Consumption
Synopsis of the Annual Energy Review and Outlook 1983, 9:33459 (R;US)
Enhanced Recovery
Contracts for field projects and supporting research on enhanced oil recovery and improved drilling technology. Progress review No. 36 for quarter ending September 30, 1983, 9:32651 (R;US)
Exports
Petroleum Supply Annual, 1983. Volume 2, 9:32660 (R;US)
Fluid Mechanics
Experimental and theoretical study of a two-phase flow in vertical and near-horizontal pipes. Application to petroleum engineering, 9:32667 (R;FR;In French)
Imports
Liberian macroeconomy and simulation of sectoral energy demand: 1981-2000, 9:33463 (R;US)
Petroleum Supply Annual, 1983. Volume 2, 9:32660 (R;US)
Market
Strategic stockpile acquisitions and the current world oil market, 9:32663 (J;GB)
Migration
Solubility of hydrocarbons in the compressed natural gas. Application to petroleum migration in sedimentary basins, 9:32672 (R;FR;In French)
Mineralization
Microbiology II. Biodegradation of oil - 1981. Study results, 9:34490 (RA;NO)
Microbiology: II. Biodegradation of oil - 1980 study results, 9:34433 (RA;NO)
Phase Diagrams
Carbon dioxide for the recovery of (residual) crude oil. Final report, 9:32652 (R;US)
Displacement of oil by carbon dioxide. Final report, 9:32650 (R;US)
Phase Studies
Displacement of oil by carbon dioxide. Final report, 9:32650 (R;US)
Production
Naval Petroleum and Oil Shale Reserves. Annual report of operations, fiscal year 1983, 9:32661 (R;US)
Petroleum Supply Annual, 1983. Volume 2, 9:32660 (R;US)
Solidification
Microbiology II. Biodegradation of oil - 1981. Study results, 9:34490 (RA;NO)
Stockpiles
Petroleum Supply Annual, 1983. Volume 2, 9:32660 (R;US)
Strategic stockpile acquisitions and the current world oil market, 9:32663 (J;GB)
Toxicity
California commercial/sport fish and shellfish oil toxicity study. Volume 1. Executive summary. Final report, 9:34486 (R;US)
Transport
Experimental and theoretical study of a two-phase flow in vertical and near-horizontal pipes. Application to petroleum engineering, 9:32667 (R;FR;In French)
Petroleum Supply Annual, 1983. Volume 2, 9:32660 (R;US)
PETROLEUM COKE
See COKE
PETROLEUM PRODUCTS
PETROLEUM FRACTIONS
See also GAS OILS
Chemical Properties

Transport
Petroleum Supply Annual, 1983. Volume 2, 9:32660 (R;US)
PETROLEUM REFINERIES
Heaters
Refinery heater fiber burner demonstration program. Final report Oct 81-Dec 83, 9:32684 (R;US)
PETTEN HIGH FLUX REACTOR
See HFR REACTOR
PETTEN LOW FLUX REACTOR
See LFR REACTOR
PFR REACTOR
Preanalysis calculations of the US/UK joint experiment in the Dounreay prototype fast reactor, 9:33234 (R;US)
PH VALUE
Deposition
Comparison of surrogate surfaces for dry deposition collection, 9:34272 (BA;US)
PHANTOMS
Depth Dose Distributions
Organ doses and effective dose equivalent for external neutron beams derived by the CHORD-method, 9:34397 (R;DE)
Dose Equivalents
Organ doses and effective dose equivalent for external neutron beams derived by the CHORD-method, 9:34397 (R;DE)
PHARYNX
Neoplasms
Results of radiotherapy of malignant tumors of the epi-, meso- and hypopharynx. A retrospective study from 1960 to 1978, 9:34405 (R;DE;In German)
Results of primary and postoperative radiotherapy of malignant tumours of the larynx and posterior pharynx, 9:34413 (R;DE;In German)
Radiotherapy
Results of primary and postoperative radiotherapy of malignant tumours of the larynx and posterior pharynx, 9:34413 (R;DE;In German)
PHASE CHANGE MATERIALS
Use with the specific phase change material (e.g. calcium chloride) when known.

Differential Thermal Analysis
Development of media for dynamic latent heat storage for the low temperature range. Pt. 1, 9:33363 (R;DE;In German)
Latent Heat Storage
Development of media for dynamic latent heat storage for the low temperature range. Pt. 1, 9:33363 (R;DE;In German)
Sensible Heat Storage
Experimental and theoretical comparison of a water storage system and of a phase-change material storage system on the experimental solar building of Bourgoin-Jallieu (Isere), 9:32952 (R;FR;In French)

PHASE TRANSFORMATIONS
See also CRYSTALLIZATION
Heisenberg Model
Reaction field approximation for Heisenberg paramagnetic thin film, 9:34766 (RA;BR)

PHENANTHRENE
Aerosol Monitoring
Distribution of polycyclic aromatic hydrocarbons in precipitation, 9:34262 (BA;US)
Precipitation Scavenging
Distribution of polycyclic aromatic hydrocarbons in precipitation, 9:34262 (BA;US)

PHENOL
Extraction
Environmental studies - fixed-bed gasification, 9:32557 (RA;US)

PHENOLS
See also CRESOLS
PHENOL
TYRAMINE
Biodegradation
Fixed-film fluidized-bed bioreactors for biooxidation of coal converison wastewaters, 9:32558 (RA;US)
Removal
Biokinetic study for SRC-I wastewater, 9:32514 (R;US)
Coal gasification and tar conversion reactions over calcium oxide, 9:32487 (RA;US)
Fixed-film fluidized-bed bioreactors for biooxidation of coal converison wastewaters, 9:32558 (RA;US)
Treatment of coal gasification wastewater using rotating biological contactors, 9:32555 (R;US)

PHENYLALANINE
Radiosensitivity Effects
Radioprotective capacity of phenylalanyl-cysteamine derivatives on cells in vitro, 9:34427 (R;NL;In Dutch)

PHI-1019 RESONANCES
Particle Production
Recent results from the PEP-4 TPC, 9:34604 (R;US)

PHONONS
Scattering
Illustrative numerical comparisons between phonon mean free paths and phonon thermal conductivity, 9:33617 (BA;US)
Thermal Conductivity
Illustrative numerical comparisons between phonon mean free paths and phonon thermal conductivity, 9:33617 (BA;US)

PHOSPHORIC ACID
Interfaces
Structure of the double layer at the mercury-phosphoric acid interface from studies of adsorption of thiourea, 9:33503 (J;US)

PHOSPHORUS
Activation Analysis
Fast transport facility for activation analysis with high-energy neutrons, 9:33799 (R;AT;In German)

PHOSPHORUS 32
Energy-Level Density
Analysis of level densities of the ^{29}Al and ^{32}P nuclei, 9:34670 (RA;SU;In Russian)
Metabolism
Labelled radioactive adenosine nucleotides for the determination of toxic action, 9:34477 (R;AT;In German)

PHOTOCONDUCTORS
Fabrication
Geometry, contact, surface, and optical developments for photoconductive power switches, 9:33919 (R;US)
Fiber Optics
Geometry, contact, surface, and optical developments for photoconductive power switches, 9:33919 (R;US)

PHOTODISINTEGRATION
See PHOTONUCLEAR REACTIONS

PHOTOELECTROCHEMICAL CELLS
Anodes
Order and disorder in electrodeposited polycrystalline CdSe liquid junction solar cells, 9:32887 (J;US)
Construction
Solar chemical converter for a solar energy system with storage, 9:32888 (J;US)
Design
Evaluation of various configurations for photoelectrochemical solar cells, 9:32889 (J;US)
Electrochemistry
Coulostatic studies of laser-induced sub-microsecond semiconductor electrode processes, 9:32885 (J;US)
Electrodes
Fermi level pinning at semiconductor electrodes, 9:32896 (J;US)
New stability measurements on GaP and WSe_2 photoelectrodes, 9:32886 (J;US)
Photoelectrochemical kinetics of p type GaP, 9:32891 (J;US)
Photoelectrochemical and thermodynamic behavior of the n-TiO_2 electrode in fluoride solutions, 9:32898 (J;US)
Photoelectrolysis and hole injection at Fe_2O_3/TiO_2 heterojunction electrode, 9:32899 (J;US)
Stabilization of photoelectrodes with electrogenerated conductive polymers, 9:32894 (J;US)
Surface treatment induced sub-band gap photoresponse, 9:32895 (J;US)
Electrolytes
General theory of photo-electron-transfer across semiconductor-electrolyte interfaces, 9:32890 (J;US)
Hot carrier effects at semiconductor-electrolyte junctions, 9:32892 (J;US)
Substituent effects on ferrocenes in the aluminum chloride-butyl pyridinium chloride molten salt, 9:32900 (J;US)
Materials
Characterization of semiconductor powders by electrochemical techniques, 9:32884 (J;US)
Operation
Solar chemical converter for a solar energy system with storage, 9:32888 (J;US)
Quantum Efficiency
Role of carrier diffusion on the spectral response and efficiency of photoelectrochemical cells with layered semiconductor photoelectrodes, 9:32893 (J;US)
Semiconductor Materials
General theory of photo-electron-transfer across semiconductor-electrolyte interfaces, 9:32890 (J;US)
Hot carrier effects at semiconductor-electrolyte junctions, 9:32892 (J;US)
Spectral Response
Role of carrier diffusion on the spectral response and efficiency of photoelectrochemical cells with layered semiconductor photoelectrodes, 9:32893 (J;US)
Stability
Photoelectrochemical cells based on n-GaAs and the Cu(II)/Cu(I) redox couple in acetonitrile, 9:32897 (J;US)

PHOTOMAGNETOELECTRIC EFFECT

PHOTONS

PHOTON DETECTION (GAMMA)
See GAMMA DETECTION

PHOTON TRANSPORT
Computer Codes
Systems guide to MCNP (Monte Carlo Neutron and Photon Transport Code), 9:34749 (R;US)

PHOTON-PHOTON INTERACTIONS
Multiple Production
Observation of hard processes in collisions of two quasi-real photons, 9:34591 (R;DE)

Pair Production
Exclusive production of hadron pairs at large momentum transfer in photon-photon interactions, 9:34595 (R;DE)
Scattering Amplitudes
High energy photon-photon scattering in 2-photon processes and test of quantum electrodynamics, 9:34600 (R;GB;In German)

PHOTONS
Buildup
Photon point source buildup factors for air, water, and iron, 9:33224 (J;US)
Diffusion Length
Photon point source buildup factors for air, water, and iron, 9:33224 (J;US)
Point Sources
Photon point source buildup factors for air, water, and iron, 9:33224 (J;US)

PHOTONUCLEAR REACTIONS
Inelastic Scattering
Activation of isomeric states of nuclei in reactions of inelastic scattering of photons and neutrons in activation analysis at electron accelerator, 9:34696 (RA;SU;In Russian)
Photoproduction
Nonequilibrium photoneutrons and statistical characteristics of heavy nuclei in a photonuclear experiment, 9:34707 (RA;SU;In Russian)
Study of inelastic photoproduction of neutral pions on a helium nucleus, 9:34655 (RA;SU;In Russian)
Research Programs
Photonuclear physics at the Bonn synchrotrons. Present status and future plans at the Bonn synchrotron, 9:34647 (R;DE)

PHOTOSYNTHESIS
Biochemical Reaction Kinetics
C_4 photosynthesis in Euphorbia degeneri and E. remyi: a comparison of photosynthetic carbon metabolism in leaves, callus cultures and regenerated plants, 9:34382 (R;US)
Enzyme Activity
C_4 photosynthesis in Euphorbia degeneri and E. remyi: a comparison of photosynthetic carbon metabolism in leaves, callus cultures and regenerated plants, 9:34382 (R;US)

PHOTOVOLTAIC CELLS

Stress Analysis
Stress analysis in the pipeline of the loop plugging-meter, 9:33901 (RA;BR;In Portuguese)
PIPERIDINES
Solvent Properties
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
PIPES
Cracks
Development of signal processing techniques for automated crack sizing, 9:33155 (RA;US)
Documentation
Revised integration documentation, 9:32495 (R;US)
Dynamics
WIPS: computer code for whip and impact analysis of piping systems. Part D. Verification manual, 9:33852 (R;US)
Failures
Overview of pipe breaks from the perspective of operating experience, 9:33304 (RA;US)
In-Service Inspection
Continuous ultrasonic sampling of in-service nuclear plant piping, 9:33056 (RA;US)
Inspection
Backlay clad inspection, 9:33054 (RA;US)
Joints
Revised integration documentation, 9:32495 (R;US)
Machining
Development of semiautomatic weld crown contouring machine (For ultrasonic inspection of pipe welds), 9:33159 (RA;US)
Repair
Backlay clad inspection, 9:33054 (RA;US)
Evaluation and acceptance of welded and repair-welded stainless steel for LWR service. Annual report for 1983, 9:33065 (R;US)
Seismic Effects
Multiple independent pipe support motions, 9:33312 (RA;US)
Steam Lines
Revised integration documentation, 9:32495 (R;US)
Stress Corrosion
Experimental surveillance of intergranular stress corrosion crack growth in large pipes, 9:33055 (RA;US)
Ultrasonic scattering from intergranular stress corrosion cracks: derivation and application of theory, 9:33156 (RA;US)
Wet storage integrity update, 9:32711 (R;US)
Supports
Multiple independent pipe support motions, 9:33312 (RA;US)
Ultrasonic Testing
Demonstration of scanning techniques for IGSCC sizing, 9:33154 (RA;US)
Development of scanners and booted ultrasonic search units for inspection of nuclear safety class piping, 9:33157 (RA;US)
Development of semiautomatic weld crown contouring machine (For ultrasonic inspection of pipe welds), 9:33159 (RA;US)
Evaluation of nondestructive examinations of intergranular stress corrosion cracking countermeasures, 9:33158 (RA;US)
Welding
Evaluation and acceptance of welded and repair-welded stainless steel for LWR service. Annual report for 1983, 9:33065 (R;US)

Compilation of interim technical research memoranda. Volume I, 9:34820 (R;US)

PLASMA SWITCHES
Design
Large aperture electro-optical switch, 9:33923 (R;US)

PLASMA WAVES
Hybrid Resonance
Guided modes between upper-hybrid and plasma resonance, 9:34837 (J;GB)

PLASMOIDS
Acceleration
Optimization of an electrodynamic acceleration system and characteristics of a liner in the "torus-liner"thermonuclear scheme with quasispherical compression, 9:34808 (RA;SU;In Russian)
Liners
Optimization of an electrodynamic acceleration system and characteristics of a liner in the "torus-liner"thermonuclear scheme with quasispherical compression, 9:34808 (RA;SU;In Russian)
Plasma Simulation
Compilation of interim technical research memoranda. Volume I, 9:34820 (R;US)

PLASMONS
Radiative Decay
Radiative decay of plasma oscillations on nonplanar metal surfaces, 9:34571 (R;US)
Resonance
Surface-plasmon exploration of multilayer physisorbed and chemisorbed films on metal substrates, 9:34145 (R;US)

PLATES
Thicker than SHEETS or FOILS.
Fluid-Structure Interactions
Thermal response of a flat plate of finite thickness immersed in a fluid with oscillating temperature, 9:33190 (J;US)
Mechanical Tests
Bend testing for miniature disks, 9:33186 (J;US)
Stress Analysis
Stress analysis for shells with double curvature by finite element method, 9:33851 (R;BR;In Portuguese)

PLATES (FUEL)
See FUEL PLATES

PLATINUM
Electrochemistry
Stabilization of photoelectrodes with electrogenerated conductive polymers, 9:32894 (J;US)
Molecule Collisions
Energy redistribution in diatomic molecules on surfaces, 9:34566 (R;US)
Sorptive Properties
Metal-support interaction studies on clean metal surfaces, 9:32785 (RA;US)
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)

PLATINUM ALLOYS
See also PLATINUM BASE ALLOYS
Superconductivity
Initial slope of the upper critical field of the heavy fermion superconductor UPt_3, 9:33676 (R;US)

PLATINUM BASE ALLOYS
Superconductivity
P-state superconductivity, 9:34777 (RA;US)

PLATINUM METALS
See also IRIDIUM
PALLADIUM
PLATINUM
RHODIUM
RUTHENIUM
Materials Recovery
Quick and complete recovery of the precious metals of low-grade sweeps and scrap, 9:33551 (R;DE;In German)

PLESIOTHERAPY
See RADIOTHERAPY

PLUMES
Diffusion
Estimation of wet deposition from a plume of a powerplant and of the corresponding background concentration, 9:34259 (BA;US)
Variation of planetary boundary layer dispersion properties with height in unstable conditions, 9:34233 (R;US)
Mathematical Models
Correction to the Gaussian source-depletion model, 9:34282 (BA;US)
EPA (Environmental Protection Agency) Complex Terrain Model Development: third milestone report 1983. Interim report Jun 82-Jun 83, 9:34180 (R;US)
Evaluation of Savannah River Plant emergency response models using standard and nonstandard meteorological data, 9:34299 (R;US)
Study of contaminant plume control in fractured-porous media, 9:34356 (R;US)
User's manual for the Plume Visibility Model (PLUVUE II). Final report 23 Feb-29 Aug 83, 9:34182 (R;US)
Monitoring
LIDAR measurements in the vicinity of the Kingston Steam Plant, Tennessee, during March 18-22, 1981, 9:34228 (R;US)
Radiation Monitoring
Environmental radiation monitoring system development for atmospheric plumes from light water reactor nuclear power plants, 9:34329 (J;US)
Visibility
User's manual for the Plume Visibility Model (PLUVUE II). Final report 23 Feb-29 Aug 83, 9:34182 (R;US)

PLUTONIUM
Bioassay
Evaluation of isotope dilution mass spectrometry for bioassay measurement of uranium, plutonium, and thorium in urine, 9:34460 (R;US)
Crystal Structure
Electron hybridization effects and the crystal structure of plutonium. Progress report as of January 31, 1984, 9:34560 (R;US)

Decontamination
Materials Science and Technology (MST) Division, Nuclear Materials Process Technology Group (MST-12), chemical process research and development report, 9:33805 (R;US)
Distribution Functions
Distribution of U(IV), U(VI), Pu(III) and nitric acid between 30 vol.% tributyl phosphate in dodecane and aqueous nitrate solutions, 9:32707 (R;DE)
Electronic Structure
Electron hybridization effects and the crystal structure of plutonium. Progress report as of January 31, 1984, 9:34560 (R;US)
Ion Exchange
Materials Science and Technology (MST) Division, Nuclear Materials Process Technology Group (MST-12), chemical process research and development report, 9:33805 (R;US)
Nuclear Materials Management
Method for the examination of plutonium quantity in plutonium dioxide used in fuel fabrication for fast neutron reactors at the Cadarache fuel fabrication plant, 9:32765 (R;FR;In French)
Radiometric Analysis
Coincidence measurements of FFTF breeder fuel subassemblies, 9:32768 (R;US)
Recovery
Materials Science and Technology (MST) Division, Nuclear Materials Process Technology Group (MST-12), chemical process research and development report, 9:33805 (R;US)
X-Ray Diffraction
Determination of the distribution of plutonium concentration in uranium- and plutonium dioxide by X-ray analysis, 9:32701 (R;DE;In German)

PLUTONIUM 236
Alpha Decay
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
Spontaneous Fission
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)

PLUTONIUM 238
Alpha Decay
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
Spontaneous Fission
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)

PLUTONIUM 239
Alpha Decay
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
Spontaneous Fission
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)

PLUTONIUM 239 TARGET
Fission Products
Fission product analytic impulse source functions, 9:34714 (J;US)
Neutron Reactions
Fission product yields for thermal-neutron fission of plutonium-239, 9:34720 (J;US)
Fission product analytic impulse source functions, 9:34714 (J;US)
Note on the prompt-fission-neutron spectra of uranium-233 and -235 and plutonium-239 and -240 relative to that of californium-252, 9:34716 (J;US)
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
The foil thickness correction in ¯ measurements and the (¯ -/eta/) discrepancy, 9:34717 (J;US)

PLUTONIUM 240
Alpha Decay
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
Nuclear Materials Management
Coincidence measurements of FFTF breeder fuel subassemblies, 9:32768 (R;US)
Spontaneous Fission
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)

PLUTONIUM 240 TARGET
Neutron Reactions
Near-equilibrium measurements of delayed neutron spectra from fast fission of plutonium-240, 9:34718 (J;US)
Note on the prompt-fission-neutron spectra of uranium-233 and -235 and plutonium-239 and -240 relative to that of californium-252, 9:34716 (J;US)

PLUTONIUM 241
Beta-Minus Decay
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)

PLUTONIUM 241 TARGET
Neutron Reactions
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
The foil thickness correction in ¯ measurements and the (¯ -/eta/) discrepancy, 9:34717 (J;US)

PLUTONIUM 242
Alpha Decay
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
Spontaneous Fission
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)

PLUTONIUM 244
Alpha Decay
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)
Spontaneous Fission
Parameters for several plutonium nuclides and ^{252}Cf of safeguards interest, 9:32763 (R;US)

PLUTONIUM ALLOYS
Electric Conductivity
Thermal conductivity and Lorenz number of plutonium and plutonium-gallium alloys, 9:33690 (BA;US)
Thermal Conductivity
Thermal conductivity and Lorenz number of plutonium and plutonium-gallium alloys, 9:33690 (BA;US)

PLUTONIUM COMPOUNDS
Crystal Structure
Electron hybridization effects and the crystal structure of plutonium. Progress report as of January 31, 1984, 9:34560 (R;US)

PLUTONIUM DIOXIDE
Calcination
Testing of wet scrap recovery equipment for mixed oxide scrap reprocessing, 9:32700 (R;US)
Coprecipitation
Testing of wet scrap recovery equipment for mixed oxide scrap reprocessing, 9:32700 (R;US)
Production
Microwave-heated continuous denitrification apparatus, 9:32695 (TG;US)

PLUTONIUM ISOTOPES
See also PLUTONIUM 236
PLUTONIUM 238
PLUTONIUM 239
PLUTONIUM 240
PLUTONIUM 241
PLUTONIUM 242
PLUTONIUM 244
Diffusion
Measurement of radionuclide diffusion in ocean floor sediment and clay, 9:34368 (J;US)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

POISEUILLE FLOW
See LAMINAR FLOW

POISONS (CHEMICAL)
See HAZARDOUS MATERIALS

POLICY
See ENERGY POLICY
ENVIRONMENTAL POLICY

POLLUTANTS
Not for radioactive contaminants for which use RADIOACTIVE WASTES or other related terminology.
Environmental Transport
Statistics of wet deposition, 9:34217 (BA;US)
Precipitation Scavenging
Deposition of submicron particulates on model scavengers, 9:34202 (BA;US)
Precipitation scavenging, dry deposition, and resuspension. Volume 1. Precipitation scavenging, 9:34184 (B;US)
Toxicity
Large animal model for health hazard assessment of environmental pollutants, 9:34470 (R;US)
POLLUTION CONTROL EQUIPMENT
See also AIR FILTERS
SCRUBBERS
Design
Equipment for incinerating oily mass. PFO-project No. 2302, 9:32666 (R;NO;In Norwegian)
Evaluation
Economic and engineering analysis of arch-fired furnaces, 9:32630 (RA;US)
Feasibility Studies
Feasibility study of a low-NO/sub x/ retrofittable firing system with US coals, 9:32628 (RA;US)
Performance Testing
Development of MACT in-furnace NO/sub x/ removal process for steam generators, 9:32573 (RA;US)
Reviews
Review and evaluation of novel flue gas purification technology for advanced flue gas purification, 9:33939 (R;SE;In Swedish)
Testing
Low-NO/sub x/ firing system for tangentially coal-fired utility boilers: preliminary testing, 9:32629 (RA;US)
POLOIDAL DIVERTOR EXPERIMENT
See PDX DEVICES
POLONIUM
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
POLONIUM 210
Airborne emission control technology for the elemental phosphorus industry. Final report, 9:34314 (R;US)
POLYACETYLENES
Derivatization
Poly(trimethylsilylacetylene): a tractable, synthetically manipulable polyacetylene derivative, 9:33731 (R;US)
Lattice Field Theory
Polyacetylene: a real material linking condensed matter and field theory, 9:34775 (BA;US)
POLYCYCLIC AROMATIC HYDROCARBONS
Chemical Reactions
Comparison of the ozonolysis products of the methylnaphthalenes and dimethylnapthalenes in hexane, methanol, and water, 9:33822 (R;US)
Hydrogenation
Study of the kinetics of hydrogenation using aged catalysts. Quarterly technical progress report, 1 October 1983-31 December 1983, 9:32522 (R;US)
Pyrolysis
Thermal reactions of aromatics with CO (1-methylnaphthalene), 9:32486 (RA;US)
POLYETHYLENES
Aging
Investigation of cable deterioration inside reactor containment, 9:33184 (J;US)
Chemical Radiation Effects
Investigation of cable deterioration inside reactor containment, 9:33184 (J;US)
Equations of Motion
Vibrational dynamics of a simple polymer, 9:33728 (RA;BR)
Mechanical Properties
Mechanical behavior of ultra high molecular weight polyethylene. Annual report No. 4, 1 Oct 82-30 Sep 83, 9:33730 (R;US)
Oxidation
Investigation of cable deterioration inside reactor containment, 9:33184 (J;US)
Physical Radiation Effects
Investigation of cable deterioration inside reactor containment, 9:33184 (J;US)
Mechanical behavior of ultra high molecular weight polyethylene. Annual report No. 4, 1 Oct 82-30 Sep 83, 9:33730 (R;US)
Stress Corrosion
Mechanical behavior of ultra high molecular weight polyethylene. Annual report No. 4, 1 Oct 82-30 Sep 83, 9:33730 (R;US)
Vibrational States
Vibrational dynamics of a simple polymer. Part 2, 9:33729 (RA;BR)
POLY(ISOBUTYLENE OXIDE)
See EPOXIDES
POLYMERS
See also ELASTOMERS
SILICONES
Corrosion
Development of corrosion resistant phosphoric acid fuel cell components, 9:33500 (J;US)
Depolymerization
Arylations of coal model systems, 9:32519 (R;US)
Mechanical Properties
Dynamic overstresses in fibrous polymeric materials, 9:33732 (R;US)
Viscoelastic and aging characteristics of polymers, 9:33733 (R;US)
Thermal Degradation
Experimental approach to evaluating environmental degradation mechanisms in metallized polymeric films, 9:32926 (J;US)
POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS
POLYOLEFINS
See also POLYETHYLENES
POLYSTYRENE
Physical Radiation Effects
Effect of LOCA simulation procedures on cross-linked polyolefin cable's performance, 9:33325 (R;US)
Tensile Properties
Effect of LOCA simulation procedures on cross-linked polyolefin cable's performance, 9:33325 (R;US)
Thermal Stresses
Effect of LOCA simulation procedures on cross-linked polyolefin cable's performance, 9:33325 (R;US)
POLYSTYRENE
Leaching
Full-scale leaching study of commercial reactor waste forms, 9:32716 (R;US)
POLYTHENE
See POLYETHYLENES
POLYTHIONATES
See OXYGEN COMPOUNDS
SULFUR COMPOUNDS
POLYTHIONIC ACIDS
See OXYGEN COMPOUNDS
SULFUR COMPOUNDS
POLYURETHANES
Chemical Preparation
Activity of catalysts in polyurethane synthesis, 9:33735 (TJ;US)
POLYVINYL CHLORIDE
See PVC
POOL CRITICAL ASSEMBLY ORNL
See ORNL-PCA REACTOR
PORE STRUCTURE
See POROSITY
POROSITY
Measuring Methods
Field determination of the hydrologic properties and parameters that control the vertical component of groundwater movement, 9:32755 (R;US)

POROUS MATERIALS
Drying
Numerical modeling of the drying of porous materials, 9:33614 (R;US)
Humidity
Distribution of humidity in porous materials as a consequence of non-steady water-vapour diffusion, 9:33761 (R;DE;In German)
PORTLAND CEMENT
Leaching
Full-scale leaching study of commercial reactor waste forms, 9:32716 (R;US)
POSITION INDICATORS
See DISPLACEMENT GAGES
POSTULATED PARTICLES
See also BEAUTY PARTICLES
CHARM PARTICLES
GLUONS
INTERMEDIATE BOSONS
MAGNETIC MONOPOLES
PARTONS
QUARKS
Particle Production
Theoretical implications of ISABELLE physics, 9:34607 (BA;US)
Reviews
Search for new particles, 9:34589 (R;DE)
POTABLE WATER
See DRINKING WATER
POTASSIUM
Activation Analysis
Fast transport facility for activation analysis with high-energy neutrons, 9:33799 (R;AT;In German)
Blood Chemistry
Alterations of serum potassium, serum magnesium and adenosine diphosphate due to various contrast media containing iodine, 9:34400 (R;DE;In German)
Deposition
Comparison of surrogate surfaces for dry deposition collection, 9:34272 (BA;US)
Ecological Concentration
Effects of acid precipitation on forest soils and watershed biogeochemistry in New England. A technical progress report, 9:34336 (R;US)
Monitoring
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Overvoltage
Cathodic overpotential of potassium in $KalCl_4$ propylene carbonate electrolyte, 9:33388 (J;US)
POTASSIUM 40
Radioecological Concentration
Aerial radiological survey of the Waterford Generating Station and surrounding area, Taft, Louisiana. Date of survey: March-April 1982, 9:34306 (R;US)
Aerial radiological survey of the Palo Verde Nuclear Generating Station and surrounding area, Wintersburg, Arizona. Date of survey: November 1982, 9:34307 (R;US)
POTASSIUM CARBONATES
Catalytic Effects
Effects of inorganics and pore structure on char gasification, 9:32460 (RA;US)
POTASSIUM CHLORIDES
Dissociation Energy
Optical detection of alkali compounds, 9:32531 (R;US)
POTASSIUM NITRATES
Chemical Properties
Thermochemistry of Na-K nitrate salts, 9:33772 (J;US)
Thermodynamic Properties
Thermochemistry of Na-K nitrate salts, 9:33772 (J;US)
POTENTIAL SCATTERING
Computer Codes
Karlsruhe code MODINA for model independent analysis of elastic scattering of spinless particles, 9:34646 (R;DE)
Hamiltonians
Short range expansion, 9:34643 (R;FR)
M Codes
Karlsruhe code MODINA for model independent analysis of elastic scattering of spinless particles, 9:34646 (R;DE)
POWER DISTRIBUTION
Power Factor
Power factor improvement study for an electrical power distribution system for University of California, Lawrence Livermore National Laboratory, Livermore, California, 9:33052 (R;US)
POWER GENERATION
See also COGENERATION
Data Compilation
Electric Power Monthly, February 1984, 9:33470 (R;US)
POWER METERS
Revenue-metering device for HVDC systems. Final report, 9:33022 (R;US)
POWER PLANTS
See also DUAL-PURPOSE POWER PLANTS
HYDROELECTRIC POWER PLANTS
SOLAR POWER PLANTS
THERMAL POWER PLANTS
THERMONUCLEAR POWER PLANTS
WIND POWER PLANTS
Auxiliary Systems
On-line control systems in auxiliary devices, 9:33037 (RA;DE;In German)
Control Rooms
Conception of control room design from the view of the user, 9:33034 (RA;DE;In German)
Flowmeters
Experience with differential pressure devices for flow metering in acceptance and control testing, 9:33028 (RA;DE;In German)
Maintenance
Hayden Station: power plant maintenance system preventive maintenance program, 9:33021 (R;US)
Nondestructive Testing
Nondestructive evaluation program: progress in 1983, 9:33913 (R;US)
On-Line Control Systems
New on-line control generation in the view of the user critical review and requirements, 9:33032 (RA;DE;In German)
Possibilities and procedures for maintenance of on-line control systems, 9:33029 (RA;DE;In German)
Present on-line control concepts - necessity or luxury, 9:33031 (RA;DE;In German)
Steam Turbines
Status and trends of turbine control, 9:33036 (RA;DE;In German)
POWER POOLS

Blowdown
Installation of an infrared measuring device in pressure release phenomena, 9:33268 (R;DE;In German)
Containment Buildings
Modeling of concrete response at high temperature, 9:33151 (R;US)
Fuel Cans
Gap conductance and temperature transients in modified pulse design experiments, 9:33354 (J;US)

Fuel Elements
Gap conductance and temperature transients in modified pulse design experiments, 9:33354 (J;US)
Loss of Coolant
Code assessment by a two-phase nozzle flow experiment, 9:33346 (J;US)
Primary Coolant Circuits
Uncertainty analysis of time-dependent nonlinear systems: theory and application to transient thermal hydraulics, 9:33345 (J;US)
Radiation Protection
Comparison of radiation protection programs at US power reactors, uranium mills, and low-level waste disposal sites, 9:32761 (R;US)
Reactor Kinetics
Uncertainty analysis of time-dependent nonlinear systems: theory and application to transient thermal hydraulics, 9:33345 (J;US)
Reactor Licensing
Operating reactors licensing actions summary. Vol.4, No. 4, 9:33115 (R;US)
Reactor Materials
Modeling of concrete response at high temperature, 9:33151 (R;US)
Reactor Protection Systems
Probability level of readiness in supervised protective systems for nuclear reactors, 9:33360 (J;US)
Specifications
Low power unattended defense reactor, 9:33114 (R;US)
Transient Overpower Accidents
A method for propagating uncertainty in probabilistic risk assessment, 9:33343 (J;US)
US NRC
Power reactor events, November-December 1983. Volume 5, No. 6, 9:33302 (R;US)

POWER SUPPLIES
See also PHOTOVOLTAIC POWER SUPPLIES
Computerized Control Systems
New pulser for principal PO power, 9:34099 (TG;US)
Specifications
Doublet III ac power systems, 9:34846 (R;US)

POWER SYSTEMS
Includes electric power networks with associated generating and transmission facilities.
See also INTERCONNECTED POWER SYSTEMS
RANKINE CYCLE POWER SYSTEMS
Disturbances
Analysis of small disturbance stability regions of power system models with real and reactive power flows, 9:33017 (R;US)
Persistence of the Hopf bifurcation under singular perturbations, 9:33016 (R;US)
Reliability
Probabilistic steady-state and dynamic security assessment, 9:33019 (R;US)
Safety Engineering
Electrical installations in oil shale mines. Open file report 21 Sep 81-13 Aug 83, 9:32689 (R;US)
Security
Probabilistic steady-state and dynamic security assessment, 9:33019 (R;US)
Research progress in dynamic security assessment, 9:33018 (R;US)
Stability
Application of singular perturbation techniques to power system transient stability analysis, 9:33046 (R;US)
Stabilization
Emergency state control methods. Executive Summary, 9:33024 (R;US)

POWER TRANSMISSION
Control
Static thyristor controlled regulating transformers for electric power systems, 9:33050 (R;CH;In German)
HVDC Systems
Summary of multiterminal high-voltage direct current transmission technology, 9:33051 (R;US)
Meetings
Urban applications of HVDC power transmission, 9:33044 (R;US)
Simulation
Radial, internal network equivalent for safety monitoring of interconnected networks with a number of regional control centers, 9:33049 (R;CH;In German)
Transformers
Static thyristor controlled regulating transformers for electric power systems, 9:33050 (R;CH;In German)

POWER TRANSMISSION LINES
Electrical Insulation
Current assessment of the potential of dielectric gas mixtures for industrial applications, 9:33045 (R;US)
Mechanical Vibrations
Static and dynamic behavior of mechanical components associated with electrical transmission lines, 9:33048 (R;US)
Safety
Living and working around high-voltage power lines, 9:33047 (R;US)
Site Selection
Bibliography of the Maryland Power Plant Siting Program, Fifth Edition, 9:33484 (R;US)
Structural Models
Static and dynamic behavior of mechanical components associated with electrical transmission lines, 9:33048 (R;US)

POWER TRANSMISSION TOWERS
Mechanical Vibrations
Static and dynamic behavior of mechanical components associated with electrical transmission lines, 9:33048 (R;US)
Structural Models
Static and dynamic behavior of mechanical components associated with electrical transmission lines, 9:33048 (R;US)

PRASEODYMIUM PHOSPHIDES
Superconductivity
Electrical resistivity of rare earth iron phosphides, 9:33758 (R;US)

PRECIPITATION SCAVENGING
Comments about precipitation scavengging research, 9.34291 (BA;US)
Efficiency
Particle scavenging by evaporating cloud drops, 9:34204 (BA;US)
Mathematical Models
Comparison of in-cloud scavenging by Brownian diffusion and thermo and diffusio-phoresis, 9:34205 (BA;US)
Modeling wet-removal processes in the atmosphere, 9:34244 (R;US)
Precipitation scavenging and tropospheric mixing, 9:34219 (BA;US)
Scavenging measurements near large point sources: a review and evaluation, 9:34258 (BA;US)
Spatial inhomogeneity of aerosols within an air parcel and some implications for the modelling of particle scavenging by convective clouds, 9:34218 (BA;US)
Statistics of wet deposition, 9:34217 (BA;US)
Theoretical and experimental study of SO_2 scavenging by cloud and rain drops, 9:34199 (BA;US)

PRECIPITATIONS (ATMOSPHERIC)
See ATMOSPHERIC PRECIPITATIONS

PRESSURE REGULATORS
Design
Experience with differential pressure devices for flow metering in acceptance and control testing, 9:33028 (RA;DE;In German)
Installation
Experience with differential pressure devices for flow metering in acceptance and control testing, 9:33028 (RA;DE;In German)
Performance Testing
Experience with differential pressure devices for flow metering in acceptance and control testing, 9:33028 (RA;DE;In German)

PRESSURE RELEASE
Two-Phase Flow
Installation of an infrared measuring device in pressure release phenomena, 9:33268 (R;DE;In German)

PRESSURE VESSELS
Crack Propagation
Failure prediction of notched pressure vessels using the CTOD approach, 9:33868 (R;US)
Destructive Testing
Failure prediction of notched pressure vessels using the CTOD approach, 9:33868 (R;US)
Dosimetry
LWR pressure vessel surveillance dosimetry improvement program. Volume 3. 1983 annual report, October 1, 1982-September 30, 1983, 9:33177 (R;US)
Fabrication
Surface Gasification Materials Program. Semiannual progress report for the period ending March 31, 1984, 9:32535 (R;US)
Failures
High temperature melt attack on steel and urania-coated steel, 9:33323 (R;US)
Fasteners
Detection of stress corrosion cracks in reactor pressure vessel and primary coolant system anchor studs, 9:33166 (RA;US)
Physical Radiation Effects
Assessment of radiation effects relating to reactor pressure vessel cladding, 9:33180 (R;US)
LWR pressure vessel surveillance dosimetry improvement program. Volume 3. 1983 annual report, October 1, 1982-September 30, 1983, 9:33177 (R;US)
Protective Coatings
Assessment of radiation effects relating to reactor pressure vessel cladding, 9:33180 (R;US)
Reactor Accidents
OCA-P, a deterministic and probabilistic fracture-mechanics code for application to pressure vessels, 9:33326 (R;US)
Strain Gages
Weighing of heavy vessels using strain gauges, 9:33189 (J;US)
Surveillance
LWR pressure vessel surveillance dosimetry improvement program. Volume 3. 1983 annual report, October 1, 1982-September 30, 1983, 9:33177 (R;US)
Thermal Shock
Consideration of loading conditions initiated by thermal transients in PWR pressure vessels, 9:33067 (R;DE;In German)
Thermal Stresses
High temperature melt attack on steel and urania-coated steel, 9:33323 (R;US)
Ultrasonic Testing
Definition of Section XI ultrasonic techniques: the design and manufacture of NDE qualification blocks, 9:33162 (RA;US)
Detection of stress corrosion cracks in reactor pressure vessel and primary coolant system anchor studs, 9:33166 (RA;US)
Development of a production prototype pressure vessel imaging system, 9:33160 (RA;US)
Evaluation and development of improved crack detection techniques, 9:33164 (RA;US)
Evaluation of the Ultrasonic Data Recording and Processing System (UDRPS), 9:33165 (RA;US)
Ultrasonic signal processing for characterization of under-clad flaws in pressure vessels, 9:33163 (RA;US)
Weight Indicators
Weighing of heavy vessels using strain gauges, 9:33189 (J;US)
Weight Measurement
Weighing of heavy vessels using strain gauges, 9:33189 (J;US)
PRESSURIZED WATER COOLED MODERATED REACTO
See PWR TYPE REACTORS
PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS
PRESSURIZERS
Blowdown
Calculation of sample problems related to two-phase flow blowdown transients in pressure relief piping of a PWR pressurizer, 9:33255 (R;US)
Monitors
A generalized likelihood ratio approach to detecting and identifying failures in pressurizer instrumentation, 9:33217 (J;US)
Pressure Release
Calculation of sample problems related to two-phase flow blowdown transients in pressure relief piping of a PWR pressurizer, 9:33255 (R;US)
Reactor Instrumentation
Instrument fault detection in a pressurized water reactor pressurizer, 9:33218 (J;US)
Simulation
Instrument fault detection in a pressurized water reactor pressurizer, 9:33218 (J;US)
Stress Analysis
Calculation of strength and life of WWER steam generator and pressurizer, 9:33084 (RA;CS;In Czech)
Transients
Pressurizer transient response: experimental data. Final Report, 9:33261 (R;US)
PRESTRESSED CONCRETE
Mechanical Properties
Design criteria for prestressed concrete reactor vessels for high-temperature reactors, 9:33767 (J;US)
Stresses
Design criteria for prestressed concrete reactor vessels for high-temperature reactors, 9:33767 (J;US)
Technology Assessment
Design criteria for prestressed concrete reactor vessels for high-temperature reactors, 9:33767 (J;US)
PRIMARY COOLANT CIRCUITS
Heat Transfer
Three-dimensional calculations of transient fluid-thermal mixing in the downcomer of the Calvert Cliffs-1 plant using SOLA-PTS, 9:33327 (R;US)
Uncertainty analysis of time-dependent nonlinear systems: theory and application to transient thermal hydraulics, 9:33345 (J;US)
Hydraulics
Three-dimensional calculations of transient fluid-thermal mixing in the downcomer of the Calvert Cliffs-1 plant using SOLA-PTS, 9:33327 (R;US)
Uncertainty analysis of time-dependent nonlinear systems: theory and application to transient thermal hydraulics, 9:33345 (J;US)
VOR programe package for calculating hydraulic shock in generally branched coolant circuit, 9:33085 (RA;CS;In Czech)
Level Indicators
Non-invasive water level measurements at LOFT using a neutron detection system, 9:33318 (RA;US)
Torsional ultrasonic technique for reactor vessel liquid level measurement, 9:33317 (RA;US)
Nonlinear Problems
Uncertainty analysis of time-dependent nonlinear systems: theory and application to transient thermal hydraulics, 9:33345 (J;US)
Pipes
Elimination of the double-ended guillotine break in primary pipe loops, 9:33305 (RA;US)
Pressure Gradients
VOR programe package for calculating hydraulic shock in generally branched coolant circuit, 9:33085 (RA;CS;In Czech)
Pumps
Long-term inspection requirements for nuclear power plant components, 9:33153 (RA;US)
Simulation
Transient simulation in a medium channel of LMFBR, 9:33279 (RA;BR;In Portuguese)
Thermodynamics
Uncertainty analysis of time-dependent nonlinear systems: theory and application to transient thermal hydraulics, 9:33345 (J;US)
Transients
Transient simulation in a medium channel of LMFBR, 9:33279 (RA;BR;In Portuguese)

Water Hammer
VOR programe package for calculating hydraulic shock in generally branched coolant circuit, 9:33085 (RA;CS;In Czech)

PROBES
See also ION PROBES
Multi-stage probe for monitoring coal seam gas pressures and flows, 9:32592 (R;AU)
Calibration
Coal gasification research studies, 9:32472 (RA;US)
Design
CSIRO horizontal borehole inclinometer - description and operation, 9:32586 (R;AU)
Performance
CSIRO horizontal borehole inclinometer - description and operation, 9:32586 (R;AU)
Testing
Coal gasification research studies, 9:32472 (RA;US)

PROCESS DEVELOPMENT UNITS
Modifications
Advancement of flash hydrogasification. Quarterly technical progress report, January-March 1984, 9:32446 (R;US)
Performance Testing
Advancement of flash hydrogasification. Quarterly technical progress report, January-March 1984, 9:32446 (R;US)

PROCESS HEAT REACTORS
Planning
High temperature gas-cooled reactor program. Advanced systems concepts design and technology development plan, 9:33118 (R;US)
Specifications
Modular reactor: a deployment strategy for the long-term HTGR goal of very high temperature operation, 9:33117 (R;US)

PRODUCTION (HYDROGEN)
See HYDROGEN PRODUCTION

PRODUCTION REACTORS
For the production of fissile materials only; see also IRRADIATION REACTORS.
Engineered Safety Systems
Confinement protection by automatic backup shutdown, 9:33260 (R;US)
Reactor Accidents
Comparison of GRASS and AAMZON calculations, 9:33259 (R;US)
Confinement protection by automatic backup shutdown, 9:33260 (R;US)
GRASS calculation of a postulated Gang I withdrawal transient without shutdown, 9:33258 (R;US)
Reactor Protection Systems
Confinement protection by automatic backup shutdown, 9:33260 (R;US)

PROFESSIONAL PERSONNEL
See also SCIENTIFIC PERSONNEL
Wages
Report on 1984 national survey of compensation paid scientists and engineers engaged in research and development activities, 9:34977 (R;US)

PROMETHIUM 144
Decay
Educational laboratory experiments on chemistry in a nuclear engineering school, 9:33844 (J;US)
Solvent Extraction
Educational laboratory experiments on chemistry in a nuclear engineering school, 9:33844 (J;US)

PROMPT NEUTRONS
Binding Energy
A simple formula for calculation of prompt neutron yield from spontaneous fission of transuranics, 9:34715 (J;US)
Fission Spectra
Note on the prompt-fission-neutron spectra of uranium-233 and -235 and plutonium-239 and -240 relative to that of californium-252, 9:34716 (J;US)
Multiplicity
A simple formula for calculation of prompt neutron yield from spontaneous fission of transuranics, 9:34715 (J;US)
Experimental determination of photofission neutron multiplicities for ^{235}U, ^{236}U, ^{238}U, and ^{232}Th using monoenergetic photons, 9:34719 (J;US)
The foil thickness correction in $\bar{\ }$ measurements and the ($\bar{\ }$ -/eta/) discrepancy, 9:34717 (J;US)
Neutron Spectra
Note on the prompt-fission-neutron spectra of uranium-233 and -235 and plutonium-239 and -240 relative to that of californium-252, 9:34716 (J;US)
Statistical Models
A simple formula for calculation of prompt neutron yield from spontaneous fission of transuranics, 9:34715 (J;US)
Thermal Fission
The foil thickness correction in $\bar{\ }$ measurements and the ($\bar{\ }$ -/eta/) discrepancy, 9:34717 (J;US)

PROPANE
Fires
Studies of flames from various accidental release geometries. Flame size and radiation measurements, 9:32659 (R;NO)
Production
Naval Petroleum and Oil Shale Reserves. Annual report of operations, fiscal year 1983, 9:32661 (R;US)
Radiolysis
Radiation chemistry of hydrocarbon and alkyl halide systems. Annual progress report, August 1, 1983-May 31, 1984, 9:33826 (R;US)

PROPELLANTS
Detonations
Measurement of shock induced reaction in rocket propellants by nanosecond infrared radiometry and photography, 9:34164 (R;US)

PROPORTIONAL COUNTERS
See also MULTIWIRE PROPORTIONAL CHAMBERS
Data Analysis
TACI: a code for interactive analysis of neutron data produced by a tissue equivalent proportional counter, 9:34135 (R;US)
Design
Low-background high-efficiency detector for the study of the (n,α) reaction at pulsed neutron source, 9:34139 (J;US)
Efficiency
Low-background high-efficiency detector for the study of the (n,α) reaction at pulsed neutron source, 9:34139 (J;US)
Performance
Low-background high-efficiency detector for the study of the (n,α) reaction at pulsed neutron source, 9:34139 (J;US)

PROTECTION (CORROSION)
See CORROSION PROTECTION

PROTECTION (RADIATION)
See RADIATION PROTECTION

PROTECTIVE COATINGS
Radiation-enhanced diffusion as a coating method for protection against corrosion and wear, 9:33640 (RA;BR)

PROTEINS
See also LIPOPROTEINS
RHODOPSIN
Biodegradation
Microbial degradation of dissolved proteins in seawater, 9:34434 (J;US)
Catabolism
Measurement of ^{15}N in biological samples with particular reference to whole body protein turnover studies, 9:34394 (R;GB)
Molecular Structure
Protein structure is only as good as the data, 9:34378 (R;US)
Neutron Diffraction
Neutron structure of the hydrophobic plant protein crambin, 9:34379 (R;US)
Protein structure is only as good as the data, 9:34378 (R;US)
Solitons
Solitons in biology, 9:34381 (RA;US)

PROTEOLIPIDS
See LIPOPROTEINS

PROTON BEAMS
Spin Orientation
Polarization preservation in the AGS, 9:34007 (J;US)

PROTON REACTIONS
Charge-Exchange Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
Elastic Scattering
Analysis of scattering of protons with energy near 6 MeV on nuclei with A=26,50, 9:34669 (RA;SU;In Russian)
Elastic and inelastic scattering of polarized protons from carbon-12 at 400, 600, and 700 MeV, 9:34665 (R;US)
Inelastic Scattering
Analysis of experimental data on inelastic scattering of protons with approximately 6 MeV energy in ^{58}Ni, 9:34674 (RA;SU;In Russian)
Analysis of scattering of protons with energy near 6 MeV on nuclei with A=26,50, 9:34669 (RA;SU;In Russian)
Elastic and inelastic scattering of polarized protons from carbon-12 at 400, 600, and 700 MeV, 9:34665 (R;US)
Quasi-Free Reactions
Quasi-free scattering and nuclear structure investigation, 9:34659 (RA;BR)
Spin and isospin dependence on (p,pN) quasi-free reactions, 9:34673 (RA;BR)
Scattering
Analysis of 6 MeV proton scattering on Pd even-even nuclei and dependence of the power of an imaginary part of the optical potential on the mass number, 9:34693 (RA;SU;In Russian)
Spallation
Cross section for 1 GeV proton interaction with ^{40}Ar nuclei, 9:34676 (RA;SU;In Russian)
Multiplicity of nuclear spallation products, 9:34675 (RA;SU;In Russian)
PROTON SOURCES
Polarized Beams
Need for an intense polarized source at LAMPF. Report on a workshop held at Los Alamos, November 9, 1983, 9:34094 (R;US)
PROTON-ANTIPROTON INTERACTIONS
Annihilation
Antiproton-nucleus interaction, 9:34740 (R;US)
PROTON-PROTON INTERACTIONS
Boson-Exchange Models
Quark effects in nuclear physics, 9:34723 (R;US)
Coulomb Correction
Separable representation of the proton-proton interaction, 9:34619 (R;AT;In German)
Jet Model
Transverse momentum distributions of jets and weak bosons, 9:34599 (R;US)
Particle Production
Theoretical implications of ISABELLE physics, 9:34607 (BA;US)
Transverse momentum distributions of jets and weak bosons, 9:34599 (R;US)
Potentials
Separable representation of the proton-proton interaction, 9:34619 (R;AT;In German)
Quark Model
Quark effects in nuclear physics, 9:34723 (R;US)
PROTONS
Energy Losses
Conserving average rate of energy loss in transport calculations for light charged particles, 9:34752 (J;US)
Pair Production
Exclusive production of hadron pairs at large momentum transfer in photon-photon interactions, 9:34595 (R;DE)
PROTOPLASTS
See PLANT CELLS
PROTOTYPE FAST REACTOR DOUNREAY
See PFR REACTOR
PROTOTYPE FAST REACTOR JAPAN
See MONJU REACTOR
PSEUDOMONAS
Genetic Engineering
Directed genetic modification of potentially useful microorganisms, 9:34388 (J;US)
PUBLIC BUILDINGS
Solar Air Conditioning
Performance evaluation of the Shenandoah Community Solar Recreational Center for the year 1980. Final report, 9:32936 (R;US)
Solar Space Heating
Performance evaluation of the Shenandoah Community Solar Recreational Center for the year 1980. Final report, 9:32936 (R;US)
Solar Water Heating
Performance evaluation of the Shenandoah Community Solar Recreational Center for the year 1980. Final report, 9:32936 (R;US)
PUBLIC LANDS
Coal Reserves
Fair market value of federal coal, 9:32641 (J;US)
Land Leasing
Fair market value of federal coal, 9:32641 (J;US)
Resource Development
Fair market value of federal coal, 9:32641 (J;US)
Wilderness Protection Acts
Federal coal-leasing policy; and the Bisti Badlands Wilderness proposal. Oversight hearings before the Subcommittee on Mining, Forest Management, and Bonneville Power Administration and the Subcommittee on Public Lands and National Parks, House of Representatives, Ninety-Eighth Congress, First Session, 9:32648 (B;US)
PUBLIC UTILITIES
See also ELECTRIC UTILITIES
Investment
Systems economics for industry functional modeling. Second annual technical report, 9:33433 (R;US)
Mathematical Models
Industry functional modeling, 9:33427 (R;US)
PULMONARY LAVAGE
See LUNGS
PULPS
See SLURRIES
PULSE CONVERTERS
Time Resolution
Secondary electronic converters of charged particle accelerated beam time structure, 9:34087 (RA;UA;In Russian)
PULSE SHAPERS
Feasibility Studies
Possibility of accelerating field subnanosecond pulse generation by means of radial lines, 9:33985 (RA;UA;In Russian)
PULSE STRETCHERS
See PULSE SHAPERS
PULSED D-T REACTORS
Design
Conceptual design of a Moving-Ring Reactor, 9:34968 (J;AT)
Plasma Rings
Conceptual design of a Moving-Ring Reactor, 9:34968 (J;AT)
PULSED FUSION REACTORS
See also PULSED D-T REACTORS
Liners
Some technological problems for pulse thermonuclear systems with an exploding linear, 9:34883 (RA;SU;In Russian)
PULSED MAGNET COILS
Ruptures
Destruction of single-tupn solenoids by a strong pulsed magnetic field, 9:34936 (RA;SU;In Russian)
PULSED MHD GENERATORS
Research Programs
A survey of recent work on explosive-driven magnetic flux compression generators, 9:33491 (BA;US)
Uses
Flux compression generators as plasma compression sources, 9:33492 (BA;US)
PULVERIZED FUEL ASH
See FLY ASH
PUMPS
In-Service Inspection
Long-term inspection requirements for nuclear power plant components, 9:33153 (RA;US)

Molecular Sieves
Radiation-induced outgassing from sorption pump material, 9:33187 (J;US)

PUREX PROCESS
Radiolysis
Investigation of the radiolytic TBP degradation under Purex process conditions, 9:33832 (R;DE;In German)

PURITY
See IMPURITIES

PVC
Aging
Investigation of cable deterioration inside reactor containment, 9:33184 (J;US)
Chemical Radiation Effects
Investigation of cable deterioration inside reactor containment, 9:33184 (J;US)
Oxidation
Investigation of cable deterioration inside reactor containment, 9:33184 (J;US)
Physical Radiation Effects
Investigation of cable deterioration inside reactor containment, 9:33184 (J;US)

PWR TYPE REACTORS
See also CONNECTICUT YANKEE REACTOR
SEABROOK-1 REACTOR
SEABROOK-2 REACTOR
SHIPPINGPORT REACTOR
THREE MILE ISLAND-2 REACTOR
WWER TYPE REACTORS
ZION-1 REACTOR
Containment Buildings
Capabilities of HECTR Version 1.0, 9:33335 (R;US)
CONTAIN calculations of containment loading of dry PWR's, 9:33340 (R;US)
Containment release modes, rainout, and risk, 9:33336 (R;US)
Experimental and analytical results of steel containment tests, 9:33337 (R;US)
HECTR results for Ice-Condenser Containment Standard Problem, 9:33338 (R;US)
Procedures and objectives for testing a 1/8 scale model of a steel containment, 9:33339 (R;US)
Control Elements
Development of hafnium and comparison with other pressurized water reactor control rod materials, 9:33213 (J;US)
Control Rooms
Nuclear power plant control room crew task analysis database: SEEK system. Users manual, 9:33212 (R;US)
Core Flooding Systems
Transition boiling heat transfer in the Semiscale MOD-3 core during reflood, 9:33353 (J;US)
Corrosion Denting
Causes of denting. Volume 1. Summary report. Final report, 9:33071 (R;US)
Causes of denting. Volume 2. Laboratory test results. Final report, 9:33072 (R;US)
Design Basis Accidents
View of industry on the impact of pipe break criteria, 9:33306 (RA;US)
ECCS
An assessment of TRAC-PD2 refill calculations based on Creare countercurrent flow tests, 9:33350 (J;US)
Electric Cables
Effect of LOCA simulation procedures on cross-linked polyolefin cable's performance, 9:33325 (R;US)
Progress on qualification testing methodology study of electric cables, 9:33319 (RA;US)
Electrical Equipment
Survey of equipment qualification research activities with respect to LOCA environments, 9:33320 (RA;US)
Fuel Assemblies
Program TRANS for calculation of transients in light water reactor fuel assembly, 9:33286 (RA;CS;In Czech)
Fuel Cans
Quality control for zircaloy tubes, 9:33080 (RA;BR;In Portuguese)
Fuel Cycle
Fundamentals of pressurized water reactors, 9:33077 (RA;AT)
Fuel Element Clusters
Transition boiling heat transfer in the Semiscale MOD-3 core during reflood, 9:33353 (J;US)
Fuel Element Failure
Mass spectrometric study of the release of volatile fission products from irradiated LWR fuel, 9:33253 (R;US)
The prediction of transient fission-gas release and fuel microcracking under severe core-accident conditions, 9:33356 (J;US)
Fuel Management
In-core fuel management for the course on operational physics of power reactors, 9:33060 (RA;AT)
Fuel Rods
Simulation of the thermalhydraulic behavior of a PWR fuel rod during blowdown, 9:33276 (RA;BR;In Portuguese)
User input manual for single fuel rod behaviour analysis code FEMAXI-III, 9:33061 (R;JP;In Japanese)
Fuel Scanning
Eddy current testing of PWR fuel pencils in the pool of the Osiris reactor, 9:33068 (R;FR;In French)
Fuel-Cladding Interactions
PCI-related cladding failures during off-normal events - draft, 9:33328 (R;US)
Fuel-Coolant Interactions
Fuel-coolant interaction in a shock tube with initially-established film boiling, 9:33252 (R;US)
Hearings
Statement for Sizewell 'B' public inquiry, 9:33088 (R;GB)
Loss of Coolant
An assessment of TRAC-PD2 refill calculations based on Creare countercurrent flow tests, 9:33350 (J;US)
Development of an analytic model to determine pump performance under two-phase flow conditions. Final report, 9:33265 (R;US)
Effect of LOCA simulation procedures on cross-linked polyolefin cable's performance, 9:33325 (R;US)
Fast numerical methods in 3-D, 9:33297 (R;US)
Multidimensional and two-phase flow effects in PWR core reflooding. Final report, 9:33262 (R;US)
Simulation of the thermalhydraulic behavior of a PWR fuel rod during blowdown, 9:33276 (RA;BR;In Portuguese)
Loss of Flow
TRAC-PF1 analysis of loss-of-fluid test L6-7/L9-2, 9:33295 (R;US)
Mechanical Structures
Eleventh water reactor safety research information meeting. Volume 5, 9:33303 (R;US)
Meltdown
CONTAIN calculations of containment loading of dry PWR's, 9:33340 (R;US)
Containment release modes, rainout, and risk, 9:33336 (R;US)
Demonstrations and verification of debris bed models in the MEDICI reactor cavity code, 9:33333 (R;US)
Fuel-coolant interaction in a shock tube with initially-established film boiling, 9:33252 (R;US)
High temperature melt attack on steel and urania-coated steel, 9:33323 (R;US)
Pipes
Evaluation and acceptance of welded and repair-welded stainless steel for LWR service. Annual report for 1983, 9:33065 (R;US)
Multiple independent pipe support motions, 9:33312 (RA;US)
Overview of pipe breaks from the perspective of operating experience, 9:33304 (RA;US)
Pressure Vessels
Consideration of loading conditions initiated by thermal transients in PWR pressure vessels, 9:33067 (R;DE;In German)
High temperature melt attack on steel and urania-coated steel, 9:33323 (R;US)
OCA-P, a deterministic and probabilistic fracture-mechanics code for application to pressure vessels, 9:33326 (R;US)
Pressurizers
A generalized likelihood ratio approach to detecting and identifying failures in pressurizer instrumentation, 9:33217 (J;US)

Calculation of sample problems related to two-phase flow blowdown transients in pressure relief piping of a PWR pressurizer, 9:33255 (R;US)
Instrument fault detection in a pressurized water reactor pressurizer, 9:33218 (J;US)
Primary Coolant Circuits
Elimination of the double-ended guillotine break in primary pipe loops, 9:33305 (RA;US)
Non-invasive water level measurements at LOFT using a neutron detection system, 9:33318 (RA;US)
Three-dimensional calculations of transient fluid-thermal mixing in the downcomer of the Calvert Cliffs-1 plant using SOLA-PTS, 9:33327 (R;US)
Torsional ultrasonic technique for reactor vessel liquid level measurement, 9:33317 (RA;US)
View of industry on the impact of pipe break criteria, 9:33306 (RA;US)
Radioactive Effluents
Environmental radiation monitoring system development for atmospheric plumes from light water reactor nuclear power plants, 9:34329 (J;US)
Radioactivity Transport
Effects of shutdown/cooldown techniques on radiation fields in PWR primary coolant loops, 9:33075 (R;US)
Reactor Accidents
Dose calculations for severe LWR accident scenarios, 9:33301 (R;US)
Experimental and analytical results of steel containment tests, 9:33337 (R;US)
HECTR results for Ice-Condenser Containment Standard Problem, 9:33338 (R;US)
OCA-P, a deterministic and probabilistic fracture-mechanics code for application to pressure vessels, 9:33326 (R;US)
Postaccident liquid sampling systems. Final report, 9:33264 (R;US)
Procedures and objectives for testing a 1/8 scale model of a steel containment, 9:33339 (R;US)
Three-dimensional calculations of transient fluid-thermal mixing in the downcomer of the Calvert Cliffs-1 plant using SOLA-PTS, 9:33327 (R;US)
Reactor Control Systems
Eleventh water reactor safety research information meeting. Volume 5, 9:33303 (R;US)
Safety implications of control systems, 9:33316 (RA;US)
Reactor Cooling Systems
Dynamic tests of three-dimensional piping systems: a NRC/EPRI joint test program, 9:33314 (RA;US)
Pipe-to-pipe impact tests, 9:33307 (RA;US)
Reactor Core Disruption
The prediction of transient fission-gas release and fuel microcracking under severe core-accident conditions, 9:33356 (J;US)
Reactor Instrumentation
A generalized likelihood ratio approach to detecting and identifying failures in pressurizer instrumentation, 9:33217 (J;US)
Reactor Operation
Licensed operating reactors. Status summary report data as of March 31, 1984. Vol. 8, No. 4, 9:33062 (R;US)
Reactor Operators
Nuclear power plant control room crew task analysis database: SEEK system. Users manual, 9:33212 (R;US)
Ranking scheme for making decisions on the relative training importance of potential nuclear power plant malfunctions, 9:33063 (R;US)
Studies for improving PWR simulators and the training of PWR operators using simulators. Pt. 2, 9:33066 (R;DE;In German)
Reactor Physics
Fundamentals of pressurized water reactors, 9:33077 (RA;AT)
In-core fuel management for the course on operational physics of power reactors, 9:33060 (RA;AT)
Operational physics of pressurized water power reactors, 9:33079 (RA;AT)
Reactor Safety
Dynamic tests of three-dimensional piping systems: a NRC/EPRI joint test program, 9:33314 (RA;US)
Eleventh water reactor safety research information meeting. Volume 5, 9:33303 (R;US)
Elimination of the double-ended guillotine break in primary pipe loops, 9:33305 (RA;US)
Multiple independent pipe support motions, 9:33312 (RA;US)
Non-invasive water level measurements at LOFT using a neutron detection system, 9:33318 (RA;US)
Overview of pipe breaks from the perspective of operating experience, 9:33304 (RA;US)
Pipe-to-pipe impact tests, 9:33307 (RA;US)
Progress on qualification testing methodology study of electric cables, 9:33319 (RA;US)
Safety implications of control systems, 9:33316 (RA;US)
Survey of equipment qualification research activities with respect to LOCA environments, 9:33320 (RA;US)
Torsional ultrasonic technique for reactor vessel liquid level measurement, 9:33317 (RA;US)
View of industry on the impact of pipe break criteria, 9:33306 (RA;US)
Reactor Simulators
Studies for improving PWR simulators and the training of PWR operators using simulators. Pt. 2, 9:33066 (R;DE;In German)
Reactor Start-Up
Fundamentals of pressurized water reactors, 9:33077 (RA;AT)
Relief Valves
Coupled-valve dynamic model for steam, two-phase, and subcooled discharge flow conditions. Final report, 9:33263 (R;US)
Rod Ejection Accidents
Development and quarter core PWR rod ejection accident application of the TITAN code. Final report 1982-83, 9:33329 (R;US)
Steam Generators
Causes of denting. Volume 1. Summary report. Final report, 9:33071 (R;US)
Causes of denting. Volume 2. Laboratory test results. Final report, 9:33072 (R;US)
Development of a finite element model for eddy current NDT phenomena, 9:33073 (RA;US)
Evaluation and transfer of steam generator NDE technology, 9:33074 (RA;US)
Implantation and developemnt of computer codes, 9:33081 (RA;BR;In Portuguese)
Steam Lines
Model for transient simulation in a PWR steam circuits, 9:33275 (RA;BR;In Portuguese)
Transients
Computer code to simulate transients in a PWR power plant, 9:33274 (RA;BR;In Portuguese)
Program TRANS for calculation of transients in light water reactor fuel assembly, 9:33286 (RA;CS;In Czech)
PYRENE
Aerosol Monitoring
Distribution of polycyclic aromatic hydrocarbons in precipitation, 9:34262 (BA;US)
Hydrogenation
Determination of the intrinsic activity and effective diffusivity of aged coal liquefaction catalysts, 9:32537 (R;US)
Precipitation Scavenging
Distribution of polycyclic aromatic hydrocarbons in precipitation, 9:34262 (BA;US)
PYRITE
Catalytic Effects
Advanced coal liquefaction research. Quarterly technical progress report, January 1-March 31, 1983, 9:32516 (R;US)
Morphology
Investigation of pyrite as a contributor to slagging in Eastern Bituminous coals. Quarterly progress report 10, January 1-March 30, 1984, 9:32621 (R;US)
Oxidation
Sulfur species leached from pyrite during oxidative desulfurization of coal in alkaline solutions, 9:32608 (R;US)

Removal
Distribution of pyrite and its liberation by crushing in the washed coal at Kellingley Colliery, North Yorkshire Area, 9:32610 (R;GB)

PYRITES
See PYRITE

PYROCARBON
See PYROLYTIC CARBON

PYROLYSIS
See also FLASH HYDROPYROLYSIS PROCESS
Laser-Radiation Heating
Pyrolysis of coal-derived fuels using the laser-powered homogeneous pyrolysis technique, 9:32515 (R;US)

PYROLYTIC CARBON
Temperature Effects
Performance results on a C-SiC alloy coating chemically vapor-deposited onto graphite substrates, 9:33715 (J;CH)

PYROLYTIC GASES
Infrared Spectra
Investigation of vaporization and devolatilization of coal/water mixtures. Seventh quarterly report, November 1, 1983-January 31, 1984, 9:32622 (R;US)

PYROTECHNIC DEVICES
Ignition
Effect of oxide coated thickness on thermal ignition of titanium-based pyrotechnics, 9:34162 (R;US)

PYROXYLIN
See NITROCELLULOSE

PYRROLIDONES
Sorptive Properties
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)

Q

QUANTUM CHROMODYNAMICS
Quantum chromodynamics, chiral symmetry and bag models, 9:34631 (R;FR)
Chirality
Death of fractional topological charge, 9:34642 (BA;US)
Electron-Positron Interactions
Perturbative corrections to sigma sub(tot) (e^+e^- -> hadrons) in supersymmetric QCD, 9:34596 (R;DE)
Matrix Elements
Experiments on multiparton final states in e^+e^- annihilation at $\sqrt{s}$=30 GeV (MARK-J/PETRA), 9:34611 (R;FR;In French)
Perturbation Theory
Perturbative corrections to university and renormalization group behaviour, 9:34638 (R;US)
Weak coupling tests of lattice QCD, 9:34629 (R;US)
Renormalization
Perturbative corrections to university and renormalization group behaviour, 9:34638 (R;US)
Sum Rules
Comment on QCD sum rules and weak bottom decays, 9:34609 (R;FR)
Vacuum States
Death of fractional topological charge, 9:34642 (BA;US)
Weak-Coupling Model
Weak coupling tests of lattice QCD, 9:34629 (R;US)
Wilson Loop
Weak coupling tests of lattice QCD, 9:34629 (R;US)

QUANTUM ELECTRODYNAMICS
Electron-Positron Interactions
High energy photon-photon scattering in 2-photon processes and test of quantum electrodynamics, 9:34600 (R;GB;In German)

QUANTUM FIELD THEORY
See also LATTICE FIELD THEORY
QUANTUM CHROMODYNAMICS
QUANTUM ELECTRODYNAMICS
Inelastic strong interactions at high energies. Final report, June 1, 1976-May 31, 1984, 9:34637 (R;US)
Baecklund Transformation
Bianchi-Backlund transformations, conservation laws, and linearization of various field theories, 9:34640 (BA;US)
Conservation Laws
Bianchi-Backlund transformations, conservation laws, and linearization of various field theories, 9:34640 (BA;US)
Symmetry Breaking
Crossover in anisotropic Potts phi^3 field theory with quadratic symmetry breaking, 9:34773 (RA;BR)
Symmetry breaking in Potts phi^3 field theory. Crossover in random ferromagnets, 9:34772 (RA;BR)

QUANTUM MECHANICS
Control Theory
Quantization of dynamical systems and stochastic control theory, 9:34779 (R;FR)

QUARK CONFINEMENT
See BAG MODEL

QUARK MODEL
See also BAG MODEL
STRING MODELS
Exotic multiquark states with charm, 9:34624 (BA;US)

QUARK-ANTIQUARK INTERACTIONS
Potentials
Scaling of the quark-antiquark potential and improved actions in SU(2) lattice gauge theory, 9:34634 (R;DE)

QUARK-QUARK INTERACTIONS
P Invariance
Quark effects in nuclear physics, 9:34723 (R;US)

QUARKS
Fragmentation
Hadron production in e^+e^- annihilation at PEP, 9:34605 (R;US)
Recent results from the PEP-4 TPC, 9:34604 (R;US)
Mass Spectroscopy
Rare particles, 9:34014 (R;US)
Particle Production
Recent results on e^+e^- annihilation from PETRA, 9:34592 (R;DE)
Rest Mass
Electroweak interaction parameters, 9:34608 (R;US)
Semileptonic Decay
Semileptonic decays of c and b quarks, 9:34603 (R;DE)
Unified Gauge Models
SU(5) without SU(5): why B-L is conserved and baryon number not in unified models of quarks and leptons, 9:34641 (BA;US)

QUARTZ
Catalytic Effects
Thermal and catalytic cracking of tars and tar constituents from coal gasification processes, 9:32488 (RA;US)
Comparative Evaluations
Thermal reactions of aromatics with CO, 9:32486 (RA;US)
Particulates
Size distribution and mineralogy of aluminosilicate dust particles in tropical Pacific air and rain, 9:34286 (BA;US)
Physical Radiation Effects
Peculiarities of radiation-induced diffusion of alkali ions in quartz doped with germanium and aluminium, 9:33755 (RA;SU;In Russian)

QUASI-FREE REACTIONS
Reviews
Recent developments in quasi-free reactions, 9:34734 (RA;BR)

QUENCHING
Heat Transfer
Unsteady heat transfer during laminar flame quenching, 9:33909 (R;US)

QUINOLINES
Hydrogenation
Chemistry and morphology of coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 9:32532 (R;US)

R

RADIANT HEAT TRANSFER
Calculation Methods
Least-squares smoothing of direct-exchange areas in zonal analysis, 9:33908 (R;US)
RADIATION BURDEN
See RADIATION DOSES
RADIATION CHEMISTRY
Research Programs
Radiation chemistry of hydrocarbon and alkyl halide systems. Annual progress report, August 1, 1983-May 31, 1984, 9:33826 (R;US)
RADIATION DAMAGE (BIOLOGICAL)
See RADIATION INJURIES
RADIATION DETECTORS
See also CRYSTAL COUNTERS
EMANOMETERS
GEIGER-MUELLER COUNTERS
IONIZATION CHAMBERS
NEUTRON DETECTORS
PROPORTIONAL COUNTERS
RADIOMETERS
SCINTILLATION COUNTERS
SEMICONDUCTOR DETECTORS
SHOWER COUNTERS
TISSUE-EQUIVALENT DETECTORS
Corrections
A point detector scoring method compatible with Monte Carlo transport calculations of specularly reflected particles, 9:34754 (J;US)
Performance Testing
Results of testing and evaluating a health physics instrument performance standard, 9:34136 (R;US)
RADIATION DOSES
Calculation Methods
Hanford Dose Overview Program: standardized methods and data for Hanford environmental dose calculations. Rev. 1, 9:34317 (R;US)
RADIATION EXPOSURE (DOSES)
See RADIATION DOSES
RADIATION HYGIENE
See RADIATION PROTECTION
RADIATION INJURIES
Dose-Response Relationships
Is radiation an appropriate model for chemical mutagenesis and carcinogenesis, 9:34466 (BA;US)
RADIATION MONITORING
Research Programs
Analytical capability of the environmental radiation ambient monitoring system, 9:34315 (R;US)
RADIATION MONITORS
See also EXPOSURE RATEMETERS
Performance
Monitoring krypton-85 during Three Mile Island Unit 2 purging, 9:33223 (J;US)
Performance Testing
Results of testing and evaluating a health physics instrument performance standard, 9:34136 (R;US)
RADIATION PROTECTION
Research Programs
Radiation protection programme: Progress report 1982, 9:34444 (R;XE)
Safety Standards
Basic international safety standards for radiation protection, 9:34500 (RA;IL)
Standards
Provision of guidance, information and basic criteria for radiation protection and measurements. Final technical report 1 Jul-31 Dec 83, 9:34757 (R;US)
RADIATION SAFETY
See RADIATION PROTECTION
RADIATION SOURCES
For cosmic sources of radiation see also COSMIC GAMMA SOURCES, COSMIC RADIO SOURCES, and COSMIC X-RAY SOURCES.
See also SEALED SOURCES
SYNCHROTRON RADIATION SOURCES
Shielding
Radiation survey for installation of the cobalt-60 theratron-80 at Armed Forces Radiobiology Research Institute. Technical report, 9:34395 (R;US)
RADIATION STREAMING
Measurements of neutron and gamma-ray streaming in a cavity-duct system and an analysis by an albedo Monte Carlo method, 9:34751 (J;US)
RADICALS
Not to be used for compound descriptions.
See also HYDROXYL RADICALS
Chemistry
Coupled gas-phase/aqueous phase free radical chemistry of a cloud, 9:34198 (BA;US)
RADIOACTIVE AEROSOLS
Mathematical Models
Mean residence time of the submicrometer aerosols in the global troposphere, 9:34328 (BA;US)
Physical Radiation Effects
Electrical aspects of rainout, 9:34320 (BA;US)
Precipitation Scavenging
Electrical aspects of rainout, 9:34320 (BA;US)
Shape
Direct measurement of aerosol shape factors, 9:33294 (R;DE;In German)
RADIOACTIVE BIOLOGICAL WASTES
See RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Radiation Monitoring
Environmental radiation monitoring system development for atmospheric plumes from light water reactor nuclear power plants, 9:34329 (J;US)
RADIOACTIVE GASEOUS WASTES
See RADIOACTIVE WASTES
RADIOACTIVE MATERIALS
See also FISSION PRODUCTS
RADIOACTIVE WASTES
Radiometric Analysis
Absolute calibration technique for spontaneous fission sources, 9:32764 (R;US)
RADIOACTIVE PARTICULATES
See PARTICLES
RADIOACTIVE AEROSOLS
RADIOACTIVE TRACERS
See RADIOPHARMACEUTICALS
RADIOACTIVE WASTE DISPOSAL
Americium 241
Materials Science and Technology (MST) Division, Nuclear Materials Process Technology Group (MST-12), chemical process research and development report, 9:33805 (R;US)
Basalt
Disruption scenario analysis for a nuclear waste repository in Hanford Site basalts, Washington State, 9:32738 (R;US)
Economic Impact
Social and economic aspects of radioactive waste disposal: considerations for institutional management, 9:32719 (R;US)
Fission Product Release
Mathematical modelling of the corrosion and leaching behaviour of cemented waste forms, 9:32729 (R;DE;In German)
Geochemistry
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Geochemistry research planning for the underground storage of high-level nuclear waste, 9:32730 (R;US)
Overview of geochemical modeling needs for nuclear waste management, 9:32742 (R;US)
High-Level Radioactive Wastes
Assessment of retrieval alternatives for the geologic disposal of nuclear waste. Final report, 9:32731 (R;US)
Commercial nuclear waste research and development program. Quarterly report, January-March 1984, 9:32720 (R;US)
Disruption scenario analysis for a nuclear waste repository in Hanford Site basalts, Washington State, 9:32738 (R;US)

Geochemistry research planning for the underground storage of high-level nuclear waste, 9:32730 (R;US)
Social and economic aspects of radioactive waste disposal: considerations for institutional management, 9:32719 (R;US)
International Cooperation
International co-operation for safe radioactive waste management, 9:32728 (R;FR)
Intrusion
Disruption scenario analysis for a nuclear waste repository in Hanford Site basalts, Washington State, 9:32738 (R;US)
Low-Level Radioactive Wastes
Design and construction of a French drain for groundwater diversion in solid waste storage area six at the Oak Ridge National Laboratory, 9:32734 (R;US)
Monitoring
SRP hazardous waste monitor well report, 9:32722 (R;US)
Radionuclide Migration
Mathematical modelling of the corrosion and leaching behaviour of cemented waste forms, 9:32729 (R;DE;In German)
Research Programs
Commercial nuclear waste research and development program. Quarterly report, January-March 1984, 9:32720 (R;US)
Retrieval Systems
Assessment of retrieval alternatives for the geologic disposal of nuclear waste. Final report, 9:32731 (R;US)
Salt Deposits
Radioactive waste isolation in salt: peer review of the Office of Nuclear Waste Isolation's plans for repository performance assessment, 9:32713 (R;US)
Site Selection
Nuclear waste management: issues and progress, 9:32744 (J;US)
Unit evaluation at Yucca Mountain, Nevada Test Site: summary report and recommendation, 9:32740 (R;US)
Social Impact
Social and economic aspects of radioactive waste disposal: considerations for institutional management, 9:32719 (R;US)

RADIOACTIVE WASTE FACILITIES
Connectors
Remotely replaceable jumpers and embedded wiring for the DWPF, 9:32723 (R;US)
Intrusion
Disruption scenario analysis for a nuclear waste repository in Hanford Site basalts, Washington State, 9:32738 (R;US)
Modifications
Feasible modifications for the low-level waste treatment plant at Oak Ridge National Laboratory, 9:32733 (R;US)
Performance
Radioactive waste isolation in salt: peer review of the Office of Nuclear Waste Isolation's plans for repository performance assessment, 9:32713 (R;US)
Pilot Plants
Development of quality assurance and performance testing for the Process Experimental Pilot Plant, 9:32732 (R;US)
Quality Assurance
Development of quality assurance and performance testing for the Process Experimental Pilot Plant, 9:32732 (R;US)
Radiation Protection
Comparison of radiation protection programs at US power reactors, uranium mills, and low-level waste disposal sites, 9:32761 (R;US)
Seismic Effects
Seismic design of low-level nuclear waste repositories and toxic waste management facilities, 9:32762 (R;US)
Wires
Remotely replaceable jumpers and embedded wiring for the DWPF, 9:32723 (R;US)

RADIOACTIVE WASTE MANAGEMENT
Radioactive Waste Disposal
International co-operation for safe radioactive waste management, 9:32728 (R;FR)
Radioactive Waste Processing
International co-operation for safe radioactive waste management, 9:32728 (R;FR)

RADIOACTIVE WASTE PROCESSING
See also SYNROC PROCESS
Alpha-Bearing Wastes
Development of quality assurance and performance testing for the Process Experimental Pilot Plant, 9:32732 (R;US)
Cesium
Phenolic cation exchange resin material for recovery of cesium and strontium, 9:32745 (P;US)
Combustion
Evaluation of a processing technique for immobilization of low-level waste, 9:32718 (R;US)
Savannah River Plant low-level waste incinerator demonstration, 9:32724 (R;US)
Evaluation
Evaluation of a processing technique for immobilization of low-level waste, 9:32718 (R;US)
High-Level Radioactive Wastes
Features of a radioactive liquid-fed ceramic melter system, 9:32737 (R;US)
International Cooperation
International co-operation for safe radioactive waste management, 9:32728 (R;FR)
Low-Level Radioactive Wastes
Evaluation of a processing technique for immobilization of low-level waste, 9:32718 (R;US)
Feasible modifications for the low-level waste treatment plant at Oak Ridge National Laboratory, 9:32733 (R;US)
Savannah River Plant low-level waste incinerator demonstration, 9:32724 (R;US)
Solidification of radioactive waste in a cement/lime mixture, 9:32715 (R;US)
Treatment faciliy for 200 Area seepage basin waste. Technical data summary, 9:32725 (R;US)
Materials
Alkoxide derived vitreous waste forms, 9:32749 (J;US)
Hexavalent uranium in fluorite structure oxide solid solutions, 9:32748 (J;US)
High nuclear waste loadings in tailored ceramics waste forms, 9:32747 (J;US)
Ponds
Investigation of the concentration, distribution, and inventory of radionuclides in the sediment of Process Waste System Basin 3524, 9:34363 (R;US)
Solidification
Evaluation of a processing technique for immobilization of low-level waste, 9:32718 (R;US)
Solidification of radioactive waste in a cement/lime mixture, 9:32715 (R;US)
Strontium
Phenolic cation exchange resin material for recovery of cesium and strontium, 9:32745 (P;US)
SYNROC Process
SYNROC C: preparation and phase equilibria, 9:32746 (J;US)
Vitrification
Features of a radioactive liquid-fed ceramic melter system, 9:32737 (R;US)

RADIOACTIVE WASTE STORAGE
Alpha-Bearing Wastes
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
Fires
High-temperature vaporization of simulated radioactive waste forms, 9:32751 (J;US)
High-Level Radioactive Wastes
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
Hydrothermal interaction studies of Bullfrog Member tuff core wafers in J-13 water at 150°C: quantitative analyses of aqueous and solid phases, 9:32741 (R;US)
Text of slides prepared 1/20/84 for presentation regarding underrun funds (Slides, no text), 9:32721 (R;US)
Salt Caverns
Investigations on kind and quantity of water contained in permian rock salt and its release and migration in the temperature field of deposited radioactive wastes, 9:32727 (R;DE;In German)

Site Selection
Hydrothermal interaction studies of Bullfrog Member tuff core wafers in J-13 water at 150°C: quantitative analyses of aqueous and solid phases, 9:32741 (R;US)

RADIOACTIVE WASTES

Economic Impact
Socioeconomic consequences of nuclear reactor accidents, 9:33324 (R;US)
Fires
Relationship of fire protection research to plant safety, 9:33321 (RA;US)
Fission Product Release
Evaluation and mitigation of accidental releases of radioactivity. Identification of uncertainties. Proceedings, 9:33283 (R;DE)
Heat Transfer
Comparison of GRASS and AAMZON calculations, 9:33259 (R;US)
GRASS calculation of a postulated Gang I withdrawal transient without shutdown, 9:33258 (R;US)
Three-dimensional calculations of transient fluid-thermal mixing in the downcomer of the Calvert Cliffs-1 plant using SOLA-PTS, 9:33327 (R;US)
Hydraulics
Comparison of GRASS and AAMZON calculations, 9:33259 (R;US)
GRASS calculation of a postulated Gang I withdrawal transient without shutdown, 9:33258 (R;US)
Three-dimensional calculations of transient fluid-thermal mixing in the downcomer of the Calvert Cliffs-1 plant using SOLA-PTS, 9:33327 (R;US)
Monitoring
Postaccident liquid sampling systems. Final report, 9:33264 (R;US)
Pressure Gradients
Experimental and analytical results of steel containment tests, 9:33337 (R;US)
HECTR results for Ice-Condenser Containment Standard Problem (PWR), 9:33338 (R;US)
Procedures and objectives for testing a 1/8 scale model of a steel containment (PWR; BWR), 9:33339 (R;US)
Radiation Doses
Dose calculations for severe LWR accident scenarios, 9:33301 (R;US)
Radioactive Aerosols
Direct measurement of aerosol shape factors, 9:33294 (R;DE;In German)
Social Impact
Socioeconomic consequences of nuclear reactor accidents, 9:33324 (R;US)
Socio-Economic Factors
Socioeconomic consequences of nuclear reactor accidents, 9:33324 (R;US)
Temperature Gradients
HECTR results for Ice-Condenser Containment Standard Problem (PWR), 9:33338 (R;US)
REACTOR CELLS
Computer Calculations
Validation of resonance-shielding procedures for reactor cell analysis, 9:33120 (R;US)
REACTOR CHANNELS
Passage through the reactor.
Flow Blockage
Initial-value methods for a simplified subchannel model of thermal-hydraulic behavior, 9:33191 (J;US)
Hydraulics
Initial-value methods for a simplified subchannel model of thermal-hydraulic behavior, 9:33191 (J;US)
Simulation
Transient simulation in a medium channel of LMFBR, 9:33279 (RA;BR;In Portuguese)
Thermodynamics
Initial-value methods for a simplified subchannel model of thermal-hydraulic behavior, 9:33191 (J;US)
Transients
Transient simulation in a medium channel of LMFBR, 9:33279 (RA;BR;In Portuguese)
Two-Phase Flow
Numerical fluid dynamics calculations of nonequilibrium steam-water flows with entrained droplets, 9:33296 (R;US)

Critical Heat Flux
Downflow post-critical heat flux heat transfer to low pressure water, 9:33188 (J;US)
Decontamination
The effect of residual decontamination reagent on stress corrosion cracking of austenitic materials under high temperature water, 9:33204 (J;US)
Flow Blockage
Initial-value methods for a simplified subchannel model of thermal-hydraulic behavior, 9:33191 (J;US)

Heat Transfer
Downflow post-critical heat flux heat transfer to low pressure water, 9:33188 (J;US)
The DSNP simulation language and its application to liquid-metal fast breeder reactor transient analyses, 9:33355 (J;US)
Hydraulics
Initial-value methods for a simplified subchannel model of thermal-hydraulic behavior, 9:33191 (J;US)
The DSNP simulation language and its application to liquid-metal fast breeder reactor transient analyses, 9:33355 (J;US)
Hydrodynamics
Downflow post-critical heat flux heat transfer to low pressure water, 9:33188 (J;US)
Pipes
Dynamic tests of three-dimensional piping systems: a NRC/EPRI joint test program, 9:33314 (RA;US)
Pipe-to-pipe impact tests, 9:33307 (RA;US)
Radiochemical Analysis
Application of an ion exchange method for sensitivity improvement of an automated radionuclide analysis system, 9:33185 (J;US)
Thermodynamics
Initial-value methods for a simplified subchannel model of thermal-hydraulic behavior, 9:33191 (J;US)

REACTOR CORE DISRUPTION
Criticality
Recriticality considerations in disrupted gas-cooled fast reactor core geometry, 9:33342 (J;US)
Fission Product Release
The prediction of transient fission-gas release and fuel microcracking under severe core-accident conditions, 9:33356 (J;US)

REACTOR CORES
Buckling
Environmental influences on fuel burnup in Mk.III G.C.R.'s, 9:33091 (R;GB)
Burnup
1DXB and GENERATOR computer codes, 9:33108 (RA;BR;In Portuguese)
Environmental influences on fuel burnup in Mk.III G.C.R.'s, 9:33091 (R;GB)
LEOPARD and SPOTS computer codes, 9:33130 (RA;BR;In Portuguese)
Computer Calculations
Core project of a low power fast reactor : introduction to a new methodology of calculation and preliminary results, 9:33102 (RA;BR;In Portuguese)
Computerized Simulation
Load follow simulation of three-dimensional boiling water reactor core by PACS-32 parallel microprocessor system, 9:33216 (J;US)
Configuration
Recriticality considerations in disrupted gas-cooled fast reactor core geometry, 9:33342 (J;US)
Design
A liquid-metal fast breeder reactor core design with seed blanket modular assemblies, 9:33348 (J;US)
Hydraulics
Calculations of pressure drop and redistribution of rate of flow in LMFBR reactor core, 9:33106 (RA;BR;In Portuguese)
Neutron Absorbers
Neutron diffusion in graphite poisoned with 1/v and non-1/v absorbers, 9:33215 (J;US)
Power Density
Environmental influences on fuel burnup in Mk.III G.C.R.'s, 9:33091 (R;GB)
Pressure Drop
Calculations of pressure drop and redistribution of rate of flow in LMFBR reactor core, 9:33106 (RA;BR;In Portuguese)
Reactor Simulators
Load follow simulation of three-dimensional boiling water reactor core by PACS-32 parallel microprocessor system, 9:33216 (J;US)

REACTOR FUEL ELEMENTS

Sensitivity
Environmental gamma-ray measurement methods for French nuclear installation impact studies, 9:33222 (J;US)

REACTOR INTERNALS
Hydrodynamics
Sloshing response of a reactor tank with internals, 9:33256 (R;US)
Stress Analysis
N-47 postprocessor for high temperature inelastic analyses, 9:33095 (R;US)

REACTOR KINETICS
Environmental influences on fuel burnup in Mk.III G.C.R.'s, 9:33091 (R;GB)
Benchmarks
Neutronic calculation on LMFBR (1250 MWe) benchmark model, 9:33096 (RA;BR;In Portuguese)
Buckling
A rigorous treatment of transverse buckling effects in two-dimensional neutron transport computations, 9:33148 (J;US)
Computer Calculations
ALVIN computer code, 9:33134 (RA;BR;In Portuguese)
KERNELBUT computer code, 9:33133 (RA;BR;In Portuguese)
Neutronic calculation on LMFBR (1250 MWe) benchmark model, 9:33096 (RA;BR;In Portuguese)
System of neutronic calculation for nuclear reactors, 9:33125 (RA;BR;In Portuguese)
Computerized Simulation
Generalized quasi-static method for nuclear reactor space-time kinetics, 9:33143 (J;US)
Cross Sections
Modular system for sensitivity calculations and cross sections adjustments, 9:33127 (RA;BR;In Portuguese)
Green Function
An extension of the nodal Green's function method for reactor analysis, 9:33196 (J;US)
Multigroup Theory
Presentation and user's manual of GAMTEC-II computer code, 9:33138 (RA;BR;In Portuguese)
RMAT 1D computer code. Implantation and user's code, 9:33137 (RA;BR;In Portuguese)
Neutron Diffusion Equation
An extension of the nodal Green's function method for reactor analysis, 9:33196 (J;US)
EXTERMINATOR - 2 computer code, 9:33132 (RA;BR;In Portuguese)
HAMMER, LITHE and HELP computer codes, 9:33131 (RA;BR;In Portuguese)
Presentation and user's manual of ONED computer code, 9:33136 (RA;BR;In Portuguese)

Synthesis method with finite elements for three-dimensional diffusion multigroup calculations, 9:33135 (RA;BR;In Portuguese)

Neutron Flux

A rigorous treatment of transverse buckling effects in two-dimensional neutron transport computations, 9:33148 (J;US)

Approximation procedures for the energy variable in neutronic distribution, 9:33123 (RA;BR;In Portuguese)

Approximation procedures for the spatial variable in neutronic distribution, 9:33124 (RA;BR;In Portuguese)

Solution of one-dimensional multigroup - diffusion equation by Fourier series with a few terms, 9:33121 (RA;BR;In Portuguese)

Neutron Spectra

Neutron spectra from monoenergetic source neutrons after multiple reflection between plane-parallel concrete interfaces, 9:33149 (J;US)

Neutron Transport Theory

ANISN - Presentation and user's manual, 9:33139 (RA;BR;In Portuguese)

Approximation procedures for the angular variable in neutronic distribution, 9:33122 (RA;BR;In Portuguese)

Comparison of the order of approximation in several spatial difference schemes for the discrete-ordinates transport equation in one-dimensional plane geometry, 9:33144 (J;US)

Convergence rates of spatial difference equations for the discrete-ordinates neutron transport equations in slab geometry, 9:33150 (J;US)

Perturbation Theory

Time-dependent generalized perturbation theory for coupled neutron-nuclide problems, 9:33147 (J;US)

REACTOR KINETICS EQUATIONS

Neutron Diffusion Equation

Generalized quasi-static method for nuclear reactor space-time kinetics, 9:33143 (J;US)

Neutron Transport Theory

Homogenized diffusion approximations to the neutron transport equation, 9:33145 (J;US)

Perturbation Theory

Comments on higher order generalized perturbation theory, 9:33146 (J;US)

REACTOR LATTICES

Heterogeneous Effects

An equivalence relation for a doubly heterogeneous lattice, 9:33197 (J;US)

Reactor Kinetics Equations

An equivalence relation for a doubly heterogeneous lattice, 9:33197 (J;US)

Resonance

Validation of resonance-shielding procedures for reactor cell analysis, 9:33120 (R;US)

Shielding

Validation of resonance-shielding procedures for reactor cell analysis, 9:33120 (R;US)

REACTOR LICENSING

Operating reactors licensing actions summary. Vol.4, No. 4, 9:33115 (R;US)

Program Management

Energy and water development appropriations for 1985. Part 6. Hearings before the Committee on Appropriations, House of Representatives, Ninety-Eighth Congress, Second Session, 9:34175 (B;US)

REACTOR MATERIALS

To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.

RESIDUAL FUELS
Chemical Properties
Combined processing of coal and heavy resids. Progress report, January 16, 1984-April 15, 1984, 9:32520 (R;US)
Physical Properties
Combined processing of coal and heavy resids. Progress report, January 16, 1984-April 15, 1984, 9:32520 (R;US)
Structural Chemical Analysis
Combined processing of coal and heavy resids. Progress report, January 16, 1984-April 15, 1984, 9:32520 (R;US)

RESIDUES
See also ASHES
SMOKES
Calorific Value
Gasification of residual materials from coal liquefaction: Type II preliminary pilot plant evaluation of SRC-I extruded Kerr McGee mineral ash residue-water slurry, 9:32445 (R;US)
Catalytic Effects
Effects of accumulated solids and solvent initial boiling point on dissolver performance. Final technical report, 9:32497 (R;US)
Chemical Analysis
Characterization of vacuum bottoms from the P-99 coal liquefaction unit, 9:32526 (R;US)
Chemical Composition
Gasification of residual materials from coal liquefaction: Type II preliminary pilot plant evaluation of SRC-I extruded Kerr McGee mineral ash residue-water slurry, 9:32445 (R;US)
Gasification
Gasification of residual materials from coal liquefaction. Type III extended pilot plant evaluation of a pelletized and ground Kerr McGee mineral ash residue from SRC-I coal liquefaction process, 9:32444 (R;US)
Gasification of residual materials from coal liquefaction: Type II preliminary pilot plant evaluation of SRC-I extruded Kerr McGee mineral ash residue-water slurry, 9:32445 (R;US)
Materials Handling
Compaction and granulation of coal liquefaction residue. Final report, 9:32529 (R;US)
Mutagen Screening
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 2. Microbial mutagenicity evaluations (Ames test) option IA reports, 9:32502 (R;US)
Recycling
Effects of accumulated solids and solvent initial boiling point on dissolver performance. Final technical report, 9:32497 (R;US)
Solvent Extraction
Characterization of vacuum bottoms from the P-99 coal liquefaction unit, 9:32526 (R;US)

RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES

RESIDUUMS
See RESIDUAL FUELS

RESINS
Thermal Conductivity
Thermal conductivity and interface resistance of particle-filled silicone resin, 9:32862 (R;US)

RESISTIVITY (ELECTRIC)
See ELECTRIC CONDUCTIVITY

RESONANCE CAVITIES
See CAVITY RESONATORS

RESONATORS
See also CAVITY RESONATORS
Eigenfrequency
Instrument for measuring the resonator eigenfrequencies, 9:34082 (RA;UA;In Russian)
Frequency Measurement
Instrument for measuring the resonator eigenfrequencies, 9:34082 (RA;UA;In Russian)

RESOURCE DEVELOPMENT
Budgets
Energy and water development appropriations for 1985. Part 7. Testimony of members of congress and other interested individuals and organizations. Hearings before the Committee on Appropriations, House of Representatives, Ninety-Eighth Congress, Second Session, 9:33444 (B;US)
Financing
Energy and water development appropriations for 1985. Part 7. Testimony of members of congress and other interested individuals and organizations. Hearings before the Committee on Appropriations, House of Representatives, Ninety-Eighth Congress, Second Session, 9:33444 (B;US)
Licensing
Colorado Joint Review Process. Final technical report, 9:33438 (R;US)
Colorado's Joint Review Process for major energy and mineral resource development projects, 9:33437 (R;US)
Permits
Colorado permit directory for energy and mineral resource development, 9:33442 (R;US)

RESOURCE RECOVERY FACILITIES
Construction
Construction and development of a resource recovery facility for household waste and commercial waste on a sanitary landfill, 9:33926 (R;DE;In German)
Solid Wastes
Construction and development of a resource recovery facility for household waste and commercial waste on a sanitary landfill, 9:33926 (R;DE;In German)

RESPIRABLE DUSTS
See DUSTS

RESPIRATORS
Quality Assurance
Quality assurance testing of HEPA filters and respirator canisters, 9:34503 (R;US)
Test Facilities
Operating policy of DOE filter test program, 9:34502 (R;US)

RESPIRATORY EQUIPMENT
See RESPIRATORS

RESUSPENSION
See PARTICLE RESUSPENSION

RETINA
Biological Radiation Effects
Study of low level laser retinal damage. Annual progress report 1 Feb 83-31 Jan 84, 9:34498 (R;US)

RETORTING
See also IN-SITU RETORTING
Dynamics
Formation, deposition, and drainage of mist in porous media with application to oil shale retorting, 9:32685 (R;US)

RETRIEVAL SYSTEMS
For retrieval of information, see INFORMATION RETRIEVAL.
Technology Assessment
Assessment of retrieval alternatives for the geologic disposal of nuclear waste. Final report, 9:32731 (R;US)

RETROFITTING
Cost Benefit Analysis
Feasibility study of a low-NO/sub x/ retrofittable firing system with US coals, 9:32628 (RA;US)

REVERSE OSMOSIS
See OSMOSIS
REVERSE-FIELD PINCH
Plasma Instability
Thermal instabilities in the edge region of reversed-field pinches, 9:34818 (R;US)
RF SYSTEMS
Design
An isochronous stacking ring approach to the HTE, 9:34966 (J;US)
ECR Heating
Design of a technical complex for ecr heating of a plasma in the L-2 stellarator, 9:34877 (RA;SU;In Russian)
System of electron-cyclotron heating of a plasma in the T-15 tokamak, 9:34876 (RA;SU;In Russian)
High-Frequency Heating
High-frequency power supply for plasma heating in toroidal traps, 9:34894 (RA;SU;In Russian)
Powerful generators for plasma Alfven heating, 9:34888 (RA;SU;In Russian)
System of energy transfer for HF heating of the T-10 tokamak plasma, 9:34882 (RA;SU;In Russian)
Performance
An isochronous stacking ring approach to the HTE, 9:34966 (J;US)
RHENIUM
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
RHEUMATIC DISEASES
Diagnosis
Use of computer tomography for diagnosis of sacroiliitis, 9:34417 (RA;AT;In German)
RHEUMATOID DISEASES
See RHEUMATIC DISEASES
RHINE RIVER
Dredging
Silting and removing problems in the storage zone of the hydraulic power plant Eglisau, 9:32819 (RA;CH;In German)
RHODE ISLAND
Igneous Rocks
Crystalline rocks of the northeastern United States, 9:34506 (R;US)
Crystalline rocks of the northeastern United States, 9:34507 (R;US)
RHODIUM
Surface Properties
Coadsorption studies on transition metals. Annual report 1 Jan-31 Dec 83, 9:33808 (R;US)
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
RHODIUM 103 TARGET
Helium 3 Reactions
Excitation function and isomeric ratio of the reaction ^{103}Rh(^{3}He, xn) sup(106-x) Ag, where x = 2, 3 and 4, 9:34691 (RA;BR;In Portuguese)
Neutron Reactions
Cross section measurement for the reaction /sup 103/Rh (n,n') /sup 103m/Rh , 9:34700 (J;US)
Ru(n,γ) cross sections above 2.6 KeV, 9:34701 (J;US)
RHODIUM BORIDES
Specific Heat
Specific heat-measurement of an $ErRh_4B_4$ single crystal, 9:33701 (R;US)
Superconductivity
Anomalous surface impedance in reentrant ferromagnetic superconductors, 9:33710 (R;US)
RHODOPSIN
Biochemical Reaction Kinetics
Time-resolved laser studies on the energy transfer and the configurational changes in bacteriorhodopsin. Progress report, December 1, 1981-November 30, 1984, 9:34380 (R;US)
Reaction Intermediates
Time-resolved laser studies on the energy transfer and the configurational changes in bacteriorhodopsin. Progress report, December 1, 1981-November 30, 1984, 9:34380 (R;US)
RIBONUCLEIC ACID
See RNA
RICE
Plant Growth
Effects of ozone or SO_2 on growth and yield of rice. Final report Jan-Dec 82, 9:34484 (R;US)
RICHLAND FFTF REACTOR
See FFTF REACTOR
RIEMANN WAVES
See SHOCK WAVES
RINGS (STORAGE)
See STORAGE RINGS
RISER CRACKING
See COAL LIQUEFACTION
RIVETS
See FASTENERS
RNA
See also TRANSFER RNA
Biosynthesis
RNA synthesis of perinatal female and male gametes. Autoradiographic studies in Wistar rats, 9:34435 (R;DE;In German)
RNA POLYMERASE
See RNA
ROADS
Maintenance
Energy conservation and cost saving related to highway routine maintenance: data collection and analysis of fuel consumption. Report for Jan-Dec 82, 9:33547 (R;US)
ROADWAYS (MINES)
See MINE ROADWAYS
ROBOTS
Control Systems
Optimum control of electric motor drives for industrial robots, 9:33858 (R;US)
Electric Motors
Optimum control of electric motor drives for industrial robots, 9:33858 (R;US)
Performance
Uncertainty covariances in robotics applications, 9:33053 (R;US)
Reliability
Uncertainty covariances in robotics applications, 9:33053 (R;US)
ROCK BURSTS
Control
Multi-stage probe for monitoring coal seam gas pressures and flows, 9:32592 (R;AU)
Monitoring
Dual-channel microseismic monitor for use in gassy coal mines, 9:32591 (R;AU)
ROCK SALT
See SALT DEPOSITS
ROCKS
Deformation
Numerical creep analysis, 9:34519 (R;US)
ROD BUNDLES
Hydraulics
Turbulent flow in rod bundles with geometrical disturbances, 9:33194 (J;US)
Turbulent Flow
Turbulent flow in rod bundles with geometrical disturbances, 9:33194 (J;US)
ROD DROP ACCIDENTS
Systems Analysis
Analyzing the rod drop accident in a boiling water reactor, 9:33358 (J;US)
ROD DROP METHOD
Computerized Simulation
Reactivity calculation in tests of control rod drop, 9:33211 (RA;BR;In Portuguese)

ROD EJECTION ACCIDENTS
Heat Transfer
Development and quarter core PWR rod ejection accident application of the TITAN code. Final report 1982-83, 9:33329 (R;US)
Hydraulics
Development and quarter core PWR rod ejection accident application of the TITAN code. Final report 1982-83, 9:33329 (R;US)
RODS (CONTROL)
See CONTROL ELEMENTS
RODS (FUEL)
See FUEL RODS
ROLL WELDING
See FORGE WELDING
ROOFS
Supports
Plug and collar anchor to transmit load from a strand to a thrust plate, 9:32594 (R;AU)
ROOTS
Lead
Lead in vegetation, forest floor material, and soils of the spruce-fir zone, Great Smoky Mountains National Park, 9:34335 (R;US)
ROTARY ENGINES
Preliminary assessment of a rotary detonation engine concept. Master's thesis, 9:33586 (R;US)
RUBBER (NATURAL)
See NATURAL RUBBER
RUBIDIUM
Activation Analysis
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
Biological Accumulation
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
RUBIDIUM CHLORIDES
X-Ray Spectra
X-ray spectroscopy of solids under pressure. Annual progress report, August 1983-July 1984, 9:33740 (R;US)
RUBIDIUM ISOTOPES
Beta-Minus Decay
Beta spectroscopy on neutron-rich nuclei of mass 93<=A<=100, 9:34682 (R;DE;In German)
Mass Defect
Beta spectroscopy on neutron-rich nuclei of mass 93<=A<=100, 9:34682 (R;DE;In German)
RUMEN
See STOMACH
RUNGE-KUTTA METHOD
Computer Calculations
Some practical Runge-Kutta formulas, 9:34786 (R;US)
RUNOFF
Chemical Composition
Characterization and treatability of drainage samples from coal piles at steam electric power stations, 9:32559 (R;CA)
Water Treatment
Characterization and treatability of drainage samples from coal piles at steam electric power stations, 9:32559 (R;CA)
RUPTURE DISKS
See RELIEF VALVES
RUTHENIUM
Catalytic Effects
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
Removal
Mound activities in chemical and physical research: July-December 1983, 9:34971 (R;US)
Solvent Extraction
Study of the ruthenium behavior in TBP systems, 30% (v/v) - dodecane/ruthenium complexes - HNO_3-H_2O, 9:33790 (RA;BR;In Portuguese)
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
RUTHENIUM 100 TARGET
Neutron Reactions
Ru(n,γ) cross sections above 2.6 KeV, 9:34701 (J;US)
RUTHENIUM 101 TARGET
Neutron Reactions
Ru(n,γ) cross sections above 2.6 KeV, 9:34701 (J;US)
RUTHENIUM 102 TARGET
Neutron Reactions
Ru(n,γ) cross sections above 2.6 KeV, 9:34701 (J;US)
RUTHENIUM 103
Radiochemistry
Organ-distribution and biochemical aspects in developing new radiopharmaceuticals labelled with metallocenes, 9:33841 (RA;IL)
RUTHENIUM 104 TARGET
Neutron Reactions
Ru(n,γ) cross sections above 2.6 KeV, 9:34701 (J;US)
RUTHENIUM 106
Radioecological Concentration
1. Quarterly progress report 1983, 9:34365 (R;FR;In French)
2. Quarterly progress report, 1983, 9:34366 (R;FR;In French)
4. Quarterly progress report, 1982, 9:34367 (R;FR;In French)
Washout
Scavenging ratios and dry deposition velocities of radioactive particles in the tropical regions of India, 9:34324 (BA;US)
RUTHENIUM 96 TARGET
Alpha Reactions
Study on the energy dependence of γ-quantum yield in the interaction of ^{3}He and ^{4}He ions with sup(96,98)Ru, 9:34695 (RA;SU;In Russian)
Helium 3 Reactions
Study on the energy dependence of γ-quantum yield in the interaction of ^{3}He and ^{4}He ions with sup(96,98)Ru, 9:34695 (RA;SU;In Russian)
RUTHENIUM 98 TARGET
Alpha Reactions
Study on the energy dependence of γ-quantum yield in the interaction of ^{3}He and ^{4}He ions with sup(96,98)Ru, 9:34695 (RA;SU;In Russian)
Helium 3 Reactions
Study on the energy dependence of γ-quantum yield in the interaction of ^{3}He and ^{4}He ions with sup(96,98)Ru, 9:34695 (RA;SU;In Russian)
RUTHENIUM COMPLEXES
Solvent Extraction
Study of the chemical interactions of actinide cations in solution at macroscopic concentrations, 9:32702 (R;FR;In French)
RUTHENIUM COMPOUNDS
Catalytic Effects
Homogenous high pressure hydrogenation of carbon monoxide using cobalt, ruthenium and iridium catalyst, 9:32796 (R;DE;In German)

S

S CODES
Validation
Verification and field comparison of the Sandia Waste-Isolation Flow and Transport Model (SWIFT), 9:32756 (R;US)
SAFEGUARDS
Simulation
Simulation of nuclear fuel reprocessing for safeguards, 9:32706 (R;DE)
SAFETY (NUCLEAR)
See RADIATION PROTECTION
SAFETY (REACTOR)
See REACTOR SAFETY
SALINE ZONE
See OIL SHALES

SALT CAVERNS
Waste-Rock Interactions
Investigations on kind and quantity of water contained in permian rock salt and its release and migration in the temperature field of deposited radioactive wastes, 9:32727 (R;DE;In German)
SALT DEPOSITS
Hydrology
Well completion report - J. Friemel No. 1 (PD-9) well, Palo Duro Basin, Texas: unanalyzed data, 9:32714 (R;US)
Interstitial Water
Investigations on kind and quantity of water contained in permian rock salt and its release and migration in the temperature field of deposited radioactive wastes, 9:32727 (R;DE;In German)
Stratigraphy
Well completion report - J. Friemel No. 1 (PD-9) well, Palo Duro Basin, Texas: unanalyzed data, 9:32714 (R;US)
SAMARIUM COMPOUNDS
See also SAMARIUM SELENIDES
SAMARIUM SULFIDES
Electric Conductivity
Electrical resistivity of Sm Monochalcogenides, 9:33743 (RA;BR)
SAMARIUM SELENIDES
X-Ray Spectra
X-ray spectroscopy of solids under pressure. Annual progress report, August 1983-July 1984, 9:33740 (R;US)
SAMARIUM SULFIDES
X-Ray Spectra
X-ray spectroscopy of solids under pressure. Annual progress report, August 1983-July 1984, 9:33740 (R;US)
SAMPLERS
Automation
Application of an ion exchange method for sensitivity improvement of an automated radionuclide analysis system, 9:33185 (J;US)
Performance Testing
Application of an ion exchange method for sensitivity improvement of an automated radionuclide analysis system, 9:33185 (J;US)
Sampling
Application of an ion exchange method for sensitivity improvement of an automated radionuclide analysis system, 9:33185 (J;US)
SAMPLING
Cryogenics
Chemical reactions and molecular aggregation in cryogenic whole air sample matrices. Final technical report 1 Oct 81-31 Mar 83, 9:34220 (R;US)
SANDIA LABORATORIES
Bibliographies
Bibliography of reports of the Sandia Solar Thermal Distributed Receiver Systems Project, 9:32913 (R;US)
Solar Thermal Conversion
Bibliography of reports of the Sandia Solar Thermal Distributed Receiver Systems Project, 9:32913 (R;US)
SANDSTONES
Compression Strength
Mechanical properties of multiwell MWX-1 sandstone and siltstone at high pressures, 9:32676 (R;US)
Hydraulic Fracturing
Western Gas Sands Subprogram, 9:32675 (R;US)
Permeability
Western Gas Sands Subprogram, 9:32675 (R;US)
Tensile Properties
Mechanical properties of multiwell MWX-1 sandstone and siltstone at high pressures, 9:32676 (R;US)
SANITARY LANDFILLS
Containment Systems
Hydrogeologic assessment of zone-of-saturation landfill design, 9:33935 (R;US)
Resource Recovery Facilities
Construction and development of a resource recovery facility for household waste and commercial waste on a sanitary landfill, 9:33926 (R;DE;In German)
SATELLITE POWER SYSTEM
See ORBITAL SOLAR POWER PLANTS
SATELLITE SOLAR POWER STATIONS
See ORBITAL SOLAR POWER PLANTS
SAVANNAH RIVER
Invertebrates
Interim report of the Savannah River macroinvertebrate and periphyton studies, 9:34370 (R;US)
SAVANNAH RIVER PLANT
Ground Water
SRP groundwater protection implementation plan. Draft, 9:32753 (R;US)
Technical summary of the A/M Area Groundwater (AMGW) remedial action program, 9:32752 (R;US)
Technical summary of groundwater quality protection program at Savannah River Plant. Volume 1. Site geohydrology, and solid and hazardous wastes, 9:32754 (R;US)
Radiation Accidents
Environmental release of iodine-131, May 29-June 23, 1961, 9:34300 (R;US)
Radiation Monitoring
Environmental monitoring in the vicinity of the Savannah River Plant. Annual report for 1983, 9:34303 (R;US)
Radioactive Effluents
1960 Audit of SRP radioactive waste, 9:34301 (R;US)
1973 releases of radioactivity at the Savannah River Plant, 9:34302 (R;US)
Radioactivity in the environs of Steel Creek, 9:34360 (R;US)
Radiological effect of SRP operations, 1979, 9:34304 (R;US)
Release guides for liquid radioactive releases to streams and basins, 9:34331 (R;US)
Radioactive Waste Disposal
SRP hazardous waste monitor well report, 9:32722 (R;US)
Radioactive Waste Facilities
Remotely replaceable jumpers and embedded wiring for the DWPF, 9:32723 (R;US)
Text of slides prepared 1/20/84 for presentation regarding underrun funds (Slides, no text), 9:32721 (R;US)
Streams
Mineralogy and ion exchange characteristics of Savannah River Plant streambed sediments, 9:34516 (R;US)
Thermal Effluents
Thermal discharges from the Savannah River Plant, 9:33242 (R;US)
SAVANNAH RIVER PLANT C REACTOR

Meetings
Center for Computer Security newsletter. Volume 2, Number 3, 9:34988 (R;US)
SEDIMENTATION
Flood disaster 1978 in the compensation basin of Palagnedra, 9:32833 (RA;CH;In German)
Calculation Methods
Time-dependent degradation of sediment accumulation during the scouring of storage basins, 9:32816 (RA;CH;In German)
Dredge Spoil
Silt measurement and monitoring on Rhine canal sections between Basle and Strasbourg, 9:32823 (RA;CH;In French)
Environmental Effects
Silting and removing problems in the storage zone of the hydraulic power plant Eglisau, 9:32819 (RA;CH;In German)
Measuring Methods
Hydro power station Eglisau - periodical survey of the sedimentation 1919-1980, 9:32818 (RA;CH;In German)
Silt measurement and monitoring on Rhine canal sections between Basle and Strasbourg, 9:32823 (RA;CH;In French)
Meetings
Silting of storage areas and reservoirs in the Alpine region, 9:32838 (R;CH;GE)
Range Finders
Echo-depth sounding and evaluation in order to detect and record sedimentation in water-reservoirs, 9:32817 (RA;CH;In German)
Simulation
Sedimentation in the Bremgarten-Zufikon-reservoir on the Reuss river, 9:32821 (RA;CH;In German)
Simulation model for calculating sedimentation in water reservoirs, 9:32815 (RA;CH;In German)
SEDIMENTS
Mineralogy
Mineralogy and ion exchange characteristics of Savannah River Plant streambed sediments, 9:34516 (R;US)
Radioactivity
Investigation of the concentration, distribution, and inventory of radionuclides in the sediment of Process Waste System Basin 3524, 9:34363 (R;US)
Radionuclide Migration
Measurement of radionuclide diffusion in ocean floor sediment and clay, 9:34368 (J;US)
Removal
Experience with clearance of storage areas at the Tauernkraftwerke AG plants in Salzburg, 9:32834 (RA;CH;In German)
Model tests for flushing of bed load sediment from the upper end of the compensating reservoir Rempen of AG Kraftwerke Waegital, 9:32826 (RA;CH;In German)
Sedimentation and erosion in the reservoir of Ferden, 9:32828 (RA;CH;In German)
Sedimentation in the Grimsel reservoir, 9:32830 (RA;CH;In German)
Traps
Experience with a sediment trap on the Emme river upstream of the weir at Flumenthal, 9:32832 (RA;CH;In German)
SEISMIC ARRAYS
Testing
Interaction between airguns, 9:34514 (R;NO)
SEISMIC EFFECTS
Mathematical Models
Sloshing response of a reactor tank with internals, 9:33256 (R;US)
Simulation
Uses of an earthquake simulator, 9:33309 (RA;US)
SEISMIC SURVEYS
Acoustic Monitoring
Interaction between airguns, 9:34514 (R;NO)
Petroleum Geology
Direct detection of hydrocarbons with seismic methods applied to land-data, 9:32649 (R;DE;In German)

Wave Equations
Seismic migration using the WKB approximation, 9:34513 (R;NO)
SEISMIC WAVES
Mathematical Models
Historic eastern Canadian earthquakes. A reappraisal of near-field effects, 9:34511 (RA;CA)
WKB Approximation
Seismic migration using the WKB approximation, 9:34513 (R;NO)
SELENIUM
Activation Analysis
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
Biological Accumulation
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
SELENIUM 76 TARGET
Neutron Reactions
Angular anisotropy of neutron inelastic scattering on Se nuclei and the role of the direct reaction mechanism in the range of E approximately 1 MeV, 9:34683 (RA;SU;In Russian)
SELENIUM 78 TARGET
Neutron Reactions
Angular anisotropy of neutron inelastic scattering on Se nuclei and the role of the direct reaction mechanism in the range of E approximately 1 MeV, 9:34683 (RA;SU;In Russian)
SELENIUM 80 TARGET
Neutron Reactions
Angular anisotropy of neutron inelastic scattering on Se nuclei and the role of the direct reaction mechanism in the range of E approximately 1 MeV, 9:34683 (RA;SU;In Russian)
SELENIUM 82 TARGET
Neutron Reactions
Angular anisotropy of neutron inelastic scattering on Se nuclei and the role of the direct reaction mechanism in the range of E approximately 1 MeV, 9:34683 (RA;SU;In Russian)
SELENIUM COMPOUNDS
Ecological Concentration
Methods to evaluate ecotoxicological effects of chemicals. Vol. 2, 9:34337 (R;DE;In German)
Environmental Transport
Methods to evaluate ecotoxicological effects of chemicals. Vol. 2, 9:34337 (R;DE;In German)
SEM (MICROSCOPY)
See SCANNING ELECTRON MICROSCOPY
SEMICIRCULAR SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS
SEMICONDUCTOR COUNTERS
See SEMICONDUCTOR DETECTORS
SEMICONDUCTOR DETECTORS
Photon detectors, E/sub γ/ = several MeV to 1 GeV, 9:34113 (R;US)
SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.
Electron Transfer
General theory of photo-electron-transfer across semiconductor-electrolyte interfaces, 9:32890 (J;US)
Energy Conversion
Hot carrier effects at semiconductor-electrolyte junctions, 9:32892 (J;US)
Ion Implantation
Use of SIMS to measure dopant profile changes in semiconductor materials caused by pulsed laser annealing, 9:32876 (J;US)
Optical Properties
Infrared absorption spectrum of free carriers in polar semiconductors. Final report, July 1, 1983-June 30, 1984, 9:34763 (R;US)
Phase Transformations
Some properties of intermediate valence compounds, 9:33744 (RA;BR)
SEMICONDUCTOR STORAGE DEVICES
Radiation Hardening
Low power radiation hard GaAs RAM. Semi-annual technical report 10 Jun 82-9 Dec 83, 9:34141 (R;US)
SENIOR CENTERS
See PUBLIC BUILDINGS
SENSIBLE HEAT STORAGE
Experimental and theoretical comparison of a water storage system and of a phase-change material storage system on the experimental solar building of Bourgoin-Jallieu (Isere), 9:32952 (R;FR;In French)
Rock Beds
Solar collectors and heat store in a system using air as the energy carrier, 9:32932 (R;SE;In Swedish)
SERUM (BLOOD)
See BLOOD SERUM
SEYFERT GALAXIES
Visible Radiation
U.B.V. light variation in Seyfert galaxies, 9:34545 (RA;BR)
SHALE MINING
See OIL SHALE MINING
SHALE OIL
Combustion
Alternate fuels combustion research. Interim report 19 May 80-20 Feb 83 on phase 2, 9:32688 (R;CA)
Oil Yields
Oil yield losses in non-uniform in situ oil shale retorts, 9:32686 (R;US)
SHEATHS (FUEL)
See FUEL CANS
SHELL MODELS
Nuclear shell models only; for electron shell models use ELECTRONIC STRUCTURE.
Nuclear Molecules
Diabatic two-center shell model, 9:34726 (R;DE)
SHELLS
Structural forms; for electron shells in atoms use ELECTRONIC STRUCTURE.
Mechanical Vibrations
DYNASHELL computer code, 9:33172 (RA;BR;In Portuguese)
Stress Analysis
Implantation in MEF computer code, a finite element method for shell calculations, 9:33174 (RA;BR;In Portuguese)
Stress analysis for shells with double curvature by finite element method, 9:33851 (R;BR;In Portuguese)
SHF RADIATION
See RADIOWAVE RADIATION
SHIELDING
Perturbation Theory
Comments on higher order generalized perturbation theory, 9:33146 (J;US)
Radiation Flux
Calculation of nonrelativistic electron flux potential in conducting shields, 9:33986 (RA;UA;In Russian)
SHIELDING MATERIALS
Energy Absorption
Neutron and gamma-ray penetrations in thick iron, 9:33241 (J;US)
Irradiation
Neutron and gamma-ray penetrations in thick iron, 9:33241 (J;US)
Post-Irradiation Examination
Neutron and gamma-ray penetrations in thick iron, 9:33241 (J;US)
SHIELDS
Photon Transport
Gamma-ray buildup factors for concrete slab shields under slant incidence conditions, 9:34755 (J;US)
SHIFT PROCESSES
Bench-Scale Experiments
Development of an advanced water-gas shift conversion system, 9:32536 (R;US)
Catalysts
Development of an advanced water-gas shift conversion system, 9:32536 (R;US)
Development of an advanced water-gas shift conversion system. Quarterly progress report, February 1-April 30, 1984, 9:32527 (R;US)

Chemical Reactors
Development of an advanced water-gas shift conversion system. Quarterly progress report, February 1-April 30, 1984, 9:32527 (R;US)
Process Development Units
Development of an advanced water-gas shift conversion system. Quarterly progress report, February 1-April 30, 1984, 9:32527 (R;US)
SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR
SHIPPINGPORT REACTOR
Reactor Maintenance
Shippingport Atomic Power Station. Quarterly operating report, fourth quarter 1983, 9:33069 (R;US)
Water Chemistry
Shippingport Atomic Power Station. Quarterly operating report, fourth quarter 1983, 9:33069 (R;US)
SHIPS
Quality Assurance
Aircraft, ships, spacecraft, nuclear plants and quality, 9:33853 (R;US)
SHOCK WAVES
Hydrodynamics
H Division. Materials Physics quarterly report, October-December 1983, 9:33615 (R;US)
Mach Number
Longitudinal resistivity and intermediate Mach number collisionless transverse magnetosonic shocks. Memorandum report, 9:34788 (R;US)
SHORES
For both lake- and sea-land boundaries.
Microorganisms
Microbiology: II. Biodegradation of oil - 1980 study results, 9:34433 (RA;NO)
Oil Spills
Final administrative report, the BIOSIS-project/. Canada 1980-1982, 9:34432 (R;NO;In Norwegian,English)
Microbiology II. Biodegradation of oil - 1981. Study results, 9:34490 (RA;NO)
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Design
First results obtained from the Cello liquid argon end cap calorimeters, 9:34116 (R;FR;In French)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIEGBAHN SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS
SIGMA PARTICLES
Hypernuclei
Structure of Σ-hypernuclei, 9:34613 (RA;BR)
Structure of Σ-hypernuclei, 9:34614 (RA;BR)
Widths of Σ-hypernuclear states, 9:34615 (RA;BR)
Potentials
Mean-field approach to Λ and Σ hypernuclei, 9:34612 (RA;BR)
SIGMALOG
See MWD SYSTEMS
SILANES
Glow Discharges
Analysis of silane glow discharges by mass spectroscopy, 9:32874 (J;US)
Plasma
Measurement and use of the plasma current waveform in an RF silane discharge, 9:32873 (J;US)
SILICA
Monitoring
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Physical Radiation Effects
Radiation damage by high-energy neutrons, 9:33219 (J;US)
Sorptive Properties
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
Thermal Expansion
Radiation damage by high-energy neutrons, 9:33219 (J;US)
SILICA GEL
Sorptive Properties
Solvent cleanup using base-treated silica gel solid adsorbent, 9:32708 (R;US)
SILICEOUS ROCK
See SANDSTONES
SILICON
Activation Analysis
Fast transport facility for activation analysis with high-energy neutrons, 9:33799 (R;AT;In German)
Atom Transport
Radiation-induced diffusion of gold on silicon surface, 9:33752 (RA;SU;In Russian)
Crystal Growth
Low-cost silicon substrates by directional solidification. Final report, 9:32867 (R;US)
Crystallization
Effect of diborane and phosphine on the deposition rate of silicon grown from $SiCl_4$ by R.F. plasma, 9:33815 (RA;IL)
Deposition
Analysis of silane glow discharges by mass spectroscopy, 9:32874 (J;US)
Effect of diborane and phosphine on the deposition rate of silicon grown from $SiCl_4$ by R.F. plasma, 9:33815 (RA;IL)
Measurement and use of the plasma current waveform in an RF silane discharge, 9:32873 (J;US)
Electrical Properties
Kinetics and electronic properties of electrodeposited silicon, 9:32883 (J;US)
Electrodeposition
Dependence of electrodeposited silicon morphology on graphite substrate preparation, 9:32882 (J;US)
Electrometallurgy
Electrowinning of silicon using a molten tin cathode, 9:32877 (J;US)
Electrorefining
Electrorefining of metallurgical grade silicon, 9:32880 (J;US)
Grain Boundaries
Plasma modification of grain boundaries in polycrystalline silicon, 9:32872 (J;US)
Impurities
Electrowinning of silicon using a molten tin cathode, 9:32877 (J;US)
Ion Implantation
Evaluation of the ion implantation process for production of solar cells from silicon sheet materials. Final report, 15 December 1982-1 December 1983, 9:32849 (R;US)
Heatpulse annealing of ion-implanted silicon: structural characterization by transmission electron microscopy, 9:33764 (J;GB)
Kinetics
Kinetics and electronic properties of electrodeposited silicon, 9:32883 (J;US)
Morphology
Dependence of electrodeposited silicon morphology on graphite substrate preparation, 9:32882 (J;US)
Passivation
Process research of polycrystalline silicon material (PROPSM). Quarterly report No. 2, January 1, 1984-March 31, 1984, 9:32850 (R;US)
Physical Radiation Effects
Radiation-induced diffusion of gold on silicon surface, 9:33752 (RA;SU;In Russian)
Production
Electrorefining of metallurgical grade silicon, 9:32880 (J;US)
Refinement of MG silicon by HEM for photovoltaic applications, 9:32879 (J;US)
Pyrometallurgy
Low cost silicon by thermite reactions, 9:32878 (J;US)
Refining
Refinement of MG silicon by HEM for photovoltaic applications, 9:32879 (J;US)

SILICON 28 TARGET
Oxygen 18 Reactions
Contribution to the study of heavy-ion induced quasi-elastic processes in the 2s-1d shell, 9:34667 (R;FR;In French)
SILICON ALLOYS
Magnetic Properties
Magnetic behaviour of Fe-Si-B metallic glasses studied by neutron scattering, 9:33748 (RA;CH)
Moessbauer Effect
Moessbauer spectroscopy measurements of the magnetic properties of oriented SiFe sheets, 9:33661 (RA;CH)
Neutron Diffraction
Magnetic behaviour of Fe-Si-B metallic glasses studied by neutron scattering, 9:33748 (RA;CH)
Physical Radiation Effects
Non-equilibrium segregation in irradiated alloys, 9:33694 (BA;GB)
Nonequilibrium segregation and phase instability in alloy films during elevated-temperature irradiation in a high-voltage electron microscope, 9:33626 (R;US)
Segregation
Non-equilibrium segregation in irradiated alloys, 9:33694 (BA;GB)
Splat Cooling
Metallic glasses as new catalyst systems for energy conversion. Annual progress report and final technical report, 9:33633 (R;US)
SILICON CARBIDES
Electric Conductivity
Evaluation of electrical properties of SiC for ICRH window applications, 9:33705 (RA;US)
Physical Radiation Effects
Structural performance of low-activation ceramics after high-dose neutron irradiation, 9:33706 (RA;US)
Temperature Effects
Performance results on a C-SiC alloy coating chemically vapor-deposited onto graphite substrates, 9:33715 (J;CH)
SILICON FLUORIDES
Toxicity
Decomposition of sparked SF_6 and cytotoxicity of SF_6 decomposition products, 9:34473 (R;US)
SILICON HYDRIDES
See SILANES
SILICON ISOTOPES
Proton Reactions
Analysis of scattering of protons with energy near 6 MeV on nuclei with A=26,50, 9:34669 (RA;SU;In Russian)
SILICON NITRIDES
Chemical Composition
Electron trap densities and chemical composition of APCVD silicon nitride, 9:33770 (J;US)
Electron Density
Electron trap densities and chemical composition of APCVD silicon nitride, 9:33770 (J;US)
Fabrication
Development of silicon nitride gas turbine components. Phase 2, 9:33700 (R;DE;In German)
Mechanical Properties
Development of silicon nitride gas turbine components. Phase 2, 9:33700 (R;DE;In German)
Oxidation
Development of silicon nitride gas turbine components. Phase 2, 9:33700 (R;DE;In German)
Phase Studies
X-ray energy dispersive spectroscopy of intergranular phases in βll sialons, 9:33716 (BA;US)
Physical Properties
High-temperature electrical insulators for electrophysical devices, 9:34919 (RA;SU;In Russian)
Physical Radiation Effects
Structural performance of low-activation ceramics after high-dose neutron irradiation, 9:33706 (RA;US)
Trapping
Electron trap densities and chemical composition of APCVD silicon nitride, 9:33770 (J;US)
X-Ray Spectroscopy
X-ray energy dispersive spectroscopy of intergranular phases in βll sialons, 9:33716 (BA;US)
SILICON SOLAR CELLS
Electric Contacts
Development of metallization process FSA Project, cell and module formation research area. Quarterly technical progress report for the period ending September 30, 1983, 9:32848 (R;US)
Electrical Properties
Electrical properties of submicronic emitters. Application to the case of solar cells and subnanosecond hyperfrequency transitors, 9:32851 (R;FR;In French)
Fabrication
Development and fabrication of a solar cell junction processing system. Draft final report, 9:32847 (R;US)
Process research of polycrystalline silicon material (PROPSM). Quarterly report No. 2, January 1, 1984-March 31, 1984, 9:32850 (R;US)
Heterojunctions
Influence of the interfacial layer on electrooptical properties of heterojunction solar cells. Final report, 9:32846 (R;US)
Materials
Dependence of electrodeposited silicon morphology on graphite substrate preparation, 9:32882 (J;US)
Electrorefining of metallurgical grade silicon, 9:32880 (J;US)
Electrowinning of silicon using a molten tin cathode, 9:32877 (J;US)
Kinetics and electronic properties of electrodeposited silicon, 9:32883 (J;US)
Low cost silicon by thermite reactions, 9:32878 (J;US)
Refinement of MG silicon by HEM for photovoltaic applications, 9:32879 (J;US)
P-N Junctions
Electrical properties of submicronic emitters. Application to the case of solar cells and subnanosecond hyperfrequency transitors, 9:32851 (R;FR;In French)
Sputtering
Study of improvements to Schottky diodes on amorphous silicon, prepared by cathodic sputtering. Final report, 9:32860 (R;XE;In French)
SILICONES
Thermal Conductivity
Thermal conductivity and interface resistance of particle-filled silicone resin, 9:32862 (R;US)
SILOE REACTOR
Neutron Diffractometers
Control program of the neutron four-circle-diffractometer P32 at the SILOE reactor/CEN Grenoble, 9:34132 (R;DE)
P Codes
Control program of the neutron four-circle-diffractometer P32 at the SILOE reactor/CEN Grenoble, 9:34132 (R;DE)
SILOXANES
See also SILICONES
Polymerization
Mass-spectrometric investigation of the plasma polymerization of hexamethyldisiloxane, 9:33769 (J;US)
Structural Chemical Analysis
Surface and bulk phase separations in block copolymers and their blends. Interim report 30 Sep 82-30 Dec 83, 9:33724 (R;US)
SILT
Compression Strength
Mechanical properties of multiwell MWX-1 sandstone and siltstone at high pressures, 9:32676 (R;US)
Removal
Fine material deposit and flushing of the surge pond of Mattsand, 9:32827 (RA;CH;In German)
Problems of siltation in three compensating basins at Linth-Limmern power scheme, 9:32824 (RA;CH;In German)
Silting-up and scouring of the small Innerferrera reservoir of the Hinterrhein Hydroelectric Scheme, 9:32825 (RA;CH;In German)
Z'Mutt compensating basin and sediments, 9:32808 (RA;CH;In French)

Tensile Properties
Mechanical properties of multiwell MWX-1 sandstone and siltstone at high pressures, 9:32676 (R;US)

SILVER
Catalytic Effects
Selective epoxidation of ethylene catalyzed by silver. Mechanistic details revealed by single-crystal studies, 9:33817 (R;US)
Electron Collisions
Radiative decay of plasma oscillations on nonplanar metal surfaces, 9:34571 (R;US)
Surface Properties
Surface-plasmon exploration of multilayer physisorbed and chemisorbed films on metal substrates, 9:34145 (R;US)

SILVER IODIDES
Precipitation Scavenging
Precipitation scavenging of submicron particles released by rockets into convective clouds, 9:34196 (BA;US)

SILVER-ZINC BATTERIES
Electrodes
Effect of inorganic additives on zinc electrodes in alkaline batteries, 9:33403 (J;US)

SIMS
See ION MICROPROBE ANALYSIS
MASS SPECTROSCOPY

SIMULATORS (REACTOR)
See REACTOR SIMULATORS

SITE SELECTION
Legal Aspects
Act No. 8 of 10 January 1983 amending Act No. 393 of 2 August 1975 on requirements for the siting of nuclear electricity-generating plants, 9:33221 (R;IT;In Italian)

SKELETAL DISEASES
See also RHEUMATIC DISEASES
Diagnosis
Informative value of radionative diagnostics in cases of patellar chondropathy, 9:34401 (R;DE;In German)

SKULL
CAT Scanning
Comparison of CT and angiographic findings about tumors of the posterior cranial fossa, 9:34406 (R;DE;In German)

SKYLIGHTS
Design
Skylight energy performance and design optimization, 9:33519 (R;US)
Performance
Skylight energy performance and design optimization, 9:33519 (R;US)

SLAGS
Corrosive Effects
Surface Gasification Materials Program. Semiannual progress report for the period ending March 31, 1984, 9:32535 (R;US)
Scanning Electron Microscopy
Investigation of pyrite as a contributor to slagging in Eastern Bituminous coals. Quarterly progress report 10, January 1-March 30, 1984, 9:32621 (R;US)
Solvent Properties
Pulverized coal firing of aluminum melting furnaces. Final report (Sulfide capacity of various slags in given temperature range), 9:32619 (R;US)
Viscosity
Viscosity of synthetic coal ash slags, 9:32618 (R;US)

SLC
See STANFORD LINEAR COLLIDER

SLUDGES
Leaching
Evaluation of thickening and dewatering characteristics of SRC-I wastewater treatment sludges. Final technical report, 9:32513 (R;US)
Uses
Beneficial use of sludge in building components, 9:33762 (R;US)
Waste Disposal
Evaluation of thickening and dewatering characteristics of SRC-I wastewater treatment sludges. Final technical report, 9:32513 (R;US)
Water Removal
Evaluation of thickening and dewatering characteristics of SRC-I wastewater treatment sludges. Final technical report, 9:32513 (R;US)

SLUGS (FUEL)
See FUEL RODS

SLURRIES
See also FUEL SLURRIES
Flow Rate
Mass flow measurement at Wilsonville Advanced Coal Liquefaction Pilot Plant using micro motion mass flow meters, 9:32533 (R;US)

SLURRIES (FUEL)
See FUEL SLURRIES

SMALL INTESTINE
Diagnosis
Clinic, diagnosis and therapy of tumors of the small intestine. A survey about 53 cases between 1961 and 1980, 9:34404 (R;DE;In German)
Radiotherapy
Clinic, diagnosis and therapy of tumors of the small intestine. A survey about 53 cases between 1961 and 1980, 9:34404 (R;DE;In German)

SMALL-SCALE HYDROELECTRIC POWER PLANTS
Development of small scale hydro-schemes. Part 1. Rapid assessment, 9:32807 (R;IE)
Feasibility Studies
Small hydro-electric potential west Poverty Bay region. Final report, 9:32811 (R;NZ)

SMECTITE
Particulates
Size distribution and mineralogy of aluminosilicate dust particles in tropical Pacific air and rain, 9:34286 (BA;US)

SMELTERS
Air Pollution Control
Copper smelters and atmospheric visibility in national parks and wilderness areas in the southwest, 9:34229 (R;US)

SMOKES
Chemical Composition
Chemical characterization and toxicologic evaluation of airborne mixtures. Chemical and physical characterization of diesel fuel smoke, 9:32674 (R;US)

SN METHOD
See DISCRETE ORDINATE METHOD

SNOW
Electric Conductivity
Experimental study of electrostatic effect on aerosol scavenging by snow crystals, 9:34206 (BA;US)
Quantitative Chemical Analysis
Trace gases in snow and rain, 9:34288 (BA;US)

SNR REACTOR
See SNR-1 REACTOR

SNR-1 REACTOR
Prior to 1977, SNR REACTOR was used.
Containment Systems
Position paper of the Federal Republic of Germany on sodium fires, design and testing, 9:33109 (RA;AT)
Reactor Safety
GRS annual report 1982, 9:33282 (R;DE;In German)
Position paper of the Federal Republic of Germany on sodium fires, design and testing, 9:33109 (RA;AT)

SNR-2 REACTOR
Containment Systems
Position paper of the Federal Republic of Germany on sodium fires, design and testing, 9:33109 (RA;AT)
Reactor Safety
Position paper of the Federal Republic of Germany on sodium fires, design and testing, 9:33109 (RA;AT)

SNR-300 REACTOR
See SNR-1 REACTOR

SODA ASH
See SODIUM CARBONATES

SODIUM
Chemical Analysis
Project of a hydrogen monitor for sodium loops, 9:33792 (RA;BR;In Portuguese)

Coolant Loops
Calculation of a thermal field in the heater cover of CTS-1 sodium loop, 9:33893 (RA;BR;In Portuguese)
Determination of inlet temperature of CTS-1 heater, under critical conditions of outlet temperature and rate of flow, 9:33888 (RA;BR;In Portuguese)
Modifications in the CTS-1 sodium thermal loop, 9:33892 (RA;BR;In Portuguese)
Natural convection in sodium thermal circuit, 9:33889 (RA;BR;In Portuguese)
Project of a cold trap for CTS-1 sodium thermal loop, 9:33894 (RA;BR;In Portuguese)
Project of a hydrogen monitor for sodium loops, 9:33792 (RA;BR;In Portuguese)
Stress analysis in a sodium loop at IEN (Institute of Nuclear Engineering), 9:33900 (RA;BR;In Portuguese)
Stress analysis in the pipeline of the loop plugging-meter, 9:33901 (RA;BR;In Portuguese)
Temperature measurement of fusion range of sodium stored in drain tank, 9:33890 (RA;BR;In Portuguese)
Corrosive Effects
Study of the components taken from sodium loop, 9:33647 (RA;BR;In Portuguese)
Crystal Structure
Particle scattering studies on foreign ions in superionic conductors. Technical report, 9:33736 (R;US)
Deposition
Comparison of surrogate surfaces for dry deposition collection, 9:34272 (BA;US)
Dry deposition of trace elements in Olympic National Park, 9:34271 (BA;US)
Distillation
Project of a distillator for sodium oxygen chemical analysis, 9:33793 (RA;BR;In Portuguese)
Ecological Concentration
Effects of acid precipitation on forest soils and watershed biogeochemistry in New England. A technical progress report, 9:34336 (R;US)
Engineered Safety Systems
Elastoplastic bending of great displacements of primary sodium safety reservoir for PEC reactor, 9:33103 (RA;BR;In Portuguese)
Environmental Transport
Estimates of dry and wet deposition and resuspension fluxes of several trace metals in the Southern Bight of the North Sea, 9:34283 (BA;US)
Fires
Italian position paper on the safety analysis of liquid metal fast breeder reactors as related to sodium fires. The PEC reactor, 9:33291 (RA;AT)
Japanese studies on sodium fires, design and testing, 9:33110 (RA;AT)
Liquid metal fires. A review of work status in the United Kingdom, 9:33292 (RA;AT)
Position paper of the Federal Republic of Germany on sodium fires, design and testing, 9:33109 (RA;AT)
United States position paper on sodium fires, design and testing, 9:33293 (RA;AT)
Hydrogen Additions
Project of a hydrogen monitor for sodium loops, 9:33792 (RA;BR;In Portuguese)
Ion Implantation
Particle scattering studies on foreign ions in superionic conductors. Technical report, 9:33736 (R;US)
Oxygen Additions
Project of a distillator for sodium oxygen chemical analysis, 9:33793 (RA;BR;In Portuguese)
Primary Coolant Circuits
Elastoplastic bending of great displacements of primary sodium safety reservoir for PEC reactor, 9:33103 (RA;BR;In Portuguese)
Quantitative Chemical Analysis
Project of a distillator for sodium oxygen chemical analysis, 9:33793 (RA;BR;In Portuguese)
Smokes
Study on the production, elimination and quality of sodium smoke, 9:33107 (RA;BR;In Portuguese)
Storage
Safety of sodium storage and sodium extinction, 9:33281 (RA;BR;In Portuguese)
Void Coefficient
A liquid-metal fast breeder reactor core design with seed blanket modular assemblies, 9:33348 (J;US)
Neutronic calculations on the sodium void coefficient, 9:33097 (RA;BR;In Portuguese)

SODIUM 23
Nuclear Quadrupole Resonance
Study of the ^{23}Na EFG (Electrostatic Field Gradient) tensor on single crystals of $Na_2S.9H_2O$ by wideline NMR, 9:33750 (R;AT;In German)

SODIUM CARBONATES
Catalytic Effects
Development of an advanced water-gas shift conversion system, 9:32536 (R;US)
Effects of inorganics and pore structure on char gasification, 9:32460 (RA;US)
Mechanism of catalytic gasification of coal char. Quarterly technical progress report No. 13, 1 January-31 March 1984, 9:32455 (R;US)
Sorptive Properties
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)

SODIUM CHLORIDES
Catalytic Effects
Mechanism of catalytic gasification of coal char. Quarterly technical progress report No. 13, 1 January-31 March 1984, 9:32455 (R;US)
Deposition
Dry deposition of small particles to grass in field conditions, 9:34270 (BA;US)
Radiolysis
Radiation-chemical conversion of radiolysis products under high-temperature irradiation in alkali-halide crystals (Electrons), 9:33831 (RA;UA;In Russian)

SODIUM IODIDE DETECTORS
See NAI DETECTORS

SODIUM IONS
Diffusion
Peculiarities of radiation-induced diffusion of alkali ions in quartz doped with germanium and aluminium, 9:33755 (RA;SU;In Russian)

SODIUM ISOTOPES
See also SODIUM 23
Diffusion
Measurement of radionuclide diffusion in ocean floor sediment and clay, 9:34368 (J;US)

SODIUM MINERALS
See MINERALS

SODIUM NITRATES
Chemical Properties
Thermochemistry of Na-K nitrate salts, 9:33772 (J;US)
Thermodynamic Properties
Thermochemistry of Na-K nitrate salts, 9:33772 (J;US)

SODIUM SULFIDES
Structural Chemical Analysis
Study of the ^{23}Na EFG (Electrostatic Field Gradient) tensor on single crystals of $Na_2S.9H_2O$ by wideline NMR, 9:33750 (R;AT;In German)

SODIUM-SULFUR BATTERIES
Solid Electrolytes
Glass electrolytes, 9:33370 (R;US)

SOIL CONSERVATION
Report to Congress: nonpoint source pollution in the U.S. Final report Sep 83-Jan 84, 9:34372 (R;US)

SOILS
Erosion
Threshold velocities for wind erosion on natural terrestrial arid surfaces (a summary), 9:34344 (BA;US)
Heat Storage
Heat storage in unsaturated soils: initial theoretical analysis of storage design and operational methods, 9:32953 (R;US)

Lead
Lead in vegetation, forest floor material, and soils of the spruce-fir zone, Great Smoky Mountains National Park, 9:34335 (R;US)
Mineralogy
Mineralogy and ion exchange characteristics of Savannah River Plant streambed sediments, 9:34516 (R;US)
Radionuclide Migration
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
The migration of ^{137}Cs and ^{90}Sr in multilayered soils: Results from batch, column, and fallout investigations, 9:34347 (J;US)

SOLAR ACCESS
Prior to September 1980 this concept was indexed to SOLAR RIGHTS.
Planning
Planning and zoning for solar access. A guide for Minnesota communities, 9:32841 (R;US)
Zoning
Planning and zoning for solar access. A guide for Minnesota communities, 9:32841 (R;US)

SOLAR AIR CONDITIONERS
Cost
Radian solar heating and cooling demonstration project. Final report, 9:32937 (R;US)
Design
Radian solar heating and cooling demonstration project. Final report, 9:32937 (R;US)

SOLAR BATTERIES
See SOLAR CELL ARRAYS

SOLAR CELL ARRAYS
See also SOLAR TRACKING SYSTEMS
Comparative Evaluations
Comparative evaluation of new low-cost array field designs for grid-connected photovoltaic systems, 9:32863 (R;US)
Concentrator Solar Cells
Concentrating photovoltaic technology, 9:32864 (R;US)
Design
Comparative evaluation of new low-cost array field designs for grid-connected photovoltaic systems, 9:32863 (R;US)
Electrical Faults
Study of coupling and protecting solar arrays of photovoltaic cells with the aim of obtaining high direct current voltages. Final report, 9:32856 (R;XE;In French)

SOLAR CELLS
See also CADMIUM SELENIDE SOLAR CELLS
CADMIUM SULFIDE SOLAR CELLS
CONCENTRATOR SOLAR CELLS
GALLIUM ARSENIDE SOLAR CELLS
SCHOTTKY BARRIER SOLAR CELLS
SILICON SOLAR CELLS
Heat Sinks
Study of the technology of a solar module offering good thermal dissipation. Final report, 9:32858 (R;XE;In French)
Materials
Preparation, characterization and reaction in oxygen of Cu_2S films, 9:32875 (J;US)
Use of SIMS to measure dopant profile changes in semiconductor materials caused by pulsed laser annealing, 9:32876 (J;US)

SOLAR COLLECTORS
See also COMBINED COLLECTORS
FLAT PLATE COLLECTORS
SOLAR PONDS
SOLAR TRACKING SYSTEMS
Black Coatings
Optical properties, thermal stability, and characterization of black cobalt oxide films, 9:32927 (J;US)
Design
Tracking system for solar collectors, 9:32951 (P;US)
Manufacturing
Solar collector manufacturing activity 1983, 9:32948 (R;US)
Market
Solar collector manufacturing activity 1983, 9:32948 (R;US)
Operation
Tracking system for solar collectors, 9:32951 (P;US)
Performance Testing
Comparison of collector performance measured in a solar simulator. Final report, 9:32949 (R;XE)
Solar Tracking Systems
Tracking system for solar collectors, 9:32951 (P;US)

SOLAR CONCENTRATORS
See also SOLAR REFLECTORS
Materials
Attack of stainless steel by molten aluminium in a solar concentrator, 9:32922 (J;US)

SOLAR COOLING SYSTEMS
See also PASSIVE SOLAR COOLING SYSTEMS
SOLAR AIR CONDITIONERS
Performance
Performance evaluation of the Shenandoah Community Solar Recreational Center for the year 1980. Final report, 9:32936 (R;US)

SOLAR ENERGY
Research Programs
Annual report 1982, 9:33233 (R;NL;In Dutch)

SOLAR FLARES
Forecasting
Study of coronal precursors of solar flares. Final report 26 Jan 82-25 Jul 83, 9:34522 (R;US)

SOLAR HEATING SYSTEMS
See also PASSIVE SOLAR HEATING SYSTEMS
Computerized Simulation
Contribution to the optimum design of a solar heating system for a residential building, 9:32940 (R;DE;In German)
Cost
Radian solar heating and cooling demonstration project. Final report, 9:32937 (R;US)
Design
Contribution to the optimum design of a solar heating system for a residential building, 9:32940 (R;DE;In German)
Radian solar heating and cooling demonstration project. Final report, 9:32937 (R;US)
Technical evaluation of a solar heating system having conventional hydronic solar collectors and a radiant panel slab. Final report, 9:32933 (R;US)
Optimization
Contribution to the optimum design of a solar heating system for a residential building, 9:32940 (R;DE;In German)
Performance
Performance evaluation of the Shenandoah Community Solar Recreational Center for the year 1980. Final report, 9:32936 (R;US)
Technical evaluation of a solar heating system having conventional hydronic solar collectors and a radiant panel slab. Final report, 9:32933 (R;US)
Testing
Testing of modular industrial solar retrofit industrial process steam systems, 9:32944 (R;US)

SOLAR PONDS
Direct Contact Heat Exchangers
Direct-contact condensers for solar pond power production, 9:32915 (R;US)

SOLAR POWER PLANTS
See also OCEAN THERMAL POWER PLANTS
ORBITAL SOLAR POWER PLANTS
PHOTOVOLTAIC POWER PLANTS
SOLAR THERMAL POWER PLANTS
Lead-Acid Batteries
Testing of batteries for solar applications, 9:32869 (J;US)

SOLAR PROCESS HEAT
Solar Heating Systems
Testing of modular industrial solar retrofit industrial process steam systems, 9:32944 (R;US)

SOLAR RADIATION
Spectra
Solar irradiance: the effect of dimensionality on solar spectrum curves, 9:32842 (R;US)

SOLAR REFLECTORS
Cleaning
Cleaning of float glass and how it effects the corrosion of finished mirrors, 9:32925 (J;US)

Coatings
Experimental approach to evaluating environmental degradation mechanisms in metallized polymeric films, 9:32926 (J;US)
Corrosion
Cleaning of float glass and how it effects the corrosion of finished mirrors, 9:32925 (J;US)
Electrochemical evaluation of the degradation of reflector surfaces, 9:32924 (J;US)
Testing
Degradation of silver/glass solar mirrors, 9:32923 (J;US)
Thermal Degradation
Degradation of silver/glass solar mirrors, 9:32923 (J;US)
Electrochemical evaluation of the degradation of reflector surfaces, 9:32924 (J;US)

SOLAR SEA POWER PLANTS
See OCEAN THERMAL POWER PLANTS

SOLAR SPACE HEATING
Solar Air Heaters
Solar collectors and heat store in a system using air as the energy carrier, 9:32932 (R;SE;In Swedish)

SOLAR STILLS
Economic Analysis
Five solar-energy desalination systems, 9:32946 (J;GB)

SOLAR THERMAL CONVERSION
Use for overviews of solar thermal program.
Bibliographies
Bibliography of reports of the Sandia Solar Thermal Distributed Receiver Systems Project, 9:32913 (R;US)

SOLAR THERMAL POWER PLANTS
See also DISTRIBUTED COLLECTOR POWER PLANTS
Capitalized Cost
Effects of materials reliability and integrity on the cost of solar energy systems, 9:32916 (J;US)
Corrosion
Development of a mid-temperature reference electrode for solar thermal application, 9:32917 (J;US)
Digital AC impedance system for evaluating materials degradation in solar energy conversion systems, 9:32918 (J;US)
Software development as an integral part of an AC impedance system for corrosion studies, 9:32919 (J;US)
Heat Transfer Fluids
Digital AC impedance system for evaluating materials degradation in solar energy conversion systems, 9:32918 (J;US)
Materials
Corrosion of 316ss and incoloy 800 in molten (NaK)NO_3, 9:32928 (J;US)
Effects of materials reliability and integrity on the cost of solar energy systems, 9:32916 (J;US)
Low-cycle fatigue and creep-fatigue behavior of alloy 800 in the presence of saturated and superheated steam, 9:32921 (J;US)
Metals compatibility with molten sodium potassium nitrate salt, 9:32920 (J;US)
Performance Testing
Kuwait, phase 3/stage 1 'Application and test program for the Sulaibyah food/water/power system', 9:32912 (R;DE)
Solar Ponds
Direct-contact condensers for solar pond power production, 9:32915 (R;US)

SOLAR TRACKING SYSTEMS
Accuracy
Tracking system for solar collectors, 9:32951 (P;US)
Design
Tracking system for solar collectors, 9:32951 (P;US)
Operation
Tracking system for solar collectors, 9:32951 (P;US)

SOLAR WATER HEATERS
Economic Analysis
Solar heating plant for hot running water, 9:32941 (R;SE;In Swedish)

SOLID ELECTROLYTES
Electric Conductivity
Glass electrolytes, 9:33370 (R;US)
Ionic Conductivity
Nuclear magnetic resonance studies of ion motion in solid electrolytes. Annual report, April 1, 1983-March 31, 1984, 9:33738 (R;US)
Nuclear Magnetic Resonance
Nuclear magnetic resonance studies of ion motion in solid electrolytes. Annual report, April 1, 1983-March 31, 1984, 9:33738 (R;US)

SOLID SCINTILLATION DETECTORS
See also NAI DETECTORS
Photon detectors, E/sub γ/ = several MeV to 1 GeV, 9:34113 (R;US)
Efficiency
Comparative measurements between a Li-6 glass and a He-3 high-pressure gas scintillator, 9:34118 (R;DE)

SOLID SOLUTIONS
Segregation
Multicomponent diffusion under general chemical potential gradients. Final report, July 1, 1981-June 30, 1984, 9:34764 (R;US)

SOLID STATE PHYSICS
Research Programs
1982. Progress report (no.19), 9:33445 (R;FR;In French)

SOLID WASTES
See also TAILINGS
WOOD WASTES
Briquetting
Simplex coal and biomass gasification process. Phase II-C. Demonstration of Bepex briquetting process properties of commercial Simplex briquettes, 9:32607 (R;US)
Waste Disposal
Technical summary of groundwater quality protection program at Savannah River Plant. Volume 1. Site geohydrology, and solid and hazardous wastes, 9:32754 (R;US)
Waste Management
Technical assistance program report: consideration of the Resource Recovery option in Colorado. Final report, 9:34350 (R;US)

SOLIDS
Diffusion
Monte Carlo calculation of correlation and vacancy wind effects in diffusion, 9:34762 (R;US)
Fluid Flow
Effects of system and geometrical parameters on the flow of Class-B solids in overflow standpipes, 9:33881 (R;US)
Thermal Conductivity
Illustrative numerical comparisons between phonon mean free paths and phonon thermal conductivity, 9:33617 (BA;US)

SOLID-STATE PLASMA
Light Scattering
Study of hot phonons and hot carriers in GaAs under picosecond optical pulse excitation, 9:33759 (R;US)

SOLVENT EXTRACTION
Optimization
Determination and optimization of the parameters in uranium extraction by solvents in a mixer - settler Pollux B-32, 9:33791 (RA;BR;In Portuguese)

SOLVENT-REFINED COAL
Mutagen Screening
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix B. Vol. 2, 9:32503 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 2. Microbial mutagenicity evaluations (Ames test) option IA reports, 9:32502 (R;US)

SOLVENT-REFINED COAL PROCESS
See SRC PROCESS

SOLVENT-REFINING COAL PLANTS
See COAL PREPARATION PLANTS
SRC PROCESS

SOLVENTS
See also ORGANIC SOLVENTS

Recycling
Recycling of various types of solvents, construction of a pilot plant, daily throughput: 8-10 tons, 9:33925 (R;DE;In German)
Thermal Conductivity
Thermal conductivities of Wilsonville solvent and Wilsonville solvent/Illinois No. 6 coal slurry (Wilsonville solvent), 9:32543 (R;US)

SONDES
See PROBES

SOUTH KOREA
See REPUBLIC OF KOREA

SOVIET UNION

SPACE FLIGHT
Energy Sources
Nuclear reactors: powering our space future, 9:33341 (J;US)

SPACE HEATERS
Fuel Consumption
Efficiency and emissions improvement of gas-fired space heaters. Task 1. Efficiency improvement of vented heaters. Final report 1 Feb-31 Jul 83, 9:33538 (R;US)
Thermal Efficiency
Development of a pulse combustion space heater. Annual report Mar 82-May 83, 9:33537 (R;US)

SPACE HVAC SYSTEMS
Heating, ventilation, and air conditioning systems.
Energy Consumption
Present situation and energy consumption of space HVAC systems in the Federal Republic of Germany, 9:33515 (R;DE;In German)
Statistical Data
Present situation and energy consumption of space HVAC systems in the Federal Republic of Germany, 9:33515 (R;DE;In German)

SPACE POWER REACTORS
Reactor Materials
Fuel system and structural alloy considerations for space nuclear reactor systems, 9:33113 (R;US)

SPACE VEHICLES
Quality Assurance
Aircraft, ships, spacecraft, nuclear plants and quality, 9:33853 (R;US)

SPAIN
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)

SPARK GAPS
Breakdown
Self-breakdown spark gap stability under rep-rate conditions, 9:33921 (R;US)
Stability
Self-breakdown spark gap stability under rep-rate conditions, 9:33921 (R;US)

SPARK IGNITION ENGINES
Combustion Kinetics
Experimental and modeling study of engine knock, 9:33543 (R;US)
Raman spectroscopy measurements of flame quenching in a duct-type crevice, 9:33510 (R;US)
Flame Propagation
Laminar flame propagation/quench for a parallel-wall duct, 9:33511 (R;US)
Fuel Substitution
After-test engine inspection of U.S. Army administrative and light-tactical vehicles operated on gasohol and unleaded gasoline. Interim report Oct 81-Feb 83, 9:33611 (R;US)
Knock Control
Experimental and modeling study of engine knock, 9:33543 (R;US)
Raman Effect
Raman spectroscopy measurements of flame quenching in a duct-type crevice, 9:33510 (R;US)

SPECTRA (NEUTRON)
See NEUTRON SPECTRA

SPECTRA UNFOLDING
Computer Codes
LIZA, fit program for particle spectra, 9:34127 (RA;DE;In German)
Program for the defolding of two-dimensional gamma-spectra, 9:34128 (RA;DE;In German)

SPECTRAL SHIFT
H Division. Materials Physics quarterly report, October-December 1983, 9:33615 (R;US)

SPECTRALLY SELECTIVE SURFACES
Optical Properties
Selective solar absorptance of some oxide and sulfide films grown in-situ on binary metal alloys. Final report, 9:32947 (R;US)

SPECTROCHEMISTRY
See EMISSION SPECTROSCOPY

SPENT FUEL CASKS
Specifications
Description of the transport/storage container TN 1300, 9:33862 (R;DE;In German)

SPENT FUEL ELEMENTS
Fission Product Release
Data summary report for fission product release test HI-4, 9:33064 (R;US)
Reprocessing
Determination of light elements in reprocessing flux by X-ray spectrometry, 9:32704 (RA;BR;In Portuguese)

SPENT FUEL STORAGE
See also DRY STORAGE
Wet storage integrity update, 9:32711 (R;US)
Research Programs
Commercial nuclear waste research and development program. Quarterly report, January-March 1984, 9:32720 (R;US)

SPENT FUELS
Criticality
Electronics manual for the FAST facility delayed neutron interrogator assay system, 9:32767 (R;US)
Delayed Neutron Analysis
Electronics manual for the FAST facility delayed neutron interrogator assay system, 9:32767 (R;US)
Radioactive Waste Management
Nuclear waste management: issues and progress, 9:32744 (J;US)

SPHENE
See TITANITE

SPILLWAY
Repair
Repair of the Palagnedra spillway after the flood of 1978, 9:32810 (RA;CH;In German)

SPIN
Hamiltonians
Diagramatic technique for the statistical thermodynamics of spin Hamiltonians, 9:34767 (RA;BR)
Perturbation Theory
Renormalized perturbation theory for anisotropic spin systems: Crossover behavior of the susceptibility, 9:34774 (RA;BR)

SPINE
See VERTEBRAE

SPIRAL ORBIT SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS

SPLEEN
Injuries
Radionuclide study in post-trauma splenectomy cases, 9:34425 (RA;IL)
Scintiscanning
Radionuclide study in post-trauma splenectomy cases, 9:34425 (RA;IL)

SPRINGS
Mechanical springs only.
Coolant Loops
Testing of bearing spring of CTS-1 plugging-meter, 9:33896 (RA;BR;In Portuguese)
Specifications
Project of the new sustenance springs for CTS-1 pipelines, 9:33895 (RA;BR;In Portuguese)

Testing
Testing of bearing spring of CTS-1 plugging-meter, 9:33896 (RA;BR;In Portuguese)
SPUTTERING
Fluorescence
Laser induced fluorescence measurements on atoms with low energies, 9:33665 (R;AT;In German)
Laser Spectroscopy
Laser induced fluorescence measurements on atoms with low energies, 9:33665 (R;AT;In German)
Measuring Instruments
Studies of particle emission from solid surfaces by means of direct-Reading Detectors, 9:34151 (RA;AT)
SRC PROCESS
Hydroprocessing SRC. Final technical report, 9:32499 (R;US)
Chemical Reactors
Effects of accumulated solids and solvent initial boiling point on dissolver performance. Final technical report, 9:32497 (R;US)
Full-scale cold-flow modelling of the SRC-I slurry fired heater at Creare, Inc., 9:32506 (R;US)
Internal R and D task summary report: large-scale dissolver cold-flow modeling, 9:32494 (R;US)
Slurry fired heater cold-flow modelling, 9:32500 (R;US)
Coal Liquids
Liquid product characterization and compatibility studies. Final technical report, 9:32507 (R;US)
Subcontracted R & D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Vol. 3, 9:32511 (R;US)
Demonstration Plants
Extension of the evaluation of reverse osmosis for SRC-I wastewater. Final technical report, 9:32512 (R;US)
Final environmental impact statement/baseline design reconciliation. Final technical report, 9:32493 (R;US)
Revised integration documentation, 9:32495 (R;US)
Steam/fuel system optimization report: 6000-tpd SRC-I Demonstration Plant, 9:32498 (R;US)
Subcontracted R and D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Volume 1, 9:32509 (R;US)
Subcontracted R and D final report: SRC-I phase equilibrium and enthalpy data for coal liquefaction and solvent recovery areas. Volume 2, 9:32510 (R;US)
Distillates
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 2. Microbial mutagenicity evaluations (Ames test) option IA reports, 9:32502 (R;US)
Environmental Impact Statements
Final environmental impact statement/baseline design reconciliation. Final technical report, 9:32493 (R;US)
Heaters
Full-scale cold-flow modelling of the SRC-I slurry fired heater at Creare, Inc., 9:32506 (R;US)
Material Balance
Summary material balances for the 6000-TPD SRC-I Demonstration Plant (All streams, each process unit, pressure, temperature, flow rate, molecular weight, density and viscosity), 9:32496 (R;US)
Naphtha
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix B. Vol. 2, 9:32503 (R;US)
Pipes
Revised integration documentation, 9:32495 (R;US)
Residues
Effects of accumulated solids and solvent initial boiling point on dissolver performance. Final technical report, 9:32497 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 2. Microbial mutagenicity evaluations (Ames test) option IA reports, 9:32502 (R;US)
Solvent-Refined Coal
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 2. Microbial mutagenicity evaluations (Ames test) option IA reports, 9:32502 (R;US)
Steam Systems
Steam/fuel system optimization report: 6000-tpd SRC-I Demonstration Plant, 9:32498 (R;US)
Waste Water
Biokinetic study for SRC-I wastewater, 9:32514 (R;US)
Comparative toxicity of SRC-I wastewater to aquatic organisms. Final technical report, 9:32508 (R;US)
Evaluation of thickening and dewatering characteristics of SRC-I wastewater treatment sludges. Final technical report, 9:32513 (R;US)
Evaluation of effects of phenol recovery on biooxidation and tertiary treatment of SRC-I wastewater. Final technical report, 9:32501 (R;US)
RO feed pretreatment and flat cell tests for SRC-I wastewater, 9:32505 (R;US)
SRC-II PROCESS
Coal Preparation
Advanced coal liquefaction research. Quarterly technical progress report, January 1-March 31, 1983, 9:32516 (R;US)
Residues
Characterization of vacuum bottoms from the P-99 coal liquefaction unit, 9:32526 (R;US)
Yields
Advanced coal liquefaction research. Quarterly technical progress report, January 1-March 31, 1983, 9:32516 (R;US)
STAGED COMBUSTION
Additives
Pulverized coal firing of aluminum melting furnaces. Final report, 9:32619 (R;US)
Combustion Control
Fuel staging for pulverized coal furnace NO/sub x/ control, 9:32575 (RA;US)
In-furnace control of NO formation in gas- and oil-fired utility boilers, 9:32631 (RA;US)
NO/sub x/ reduction by reburning with gas and coal: bench scale studies, 9:32574 (RA;US)
STAINLESS STEEL-304
Corrosion
Corrosion of fractionation towers in coal liquefaction plants, 9:32504 (R;US)
In-plant measurements of electrochemical potentials in BWR water. Final report, 9:33057 (R;US)
Corrosion Protection
Effect of surface doping on the oxidation of chromia former alloys, 9:33680 (R;US)
Decontamination
The effect of residual decontamination reagent on stress corrosion cracking of austenitic materials under high temperature water, 9:33204 (J;US)
Intergranular Corrosion
The effect of residual decontamination reagent on stress corrosion cracking of austenitic materials under high temperature water, 9:33204 (J;US)
Stress Corrosion
Evaluation and acceptance of welded and repair-welded stainless steel for LWR service. Annual report for 1983, 9:33065 (R;US)
The effect of residual decontamination reagent on stress corrosion cracking of austenitic materials under high temperature water, 9:33204 (J;US)
Welding
Evaluation and acceptance of welded and repair-welded stainless steel for LWR service. Annual report for 1983, 9:33065 (R;US)
STAINLESS STEEL-310
Corrosion Protection
Effect of surface doping on the oxidation of chromia former alloys, 9:33680 (R;US)
STAINLESS STEEL-316
Corrosion
Attack of stainless steel by molten aluminium in a solar concentrator, 9:32922 (J;US)
Corrosion of 316ss and incoloy 800 in molten (NaK)NO_3, 9:32928 (J;US)

Corrosion of 316L stainless steel in environments simulating molten carbonate fuel cell conditions, 9:33499 (J;US)
Corrosion of fractionation towers in coal liquefaction plants, 9:32504 (R;US)

STAINLESS STEEL-316L
Intergranular Corrosion
Analysis of AISI 316-L stainless steel welded plates, 9:33650 (RA;BR;In Portuguese)

STAINLESS STEEL-430
Auger Electron Spectroscopy
Behavior of AISI 430 stainless steel in presence of chloride ions or sulphate ions, 9:33778 (RA;BR;In Portuguese)
Spectrophotometry
Behavior of AISI 430 stainless steel in presence of chloride ions or sulphate ions, 9:33778 (RA;BR;In Portuguese)

STAINLESS STEELS
See also STAINLESS STEEL-304
STAINLESS STEEL-310
STAINLESS STEEL-316
STAINLESS STEEL-316L
STAINLESS STEEL-430
STEEL-0KH18N10T
Corrosion
Metals compatibility with molten sodium potassium nitrate salt, 9:32920 (J;US)
Mechanical Tests
Development of a facility for fatigue and fracture testing of stainless steels at liquid helium temperature, 9:34964 (J;GB)
Stress Corrosion
Wet storage integrity update, 9:32711 (R;US)

STANDING CROP
See BIOMASS

STANFORD LINEAR ACCELERATOR CENTER
Operation
Stanford Linear Accelerator Center monthly report for May 1984, 9:34017 (R;US)
Research Programs
Stanford Linear Accelerator Center monthly report for May 1984, 9:34017 (R;US)

STANFORD LINEAR COLLIDER
Beam Focusing Magnets
SLC intergirder quad vibrations, 9:34097 (R;US)

STAR CLUSTERS
Chemical Composition
Mean properties and metal abundances of the open clusters NGC 2232, NGC 2287 and NGC 2451, 9:34533 (RA;BR)
Hertzsprung-Russell Diagram
Open cluster melotte 227, 9:34534 (RA;BR)
Photometry
Open cluster melotte 227, 9:34534 (RA;BR)

STARCH
Fermentation
Production of ethanol from biopolymers by anaerobic, thermophilic, and extreme thermophilic bacteria. I. Regulation of carbohydrate utilization in mutants of Thermoanaerobacter ethanolicus, 9:32799 (J;US)
Production of ethanol from biopolymers by anaerobic, thermophilic, and extreme thermophilic bacteria. III. Thermoanaerobacter ethanolicus JW200 and its mutants in batch cultures and resting cell experiments, 9:32800 (J;US)

STARS
See also BINARY STARS
NEUTRON STARS
VARIABLE STARS
Age Estimation
Measurements of the equivalent width of the Hβ emission line and age determination of HII regions of the LMC and SMC, 9:34535 (RA;BR)
Chemical Composition
Narrow-band photometry of bright Be stars, 9:34527 (RA;BR)
Emission Spectra
Burst of star formation in detached extragalactic HII regions: A qualitative analysis, 9:34538 (RA;BR)
Measurements of the equivalent width of the Hβ emission line and age determination of HII regions of the LMC and SMC, 9:34535 (RA;BR)
R crateris, 9:34532 (RA;BR)
Lyman Lines
Equivalent width of the Hβ emission line and the evolution of the HII regions, 9:34536 (RA;BR)
Photometry
DDO photometry of G and K stars, 9:34530 (RA;BR)
Narrow-band photometry of bright Be stars, 9:34527 (RA;BR)
Standard stars for Hα photometry, 9:34539 (RA;BR)

STATE BUILDINGS
See PUBLIC BUILDINGS

STATISTICAL MECHANICS
Topics in statistical mechanics, 9:34782 (R;US)

STATISTICS
Limited to the indexing of information on the mathematical discipline of statistics or its application in other scientific disciplines; for indexing numerical values of a statistical nature use STATISTICAL DATA.
Multivariate Analysis
Investigation of an empirical probability measure based test for multivariate normality, 9:34983 (R;US)
Transformations
Asymptotic relative efficiencies of the rank transformation procedure in randomized complete block designs, 9:34996 (R;US)

STEAM
Dissociation
Study of mechanism of thermolysis of steam in a cylindrical reactor between 1700-1900 K, 9:32778 (R;FR;In French)

STEAM COOLANT
See STEAM

STEAM GENERATORS
Corrosion Denting
Causes of denting. Volume 1. Summary report. Final report, 9:33071 (R;US)
Causes of denting. Volume 2. Laboratory test results. Final report, 9:33072 (R;US)
Cost
Effects of technological change, experience and environmental regulation on the construction costs of coal-burning generating units, 9:33038 (R;US)
Eddy Current Testing
Development of a finite element model for eddy current NDT phenomena, 9:33073 (RA;US)
Nondestructive testing: a bidimensional model for defect detection by eddy current testing, 9:33152 (R;FR;In French)
Single Frequency Eddy Current Analysis Program, 9:33161 (RA;US)
Fluid Flow
Implantation and developemnt of computer codes, 9:33081 (RA;BR;In Portuguese)
Heat Transfer
Implantation and developemnt of computer codes, 9:33081 (RA;BR;In Portuguese)
Thermohydraulic simulation models of steam generators heated with sodium, 9:33105 (RA;BR;In Portuguese)
Hydraulics
Thermohydraulic simulation models of steam generators heated with sodium, 9:33105 (RA;BR;In Portuguese)
Nondestructive Testing
Evaluation and transfer of steam generator NDE technology, 9:33074 (RA;US)
Stress Analysis
Calculation of strength and life of WWER steam generator and pressurizer, 9:33084 (RA;CS;In Czech)
Technology Impacts
Effects of technological change, experience and environmental regulation on the construction costs of coal-burning generating units, 9:33038 (R;US)
Void Fraction
ATHOS and FLOW3 simulation of the FRIGG heated rod bundle experiment. Final report, 9:33171 (R;US)

STEAM INJECTION
Process Heat
Recovery of heavy oil and tar sands using a high-temperature nuclear steam supply, 9:32654 (R;US)

STEAM LINES
Documentation
Revised integration documentation, 9:32495 (R;US)
Simulation
Model for transient simulation in a PWR steam circuits, 9:33275 (RA;BR;In Portuguese)
Transients
Model for transient simulation in a PWR steam circuits, 9:33275 (RA;BR;In Portuguese)
STEAM SYSTEMS
Design
Steam/fuel system optimization report: 6000-tpd SRC-I Demonstration Plant, 9:32498 (R;US)
Optimization
Steam/fuel system optimization report: 6000-tpd SRC-I Demonstration Plant, 9:32498 (R;US)
STEAM TURBINES
Control
Status and trends of turbine control, 9:33036 (RA;DE;In German)
Feedwater Heaters
Critical review of use of high pressure saturated steam turbine economizers in nuclear power plants, 9:33082 (RA;CS;In Czech)
Inspection
Initial evaluation of annular array technology for use in turbine disc inspection, 9:33169 (RA;US)
On-Line Control Systems
Status and trends of turbine control, 9:33036 (RA;DE;In German)
Ultrasonic Testing
Design and fabrication of steam turbine disc NDE test-bed facilities. Final report, 9:33026 (R;US)
Prototype system for ultrasonic inspection of turbine disc-rims, 9:33168 (RA;US)
STEEL INDUSTRY
See METAL INDUSTRY
STEEL-0KH18N10T
Crack Propagation
Assessing fatigue characteristics of austenitic CrNi steel used for components of light water reactor power plant, 9:33660 (RA;CS;In Czech)
Fatigue
Assessing fatigue characteristics of austenitic CrNi steel used for components of light water reactor power plant, 9:33660 (RA;CS;In Czech)
STEEL-ASTM-A533-B
Annealing
Analytic predictions of the annealing response of A533-B reactor vessel steel welds, 9:33182 (J;US)
Corrosion Fatigue
Fractographic evaluation of specimens of A533B pressure vessel steel. Final report, 9:33634 (R;US)
Physical Radiation Effects
Analytic predictions of the annealing response of A533-B reactor vessel steel welds, 9:33182 (J;US)
STEELS
See also AUSTENITIC STEELS
CARBON STEELS
STAINLESS STEELS
Annealing
Radiation annealing mechanisms of low-alloy reactor pressure vessel steels dependent on irradiation temperature and neutron fluence, 9:33181 (J;US)
Chemical Composition
Significance of selected residual elements to the radiation sensitivity of A302-B steels, 9:33183 (J;US)
Corrosion Protection
Corrosion control through a better understanding of the metallic substrate/organic coating/interface. Annual report No. 4, 1 Sep 82-30 Sep 83, 9:33620 (R;US)
Crack Propagation
Assessing fatigue characteristics of austenitic CrNi steel used for components of light water reactor power plant (0Kh18N12T), 9:33660 (RA;CS;In Czech)
Destructive Testing
Failure prediction of notched pressure vessels using the CTOD approach, 9:33868 (R;US)
Fatigue
Assessing fatigue characteristics of austenitic CrNi steel used for components of light water reactor power plant (0Kh18N12T), 9:33660 (RA;CS;In Czech)
Ion Implantation
Nitriding of steels: Conventional processes and ion implantation, 9:33642 (RA;BR)
Melting
High temperature melt attack on steel and urania-coated steel, 9:33323 (R;US)
Nitridation
Nitriding of steels: Conventional processes and ion implantation, 9:33642 (RA;BR)
Physical Radiation Effects
Radiation annealing mechanisms of low-alloy reactor pressure vessel steels dependent on irradiation temperature and neutron fluence, 9:33181 (J;US)
Significance of selected residual elements to the radiation sensitivity of A302-B steels, 9:33183 (J;US)
Stress Corrosion
Inspection realized in steel large whip fractured during normal operation, 9:33649 (RA;BR;In Portuguese)
STELLARATORS
See also L-2 STELLARATOR
TORSATRON STELLARATOR
URAGAN STELLARATOR
Parametric Analysis
Some parameters of a stellarator reactor with helical magnetic axis, 9:34873 (RA;SU;In Russian)
Plasma Diagnostics
Fast plasma tomography routine with second-order accuracy and compensation for spatial resolution, 9:34816 (R;DE)
Tearing Instability
Fast plasma tomography routine with second-order accuracy and compensation for spatial resolution, 9:34816 (R;DE)
STES
See SEASONAL THERMAL ENERGY STORAGE
STILLAGE
Waste Disposal
Hawaii Ethanol from Molasses Project, Phase I. Final report, 9:32795 (R;US)
Waste Product Utilization
Hawaii Ethanol from Molasses Project, Phase I. Final report, 9:32795 (R;US)
STIMULATED EMISSION DEVICES
See LASERS
MASERS
STIRLING ENGINES
Computer Codes
SEAMOPT - Stirling engine optimization code, 9:33593 (R;US)
Materials Testing
Creep-rupture behavior of candidate Stirling engine alloys after long-term aging at 760°C in low-pressure hydrogen, 9:33595 (R;US)
Mathematical Models
Comparison of free-piston Stirling engine model predictions with RE1000 engine test data, 9:33594 (R;US)
Optimization
SEAMOPT - Stirling engine optimization code, 9:33593 (R;US)
Thermodynamics
Nonlinear analysis of Stirling engine thermodynamics, 9:33596 (R;US)
STOCKPILES
Runoff
Characterization and treatability of drainage samples from coal piles at steam electric power stations, 9:32559 (R;CA)
STOMACH
Biomedical Radiography
Combined method for morphological and functional roentgenologic study of the operated stomach by double contrast and "food cocktail", 9:34407 (RA;BG;In Bulgarian)
Diagnostic Techniques
Combined method for morphological and functional roentgenologic study of the operated stomach by double contrast and "food cocktail", 9:34407 (RA;BG;In Bulgarian)

STOPPINGS

SUPERCONDUCTING SUPER COLLIDER
VEPP-4
Beam Dynamics
Coupled bunch instabilities in a p anti p collider, 9:34107 (R;US)
Beam Stacking
Photon factory: status of storage ring, 9:34111 (J;US)
Design
An isochronous stacking ring approach to the HTE, 9:34966 (J;US)
Photon factory: status of storage ring, 9:34111 (J;US)
Modifications
Reconstruction of the KFTI N-100 storage ring with increase of stored electron energy up to 160 MeV, 9:34108 (RA;SU;In Russian)
Performance
An isochronous stacking ring approach to the HTE, 9:34966 (J;US)
Photon factory: status of storage ring, 9:34111 (J;US)
STORAGE (SPENT FUEL)
See SPENT FUEL STORAGE
STORES
See COMMERCIAL BUILDINGS
STORMS
Lightning
Lightning strike density for the contiguous United States from thunderstorm duration records, 9:34176 (R;US)
Mathematical Models
Possibilities of anthropogenic modifications of thunderstorm activity, 9:34330 (R;CH;In German)
Water Chemistry
Correlation of intrastorm sequential precipitation chemistry with storm meteorology, 9:34255 (BA;US)
STOVES
Air Pollution
Environmental effects of multi-fuel stoves and fireplaces. Where there's smoke there's fire, 9:33489 (R;NL;In Dutch)
STRAIN GAGES
Design
Weighing of heavy vessels using strain gauges, 9:33189 (J;US)
STRAND BREAKS
Biological Repair
Measurement of DNA strand break repair and survival rate after X-irradiation of synchronized CHO cells, 9:34387 (R;DE;In German)
STRATEGIC PETROLEUM RESERVE
Government Policies
Strategic stockpile acquisitions and the current world oil market, 9:32663 (J;GB)
STRATOSPHERE
Air Pollution
Chemical reactions and molecular aggregation in cryogenic whole air sample matrices. Final technical report 1 Oct 81-31 Mar 83, 9:34220 (R;US)
Atmospheric Chemistry
Chemical reactions and molecular aggregation in cryogenic whole air sample matrices. Final technical report 1 Oct 81-31 Mar 83, 9:34220 (R;US)
STRAW
Combustion
Further development and practical use of plants for energy generation from wood and straw in agriculture (rural area), 9:32845 (R;DE;In German)
STREAMING (RADIATION)
See RADIATION STREAMING
STREAMS
Contamination
Radioactivity in the environs of Steel Creek, 9:34360 (R;US)
Flow Rate
Water flow statistics: SRP creeks, 9:34352 (R;US)
Invertebrates
Interim report of the Savannah River macroinvertebrate and periphyton studies, 9:34370 (R;US)
Radioactivity
Radioactivity in the environs of Steel Creek, 9:34360 (R;US)
STREETS
See ROADS
STRENGTH (IMPACT)
See IMPACT STRENGTH
STRESS CORROSION
Reviews
Anodic processes and the kinetics of stress-corrosion cracking or corrosion fatigue, 9:33623 (R;US)
STRING MODELS
Treating the interactions of extended particles through breaking and connection of strings.
Lattice Field Theory
Variational determination of the string tension and the glueball mass in (2+1) dimensional U(1) lattice gauge theory for all values of the coupling constant, 9:34635 (R;DE)
STRONTIUM
Adsorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Chelating Agents
Phenolic cation exchange resin material for recovery of cesium and strontium, 9:32745 (P;US)
Desorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Ion Exchange
Phenolic cation exchange resin material for recovery of cesium and strontium, 9:32745 (P;US)
Leaching
Mathematical modelling of the corrosion and leaching behaviour of cemented waste forms, 9:32729 (R;DE;In German)
Solubility
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
STRONTIUM 90
Biological Accumulation
Bibliographical survey of radiostrontium uptake capacity and processes in aquatic plants, 9:34359 (R;FR;In French)
Distribution Functions
The migration of ^{137}Cs and ^{90}Sr in multilayered soils: Results from batch, column, and fallout investigations, 9:34347 (J;US)
Radioecological Concentration
1. Quarterly progress report 1983, 9:34365 (R;FR;In French)
2. Quarterly progress report, 1983, 9:34366 (R;FR;In French)
4. Quarterly progress report, 1982, 9:34367 (R;FR;In French)
Uptake
Bibliographical survey of radiostrontium uptake capacity and processes in aquatic plants, 9:34359 (R;FR;In French)
Washout
Atmosphere to snow transfers in Antarctica, 9:34325 (BA;US)
STRONTIUM ISOTOPES
See also STRONTIUM 90
Beta-Minus Decay
Beta spectroscopy on neutron-rich nuclei of mass $93 <= A <= 100$, 9:34682 (R;DE;In German)
Mass Defect
Beta spectroscopy on neutron-rich nuclei of mass $93 <= A <= 100$, 9:34682 (R;DE;In German)
STRUCTURAL BEAMS
Computerized Simulation
Combined experimental/analytical modeling using component mode synthesis, 9:33854 (R;US)
STRUCTURAL MATERIALS

SUBBITUMINOUS COAL
Pyrolysis
Flash pyrolysis of coal with reactive and non-reactive gases, 9:32469 (RA;US)
SUBCRITICAL FLOW
See LAMINAR FLOW
SULFATES
Deposition
Comparison of surrogate surfaces for dry deposition collection, 9:34272 (BA;US)
Comparison of several techniques for determining dry deposition flux, 9:34278 (BA;US)
Dependence of sulphate scavenging ratios on meteorological variables, 9:34253 (BA;US)
Deposition of atmospheric trace constituents onto different natural surfaces, 9:34269 (BA;US)
Estimation of dry deposition velocities of sulfur over Canada and United States east of the Rocky Mountains, 9:34279 (BA;US)
Experimental study of sulfur deposition to grassland, 9:34275 (BA;US)
Pollutant deposition as a result of interception of wind-driven cloud - measurements made at a site in northern England, 9:34185 (BA;US)
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Relationship between dry deposition as measured via collection with a dry bucket vs ambient air concentrations, 9:34273 (BA;US)
Scavenging ratios for exceptional wet $SO_4$2p episodes in eastern North America from three event networks, 9:34254 (BA;US)
Precipitation Scavenging
In-cloud scavenging and resuspension of cloud active aerosols during winter storms over Lake Michigan, 9:34187 (BA;US)
Intercomparison of the washout of SO_4^{2-} from a single-layer regional transport model with a multilayer vertical-motion regional transport model, 9:34214 (BA;US)
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Preliminary measurements on the scavenging of sulfate and nitrate by clouds, 9:34251 (BA;US)
Reaction Kinetics
Fundamental study of sulfate aerosol formation, condensation, and growth. Final report Oct 80-Sep 82, 9:34242 (R;US)
SULFONIC ACIDS
Dissociation
Investigations on the dissociation of high molecular organic compounds in natural water, 9:34355 (R;DE;In German)
Infrared Spectra
Investigations on the dissociation of high molecular organic compounds in natural water, 9:34355 (R;DE;In German)
SULFUR
Leaching
Experimental and engineering support for the CAFB (Chemically Active Fluid-bed) demonstration: residue disposal/utilization. Final report 1979-82, 9:32565 (R;US)
Oxidation
Chemistry of nighttime urban fogs, 9:34191 (BA;US)
Precipitation Scavenging
Scavenging rates of sulfur and trace metals from a smelter plume, 9:34260 (BA;US)
Recovery
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
Electrochemical disposal of hydrogen sulfide. Final report, August 31, 1977-September 30, 1982, 9:32447 (R;US)
SULFUR 32 TARGET
Proton Reactions
Analysis of scattering of protons with energy near 6 MeV on nuclei with A=26,50, 9:34669 (RA;SU;In Russian)
SULFUR 35
Beta-Minus Decay
Experimental study on the continuous energy distribution of internal bremsstrahlung quanta allowing ^{35}S beta decay by threshold detector method, 9:34668 (RA;SU;In Russian)
Internal Bremsstrahlung
Experimental study on the continuous energy distribution of internal bremsstrahlung quanta allowing ^{35}S beta decay by threshold detector method, 9:34668 (RA;SU;In Russian)
SULFUR COMPOUNDS
See also CARBON OXYSULFIDE
SULFATES
SULFUR FLUORIDES
SULFUR OXIDES
Deposition
Profiles of elements in the surface boundary layer, 9:34280 (BA;US)
SULFUR DIOXIDE
Absorption
Dry deposition of SO_2 onto a Scots pine forest, 9:34340 (BA;US)
Dry deposition on coniferous forest of SO_2 at ppb levels, 9:34341 (BA;US)
Adsorption
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
Air Pollution Control
Feasibility of furnace injection of limestone for SO_2 control, 9:32580 (RA;US)
Air Pollution Monitors
Performance test results and comparative data for designated equilvalent methods for sulfur dioxide, 9:34238 (R;US)
Biological Effects
Effects of ozone or SO_2 on growth and yield of rice. Final report Jan-Dec 82, 9:34484 (R;US)
Impact of O_3 and SO_2 on soybean yield (CSRCLAP), 9:34475 (R;US)
Deposition
Dependence of sulphate scavenging ratios on meteorological variables, 9:34253 (BA;US)
Dry deposition of SO_2 onto a Scots pine forest, 9:34340 (BA;US)
Dry deposition on coniferous forest of SO_2 at ppb levels, 9:34341 (BA;US)
Dry deposition of sulphur dioxide onto grass in rural eastern England (with some comparisons with other forms of sulphur deposition), 9:34267 (BA;US)
Estimation of dry deposition velocities of sulfur over Canada and United States east of the Rocky Mountains, 9:34279 (BA;US)
Experimental study of sulfur deposition to grassland, 9:34275 (BA;US)
Scavenging ratios for exceptional wet SO_4^{2-} episodes in eastern North America from three event networks, 9:34254 (BA;US)
Diffusion
Deposition and resuspension, 9:34266 (BA;US)
Measuring Methods
Measurement of sulfur dioxide in the post-combustion environment, 9:34231 (R;US)
Monitoring
Development of an instrument package for the measurement of dry deposition fluxes by eddy correlation, 9:34268 (BA;US)
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Oxidation
Distribution of acidity in convective clouds due to the aqueous phase oxidation of sulfur dioxide by ozone: a numerical simulation, 9:34212 (BA;US)
Laboratory measurements of aerosol activity spectra enhanced by the aqueous phase oxidation of SO_2, 9:34200 (BA;US)
Suggestions for further research, 9:34290 (BA;US)

Precipitation Scavenging
Precipitation scavenging of highly soluble gases, 9:34216 (BA;US)
Precipitation scavenging and tropospheric mixing, 9:34219 (BA;US)
Update on acid deposition, 9:34227 (RA;US)

SULFUR FLUORIDES
Electrolysis
Decomposition of sparked SF_6 and cytotoxicity of SF_6 decomposition products, 9:34473 (R;US)
Toxicity
Decomposition of sparked SF_6 and cytotoxicity of SF_6 decomposition products, 9:34473 (R;US)

SULFUR HYDRIDES
See HYDROGEN SULFIDES

SULFUR OXIDES
See also SULFUR DIOXIDE
SULFUR TRIOXIDE
Air Pollution Control
Current status of dry NO/sub x/-SO/sub x/ emission control processes, 9:33043 (RA;US)
LIMB testing: the use of dry sorbents to reduce sulfur oxide emissions from pulverized-coal flames under low-NO/sub x/ conditions, 9:32632 (RA;US)
Low-NO/sub x/ tangential system SO/sub x/ control through sorbent injection, 9:32579 (RA;US)
Operation and performance report of the Steinmueller low NO/sub x/ SM-burner and its potential towards utility boiler SO/sub x/-control via sorbent injection, 9:32578 (RA;US)
Proceedings of the 1982 joint symposium on stationary combustion NO/sub x/ control. Volume 1. Utility boiler applications, 9:34226 (R;US)
Review of in-furnace NO/sub x reduction and SO/sub x/ reduction by sorbent injection, 9:32576 (RA;US)
Combustion Control
Proceedings of the 1982 joint symposium on stationary combustion NO/sub x/ control. Volume 1. Utility boiler applications, 9:34226 (R;US)
Precipitation Scavenging
Effects of in-cloud scavenging on the transport and gas phase reactions of SO/sub x/, NO/sub x/, HC/sub x/, H/sub x/O/sub y/, and O_3 compounds, 9:34215 (BA;US)
Separation Processes
Development of criteria for extension of applicability of low emission, high efficiency coal burners. Annual report Sep 77-Sep 78, 9:32564 (R;US)
Toxicity
Decomposition of sparked SF_6 and cytotoxicity of SF_6 decomposition products, 9:34473 (R;US)
Trace Amounts
Effects of in-cloud scavenging on the transport and gas phase reactions of SO/sub x/, NO/sub x/, HC/sub x/, H/sub x/O/sub y/, and O_3 compounds, 9:34215 (BA;US)

SULFUR SULFIDES
See SULFUR

SULFUR TRIOXIDE
Comparative Evaluations
Evaluation of NO/sub x/ and NO/sub x//SO/sub x/ flue gas treatment technology for coal-fired sources, 9:32582 (RA;US)

SULFURIC ACID
Precipitation Scavenging
Precipitation scavenging of highly soluble gases, 9:34216 (BA;US)

SUN
Chromosphere
Contribution to the study of velocity fields of chromosphere and solar transition zone, 9:34526 (R;FR;In French)

SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION

SUPER PHENIX REACTOR
Neutron Spectra
Neutronic calculations on the sodium void coefficient, 9:33097 (RA;BR;In Portuguese)
Void Coefficient
Neutronic calculations on the sodium void coefficient, 9:33097 (RA;BR;In Portuguese)

SUPERALLOYS

SUPERCONDUCTING CABLES
Design
Superconducting delay line for stochastic cooling filters, 9:34106 (J;US)
Timing Properties
Superconducting delay line for stochastic cooling filters, 9:34106 (J;US)

SUPERCONDUCTING CAVITY RESONATORS
Performance Testing
Benchmark for superconducting resonator testing, 9:34070 (RA;UA;In Russian)

SUPERCONDUCTING GENERATORS
Feasibility Studies
High-voltage stator winding development. Final report, 9:33025 (R;US)
Power Transmission
High-voltage stator winding development. Final report, 9:33025 (R;US)

SUPERCONDUCTING JUNCTIONS
Tunnel Effect
Far-infrared laser study of small-area superconducting tunnel junctions. Interim report, 9:33856 (R;US)

SUPERCONDUCTING MAGNETS
Cooling
Cool-down of circulation-type superconducting magnetic systems, 9:33863 (RA;SU;In Russian)
Study of the cooling conditions and thermal characteristics of superconducting magnetic system of the "Kristall-2" torsatron, 9:34917 (RA;SU;In Russian)
Design
Assembly and test of the SULTAN facility, 9:33860 (R;NL)
Electrical Insulation
Development and study on putties for cryogenic coils of the "T-15" thermonuclear device, 9:34938 (RA;SU;In Russian)
Materials and test methods, 9:33726 (RA;US)
Energy Transfer
Calculating study an temperature and pressure increase in the channels of superconducting current-carrying elements in the T-15 device during energy removal, 9:34912 (RA;SU;In Russian)
Equipment Protection Devices
Protection system of the immersed-type superconducting magnet system at accidental loss of superconductivity, 9:34920 (RA;SU;In Russian)
Fabrication
Superconducting materials for particle accelerator magnets, 9:34103 (J;US)
Helium Dilution Refrigerators
Cryogenic system for the "Tokamak-15" device, 9:34928 (RA;SU;In Russian)
Magnet Coils
SuSe test coil, 9:33946 (RA;DE;In German)
Mechanical Tests
Development of a facility for fatigue and fracture testing of stainless steels at liquid helium temperature, 9:34964 (J;GB)
Optimization
Analytical calculation of momentum-free toroidal solenoids with nonuniform current distribution, 9:34913 (RA;SU;In Russian)
Organic Insulators
Cryogenic neutron irradiation effects in organic insulators for superconducting coils, 9:33725 (RA;US)
Quenching
Quench back in thin superconducting solenoid magnets, 9:33870 (J;GB)
Research Programs
GA effort of the DOE 12 Tesla Coil Development Program. Progress report, 1983, 9:34845 (R;US)
Sliding Friction
Study on the conductor-insulator friction at liquid helium temperature, 9:34921 (RA;SU;In Russian)
Solenoids
Quench back in thin superconducting solenoid magnets, 9:33870 (J;GB)

Specifications
Main design elements of the superconducting magnet for the LIN-5B baseball trap, 9:34930 (RA;SU;In Russian)
Study on the stressed-strained state and design optimization of the electromagnetic system fOr the "T-15" device, 9:34911 (RA;SU;In Russian)
Strains
Study on the stressed-strained state and design optimization of the electromagnetic system fOr the "T-15" device, 9:34911 (RA;SU;In Russian)
Stresses
Study on the stressed-strained state and design optimization of the electromagnetic system fOr the "T-15" device, 9:34911 (RA;SU;In Russian)
Study on the stresses strained state of a current-carying element of the T-15 device toroidal field coil, 9:34914 (RA;SU;In Russian)
Temperature Distribution
Study on thermal process in superconducting magnet system of the "T-15" device, 9:34932 (RA;SU;In Russian)
Test Facilities
Assembly and test of the SULTAN facility, 9:33860 (R;NL)
Testing
Assembly and test of the SULTAN facility, 9:33860 (R;NL)
Thermal Conductivity
Thermal conductivity coefficient of materials for superconducting magnet system of the T-15 device, 9:34931 (RA;SU;In Russian)

SUPERCONDUCTING SUPER COLLIDER
Computerized Simulation
Software for large scale tracking studies, 9:33974 (R;US)
Experiment Planning
Supercollider physics, 9:33965 (R;US)

SUPERCONDUCTORS
Beta-W Lattices
X-ray investigation of Nb3Ge under high pressure, 9:33674 (R;DE;In German)
Critical Current
Effects of low-temperature fusion neutron irradiation on critical properties of a monofilament niobium-tin superconductor, 9:33859 (RA;US)
Kapitza Resistance
Dynamics of normal-zone propagation in Ta at small currents, 9:33677 (R;US)
Lattice Vibrations
Lattice vibrational behavior of $SnMo_6S_8$ and oxygen defected $SnMo_6S_{7.8}O_{0.2}$, 9:33628 (R;US)
Lattice vibrational behavior of the exchange enhanced superconductor U_6Fe, 9:33629 (R;US)
Physical Radiation Effects
Proton radiation effects on structural material properties at charged particle accelerators, 9:33667 (RA;SU;In Russian)
Radiation Effects
Effects of low-temperature fusion neutron irradiation on critical properties of a monofilament niobium-tin superconductor, 9:33859 (RA;US)
Surface Properties
Anomalous surface impedance in reentrant ferromagnetic superconductors, 9:33710 (R;US)

SUPERCRITICAL FLOW
See TURBULENT FLOW

SUPERCRITICAL GAS EXTRACTION
Desulfurization
Enhanced coal liquefaction with ammonia and amines in single and binary solvent systems. Second quarterly report, December 20, 1983-March 31, 1984, 9:32521 (R;US)
Organic Solvents
Enhanced coal liquefaction with ammonia and amines in single and binary solvent systems. Second quarterly report, December 20, 1983-March 31, 1984, 9:32521 (R;US)

SUPERHEAVY ELEMENTS
See TRANS 104 ELEMENTS

SUPERSYMMETRY
Inelastic strong interactions at high energies. Final report, June 1, 1976-May 31, 1984, 9:34637 (R;US)

SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY

SUPPORTS
Fabrication
Reduced platinum sintering on modified carbon supports, 9:33504 (J;US)

SURFACE AIR
Radioecological Concentration
Radionuclide concentrations in ground level air and precipitation in South Germany from 1976 to 1982, 9:34308 (R;DE)

SURFACE MINING
Land Reclamation
Mccallum study area: resource and potential reclamation evaluation. Final report, 9:32563 (R;US)
Mining Equipment
Noise control of rubber-tired front-end loaders used in surface mining. Open file report 13 Apr 79-31 May 83, 9:32601 (R;US)

SURFACE WATERS

Mathematical Models
Mechanical interactions of rough surfaces. Progress report, April 1-June 30, 1984, 9:33850 (R;US)
Plasmons
Surface-plasmon exploration of multilayer physisorbed and chemisorbed films on metal substrates, 9:34145 (R;US)
Roughness
Mechanical interactions of rough surfaces. Progress report, April 1-June 30, 1984, 9:33850 (R;US)
Turbulence
H Division. Materials Physics quarterly report, October-December 1983, 9:33615 (R;US)

SURVEILLANCE (RADIOACTIVITY)
See RADIATION MONITORING

SURVEY (RADIOACTIVITY)
See RADIATION MONITORING

SUSPENSIONS (FUEL)
See FUEL SLURRIES

SUSQUEHANNA STEAM ELECTRIC STATION UNIT-1
See SUSQUEHANNA-1 REACTOR

SUSQUEHANNA STEAM ELECTRIC STATION UNIT-2
See SUSQUEHANNA-2 REACTOR

SUSQUEHANNA-1 REACTOR
Reactor Safety
Safety evaluation report related to the operation of Susquehanna Steam Electric Station, Units 1 and 2 (Docket Nos. 50-387 and 50-388). Suppl. 7, 9:33299 (R;US)

SUSQUEHANNA-2 REACTOR
Reactor Safety
Safety evaluation report related to the operation of Susquehanna Steam Electric Station, Units 1 and 2 (Docket Nos. 50-387 and 50-388). Suppl. 7, 9:33299 (R;US)

SWEDEN
Energy Source Development
Consulting about wood and peat as fuels, 9:33488 (R;SE;In Swedish)
Environmental Policy
Better environmental protection II. Final report from the Environmental protection commission, 9:33441 (R;SE;In Swedish)
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
Wood Fuels
Energy from forest. Project results 3065 09 forest energy, 9:32854 (R;SE;In Swedish)

SWISS ORGANIZATIONS
Alarm Systems
Alarm organization for the case of increased radioactivity in Switzerland, 9:35011 (RA;AT;In German)
SWITCHES
See also PLASMA SWITCHES
Comet-II, a two-stage, magnetically switched pulsed-power module, 9:34954 (R;US)
Design
Design for a repetitive superconducting opening switch, 9:34963 (J;GB)
Photoconductors
Geometry, contact, surface, and optical developments for photoconductive power switches, 9:33919 (R;US)
Specifications
Design for a repetitive superconducting opening switch, 9:34963 (J;GB)
Testing
Equipment qualification methodology research: tests of pressure switches, 9:33179 (R;US)
SWITZERLAND
Atomic Energy Laws
Act of 18 March 1983 on Nuclear Third Party Liability (LRCN), 9:33451 (R;CH;In French)
National Organizations
Ordinance of 14 March 1983 concerning the Federal Commission for the Safety of Nuclear Installations, 9:34759 (R;CH;In French)
Nuclear Power
Act of 18 March 1983 on Nuclear Third Party Liability (LRCN), 9:33451 (R;CH;In French)
Radiation Protection
Ordinance of 14 March 1983 concerning the Federal Commission for the Safety of Nuclear Installations, 9:34759 (R;CH;In French)
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)
SYMPATHOMIMETICS
See also TYRAMINE
Biological Effects
^{3}H-thymidine autoradiographic study of cell proliferation and the influence of isoproterenol and kallikrein in various cell populations of the gastrointestinal tract in animal experiments, 9:34384 (R;DE;In German)
SYNCHROPHASOTRONS
See SYNCHROTRONS
SYNCHROTRON RADIATION
Spectral Density
Electromagnetic radiation during the flight of relativistic particles through a small section of the force field, 9:33975 (R;DE)
SYNCHROTRON RADIATION SOURCES
See also NSLS
Beam Dynamics
Status of BESSY, an 800-MeV storage ring dedicated to synchrotron radiation, 9:34101 (J;US)
Beam Optics
Status of BESSY, an 800-MeV storage ring dedicated to synchrotron radiation, 9:34101 (J;US)
Design
Status of BESSY, an 800-MeV storage ring dedicated to synchrotron radiation, 9:34101 (J;US)
Performance
Status of BESSY, an 800-MeV storage ring dedicated to synchrotron radiation, 9:34101 (J;US)
Storage Rings
Photon factory: status of storage ring, 9:34111 (J;US)
SYNCHROTRONS
See also BONN SYNCHROTRON
BROOKHAVEN AGS
FERMILAB ACCELERATOR
IPNS-I SYNCHROTRON
NSLS
Design
Medium energy proton accelerator for therapy, 9:33971 (J;US)
Efficiency
System for the SIRIUS synchrotron operation efficiency evaluation in the channeling experiments, 9:34085 (RA;UA;In Russian)
Iodine 127 Beams
Possibilities for the study of dense, hot matter with a heavy ion synchrotron, 9:33943 (R;DE;In German)
On-Line Control Systems
Functional problems solved in the SIRIUS electron synchrotron on-line control system, 9:34084 (RA;UA;In Russian)
On-Line Measurement Systems
System for the SIRIUS synchrotron operation efficiency evaluation in the channeling experiments, 9:34085 (RA;UA;In Russian)
Specifications
Medium energy proton accelerator for therapy, 9:33971 (J;US)
SYNOVIA
See BONE JOINTS
SYNROC PROCESS
Materials
SYNROC C: preparation and phase equilibria, 9:32746 (J;US)
SYNTHESIS GAS
Production
Steam reforming of aromatic hydrocarbons, 9:32490 (RA;US)
Purification
Acid gas removal process, 9:32484 (RA;US)
SYNTHETASES
See LIGASES
SYNTHETIC FUELS
See also HYDROGEN FUELS
Chemical Composition
Comparative toxicological and chemical properties of fuels developed from coal, shale, or petroleum, 9:32658 (R;US)
Comparative Evaluations
Fuel from microalgae lipid products, 9:32790 (R;US)
Performance Testing
Alternative fuels for general aviation. Hearing before the Subcommittee on Transportation, Aviation, and Materials, U.S. House of Representatives, Ninety-Eighth Congress, First Session, August 29, 1983, 9:32791 (B;US)
Toxicity
Comparative toxicological and chemical properties of fuels developed from coal, shale, or petroleum, 9:32658 (R;US)
SYNTHINE PROCESS
See FISCHER-TROPSCH SYNTHESIS
SYSTEM FAILURE ANALYSIS
Algorithms
Lower confidence bounds on system reliability using component data: Maximus methodology, 9:34172 (R;US)
SYSTEMS ANALYSIS
Used in the fields of technology research and management for problems such as the calculation of failure probabilities and for reliability studies of systems and components.
See also SYSTEM FAILURE ANALYSIS
Markov Process
Probability level of readiness in supervised protective systems for nuclear reactors, 9:33360 (J;US)

T

T CODES
Manuals
User's manual for TOX-SCREEN: a multimedia screening-level program for assessing the potential fate of chemicals released to the environment, 9:34179 (R;US)
TAILINGS
Solid residue separated in the preparation of various products.
See also MILL TAILINGS
Leaching
Contamination of ground and surface waters by uranium mining and milling. Volume 3. Experimental studies and

analytical procedures. Open file report 25 Jul 79-14 Sep 81, 9:34358 (R;US)

TAIWAN
Spent Fuel Storage
Foreign programs for the storage of spent nuclear power plant fuels, high-level waste canisters and transuranic wastes, 9:32712 (R;US)

TANDEM ELECTROSTATIC ACCELERATORS
Prior to February 1979,information was indexed to Van de Graaff Accelerators.
See also CRNL MP TANDEM ACCELERATOR
Accelerator Facilities
The present status of the Daresbury Nuclear Structure Facility, 9:34104 (J;US)
Performance
The present status of the Daresbury Nuclear Structure Facility, 9:34104 (J;US)
Start-Up
The present status of the Daresbury Nuclear Structure Facility, 9:34104 (J;US)
Uses
Use of a tandem accelerator for light element analysis, 9:34573 (R;US)

TANDEM MIRROR DEVICES
See TMR REACTORS

TANDEM MIRROR TYPE REACTORS
See TMR REACTORS

TANTALUM
Absorption Spectroscopy
Determination of niobium and tantalum/niobium mixtures, 9:33785 (RA;BR;In Portuguese)
Kapitza Resistance
Dynamics of normal-zone propagation in Ta at small currents, 9:33677 (R;US)
Sputtering
Sputtering phenomena in ion thrusters. Final Report, 9:34568 (R;US)
Superconductivity
Dynamics of normal-zone propagation in Ta at small currents, 9:33677 (R;US)

TANTALUM 181 TARGET
Photonuclear Reactions
Nonequilibrium photoneutrons and statistical characteristics of heavy nuclei in a photonuclear experiment, 9:34707 (RA;SU;In Russian)

TANTALUM ALLOYS
See also INCONEL 738
Superconductivity
Multifilamentary superconducting (NbTa)-Sn composite wire by solid-liquid reaction for possible application above 20 tesla, 9:33687 (J;NL)

TANTALUM SULFIDES
Physical Radiation Effects
Positron annihilation technique applied to the study of inhomogeneous solids: aluminium alloys, layered compound 1T-TaS_2, 9:33624 (R;FR;In French)

Design
Design, production, and evaluation of a zircaloy-clad uranium target for an intense pulsed neutron source application, 9:33209 (J;US)
Electrodeposition
Fabrication of thorium and uranium thin targets by molecular electrodeposition, 9:33651 (RA;BR;In Portuguese)
Fabrication
Design, production, and evaluation of a zircaloy-clad uranium target for an intense pulsed neutron source application, 9:33209 (J;US)
Heating
Spot heating calculation for a heavy ion driven high temperature experiment, 9:34946 (R;US)

TBP
Decomposition
Degradation of TBP and diluents in the extraction of actinides in the reprocessing, 9:32703 (RA;BR;In Portuguese)
Radiolysis
Investigation of the radiolytic TBP degradation under Purex process conditions, 9:33832 (R;DE;In German)

TEARING INSTABILITY
Computer Calculations
Calculations of stationary solutions for the non linear viscous resistive MHD equations in slab geometry, 9:34793 (R;FR)

TECHNETIUM
Adsorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Desorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
TECHNETIUM 92
Beta-Plus Decay
Desintegration schemes of ^{92}Tc, 9:34690 (RA;BR;In Portuguese)
TECHNOLOGY UTILIZATION
Input-Output Analysis
Disaggregating input-output models, 9:33432 (J;US)
TEFLON
Specific Heat
Low-temperature specific heat of PTFE (Teflon) at pressures to 5.2 kbar, 9:33734 (J;NL)
TEKTITES
Origin
Historical controversies in the geological sciences, 9:34509 (R;US)
TELEPHONES
Digital Systems
Specifications for the PBX-based digital telecommunications system, 9:34973 (R;US)
TELLURIUM
Thermochromatography
Separation of volatile elements and oxides: thermochromatography and the use of chemical filters, 9:33810 (TG;US)
TEMPERATURE (ELECTRON)
See ELECTRON TEMPERATURE
TENDONS (STRUCTURAL)
See CABLES
TERBIUM 159 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
TERTIARY RECOVERY
See ENHANCED RECOVERY
TEST FACILITIES
Development of a facility for fatigue and fracture testing of stainless steels at liquid helium temperature, 9:34964 (J;GB)
Program for pressure drop calculation in water loop, 9:33273 (RA;BR;In Portuguese)
Densimeters
Installation of an infrared measuring device in pressure release phenomena, 9:33268 (R;DE;In German)
Maintenance
Operation, maintenance and modifications in the sodium thermal loop - CTS-1, 9:33098 (RA;BR;In Portuguese)
TEST WELLS
See EXPLORATORY WELLS
TESTES
Autoradiography
RNA synthesis of perinatal female and male gametes. Autoradiographic studies in Wistar rats, 9:34435 (R;DE;In German)
Neoplasms
Testicular tumors - clinical aspects and therapy. Results of the Clinic and Policlinic for Radiotherapy of Wuerzburg, 9:34399 (R;DE;In German)
Radiotherapy
Testicular tumors - clinical aspects and therapy. Results of the Clinic and Policlinic for Radiotherapy of Wuerzburg, 9:34399 (R;DE;In German)
TESTING (MATERIALS)
See MATERIALS TESTING
TETRAHYDROFURAN
Solvent Properties
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
TEXACO GASIFICATION PROCESS
Gasification of residual materials from coal liquefaction: Type II preliminary pilot plant evaluation of SRC-I extruded Kerr McGee mineral ash residue-water slurry, 9:32445 (R;US)
Fuel Slurries
Compaction and granulation of coal liquefaction residue. Final report, 9:32529 (R;US)
TEXAS
Geothermal Gradients
Integration of geothermal data along the Balcones/Ouachita trend, central Texas. Final report, 9:32956 (R;US)
Thermal Waters
Integration of geothermal data along the Balcones/Ouachita trend, central Texas. Final report, 9:32956 (R;US)
TEXAS EXPERIMENTAL TOKAMAK
See TEXT DEVICES
TEXT DEVICES
Plasma Diagnostics
Probe measurements of the magnetic field structure of toroidal eigenmodes in the Texas Tech Tokamak, 9:34815 (RA;SU)
TEXTILES
Thermal Insulation
Economies in the use of energy obtained by using decorative textiles. Final report, 9:33530 (R;BE;In Flemish)
TFTR REACTORS
Adiabatic Compression Heating
Recent results from TFTR, 9:34825 (R;US)
Plasma Confinement
Recent results from TFTR, 9:34825 (R;US)
Plasma Density
Recent results from TFTR, 9:34825 (R;US)
THALLIUM 201
Isotope Production
Production of ^{201}Tl, 9:33836 (RA;BR;In Portuguese)
THALLIUM 208
Radioecological Concentration
Aerial radiological survey of the Palo Verde Nuclear Generating Station and surrounding area, Wintersburg, Arizona. Date of survey: November 1982, 9:34307 (R;US)
THERMAL BATTERIES
Impedance
Complex impedance of Ca/$CaCrO_4$ thermal batteries, 9:33397 (J;US)
THERMAL CONDUCTION
Cylindrical Configuration
Solution of the heat conduction equation, 9:33887 (RA;BR;In Portuguese)
Numerical Solution
Solution of the heat conduction equation, 9:33887 (RA;BR;In Portuguese)
THERMAL CONDUCTIVITY
Calculation Methods
The thermal conductivity of semitransparent materials, 9:33616 (BA;US)
Data Analysis
Application of parameter estimation techniques to thermal conductivity probe data reduction, 9:33618 (BA;US)
Measuring Methods
A technique for measuring the apparent thermal conductivity of flat insulations, 9:33765 (BA;US)
Parametric Analysis
Application of parameter estimation techniques to thermal conductivity probe data reduction, 9:33618 (BA;US)
THERMAL DECOMPOSITION
See PYROLYSIS
THERMAL DIFFUSION
Multicomponent diffusion under general chemical potential gradients. Final report, July 1, 1981-June 30, 1984, 9:34764 (R;US)

THERMAL ENERGY STORAGE EQUIPMENT
Latent Heat Storage
Theoretical and experimental investigation of the thermal behaviour of a high-temperature latent heat storage system with sodium nitrate as heat storage medium, 9:33365 (R;DE;In German)
Systems Analysis
Theoretical and experimental investigation of the thermal behaviour of a high-temperature latent heat storage system with sodium nitrate as heat storage medium, 9:33365 (R;DE;In German)
THERMAL INSULATION
Thermal Conductivity
A technique for measuring the apparent thermal conductivity of flat insulations, 9:33765 (BA;US)
The thermal conductivity of semitransparent materials, 9:33616 (BA;US)
THERMAL NEUTRONS
Kerma
Kerma factors for use in 37-group neutron spectrum calculations. Technical report, 9:34758 (R;US)
THERMAL POLLUTION (AIR)
See AIR POLLUTION
THERMAL POLLUTION (WATER)

THERMOELECTRIC GENERATORS
Feasibility Studies
Beneficial uses of ^{241}Am, 9:32775 (R;US)
THERMOLUMINESCENCE
Kinetics
Recent developments in thermoluminescence kinetics, 9:34112 (R;US)
THERMOLUMINESCENT DOSEMETERS
Storage
Theoretical and practical implications of the effects of temperature during irradiation and during pre- and post-irradiation storage on the response of thermoluminescence dosimeters, 9:34114 (R;US)
Temperature Effects
Theoretical and practical implications of the effects of temperature during irradiation and during pre- and post-irradiation storage on the response of thermoluminescence dosimeters, 9:34114 (R;US)
THERMONUCLEAR DEVICES
Ambipolar Diffusion
Transverse ion losses through the outer plugs of an ambipolar trap under conditions of few collisions, 9:34832 (TG;US)
Japan
Some aspects of research and development for thermonuclear fusion facilities in Toshiba, 9:34856 (RA;SU)
Pulsed MHD Generators
Flux compression generators as plasma compression sources, 9:33492 (BA;US)
THERMONUCLEAR IGNITION
Muon Beams
Muonic and polarized fusion for inertial confinement fusion, 9:34945 (R;DE)
Polarized Targets
Muonic and polarized fusion for inertial confinement fusion, 9:34945 (R;DE)
THERMONUCLEAR POWER PLANTS
Liners
Parametric study on a reactor with a liner using a simplifed economical model, 9:34868 (RA;SU;In Russian)
Minimum-B Configurations
"Magnetic trap" type thermonuclear device with minimum B for a plasma with β approximately 1, 9:34861 (RA;SU;In Russian)
Optimization
Parametric study on a reactor with a liner using a simplifed economical model, 9:34868 (RA;SU;In Russian)
Torsatron Stellarator
Thermonuclear power plant with a reactor-torsatron, 9:34902 (RA;SU;In Russian)
THERMONUCLEAR REACTOR COOLING SYSTEMS
Design
Primary heat transfer loop design for the Cascade inertial confinement fusion reactor, 9:34956 (R;US)
Technology Assessment
Technical assessment of three thermal-hydraulic techniques for high heat flux fusion applications. Chapter IV, 9:34955 (R;US)
THERMONUCLEAR REACTOR MATERIALS
Data Compilation
ORACT: a 174-neutron-group activation cross-section library for fusion and fission reactor design studies, 9:34951 (R;US)
Information Needs
LLNL nuclear data libraries used for fusion calculations, 9:34960 (R;US)

Materials Testing
Sixth annual progress report on special purpose materials for magnetically confined fusion reactors, 9:34842 (R;US)
Radioactivation
ORACT: a 174-neutron-group activation cross-section library for fusion and fission reactor design studies, 9:34951 (R;US)

THERMONUCLEAR REACTOR WALLS
Erosion
Synergistic effects in plasma surface interactions, 9:34841 (R;US)
Sputtering
Synergistic effects in plasma surface interactions, 9:34841 (R;US)

THERMONUCLEAR REACTORS
For use in cases where certain aspects of either hypothetical or real thermonuclear reactors are discussed.
See also E-BEAM TYPE REACTORS
I-BEAM TYPE REACTORS
LASER FUSION REACTORS
PULSED FUSION REACTORS
TOKAMAK TYPE REACTORS
Joint annual meeting 1982. Transactions, Volume 10, 9:34851 (R;IL)
Atomic Beam Sources
Choice of optimal parameters for a fast atom injector, 9:34886 (RA;SU;In Russian)
Fusion Yield
Boltzmann collision term and energy transfer in a stationary two-component plasma, 9:34805 (R;AT;In German)
Meetings
Reports 2. All-union conference on engineering problems of thermonuclear reactors. Volume 1, 9:34910 (R;SU)
Switches
Design for a repetitive superconducting opening switch, 9:34963 (J;GB)

THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS

THERMOSTATS
Performance
Operational characteristics of the systems for electrophysical equipment thermostatting according to the SART scheme, 9:34083 (RA;UA;In Russian)

THF
See TETRAHYDROFURAN

THICKNESS GAGES
Alpha Spectroscopy
Measurement of fissile target thickness by alpha spectrometry, 9:34122 (RA;BR;In Portuguese)

THIN FILMS
Physical Radiation Effects
Response of multilayer films and mirrors to intense x-irradiation, 9:34143 (R;US)
Review of ultraviolet damage threshold measurements at Lawrence Livermore National Laboratory, 9:33763 (R;US)

THIO COMPOUNDS
See ORGANIC SULFUR COMPOUNDS

THIOPHENE
Desulfurization
Reduced molybdenum states in hydrodesulfurization: investigations using Chevrel phase catalysts, 9:33821 (R;US)

THORIUM
Absorption Spectroscopy
Calorimetric determination of zirconium, thorium and rare earth in the same sample, 9:33784 (RA;BR;In Portuguese)
Activation Analysis
Determination of uranium and thorium in coal by epithermal neutrons, 9:33779 (RA;BR;In Portuguese)
Adsorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Alpha Spectroscopy
Measurement of fissile target thickness by alpha spectrometry, 9:34122 (RA;BR;In Portuguese)
Bioassay
Evaluation of isotope dilution mass spectrometry for bioassay measurement of uranium, plutonium, and thorium in urine, 9:34460 (R;US)
Desorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Thickness Gages
Measurement of fissile target thickness by alpha spectrometry, 9:34122 (RA;BR;In Portuguese)

THORIUM 228
Alpha Spectroscopy
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Radiochemical Analysis
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)

THORIUM 230
Alpha Spectroscopy
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Radiochemical Analysis
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Rotational States
Rotational alignment of internal angular momentum in octupole bands, 9:34713 (RA;SU;In Russian)

THORIUM 230 TARGET
Deuteron Reactions
Study of ^{231}Th fission barrier by (d,pf) reaction. Observation of a third minimum in the fission barrier associated to the fissioning nucleus configurations, 9:34709 (R;FR;In French)

THORIUM 231
Fission Barrier
Study of ^{231}Th fission barrier by (d,pf) reaction. Observation of a third minimum in the fission barrier associated to the fissioning nucleus configurations, 9:34709 (R;FR;In French)

THORIUM 232
Alpha Spectroscopy
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Radiochemical Analysis
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Radioecological Concentration
Aerial radiological survey of the Waterford Generating Station and surrounding area, Taft, Louisiana. Date of survey: March-April 1982, 9:34306 (R;US)
Aerial radiological survey of the Palo Verde Nuclear Generating Station and surrounding area, Wintersburg, Arizona. Date of survey: November 1982, 9:34307 (R;US)
Rotational States
Rotational alignment of internal angular momentum in octupole bands, 9:34713 (RA;SU;In Russian)

THORIUM 232 TARGET
Photofission
Experimental determination of photofission neutron multiplicities for ^{235}U, ^{236}U, ^{238}U, and ^{232}Th using monoenergetic photons, 9:34719 (J;US)

THORIUM B
See LEAD 212

THORIUM C
See BISMUTH 212
THALLIUM 208

THORIUM NITRATES
Electrodeposition
Fabrication of thorium and uranium thin targets by molecular electrodeposition, 9:33651 (RA;BR;In Portuguese)

THREE MILE ISLAND-2 REACTOR
Decontamination
Monitoring krypton-85 during Three Mile Island Unit 2 purging, 9:33223 (J;US)
Demineralizers
Submerged demineralizer system vessel shipment report, 9:33266 (R;US)
Electrical Equipment
Final report on the in situ testing of electrical components and devices at TMI-2, 9:33267 (R;US)

Loss of Coolant
Non-invasive water level measurements at LOFT using a neutron detection system, 9:33318 (RA;US)
Radiation Monitors
Monitoring krypton-85 during Three Mile Island Unit 2 purging, 9:33223 (J;US)
Radioactive Waste Management
Plan for shipment, storage, and examination of TMI-2 fuel, 9:33070 (R;US)
Reactor Accidents
TMI-2 and reactor safety, 9:33270 (RA;AT)
Reactor Safety
TMI-2 and reactor safety, 9:33270 (RA;AT)

THREE-BODY PROBLEM
Intermediate-energy nuclear theory. Progress report, March 1, 1982-February 29, 1984, 9:34649 (R;US)

THROAT
See PHARYNX

THULIUM ALLOYS
Superconductivity
Superconductivity in ternary rare earth palladium Heusler compounds, 9:33672 (R;US)

THYMIDINE
Uptake
Effect of the addition of unirradiated autologous monocytes on the thymidine uptakes of PHA stimulated γ irradiated OKT4+, OKT8+ and peripheral blood lymphocytes, 9:34453 (RA;IL)

THYRATRONS
Thyristors
Unit for thyratron firing, 9:34030 (RA;UA;In Russian)

THYROID
Biochemistry
Statistical comparative study on a combined radioiodine test and extended protirelin test and correlation with the common in vitro parameters of thyroid function, 9:34441 (R;DE;In German)
Biological Functions
Radio in-vitro thyroid studies in newborn and children up to 14 years of age in consideration of present diseases, 9:34436 (R;DE;In German)
Dose Equivalents
Radiation dose to the thyroid due to incorporation of iodine isotopes: Age dependence and reliability of dose factors, 9:34445 (R;DE;In German)
Quantitative Chemical Analysis
Quantitative X-ray fluorescence measurement of the stable iodine content in the thyroid gland, 9:33796 (RA;IL)
Radioassay
Statistical comparative study on a combined radioiodine test and extended protirelin test and correlation with the common in vitro parameters of thyroid function, 9:34441 (R;DE;In German)
Radioimmunoassay
Determination of FT4-fraction by the help of a monoclonal T4 antibody, 9:34438 (RA;AT;In German)
One year experience with FT4 screening, 9:34439 (RA;AT;In German)
Radiotherapy
Thyroid gland carcinomas after therapy with iodine-131, 9:34421 (RA;AT;In German)
X-Ray Fluorescence Analysis
Quantitative X-ray fluorescence measurement of the stable iodine content in the thyroid gland, 9:33796 (RA;IL)

THYROID CELLS
Carcinomas
^{131}I scan of cold masses in ectopic thyroid tissue using a rectilinear scanner, 9:34422 (RA;IL)
Radioisotope Scanning
^{131}I scan of cold masses in ectopic thyroid tissue using a rectilinear scanner, 9:34422 (RA;IL)

THYROTROPIN-RELEASING HORMONE
See TRH

TIGHT SANDS
See SANDSTONES

TIME-OF-DAY PRICING
See TIME-OF-USE PRICING

TIME-OF-FLIGHT SPECTROMETERS
Data Acquisition Systems
Neutron time-of-flight data acquisition system, 9:34119 (R;GB)

TIME-OF-SEASON PRICING
See TIME-OF-USE PRICING

TIME-OF-USE PRICING
Demonstration Programs
Cognitive factors that influence consumers' responses to innovative rate structures, 9:33481 (R;US)
Effects of consumers' attitudes and knowledge on the acceptance and utilization of time-of-use rates: Edmond, Oklahoma. Final report, 9:33478 (R;US)
Relationships between consumers' attitudes and knowledge and the effect of time-of-use rate structures on electricity consumption: North Carolina, 9:33477 (R;US)
Information Dissemination
Cognitive factors that influence consumers' responses to innovative rate structures, 9:33481 (R;US)
Effects of consumers' attitudes and knowledge on the acceptance and utilization of time-of-use rates: Edmond, Oklahoma. Final report, 9:33478 (R;US)
Public Opinion
Critical review of Elrick and Lavidge's customer acceptance surveys, 9:33480 (R;US)
Surveys
Analysis of the psychometric properties and correlates of the central Vermont Public Service Corporation: 1980 survey of time-of-use and non-time-of-use electric customers, 9:33479 (R;US)
Critical review of Elrick and Lavidge's customer acceptance surveys, 9:33480 (R;US)

TIN
Diffusion
Radiation-enhanced diffusion as a coating method for protection against corrosion and wear, 9:33640 (RA;BR)

TIN 106
Energy Levels
Study of neutron-deficient Sn isotopes, 9:34688 (R;FR;In French)

TIN 107
Energy Levels
Study of neutron-deficient Sn isotopes, 9:34688 (R;FR;In French)

TIN 108
Energy Levels
Study of neutron-deficient Sn isotopes, 9:34688 (R;FR;In French)

TIN 109
M2-Transitions
M2-transitions in odd tin isotopes, 9:34697 (RA;SU;In Russian)

TIN 111
M2-Transitions
M2-transitions in odd tin isotopes, 9:34697 (RA;SU;In Russian)

TIN 113
M2-Transitions
M2-transitions in odd tin isotopes, 9:34697 (RA;SU;In Russian)

TIN 115
M2-Transitions
M2-transitions in odd tin isotopes, 9:34697 (RA;SU;In Russian)

TIN 116 TARGET
Alpha Reactions
Nuclear structure and intermediate energy hadron probes: excitation of high energy multipole resonances by inelastic scattering of 340 MeV and 480 MeV α-particle, 9:34671 (R;FR)

TIN 117
M2-Transitions
M2-transitions in odd tin isotopes, 9:34697 (RA;SU;In Russian)

TIN 119
M2-Transitions
M2-transitions in odd tin isotopes, 9:34697 (RA;SU;In Russian)
Moessbauer Effect
Observing electron-phonon interaction in (SnTe)sub(x)(PbSe)sub(1-x) system with Moessbauer spectroscopy, 9:33666 (RA;SU;In Russian)

TIN 121
M2-Transitions
M2-transitions in odd tin isotopes, 9:34697 (RA;SU;In Russian)
TIN ALLOYS
See also ZIRCALOY
Superconductivity
Multifilamentary superconducting (NbTa)-Sn composite wire by solid-liquid reaction for possible application above 20 tesla, 9:33687 (J;NL)
Superconductivity in ternary rare earth palladium Heusler compounds, 9:33672 (R;US)
TIN OXIDES
Lattice Vibrations
Lattice vibrational behavior of $SnMo_6S_8$ and oxygen defected $SnMo_6S_{7.8}O_{0.2}$, 9:33628 (R;US)
TIN SULFIDES
Lattice Vibrations
Lattice vibrational behavior of $SnMo_6S_8$ and oxygen defected $SnMo_6S_{7.8}O_{0.2}$, 9:33628 (R;US)
TISSUE-EQUIVALENT DETECTORS
Data Analysis
TACI: a code for interactive analysis of neutron data produced by a tissue equivalent proportional counter, 9:34135 (R;US)
Performance
Environmental gamma-ray measurement methods for French nuclear installation impact studies, 9:33222 (J;US)
Sensitivity
Environmental gamma-ray measurement methods for French nuclear installation impact studies, 9:33222 (J;US)
TITANATES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Sorptive Properties
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
TITANITE
Age Estimation
Application of the fission track method to determination of temperature aging and of uranium concentrations. Absorption spectroscopy in apatite for investigation of the healing mechanism of radiation defects, 9:34518 (R;AT;In German)
Chemical Analysis
Application of the fission track method to determination of temperature aging and of uranium concentrations. Absorption spectroscopy in apatite for investigation of the healing mechanism of radiation defects, 9:34518 (R;AT;In German)
TITANIUM
Monitoring
Long term optimum performance/corrosion tests of combustion modifications for utility boilers, 9:32570 (RA;US)
Particulates
Size distribution and mineralogy of aluminosilicate dust particles in tropical Pacific air and rain, 9:34286 (BA;US)
Sputtering
Sputtering phenomena in ion thrusters. Final Report, 9:34568 (R;US)
TITANIUM BORIDES
Chemical Vapor Deposition
Chemical vapor deposition of erosion resistant TiB_2 coatings, 9:33702 (R;US)
Erosion
Chemical vapor deposition of erosion resistant TiB_2 coatings, 9:33702 (R;US)
Explosive Forming
Investigation of shock activated sintering and shock wave consolidation of selected powder materials. Final report, 9:33712 (R;US)
Microstructure
Chemical vapor deposition of erosion resistant TiB_2 coatings, 9:33702 (R;US)
TITANIUM CARBIDES
Explosive Forming
Investigation of shock activated sintering and shock wave consolidation of selected powder materials. Final report, 9:33712 (R;US)
TITANIUM ISOTOPES
Proton Reactions
Analysis of scattering of protons with energy near 6 MeV on nuclei with A=26,50, 9:34669 (RA;SU;In Russian)
TITANIUM OXIDES
See also ZIRCONOLITE
Electrochemistry
Photoelectrochemical and thermodynamic behavior of the n-TiO_2 electrode in fluoride solutions, 9:32898 (J;US)
Hole Mobility
Photoelectrolysis and hole injection at Fe_2O_3/TiO_2 heterojunction electrode, 9:32899 (J;US)
Microstructure
Characterization of imperfections in plasma-sprayed titania, 9:33717 (BA;US)
Photochemistry
Characterization of semiconductor powders by electrochemical techniques, 9:32884 (J;US)
Photoelectrolysis
Photoelectrolysis and hole injection at Fe_2O_3/TiO_2 heterojunction electrode, 9:32899 (J;US)
Plasma Arc Spraying
Characterization of imperfections in plasma-sprayed titania, 9:33717 (BA;US)
Thermodynamic Properties
Photoelectrochemical and thermodynamic behavior of the n-TiO_2 electrode in fluoride solutions, 9:32898 (J;US)
TLD (DOSEMETERS)
See THERMOLUMINESCENT DOSEMETERS
TLD SYSTEMS
See THERMOLUMINESCENT DOSEMETERS
TMPN
See PIPERIDINES
TMR REACTORS
Magnet Coils
Magnet system of the "AMBAL" experimental trap with ambipolar mirrors, 9:34942 (RA;SU;In Russian)
Neutron Transport Theory
Neutronic evaluation of fissile fuel breeding blankets for the fission-suppressed Tandem-Mirror Hybrid Reactor, 9:34950 (R;US)
TOKAMAK DEVICES
See also ASDEX TOKAMAK
PDX DEVICES
TEXT DEVICES
Design of the T-13 tokamak, 9:34871 (RA;SU;In Russian)
Adiabatic Compression Heating
Main physical and technological problems of construction of a tokamak with a strong magnetic field and plasma adiabatic compression, 9:34807 (RA;SU;In Russian)
Alfven Waves
High-n ideal and resistive shear Alfven waves in tokamaks, 9:34826 (R;US)
Atomic Beam Sources
Design of ion-atom channel of the T-15 tokamak injector, 9:34880 (RA;SU;In Russian)
JREK experimental injector, 9:34879 (RA;SU;In Russian)
Design
Modular low aspect ratio-high beta torsatron, 9:34961 (P;US)
Tokamak-15. Basic parameters and design status, 9:34900 (RA;SU;In Russian)
ECR Heating
System of electron-cyclotron heating of a plasma in the T-15 tokamak, 9:34876 (RA;SU;In Russian)
Efficiency
Technological tokamak reactors with a high density plasma, 9:34864 (RA;SU;In Russian)
Helium Dilution Refrigerators
StructUre and test results of the Tokamak-7 device cryogenic system, 9:34929 (RA;SU;In Russian)

High-Frequency Heating
System of energy transfer for HF heating of the T-10 tokamak plasma, 9:34882 (RA;SU;In Russian)
ICR Heating
Electromagnetic theory of an antenna for ICR heating of a plasma in tokamaks, 9:34970 (TG;US)
Magnet Coils
Calculation of hydraulic and temperature characteristics of cryoresistive coils of the "T-15" device with account for heat transfer between coil layers in the regimes of preliminary cooling and cryostatic cooling, 9:34933 (RA;SU;In Russian)
Results of analysis of the poloidal magnetic system and operation regimes of the "T-15" device, 9:34918 (RA;SU;In Russian)
Synthesis of the plasma eqUilibrium system in a tokamak reactor at inaccurate basic data, 9:34922 (RA;SU;In Russian)
Weight optimization of a coil of the electromagnetic system of the TB-O device, 9:34940 (RA;SU;In Russian)
Magnetic Field Configurations
Computer calculation of electromagnetic chapacteristics of toroidal inductive energy strages with account for a real geometry of the magnetic system, 9:34901 (RA;SU;In Russian)
Study of the magnetic fields of the electromagnetic system of a tokamak without a shell, 9:34941 (RA;SU;In Russian)
Neutral Particles
Studies on the behaviour of neutral particles in a tokamak plasma, 9:34803 (R;DE;In German)
Performance Testing
First results of the MT-1 tokamak start-Up, TsIFI Hungary, 9:34865 (RA;SU;In Russian)
Plasma Disruption
Reliability of initial-value MHD calculations of tokamak disruptions, 9:34823 (R;US)
Plasma Filament
Design problems on development of the system for plasma filament position fast control in the T-15 device, 9:34916 (RA;SU;In Russian)
Pulsed Magnet Coils
Electromagnetic system for the "T-15" device, 9:34925 (RA;SU;In Russian)
Strength-limited magnetic field intensity of toroidal magnet systems fabricated or the base of layer-by-layer shrouded solenoids, 9:34944 (RA;SU;In Russian)
RF Systems
High-frequency power supply for plasma heating in toroidal traps, 9:34894 (RA;SU;In Russian)
Stabilization
Stabilization of toroidal plasma devices, 9:34967 (P;AU)
Stresses
Study on the stressed-strained state and design optimization of the electromagnetic system fOr the "T-15" device, 9:34911 (RA;SU;In Russian)
Superconducting Coils
Electromagnetic system for the "T-15" device, 9:34925 (RA;SU;In Russian)
Study on the pulsed superconducting solenoids development, 9:34935 (RA;SU;In Russian)
Superconducting Magnets
Analytical calculation of momentum-free toroidal solenoids with nonuniform current distribution, 9:34913 (RA;SU;In Russian)
Calculating study an temperature and pressure increase in the channels of superconducting current-carrying elements in the T-15 device during energy removal, 9:34912 (RA;SU;In Russian)
Cryogenic system for the "Tokamak-15" device, 9:34928 (RA;SU;In Russian)
Device for normal phase detection in a toroidal-field superconducting coil of the "Tokamak-15" device, 9:34927 (RA;SU;In Russian)
Study on the stresses strained state of a current-carying element of the T-15 device toroidal field coil, 9:34914 (RA;SU;In Russian)
Study on the conductor-insulator friction at liquid helium temperature, 9:34921 (RA;SU;In Russian)
Study on the properties of a superconducting current-carrying element and its stability to pulsed poloidal fields in the "Tokamak-15", 9:34926 (RA;SU;In Russian)
Study on thermal process in superconducting magnet system of the "T-15" device, 9:34932 (RA;SU;In Russian)
Thermal conductivity coefficient of materials for superconducting magnet system of the T-15 device, 9:34931 (RA;SU;In Russian)
Tokamak-7 operation in experiments with a plasma, 9:34852 (RA;SU;In Russian)
Tearing Instability
Reliability of initial-value MHD calculations of tokamak disruptions, 9:34823 (R;US)
Transport Theory
Finite poloidal gyroradii effects on tokamak transport, 9:34829 (R;US)

TOKAMAK FUSION TEST REACTOR
See TFTR REACTORS

TOKAMAK TYPE REACTORS
See also DOUBLET REACTORS
INTOR TOKAMAK
JET REACTORS
TFTR REACTORS
Aspect Ratio
Application of toroidal multipoles to facilitate tokamak reactor studies, 9:34952 (R;US)
Feasibility Studies
Some considerations on construction of a two-cycle tokamak type thermonuclear reactor, 9:34903 (RA;SU;In Russian)
Magnetic Flux
Application of toroidal multipoles to facilitate tokamak reactor studies, 9:34952 (R;US)
Maximum Credible Accident
Choice of a technique for estimating maximum design accident of a tokamak reactor, 9:34904 (RA;SU;In Russian)
Parametric Analysis
Parametric investigation of a power hybrid tokamak reactor, 9:34905 (RA;SU;In Russian)
Superconducting Magnets
GA effort of the DOE 12 Tesla Coil Development Program. Progress report, 1983, 9:34845 (R;US)

TOLUENE
Pyrolysis
Pyrolysis of coal-derived fuels using the laser-powered homogeneous pyrolysis technique, 9:32515 (R;US)
Solvent Properties
Coal conversion processes. Quarterly report, December 13, 1983-March 12, 1984, 9:32525 (R;US)
Thermal Conductivity
Thermal conductivities of Wilsonville solvent and Wilsonville solvent/Illinois No. 6 coal slurry, 9:32543 (R;US)

TONSILS
See PHARYNX

TOOLS
Not for EDUCATIONAL TOOLS.
Energy Consumption
Factory demonstration energy efficiency of powered hand tools. Final report, 9:33553 (R;US)
Energy Efficiency
Factory demonstration energy efficiency of powered hand tools. Final report, 9:33553 (R;US)

TOP ACCIDENTS
See TRANSIENT OVERPOWER ACCIDENTS

TOROIDAL SCREW PINCH DEVICES
VT-6-2 screw torus type thermonuclear device, 9:34866 (RA;SU;In Russian)

TORQUE
Calculation Methods
On the systematic errors in the measurement of the aerodynamic performance of a WECS by the method of bins, 9:32999 (R;NL)
Statistical Models
On the systematic errors in the measurement of the aerodynamic performance of a WECS by the method of bins, 9:32999 (R;NL)

TORSATRON STELLARATOR
Forecasting parameters of a the monuclear power plant with a torsatron reactor, 9:34870 (RA;SU;In Russian)
Main concepts for a stationary reactor-torsatron, 9:34859 (RA;SU;In Russian)
Design
Modular low aspect ratio-high beta torsatron, 9:34961 (P;US)
Divertors
Divertor configurations of the torsatron magnetic field, 9:34924 (RA;SU;In Russian)
Feasibility Studies
Thermonuclear power plant with a reactor-torsatron, 9:34902 (RA;SU;In Russian)
Magnet Coils
Design and fabrication of the magnetic system for the "Uragan-3" torsatron with a spatial divertor, 9:34915 (RA;SU;In Russian)
Force-free magnet system of the "Uragan-3" torsatron, 9:34923 (RA;SU;In Russian)
Magnetic Surfaces
Magnetic surface parameter control by means of a transverse magnetic field in stellarators and torsatrons, 9:34937 (RA;SU;In Russian)
Parametric Analysis
Preliminary parametric investigations of a thermon clear power plant with a torsatron reactor, 9:34869 (RA;SU;In Russian)
Superconducting Magnets
Study of the cooling conditions and thermal characteristics of superconducting magnetic system of the "Kristall-2" torsatron, 9:34917 (RA;SU;In Russian)
Thermonuclear Ignition
Optimization of ignition in a torsatron-reactor, 9:34890 (RA;SU;In Russian)
TOTAL ENERGY SYSTEMS
Economic Analysis
Initial feasibility report on decentralized small cogeneration for Navy shore bases. Final report 1 Oct 82-30 Sep 83, 9:33575 (R;US)
TOTAL-ABSORPTION SPECTROMETERS
See SHOWER COUNTERS
TOXIC MATERIALS
Carcinogenesis
Pollution and man, environmental pollution and man, the magnitude of the problem, historical aspects and definitions, 9:34471 (R;US)
Environmental Impacts
User's manual for TOX-SCREEN: a multimedia screening-level program for assessing the potential fate of chemicals released to the environment, 9:34179 (R;US)
Environmental Transport

TRIGA TYPE REACTORS
Design
A design study of the neutron irradiation facility for boron neutron capture therapy, 9:34429 (J;US)

TRIPLET PARTICLES
See QUARKS

TRITIATED COMPOUNDS
See TRITIUM COMPOUNDS

TRITIATED WATER
See TRITIUM OXIDES

TRITIUM
Bound State
Metastable complexes of helium-hydrogen isotopes, 9:34565 (R;US)
Chemical Reaction Kinetics
Mound activities in chemical and physical research: July-December 1983, 9:34971 (R;US)
Diffusion
Isothermal annealing of tritium from the irradiated LiF crystals with different faulty structures, 9:33753 (RA;SU;In Russian)
Electric Conductivity
Metastable complexes of helium-hydrogen isotopes, 9:34565 (R;US)
Ion Mobility
Metastable complexes of helium-hydrogen isotopes, 9:34565 (R;US)
Magnetic Susceptibility
Metastable complexes of helium-hydrogen isotopes, 9:34565 (R;US)
Vapor Pressure
Metastable complexes of helium-hydrogen isotopes, 9:34565 (R;US)

TRITIUM COMPOUNDS
See also TRITIUM OXIDES
Quantitative Chemical Analysis
Analytical chemistry, 9:33842 (RA;CS;In Russian)
TRITIUM OXIDES
Natural Occurrence
Comments on natural tritiated moisture levels in air vary with atmospheric pressure, 9:34319 (J;GB)
TRITIUM RECOVERY
In thermonuclear reactors and/or devices.
TRIO-01 experiment, 9:33704 (RA;US)
TRITONS
Energy Losses
Conserving average rate of energy loss in transport calculations for light charged particles, 9:34752 (J;US)
TRU WASTES
See ALPHA-BEARING WASTES
TRX-1
See REVERSE-FIELD PINCH
TSL PROCESS
Catalysts
Wilsonville Advanced Coal Liquefaction Research and Development Facility technical progress report. Run 244 with Illinois 6 coal, 9:32517 (R;US)
Pilot Plants
Wilsonville Advanced Coal Liquefaction Research and Development Facility technical progress report. Run 244 with Illinois 6 coal, 9:32517 (R;US)
Research Programs
Steam pyrolysis of coal for two-stage gasification, 9:32467 (RA;US)
TUBES (CONDUITS)
See PIPES
TUFF
Evaluation
Unit evaluation at Yucca Mountain, Nevada Test Site: summary report and recommendation, 9:32740 (R;US)
Hydrology
Effective stress principle for partially saturated media, 9:32739 (R;US)
Hydrothermal Alteration
Hydrothermal interaction studies of Bullfrog Member tuff core wafers in J-13 water at 150°C: quantitative analyses of aqueous and solid phases, 9:32741 (R;US)
Mechanical Properties
Unit evaluation at Yucca Mountain, Nevada Test Site: summary report and recommendation, 9:32740 (R;US)
Porosity
Effective stress principle for partially saturated media, 9:32739 (R;US)
Rock-Fluid Interactions
Hydrothermal interaction studies of Bullfrog Member tuff core wafers in J-13 water at 150°C: quantitative analyses of aqueous and solid phases, 9:32741 (R;US)
Saturation
Effective stress principle for partially saturated media, 9:32739 (R;US)
TUMORS
See NEOPLASMS
TUNGSTEN
Physical Radiation Effects
Field-ion microscopy study of ion damage to tungsten, 9:33683 (J;DD)
TUNGSTEN ALLOYS
See also INCONEL 738
Fracture Properties
Fracture behavior of a uranium and a tungsten alloy in a notched component with inertia loading. Final report, 9:33621 (R;US)
TUNGSTEN OXIDES
Photochemistry
Characterization of semiconductor powders by electrochemical techniques, 9:32884 (J;US)
TUNGSTEN SELENIDES
Stability
New stability measurements on GaP and WSe_2 photoelectrodes, 9:32886 (J;US)
TURBINE BLADES
Fatigue
Inspection realized in a propeller blade fractured during normal operation, 9:33648 (RA;BR;In Portuguese)
TURBOGENERATORS
Failures
Simulation of dynamics of pressurized water reactor power plant, 9:33284 (RA;CS;In Czech)
TURBULENCE
Environmental Effects
Theoretical study of the effect of atmospheric turbulent motions on the scavenging of aerosol particles by cloud and rain drops, 9:34209 (BA;US)
Turbulent aspects of rainout, 9:34210 (BA;US)
TURBULENT FLOW
Reactor Simulators
Hydrodynamic effects of the gap between the fuel rod longitudinal fins and the tube, 9:33903 (RA;IL)
TWO-PHASE FLOW
Bench-Scale Experiments
Code assessment by a two-phase nozzle flow experiment, 9:33346 (J;US)
Flow Models
About unilateral problems degenerated from the theory of two-phase flow in porous medium. Application to G. Chavent's modelling of techniques of secondary exploitation of petroleum deposits, 9:32653 (R;FR;In French)
Code assessment by a two-phase nozzle flow experiment, 9:33346 (J;US)
Comments on the formulation of the one-dimensional six-equation two-phase flow model, 9:33910 (J;US)
Experimental and theoretical study of a two-phase flow in vertical and near-horizontal pipes. Application to petroleum engineering, 9:32667 (R;FR;In French)
Investigation of single-substance horizontal two-phase flow, 9:33906 (R;US)
Two-fluid instability, 9:33880 (R;US)
Neutron Radiography
Study of air-water two-phase flow using the neutron attenuation technique, 9:33885 (R;CA)
One-Dimensional Calculations
Comments on the formulation of the one-dimensional six-equation two-phase flow model, 9:33910 (J;US)
Simulation
Design, construction and evaluation of a simulated geothermal flow system, 9:32976 (R;US)
TYRAMINE
Labelling
Organ-distribution and biochemical aspects in developing new radiopharmaceuticals labelled with metallocenes, 9:33841 (RA;IL)

Cooling Systems
Improved working conditions by air conditioning of underground pits, 9:32642 (R;DE;In German)
Electrical Equipment
Electrical installations in oil shale mines. Open file report 21 Sep 81-13 Aug 83, 9:32689 (R;US)
Ground Subsidence
Influence of rock discontinuities on coal mine subsidence. Open file report 29 Sep 80-10 Sep 83, 9:32602 (R;US)
Noise Pollution Abatement
Study of sound propagation as a function of roadway shape, cross-section and support, 9:34373 (R;DE;In German)
Rock Bursts
Dual-channel microseismic monitor for use in gassy coal mines, 9:32591 (R;AU)
Multi-stage probe for monitoring coal seam gas pressures and flows, 9:32592 (R;AU)
Roof Bolts
Plug and collar anchor to transmit load from a strand to a thrust plate, 9:32594 (R;AU)
Roofs
Plug and collar anchor to transmit load from a strand to a thrust plate, 9:32594 (R;AU)
Safety Engineering
Laboratory testing of compressed-oxygen self-rescuers for ruggedness and reliability. Report of investigations/1983, 9:32598 (R;US)
Seismic Detectors
Dual-channel microseismic monitor for use in gassy coal mines, 9:32591 (R;AU)
Strata Control
Load transfer behaviour between steel reinforcement and cement based grout, 9:32593 (R;AU)
UNDERGROUND NUCLEAR POWER PLANTS
See UNDERGROUND NUCLEAR STATIONS
UNDERGROUND NUCLEAR STATIONS
Containment Buildings
Expansion of core melt within the concrete foundation - effects on the reactor building structure, 9:33249 (R;DE;In German)
Meltdown
Expansion of core melt within the concrete foundation - effects on the reactor building structure, 9:33249 (R;DE;In German)
Reaction of the core melt with various rock types, 9:33248 (R;DE;In German)
UNDERWATER FACILITIES
Corrosion
Internal corrosion offshore pipelines. Hydrogen induced cracking, 9:32669 (R;NO)
UNDERWATER OPERATIONS
Welding
MIG-welding of offshore steels at pressures from 1 to 30 bar, 9:33937 (R;DE)
UNICELLULAR ALGAE
Anaerobic Digestion
Filtration and methane fermentation of microscopic algae, 9:32852 (R;FR;In French)
Biological Radiation Effects
Effect of ionizing radiation with different ionizing density on the uni-cellular Alga Micrasterias denticulate Breb, 9:34455 (R;AT;In German)
Filtration
Filtration and methane fermentation of microscopic algae, 9:32852 (R;FR;In French)
UNIFIED GAUGE MODELS
See also GRAND UNIFIED THEORY
WEINBERG-SALAM GAUGE MODEL
SU(5) without SU(5): why B-L is conserved and baryon number not in unified models of quarks and leptons, 9:34641 (BA;US)
Lattice Field Theory
Restoration of Lorentz invariance in SU(2) and SU(3) lattice gauge theories, 9:34633 (R;DE)
Scaling of the quark-antiquark potential and improved actions in SU(2) lattice gauge theory, 9:34634 (R;DE)
Variational determination of the string tension and the glueball mass in (2+1) dimensional U(1) lattice gauge theory for all values of the coupling constant, 9:34635 (R;DE)
UNIFIED MODEL
Unitary, unified models for NN → NNπ, 9:34742 (R;US)

URAGAN STELLARATOR
Joule Heating
Technical peculiarities of plasma ohmic heating at the "Uragan-3" torsatron-stellarator, 9:34889 (RA;SU;In Russian)

Magnet Coils
Design and fabrication of the magnetic system for the "Uragan-3" torsatron with a spatial divertor, 9:34915 (RA;SU;In Russian)
Force-free magnet system of the "Uragan-3" torsatron, 9:34923 (RA;SU;In Russian)
Performance Testing
Main technological and physical problems of the new torsatron- "Uragan-3", 9:34858 (RA;SU;In Russian)

URANIUM
See also NATURAL URANIUM
Activation Analysis
Determination of uranium and thorium in coal by epithermal neutrons, 9:33779 (RA;BR;In Portuguese)
Adsorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Alpha Spectroscopy
Measurement of fissile target thickness by alpha spectrometry, 9:34122 (RA;BR;In Portuguese)
Bioassay
Evaluation of isotope dilution mass spectrometry for bioassay measurement of uranium, plutonium, and thorium in urine, 9:34460 (R;US)
Desorption
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Distribution Functions
Distribution of U(IV), U(VI), Pu(III) and nitric acid between 30 vol.% tributyl phosphate in dodecane and aqueous nitrate solutions, 9:32707 (R;DE)
Dodecane
Distribution of U(IV), U(VI), Pu(III) and nitric acid between 30 vol.% tributyl phosphate in dodecane and aqueous nitrate solutions, 9:32707 (R;DE)
Electronic Structure
H Division. Materials Physics quarterly report, October-December 1983, 9:33615 (R;US)
Equations of State
H Division. Materials Physics quarterly report, October-December 1983, 9:33615 (R;US)
Ion-Atom Collisions
Electron/positron detector for the orange-β-spectrometer, 9:34129 (RA;DE;In German)
Leaching
Hexavalent uranium in fluorite structure oxide solid solutions, 9:32748 (J;US)
Low-Level Radioactive Wastes
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Production
Uranium-III production - and stability, 9:33840 (RA;BR;In Portuguese)
Solubility
Geochemical information for the West Chestnut Ridge Central Waste Disposal Facility for low-level radioactive waste, 9:32758 (R;US)
Solvent Extraction
Determination and optimization of the parameters in uranium extraction by solvents in a mixer - settler Pollux B-32, 9:33791 (RA;BR;In Portuguese)
Uranium-III production - and stability, 9:33840 (RA;BR;In Portuguese)
Stability
Uranium-III production - and stability, 9:33840 (RA;BR;In Portuguese)
Thickness Gages
Measurement of fissile target thickness by alpha spectrometry, 9:34122 (RA;BR;In Portuguese)
Valence
Hexavalent uranium in fluorite structure oxide solid solutions, 9:32748 (J;US)

URANIUM 233 TARGET
Neutron Reactions
Note on the prompt-fission-neutron spectra of uranium-233 and -235 and plutonium-239 and -240 relative to that of californium-252, 9:34716 (J;US)
The foil thickness correction in $\bar{}$ measurements and the ($\bar{}$ -/eta/) discrepancy, 9:34717 (J;US)

URANIUM 234
Alpha Spectroscopy
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Radiochemical Analysis
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)

URANIUM 235
Alpha Spectroscopy
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Cross Sections
Sensitivity and uncertainty analysis of the Coupled Fast Reactivity Measurements Facility central flux spectrum, 9:33238 (J;US)
Fission Spectra
Sensitivity and uncertainty analysis of the Coupled Fast Reactivity Measurements Facility central flux spectrum, 9:33238 (J;US)
Laser Isotope Separation
Contribution to the future prospect of uranium laser-isotope separation, 9:32698 (R;DE;In German)
Neutron Spectra
LWR pressure vessel surveillance dosimetry improvement program. Quarterly progress report, October 1983-December 1983 (Benchmark neutron fields (^{252}Cf, ^{235}U)), 9:33178 (R;US)
Radiochemical Analysis
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Supply and Demand
Options for the assurance of nuclear fuel supply, 9:33454 (R;US)

URANIUM 235 TARGET
Fission Products
Fission product analytic impulse source functions, 9:34714 (J;US)
Neutron Reactions
Fission product analytic impulse source functions, 9:34714 (J;US)
Gamma radiation spectrum in 3 MeV neutron interaction with ^{235}U nuclei, 9:34712 (RA;SU;In Russian)
Note on the prompt-fission-neutron spectra of uranium-233 and -235 and plutonium-239 and -240 relative to that of californium-252, 9:34716 (J;US)
The foil thickness correction in $\bar{}$ measurements and the ($\bar{}$ -/eta/) discrepancy, 9:34717 (J;US)
Photofission
Experimental determination of photofission neutron multiplicities for ^{235}U, ^{236}U, ^{238}U, and ^{232}Th using monoenergetic photons, 9:34719 (J;US)

URANIUM 236
Rotational States
Rotational alignment of internal angular momentum in octupole bands, 9:34713 (RA;SU;In Russian)

URANIUM 236 TARGET
Iron 56 Reactions
Non-equilibrium excitation energy division in deeply-inelastic collisions, 9:34708 (R;US)
Photofission
Experimental determination of photofission neutron multiplicities for ^{235}U, ^{236}U, ^{238}U, and ^{232}Th using monoenergetic photons, 9:34719 (J;US)

URANIUM 238
Alpha Spectroscopy
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)

Cross Sections
Sensitivity and uncertainty analysis of the Coupled Fast Reactivity Measurements Facility central flux spectrum, 9:33238 (J;US)
Inelastic Scattering
Sensitivity and uncertainty analysis of the Coupled Fast Reactivity Measurements Facility central flux spectrum, 9:33238 (J;US)
Radiochemical Analysis
Activities of isotopes of uranium, thorium, radium, and lead of Antarctic coals, 9:32549 (R;US)
Radioecological Concentration
Aerial radiological survey of the Waterford Generating Station and surrounding area, Taft, Louisiana. Date of survey: March-April 1982, 9:34306 (R;US)
Aerial radiological survey of the Palo Verde Nuclear Generating Station and surrounding area, Wintersburg, Arizona. Date of survey: November 1982, 9:34307 (R;US)
Rotational States
Rotational alignment of internal angular momentum in octupole bands, 9:34713 (RA;SU;In Russian)

URANIUM 238 TARGET
Neutron Reactions
Determination of fission product yields lanthanides and yttrium, in the ^{238}U fission with neutrons of fission spectra, 9:34710 (RA;BR;In Portuguese)
Photofission
Experimental determination of photofission neutron multiplicities for ^{235}U, ^{236}U, ^{238}U, and ^{232}Th using monoenergetic photons, 9:34719 (J;US)

URANIUM ALLOYS
Fabrication
Design, production, and evaluation of a zircaloy-clad uranium target for an intense pulsed neutron source application, 9:33209 (J;US)
Fracture Properties
Fracture behavior of a uranium and a tungsten alloy in a notched component with inertia loading. Final report, 9:33621 (R;US)
Lattice Vibrations
Lattice vibrational behavior of the exchange enhanced superconductor U_6Fe, 9:33629 (R;US)
Shape Memory Effect
X-ray diffraction study of shape memory in uranium-niobium alloys, 9:33696 (BA;US)
Sorptive Properties
Analysis of the hydrogen absorption in the U(Alsub(x)Nisub(1-x))$_2$ system, 9:33653 (RA;IL)
Superconductivity
Initial slope of the upper critical field of the heavy fermion superconductor UPt_3, 9:33676 (R;US)
P-state superconductivity, 9:34777 (RA;US)

URANIUM COMPLEXES
Solvent Extraction
Study of the chemical interactions of actinide cations in solution at macroscopic concentrations, 9:32702 (R;FR;In French)

URANIUM COMPOUNDS
See also URANIUM HYDRIDES
URANIUM OXIDES
Reduction
Uranium-III production - and stability, 9:33840 (RA;BR;In Portuguese)

URANIUM DIOXIDE
Calcination
Testing of wet scrap recovery equipment for mixed oxide scrap reprocessing, 9:32700 (R;US)
Coprecipitation
Testing of wet scrap recovery equipment for mixed oxide scrap reprocessing, 9:32700 (R;US)
Fuel Densification
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
Mechanical Properties
A model for the effective thermal and mechanical properties of cracked UO_2 pellets, 9:33202 (J;US)
Production
Microwave-heated continuous denitrification apparatus, 9:32695 (TG;US)
Thermal Conductivity
The possible impact of fuel pellet cracking on inferred gap conductance and fuel stored energy, 9:33201 (J;US)
Thermal Degradation
The possible impact of fuel pellet cracking on inferred gap conductance and fuel stored energy, 9:33201 (J;US)
Thermodynamic Properties
A model for the effective thermal and mechanical properties of cracked UO_2 pellets, 9:33202 (J;US)

URANIUM HYDRIDES
Nuclear Magnetic Resonance
NMR study of the ferromagnetic beta-uranium hydride, 9:33708 (RA;IL)

URANIUM II
See URANIUM 234

URANIUM IONS
Ion-Atom Collisions
Electron/positron detector for the orange-β-spectrometer, 9:34129 (RA;DE;In German)

URANIUM ISOTOPES
See also URANIUM 234
URANIUM 235
URANIUM 236
URANIUM 238
Gaseous Diffusion Process
Separation of a multicomponent mixture by gaseous diffusion: modelization of the enrichment in a capillary; application to a pilot cascade, 9:32697 (R;FR;In French)

URANIUM MILLS
See FEED MATERIALS PLANTS

URANIUM MINES
Licensing
Radiation protection as part of occupational health and safety in the regulation of uranium mines in Canada, 9:32694 (R;CA)
Radiation Protection
Radiation protection as part of occupational health and safety in the regulation of uranium mines in Canada, 9:32694 (R;CA)
Water Pollution
Contamination of ground and surface waters by uranium mining and milling. Volume 3. Experimental studies and analytical procedures. Open file report 25 Jul 79-14 Sep 81, 9:34358 (R;US)

URANIUM OXIDE FUEL PLANT
See MIXED OXIDE FUEL FABRICATION PLANTS

URANIUM OXIDES
See also URANIUM DIOXIDE
URANIUM OXIDES U3O8
Chemical Analysis
Fluor determination in uranium oxides, 9:33787 (RA;BR;In Portuguese)
Impurities
Quantitative chemical analysis of impurities in uranium matrices by emission spectrography, 9:33789 (RA;BR;In Portuguese)
Quantitative Chemical Analysis
Quantitative chemical analysis of impurities in uranium matrices by emission spectrography, 9:33789 (RA;BR;In Portuguese)
Thermal Conductivity
Determination of the thermal conductivity coefficient for uranium oxide pellets, 9:33192 (RA;BR;In Portuguese)

URANIUM OXIDES U3O8
Calcination
Determination of the better composition for Argonaut fuel elements, 9:33227 (RA;BR;In Portuguese)
Sintering
Determination of the better composition for Argonaut fuel elements, 9:33227 (RA;BR;In Portuguese)

URANIUM RESERVES
Options for the assurance of nuclear fuel supply, 9:33454 (R;US)

URANIUM TETRAFLUORIDE
Chemical Analysis
Determination of fluorine in UF_4, 9:33786 (RA;BR;In Portuguese)
URANIUM X 2
See THORIUM 231
URANYL NITRATES
Electrodeposition
Fabrication of thorium and uranium thin targets by molecular electrodeposition, 9:33651 (RA;BR;In Portuguese)
Solvent Extraction
Thermodynamics of the extraction of uranium and nitric acid from an aqueous solution with TBP/diluent, 9:32709 (TG;US)
US DOD
Data Base Management

Feasibility Studies
Tri-County solid waste-to-fuel production project feasibility study, 9:33579 (R;US)
Operation
Geotechnical quality assurance of construction of disposal facilities. Final report Apr-Dec 82, 9:33565 (R;US)
WASTE PRODUCT UTILIZATION
Beneficial use of sludge in building components, 9:33762 (R;US)
WASTE TRANSPORTATION
Fires
High-temperature vaporization of simulated radioactive waste forms, 9:32751 (J;US)
WASTE WATER
Anaerobic Digestion
Adsorption-enhanced biogasification of coal conversion wastewater, 9:32566 (J;US)
Biodegradation
Fixed-film fluidized-bed bioreactors for biooxidation of coal converison wastewaters, 9:32558 (RA;US)
Treatment of coal gasification wastewater using rotating biological contactors, 9:32555 (R;US)
Chemical Composition
Biokinetic study for SRC-I wastewater, 9:32514 (R;US)
Environmental studies - fixed-bed gasification, 9:32557 (RA;US)
Evaluation of effects of phenol recovery on biooxidation and tertiary treatment of SRC-I wastewater. Final technical report, 9:32501 (R;US)

Dephenolization
Evaluation of effects of phenol recovery on biooxidation and tertiary treatment of SRC-I wastewater. Final technical report, 9:32501 (R;US)
Extension of the evaluation of reverse osmosis for SRC-I wastewater. Final technical report, 9:32512 (R;US)
Osmosis
Extension of the evaluation of reverse osmosis for SRC-I wastewater. Final technical report, 9:32512 (R;US)
Oxidation
Treatment of coal gasification process wastewater, 9:32556 (RA;US)
Ozonization
Treatment of coal gasification process wastewater, 9:32556 (RA;US)
Recycling
Gasifier wastewater treatment: Phase I cooling tower assessment, 9:32554 (R;US)
Solvent Extraction
Treatment of coal gasification process wastewater, 9:32556 (RA;US)
Toxicity
Comparative toxicity of SRC-I wastewater to aquatic organisms. Final technical report, 9:32508 (R;US)
Water Treatment
Adsorption-enhanced biogasification of coal conversion wastewater, 9:32566 (J;US)
Biokinetic study for SRC-I wastewater, 9:32514 (R;US)
Comparative toxicity of SRC-I wastewater to aquatic organisms. Final technical report, 9:32508 (R;US)
Environmental studies - fixed-bed gasification, 9:32557 (RA;US)
Evaluation of thickening and dewatering characteristics of SRC-I wastewater treatment sludges. Final technical report, 9:32513 (R;US)
Evaluation of effects of phenol recovery on biooxidation and tertiary treatment of SRC-I wastewater. Final technical report, 9:32501 (R;US)
Gasifier wastewater treatment: Phase I cooling tower assessment, 9:32554 (R;US)
RO feed pretreatment and flat cell tests for SRC-I wastewater, 9:32505 (R;US)
Treatment of coal gasification wastewater using rotating biological contactors, 9:32555 (R;US)
Treatment of coal gasification process wastewater, 9:32556 (RA;US)
Treatment faciliy for 200 Area seepage basin waste. Technical data summary, 9:32725 (R;US)

WATER POLLUTION
Report to Congress: nonpoint source pollution in the U.S. Final report Sep 83-Jan 84, 9:34372 (R;US)
Dose-Response Relationships
Impact of energy and industrial pollution on public health, 9:34497 (BA;US)
Toxicity
Monticello experiment: a case study, 9:34487 (R;US)

WATER REMOVAL
Comparative Evaluations
Evaluation of thickening and dewatering characteristics of SRC-I wastewater treatment sludges. Final technical report, 9:32513 (R;US)
Recommendations
Evaluation of thickening and dewatering characteristics of SRC-I wastewater treatment sludges. Final technical report, 9:32513 (R;US)

WATER RESERVOIRS
Embankments
Silting-up of the Klingnau storage-lake from 1935 until today, 9:32820 (RA;CH;In German)

Floods
Flood disaster 1978 in the compensation basin of Palagnedra, 9:32833 (RA;CH;In German)
Sedimentation
Dam of Ksob (Algeria), 9:32836 (RA;CH;In French)
Echo-depth sounding and evaluation in order to detect and record sedimentation in water-reservoirs, 9:32817 (RA;CH;In German)
Experience with clearance of storage areas at the Tauernkraftwerke AG plants in Salzburg, 9:32834 (RA;CH;In German)
Flushing of sediments at the Gebidem-Dam, 9:32829 (RA;CH;In German)
Hydro power station Eglisau - periodical survey of the sedimentation 1919-1980, 9:32818 (RA;CH;In German)
Origin of fine-grained sediment in reservoirs as a function of the geological situation in the source areas, 9:32814 (RA;CH;In German)
Problems of siltation in three compensating basins at Linth-Limmern power scheme, 9:32824 (RA;CH;In German)
Scouring of sediments in small and medium scaled water reservoirs, 9:32835 (RA;CH;In German)
Sedimentation in the Grimsel reservoir, 9:32830 (RA;CH;In German)
Silting of storage areas in rivers and lakes, 9:32812 (RA;CH;In German)
Silting-up of the Klingnau storage-lake from 1935 until today, 9:32820 (RA;CH;In German)
Silting-up of the reservoirs of hydroelectric generating stations on the Swabian-Bavarian rivers Iller, Guenz, Wertach and Lech, 9:32822 (RA;CH;In German)
Silting-up and scouring of the small Innerferrera reservoir of the Hinterrhein Hydroelectric Scheme, 9:32825 (RA;CH;In German)
Silting-up in the Etzelwerk, 9:32831 (RA;CH;In German)
Storage loss, 9:32813 (RA;CH)
Time-dependent degradation of sediment accumulation during the scouring of storage basins, 9:32816 (RA;CH;In German)
Z'Mutt compensating basin and sediments, 9:32808 (RA;CH;In French)

WATER RESOURCES
Resource Development
Energy and water development appropriations for 1985. Part 7. Testimony of members of congress and other interested individuals and organizations. Hearings before the Committee on Appropriations, House of Representatives, Ninety-Eighth Congress, Second Session, 9:33444 (B;US)

WATER SOLUTIONS
See AQUEOUS SOLUTIONS

WATER VAPOR
Diffusion
Distribution of humidity in porous materials as a consequence of non-steady water-vapour diffusion, 9:33761 (R;DE;In German)

WATER WAVES
Depth
Progress report No. 57 [on hydrodynamics and hydraulic engineering], 9:34353 (R;DK)

Inspection
Evaluation of tests of X-ray equipment performed by experts in the hospitals of North Rhine-Westphalia, 9:34402 (R;DE;In German)

Radiation Protection
Evaluation of tests of X-ray equipment performed by experts in the hospitals of North Rhine-Westphalia, 9:34402 (R;DE;In German)

X-RAY LASERS
Cavity Resonators
Development of X-ray laser media. Measurement of gain and development of cavity resonators for wavelengths near 130 angstroms, Volume 2, 9:33877 (R;US)

X-RAY RADIOGRAPHY
X-Ray Sources
PHERMEX electron gun development, 9:34100 (J;US)
Status of BESSY, an 800-MeV storage ring dedicated to synchrotron radiation, 9:34101 (J;US)

X-RAY SPECTROSCOPY
Pulse Pileup
Method to process high signal rates in pulse analysis, illustrated by the example of X-ray spectroscopy, 9:34149 (R;DE;In German)

XYLANS
Fermentation
Production of ethanol from biopolymers by anaerobic, thermophilic, and extreme thermophilic bacteria. III. Thermoanaerobacter ethanolicus JW200 and its mutants in batch cultures and resting cell experiments, 9:32800 (J;US)

XYLOSE
Fermentation
Production of ethanol from biopolymers by anaerobic, thermophilic, and extreme thermophilic bacteria. I. Regulation of carbohydrate utilization in mutants of Thermoanaerobacter ethanolicus, 9:32799 (J;US)
Production of ethanol from biopolymers by anaerobic, thermophilic, and extreme thermophilic bacteria. III. Thermoanaerobacter ethanolicus JW200 and its mutants in batch cultures and resting cell experiments, 9:32800 (J;US)

Y

YANKEE CONNECTICUT REACTOR
See CONNECTICUT YANKEE REACTOR

YAYOI REACTOR
Shielding Materials
Neutron and gamma-ray penetrations in thick iron, 9:33241 (J;US)

YEARS LIVING RADIOISOTOPES

Mass Spectroscopy
Accelerator-mass spectrometry of long-lived radioisotopes using the Rehovot pelletron, 9:33798 (RA;IL)

YELLOW CAKE
See URANIUM OXIDES U3O8

YOSHIDA SARCOMA
See EXPERIMENTAL NEOPLASMS

YTTERBIUM 160
High Spin States
Lifetime results for high-spin states in ^{160}Yb and ^{161}Yb, 9:34703 (BA;JP)
Yrast States
Lifetime results for high-spin states in ^{160}Yb and ^{161}Yb, 9:34703 (BA;JP)

YTTERBIUM 161
High Spin States
Lifetime results for high-spin states in ^{160}Yb and ^{161}Yb, 9:34703 (BA;JP)
Yrast States
Lifetime results for high-spin states in ^{160}Yb and ^{161}Yb, 9:34703 (BA;JP)

YTTERBIUM ALLOYS
Electric Conductivity
Pressure-dependent resistive behavior of $YbBe_{13}$, 9:33675 (R;US)
Superconductivity
Superconductivity in ternary rare earth palladium Heusler compounds, 9:33672 (R;US)

YTTRIUM
Activation Analysis
Fast transport facility for activation analysis with high-energy neutrons, 9:33799 (R;AT;In German)

YTTRIUM 89 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)

YTTRIUM ALLOYS
Superconductivity
Superconductivity in ternary rare earth palladium Heusler compounds, 9:33672 (R;US)

YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
FERRITE GARNETS

YTTRIUM HYDRIDES
Spin-Lattice Relaxation
Conduction electron density of states and proton spin-lattice relaxation in the dihydrides of Sc, Y, La, and Lu, 9:33671 (R;US)

YTTRIUM ISOTOPES
Beta-Minus Decay
Beta spectroscopy on neutron-rich nuclei of mass $93 <= A <= 100$, 9:34682 (R;DE;In German)
Fission Yield
Determination of fission product yields lanthanides and yttrium, in the ^{238}U fission with neutrons of fission spectra, 9:34710 (RA;BR;In Portuguese)
Mass Defect
Beta spectroscopy on neutron-rich nuclei of mass $93 <= A <= 100$, 9:34682 (R;DE;In German)

YTTRIUM OXIDES
Microstructure
Surface characteristics of yttria precursors in relation to their sintering behavior, 9:33718 (BA;US)
Sintering
Surface characteristics of yttria precursors in relation to their sintering behavior, 9:33718 (BA;US)

YUCCA MOUNTAIN
Exploratory Wells
Geohydrology of test well USW H-1, Yucca Mountain, Nye County, Nevada, 9:32743 (R;US)
Geology
Geohydrology of test well USW H-1, Yucca Mountain, Nye County, Nevada, 9:32743 (R;US)
Hydrology
Geohydrology of test well USW H-1, Yucca Mountain, Nye County, Nevada, 9:32743 (R;US)

Radioactive Waste Disposal
Unit evaluation at Yucca Mountain, Nevada Test Site: summary report and recommendation, 9:32740 (R;US)

Z

Z PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
ZEOLITES
Catalytic Effects
Thermal and catalytic cracking of tars and tar constituents from coal gasification processes, 9:32488 (RA;US)
ZINC
Activation Analysis
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
Biological Accumulation
Concentration of some trace elements in malignant human lung tissue, 9:33795 (RA;IL)
Deposition
Dry deposition of trace elements in Olympic National Park, 9:34271 (BA;US)
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Environmental Transport
Estimates of dry and wet deposition and resuspension fluxes of several trace metals in the Southern Bight of the North Sea, 9:34283 (BA;US)
Precipitation Scavenging
Precipitation scavenging and dry deposition of pollutants from the inco nickel smelter in sudbury, 9:34261 (BA;US)
Scavenging rates of sulfur and trace metals from a smelter plume, 9:34260 (BA;US)
ZINC 64 TARGET
Alpha Reactions
Phenomenologic model for related cross sections in the reactions sup(A) Zn (α, Xn, Yp, Zα), 9:34681 (RA;BR;In Portuguese)
ZINC 66 TARGET
Alpha Reactions
Phenomenologic model for related cross sections in the reactions sup(A) Zn (α, Xn, Yp, Zα), 9:34681 (RA;BR;In Portuguese)
Neutron Reactions
Activation cross sections for $^{66}Zn(n,p)^{66}Cu$, 9:34685 (J;US)
ZINC 67 TARGET
Alpha Reactions
Phenomenologic model for related cross sections in the reactions sup(A) Zn (α, Xn, Yp, Zα), 9:34681 (RA;BR;In Portuguese)
ZINC 68 TARGET
Alpha Reactions
Phenomenologic model for related cross sections in the reactions sup(A) Zn (α, Xn, Yp, Zα), 9:34681 (RA;BR;In Portuguese)
ZINC 70 TARGET
Alpha Reactions
Phenomenologic model for related cross sections in the reactions sup(A) Zn (α, Xn, Yp, Zα), 9:34681 (RA;BR;In Portuguese)
ZINC COMPOUNDS
See also ZINC OXIDES
ZINC SELENIDES
Electron Microscopy
EM study of the structure and composition of grain boundaries in (Mn,Zn) Fe_2O_4, 9:33766 (BA;US)
Grain Boundaries
EM study of the structure and composition of grain boundaries in (Mn,Zn) Fe_2O_4, 9:33766 (BA;US)
ZINC ISOTOPES
Isotope Separation
Mound activities in chemical and physical research: July-December 1983, 9:34971 (R;US)
ZINC OXIDES
Sorptive Properties
Development of a hot gas cleanup system for integrated coal gasification/molten carbonate fuel cell power plants. Topical report, October 1982-December 1983, 9:32456 (R;US)
ZINC SELENIDES
X-Ray Spectra
X-ray spectroscopy of solids under pressure. Annual progress report, August 1983-July 1984, 9:33740 (R;US)
ZION STATION UNIT-1
See ZION-1 REACTOR
ZION-1 REACTOR
Reactor Safety
Seismic safety margins research program: an overview, 9:33311 (RA;US)
ZIRCALOY
For unspecified Zircaloy alloys.
See also ZIRCALOY 2
Corrosion Resistance
Corrosion of zircaloy fuel pins, 9:33228 (RA;BR;In Portuguese)
Fracture Properties
Influence of surface condition on crack initiation in iodine-induced stress corrosion cracking of zircaloys, 9:33207 (J;US)
Impact Tests
Influence of surface condition on crack initiation in iodine-induced stress corrosion cracking of zircaloys, 9:33207 (J;US)
Quality Control
Quality control for zircaloy tubes, 9:33080 (RA;BR;In Portuguese)
Strains
In-reactor measurement of cladding strain: fuel density and relocation effects, 9:33205 (J;US)
Stress Corrosion
Influence of surface condition on crack initiation in iodine-induced stress corrosion cracking of zircaloys, 9:33207 (J;US)
ZIRCALOY 2
Fabrication
Design, production, and evaluation of a zircaloy-clad uranium target for an intense pulsed neutron source application, 9:33209 (J;US)
Fracture Properties
The effects of texture and surface condition on the iodine stress corrosion cracking susceptibility of unirradiated Zircaloy-2, 9:33208 (J;US)
Heat Transfer
Determination of thermal accommodation coefficients of helium, argon, and xenon on a surface of zircaloy-2 at about 25°C, 9:33200 (J;US)
Stress Corrosion
The effects of texture and surface condition on the iodine stress corrosion cracking susceptibility of unirradiated Zircaloy-2, 9:33208 (J;US)
Surface Properties
Determination of thermal accommodation coefficients of helium, argon, and xenon on a surface of zircaloy-2 at about 25°C, 9:33200 (J;US)
Thermal Conductivity
Determination of thermal accommodation coefficients of helium, argon, and xenon on a surface of zircaloy-2 at about 25°C, 9:33200 (J;US)
ZIRCONIUM
Absorption Spectroscopy
Calorimetric determination of zirconium, thorium and rare earth in the same sample, 9:33784 (RA;BR;In Portuguese)
ZIRCONIUM 100
Beta-Minus Decay
Beta spectroscopy on neutron-rich nuclei of mass $93 <= A <= 100$, 9:34682 (R;DE;In German)
Mass Defect
Beta spectroscopy on neutron-rich nuclei of mass $93 <= A <= 100$, 9:34682 (R;DE;In German)

ZIRCONIUM 90
M1-Transitions
Investigation of a magnetic dipole resonance with account for antinuum and spin-multipole forces, 9:34698 (RA;SU;In Russian)
ZIRCONIUM 90 TARGET
Helium 3 Reactions
Isomeric ratio in the ^{90}Zr (^{3}He, 2n)^{91}Mo reaction, 9:34689 (RA;BR;In Portuguese)
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
ZIRCONIUM 91 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
ZIRCONIUM 92
M1-Transitions
Investigation of a magnetic dipole resonance with account for antinuum and spin-multipole forces, 9:34698 (RA;SU;In Russian)
ZIRCONIUM 92 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
ZIRCONIUM 94 TARGET
Proton Reactions
Double differential cross sections for (p,n) reactions of 18 and 25 MeV protons with isotopes of Cr, Fe, Co, Ni, Cu, Y, Zr, Mo, Pd and Tb, 9:34699 (R;US)
ZIRCONIUM 95
Washout
Scavenging ratios and dry deposition velocities of radioactive particles in the tropical regions of India, 9:34324 (BA;US)
ZIRCONIUM BASE ALLOYS
See also ZIRCALOY
Oxidation
Model for the transition in the oxidation of zirconium-base alloys, 9:33682 (J;GB)
ZIRCONIUM HYDRIDES
Tetragonal Lattices
Optical-phonon structure and precision neutron total cross section measurements of zirconium hydride, 9:33713 (J;GB)
ZIRCONIUM OXIDES
See also ZIRCONOLITE
Precipitation
Investigation of methods for producing reactor-grade zirconium oxide from a zirconium-bearing chloride-sulfate strip liquor solution. Report of investigations/1984, 9:33711 (R;US)
ZIRCONOLITE
Physical Properties
High-temperature electrical insulators for electrophysical devices, 9:34919 (RA;SU;In Russian)
ZT-40 DEVICES
Equilibrium Plasma
Toroidal equilibrium in an iron-core reversed field pinch, 9:34817 (R;US)
ZYMOMONAS MOBILIS
Growth
Product inhibition of Zymomonas mobilis: evidence for two inhibitors, 9:32801 (J;US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AC01-75RA08469	**ICF, Inc., Washington, DC (USA)**

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and TIC, an order number in the form, DE82000001 or TI82000001, appears in column 3. Order numbers with DE prefixes may be used in ordering from both NTIS and TIC. Numbers with TI prefixes are valid at TIC only. Requesters are urged to use this order number where provided. In column 4, one or more DOE distribution categories are indicated, e.g. , STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from TIC. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 1 to 5% illegibility, available PC and MF; 2 = 6 to 10% illegibility, available MF only; 3 = 11% or more illegibility, available PC only. For the users of DOE/RECON, report ordering may be accomplished more expeditiously via the on-line system. Employees of DOE or DOE contractors are urged to order from the Technical Information Center (TIC); all others should order from the National Technical Information Service (NTIS). Procedures for on-line ordering are detailed in the DOE/RECON User's Manual (DOE/TIC-4586).

ORDER NUMBER CORRELATION

This correlation list is provided for those organizations where document storage is alphanumeric by report number and request may be received by order number. For other information about a document (abstract number, distribution category, availability, and price), please refer to the Report Number Index.

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and TIC accession/order number, e.g., DE84003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) price codes given are for domestic users; prices for foreign purchasers are in most instances twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($4.50).

TIC — Available from the Office of Scientific and Technical Information, Technical Information Center, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from TIC; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE					
A01	$4.50	E01	$6.50	T01	$125.00
PAPER COPY		E02	7.50	T02	140.00

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from TIC.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., DA83-22350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R:SU:In Russian). The language designator does not appear if the document is published in English.

A Series of Bibliographies

Radioactive Waste Management

A series of annual bibliographies initiated by the Department of Energy, Office of Scientific and Technical Information, Technical Information Center, addressing various facets of radioactive waste management.

The information covered in these bibliographies includes that from research reports, journal articles, books, patents, theses, and conference proceedings from worldwide sources. Corporate author, personal author, subject, contract number, and report number indexes are included in the publications. These bibliographies are available from the National Technical Information Service. Prices apply to the United States, Canada, and Mexico. Purchasers outside the United States, Canada, and Mexico should write NTIS for prices.

The citations in these publications, as well as other citations to information on radioactive waste back to January 1948, are available for on-line searching and retrieval by using the DOE/RECON system. Citations from June 1976 to the present are available also on the Department of Energy's Energy Data Base, which can be searched through the commercial on-line retrieval systems.

Airborne Radioactive Effluents: Releases and Processing, DE82012264 (DOE/TIC-3397), $16.00.

Decontamination and Decommissioning, DE82012270 (DOE/TIC-3391), $13.00.

Formerly Utilized Sites: Remedial Action, DE82012269 (DOE/TIC-3392), $8.50.

High-Level Radioactive Wastes, DE82012272 (DOE/TIC-3389), $16.25.

Low-Level Radioactive Waste, DE82004645 (DOE/TIC-3387), $10.00.

Low-Level Radioactive Waste, DE83007212 [DOE/TIC-3387(Suppl. 1)], $14.50.

Nuclear Fuel Cycle: Reprocessing, DE82012265 (DOE/TIC-3396), $16.25.

Radioactive Waste Inventories and Projections, DE82012267 (DOE/TIC-3394), $7.00.

Spent Fuel Storage, DE82012266 (DOE/TIC-3395), $12.00.

Transuranic Wastes, DE82012271 (DOE/TIC-3390), $14.50.

Uranium Mill Tailings, DE82012268 (DOE/TIC-3393), $13.00.

Waste Isolation, DE82012273 (DOE/TIC-3388), $17.50.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.

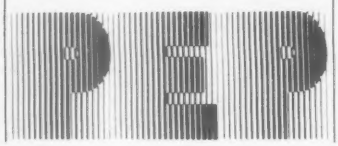
PERSONAL ENERGY PROFILE (PEP)

COMPUTER SEARCH SERVICE



PEP is a customized computer search service provided to DOE and contractor personnel on DOE/RECON (the Department's interactive on-line information retrieval system). For others, these selective dissemination-of-information services are available on commercial on-line systems. PEP automatically supplies the latest information in your field of interest by searching any of the regularly updated data bases in DOE/RECON twice a month, printing out the new bibliographic entries defined by your particular search, and mailing the update to you.

A search strategy is custom designed for each PEP subscriber so that each person's unique information needs are met. Your library and the scientific specialists at the Office of Scientific and Technical Information, Technical Information Center work with you to design a suitable search. Once the PEP service has been established, the search is automatically executed twice a month, and the results—provided in computer printout form—are mailed to you.

To obtain additional information about the specifics of subscribing to the PEP search service, or for examples of PEP search results, contact the library at your facility. If you do not have a library at your facility, contact
